On Friday morning, June 1, the Courier-News printed a dispatch from Washington signed by Herbert E. Gaston, reporting an interview given by Herbert C. Hoover, the new Federal food administrator, to a delegation representing farmers of the Northwestern States. The material contained in this interview was so important that versions of it were telegraphed to the leading eastern newspapers by correspondents in the West. A garbled form of the interview was printed in one or more eastern papers and caused Mr. Hoover to issue a denial that he had made such statements. An eastern correspondent then telegraphed to a St. Paul paper the statement that Mr. Hoover had characterized the interview in the Courier-News as a "wild dream."

Knowing that he had quoted Mr. Hoover absolutely correctly and doubting that Mr. Hoover ever had given out any denial of the Courier-News story, Mr. Gaston sent Mr. Hoover a copy of the interview as printed in the Courier-News, asking him to make such comment as he cared to make. The letter printed below is Mr. Hoover's answer:

Mr. HERBERT E. GASTON,
Care of the Courier-News, Fargo, N. Dak.

DEAR MR. GASTON: I am very much obliged to you for the interview which you inclosed with your favor of June 7. It puts quite a different light on the interview which was telegraphed to the eastern papers. The brief extracts given there conveyed a definite plan and policy in regard to grain and elevator control which I see from the original was not justified.

I set forth a series of hypothetical plans and you so reported in your interview. The eastern version caused much criticism and comment unfavorable to us, and my reply was in answer to this version. Naturally I did not characterize the report in the Courier-News as a "wild dream," for I would not criticize any article without first reading it.

Your cooperation will be exceedingly valuable to us, and as soon as we are officially organized I shall not hesitate to call upon you for assistance. As soon as Congress gives us an official status we shall have many messages for the farmers of the Northwest, and I know of no better way of reaching them than through the publications which cover that region.

Yours, faithfully, HERBERT HOOVER.

The section of this bill which provides for the requisition of storage and also for the construction of storage is exceedingly important, not only because it will take these elevators out of the hands of monopolists, who have denied elevator space to all excepting those to whom the chamber of commerce gave its consent, but more particularly because the taking over by the Government and the pooling of all such storage will facilitate the movement of grain. There was a short crop in the Northwest last year, but even under such conditions there was bad congestion at the Minneapolis terminals. By the pooling of the present elevator capacity by the Government and the possible construction of another elevator or elevators, there can be effected a great saving upon cars. In other words, the cars can be received and released very much more quickly, and cars which may be loaded for eastern shipment can also be loaded and assembled more quickly. At present a train, we will say, coming in on the Great Northern Railroad, may have cars which must be delivered at several different elevators in various portions of the city. In war times like this, if the Government undertakes to take over these elevators, it is probable that certain elevators will be designated to take care of the grain which comes in on the Great Northern and certain other elevators for the grain which comes in on the Northern Pacific, the Soo, the Milwaukee, and so forth, making it possible to deliver an entire trainload at an elevator, thus making a saving on trackage and switching and releasing the cars quickly for reuse. This would be an arbitrary proceeding, but governments must be arbitrary in time of war. The acreage in the Northwest is considerably larger this year than last year, and if there is anything like a normal crop there will be great danger of congestion at the terminals, even under the most favorable conditions.

Section 11 provides that whenever the President finds it essential, in order to prevent undue enhancement or fluctuation of prices of, or in order to prevent injurious speculation in, or in order to prevent unjust market manipulation, or unfair and misleading market quotations of the prices of necessaries, hereinafter in this section called evil practices, he is authorized to prescribe such regulations governing, or may either wholly or partly prohibit operation, practices, and transactions at, on, in, or under the rules of any exchange, board of trade, or similar institution or place of business as he may find essential in order to prevent, correct, or remove such evil practices.

There is one thing which above all others the grain producers hope will not be inflicted upon them, and that is an investigation. As a matter of fact, astute grain dealers thrive on investigation. They are long-practiced experts in beclouding investigation, and anyone who suggets that the law is likely to result in any tangible action through an investigation of the manifold evil practices of grain markets in time to affect next year's acreage displays an ignorance and innocence that is both sublime and childlike. There have been investigations enough; there is evidence enough to justify the Government taking over the grain markets of the country and the public elevators, and making both the markets and the elevators, in fact as well as in name, public institutions under Government direction. If that were done to-day, without any guaranty of price, but with a guaranty of a square deal to the farmers under the law of supply and demand, I venture to predict that the grain acreage of the country for 1918 would almost double that of 1917.

What is a fair price for a bushel of wheat? This is a reasonable and proper question at this time when we are asking the farmers to produce more. A few years ago the United States Department of Agriculture made an investigation of the time and labor required in different parts of the country in growing and harvesting wheat. Careful statistics were kept of the man time and horse time upon a large number of farms in different States. It was found, for example, that an acre of wheat in New York State averaged 20 hours of man and 30 hours of horse labor. In the State of Washington, 17 hours of man and 58 hours of horse labor. Minnesota was the lowest in labor cost, but there it averaged 10 hours for the man and 23 hours of horse. In other words, about one good full day of a man and team per acre of wheat, and that is not on the basis of union hours either. A man and team at that time could be hired for a day for $5. Now, the cost would be at least $7 for a 10-hour day. An acre requires a bushel and 3 pecks of seed, and at $2.50 per bushel, which is less than the market price at seeding time this year, the seed cost per acre is $4.37. If the land is worth $50 per acre—the average value—the interest at 6 per cent amounts to $3 per year. In those days it required about $1,600 for equipment, including horses, for 160-acre farm, or $10 per acre. The cost at present market prices will be nearly double that. The equipment will wear out every five years on most farms, but we will figure it on the basis of seven and a half years, showing a depreciation of 15 per cent, amounting to $3 per acre each year, with an interest cost per acre on the equipment of $1.20. That makes a total cost for these items alone amounting to $18.57. But we have not yet included the largest item of cost, which is the item of the fertility elements taken out of the soil by every crop.

I am aware of the fact that there is a school of modern scientists which persists in shutting its eyes to soil robbery and denies that a crop takes away from the soil nitrogen, potash, and phosphoric acid, although they must concede that these elements are found in the grain when it is examined. These scientists in some way undertake to claim that 4 less 2 still leaves 4. But there is another school of scientists of at least equal standing which recognizes that when a bushel of wheat carries off the farm a pound and a quarter of nitrogen that farm contains a pound and a quarter less nitrogen than it did before, and we find that to-day's market value of the chemical constituents taken out of the soil amounts to not less than 63 cents per bushel of wheat. The average yield in the United States is about 15 bushels per acre, although it is less than that in the Northwest. On the basis of 15 bushels, the average crop reduces the soil wealth of the farm by taking out potash, phosphates, and nitrates worth now $9.45 per acre. This is at present market prices for nitrogen, potash, and phosphoric acid, which of course have greatly increased on account of the war. At prices prior to the war, the loss of fertility, according to agricultural colleges, ranged from $4 to $5.40 per acre. Potash then was valued at $38 a ton. Now it is worth $300 to $500 a ton, and other prices have risen greatly. I am not undertaking to estimate the persistent losses through insect and other pests, or through hail or frost, flood or droughts, but simply figure the large and indisputable items of cost of production.

Now, taking $18.57 as already found to be the cost of labor, interest, and depreciation in producing an acre of wheat, and adding $9.45—the fertility loss per 15 bushels—we find the farm cost per acre is $28.02. To that the farmer must add his haul to the railroad, at 6 cents per bushel or 90 cents per acre; average freight to the terminal market 12 cents per bushel, or $1.80 per acre; commission 1 cent per bushel, or 15 cents per acre, making a marketing cost of $2.85, which brings the total cost of a 15-bushel crop up to $30.87 per acre, or $2.06 per bushel.

But in the Northwest, with an average of 11 bushels, the cost per bushel is still higher. The labor, seed, and depreciation items remain the same—$18.57 per acre. The fertility at 63 cents a bushel for 11 bushels is $6.93, and the marketing at the same scale per bushel as in the previous case, is $2.09 per acre, making a total cost per acre of $27.59. Divide by 11 and we

find the cost per bushel delivered to the terminal market is $2.51. And the figure we have heard as a reward to be guaranteed to the farmers for producing wheat costing $2.51 was $1.50 per bushel at the market—so that the farmers' penalty for patriotism would be a loss of a little over $1 a bushel for every bushel produced.

These figures are indisputable. Is it any wonder that official statistics show that in the last census decade, while there was an increase of population amounting to over 20 per cent, the increase of wheat yield was less than 4 per cent, in spite of better farming, and that there were 8,325,982 fewer acres devoted to wheat in 1909 than in 1899—an acreage decrease of 15.8 per cent. Is it any wonder that the cost of wheat to the consumer is increasing? Gentlemen, if we are going to increase the farmers' food production we must make it worth while for the farmer to grow more. We can not accomplish it by patting the farmers on the back and saying how patriotic a thing it is to grow wheat. We do not expect the munition factories to make shells at a loss because the owners are such good patriots. Why should we reward farmers with buncombe?

In making this computation I overlooked the item of twine, which will probably cost the farmers this year about 40 cents per acre, although nobody can tell what the real cost will be. The task of fixing the price this year, if it is attempted by Mr. Hoover, whom the President has announced he will appoint as food administrator, will be an exceedingly difficult one, and the work should be done with exceedingly great care. I have never known anyone to make an estimate of the cost of growing grain who did not fail to include some one item of cost. After preparing the estimate of the cost of growing wheat per acre the item of twine came to my mind. I concluded not to disturb the figures, but to make the open confession here that I overlooked the item. It is possible that I have also overlooked other items, and if so it emphasizes the need of having about Mr. Hoover at the time the prices of farm products are made actual producers of such products from the farms. The farmers of the Northwest have never asked for a price guaranty. The idea of guaranteeing an indemnifying price to the farmers evidently came to the brain of some one in the Agricultural Department at Washington. However that may be, it was never suggested by the farmers or by any farm organization. But that does not mean, since the system is to be imposed on them, that they have not a very decided interest in how the work is to be done. When the committee of northwestern farmers came to Washington recently to appear before the Committee on Agriculture, one of their first requests was that they might have the opportunity of talking with Mr. Hoover. They wanted to see and converse with the man who was to pronounce their doom next fall. I am glad to say that these farmers were well impressed with Mr. Hoover. He looked good to them. He promised them full representation and that they will be fully consulted before a minimum price is fixed. Among those who called on Mr. Hoover at that time were State Senator Thomas Pendray, of Jamestown, N. Dak.; State Senator Charles E. Drown, of Page, N. Dak.; Samuel J. Aandahl, president of the State board of railroad commissioners, of Litchville, N. Dak.; Herbert E. Gaston, editor of the Courier News, Fargo, N. Dak.; J. M. Anderson, president of the Equity Cooperative Exchange, Minneapolis, Minn.; F. A. Bennett, of Great Falls, Mont.; C. A. Holman and Charles Lyman, of Madison, Wis. I am glad that these gentlemen saw and talked with Mr. Hoover and that they also saw and had a 25 minutes' interview with the President, and that they expressed themselves before the committee, for it is a big responsibility to pass judgment upon this legislation giving such extraordinary powers to the President of the United States. When these men left for home they assured me that this bill ought to be supported, not because it contained promises of price-fixing, for which they had not asked, but because it promised a control of the markets, a control of the great exchanges, and the establishment there of a free, open market, and also the opening to the public without discrimination of public elevator storage. These are the things which they have fought for during recent years and which if given to them will do more to stimulate crop production than all other things combined which Congress might do. [Applause.]

I yield 10 minutes to the gentleman from Missouri [Mr. DYER].

Mr. DYER. Mr. Chairman, I am in favor of this bill and intend voting for it, notwithstanding the vast power it confers on the President of the United States. I hope the bill will be passed substantially as it has been reported from the Committee on Agriculture. I will not support any amendment to prohibit the use of grain, and so forth, in the manufacture of alcoholic liquors. We give in this bill the power to the President to prohibit same if he finds it necessary to conserve the food supply. That is ample for all purposes and needs, so far as this situation is concerned, and that is and ought to be the test, so far as this legislation is concerned, if our object is to win the war and furnish our people ample food at reasonable prices. Prohibition has no part in this bill.

Mr. Chairman, there is no reasonable excuse for all the complaints we have regarding high prices and scarcity of the necessaries of life. In my judgment it is due to the gamblers on the stock exchanges in foodstuffs. If for no other reason I would support this bill in order to get rid of them. They are the worst criminals in all the land. They rob the people and starve the children to fatten the purses in this nefarious, wicked, and sinful business. They ought to be subjected to the severest punishment possible and that we can provide for in this bill.

Then, Mr. Chairman, there is the fuel situation. It is inexcusable to see the high prices being paid for coal and other fuel. I have been after these robbers for some time. On May 9 I introduced a resolution—H. Res. 78—asking the Attorney General why conditions were so horrible regarding coal prices, and so forth, and I received a letter and copies of correspondence from him upon the subject, which I include in my remarks, to wit:

OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., May 17, 1917.

Hon. L. C. DYER,
House of Representatives, Washington, D. C.

DEAR SIR: I beg to acknowledge receipt of your letter of the 16th instant inclosing a copy of a resolution which you have introduced in the House in relation to the high price of coal.

Chairman WEBB, of the Judiciary Committee, had already sent me a copy of the resolution, and I inclose herewith a copy of my letter to him. If you wish any further information I will be glad to supply it if I can.

Yours, very truly,

T. W. GREGORY, *Attorney General.*

—

MAY 17, 1917.

Hon. E. Y. WEBB,
Chairman Committee on the Judiciary,
House of Representatives.

DEAR MR. WEBB: I have your letter of the 15th instant transmitting for the information of the department and such reply as it may desire to make for the use of your committee, a copy of House resolution 78, introduced by Mr. Dyer, relative to the coal situation.

This department has been especially active in the investigation and prosecution of alleged combinations of both anthracite and bituminous coal producing companies.

The control of anthracite coal has become centered in a few railroads. The backbone of the combination is the Reading Holding Co., which controls two of the great railroads from the anthracite field, namely, the Philadelphia & Reading and the Central of New Jersey, and two great coal mining companies, namely, the Philadelphia & Reading and the Lehigh & Wilkes-Barre, which together possess about 63 per cent of all the unmined anthracite coal. A suit to dissolve the Reading Holding Co. was instituted under the antitrust laws and the commodities clause in September, 1913. The decision of the lower court was in part favorable and in part adverse to the Government. Appeals were taken to the Supreme Court, where the case was argued early in October.

Suits have also been instituted under the antitrust laws and the commodities clause against the Delaware, Lackawanna & Western Railroad Co. and its affiliated coal companies and the Lehigh Valley Railroad and its affiliated coal companies, branches of the combination.

In the case against the Lackawanna companies the decision of the lower court was adverse to the Government, but on appeal to the Supreme Court the decision of the lower court was reversed and the relief asked by the Government granted. In the suit against the Lehigh Valley companies the decision of the lower court was also adverse to the Government. An appeal was taken to the Supreme Court, where the case was argued early in October.

In addition to these proceedings under the antitrust laws and the commodities clause, the Attorney General, in a letter to the Trade Commission, after the recent advance in wages but before the increase in prices, called the attention of the commission to the fact that on three prior occasions when wages were increased, namely, in 1900, 1902, and 1912, the price of anthracite coal was increased out of all proportion to any increased cost of production due to the higher wages; and in view of past history he recommended to the commission that, in the event the recent advance in wages should be followed by an advance in price (as subsequently it was), a thoroughgoing investigation be made for the purpose of ascertaining whether there was any justification for the increase in the price.

Subsequently Senator Hitchcock brought this matter before the Senate, calling attention especially to the letter of the Attorney General, and the Trade Commission was directed by resolution of the Senate to conduct such an inquiry as the Attorney General had recommended. A copy of the Attorney General's letter is attached hereto.

In the course of the investigation into increases in prices generally, the several United States district attorneys and an investigating force of the department have been inquiring into conditions in the anthracite and bituminous coal markets. As regards anthracite coal, no evidence has thus far been found which would warrant any proceedings in addition to those heretofore instituted. As regards bituminous coal, the investigation thus far made has resulted in the return of three indictments in the southern district of New York against alleged combinations to increase the price of so-called smokeless coal, produced largely in the State of West Virginia.

I also call your attention to the following recommendation contained in my last annual report:

"In United States *v.* Delaware & Hudson Co. (213 U. S., 366), the Supreme Court construed the commodities clause as prohibiting a railroad from transporting articles produced, mined, or purchased by it only where it has an interest in the articles in a legal or equitable sense

at the time of transportation. It further held that a railroad does not necessarily have an interest in a legal or equitable sense in articles produced, mined, or purchased by a bona fide corporation, of which the railroad is a stockholder. In a later case (United States v. Lehigh Valley Railroad Co., 220 U. S., 257) the court held that if the corporation owning the articles transported by the railroad was so identified with the railroad as in fact to be but an arm of the railroad, then the railroad would have an interest in the articles in the sense of the statute. The following plan was devised to meet the requirements of the statute as thus construed:

"A railroad engaged, say, in mining coal, either directly or indirectly, through a controlled corporation which is but a part of itself, will organize a new corporation, the stock of which is distributed ratably amongst the stockholders of the railroad, and the management of which will be dominated by officers of the railroad. Thereupon the railroad will sell to the new corporation at the mouth of the mines its production of coal under a contract which puts the new corporation largely, if not completely, within the power of the railroad.

"This plan was challenged in the case of United States v. The Delaware, Lackawanna & Western Railroad Co. and the Delaware, Lackawanna & Western Coal Co. The Government lost in the district court, but an appeal was taken to the Supreme Court, which, in an opinion handed down on June 21, 1915, unanimously reversed the decision of the lower court. (238 U. S., 516.)

"I stated in a previous report that even should the Government be successful in this case in the Supreme Court, the commodities clause would still fall short of accomplishing its purpose—the divorce of transportation from production. This is not less evident now that the case has, in fact, been decided in favor of the Government, since railroads are still able to claim that the clause does not prohibit them from engaging in production along their lines, provided only that they sell the articles produced before transporting them.

"I therefore urge an amendment which will prohibit a railroad from transporting in interstate commerce articles which it manufactured or produced, or which were manufactured or produced by any corporation controlled by it or affiliated with it by having the same controlling stockholders, irrespective of whether such railroad or such controlled or affiliated corporation has an interest in the articles at the time of transportation. It is also necessary, if transportation and production are to be completely divorced, that Congress prohibit any railroad owned or controlled by a producing or trading corporation and not operated merely as a plant facility, from transporting in interstate commerce articles produced or owned by such corporation.

"A bill to carry out this recommendation was introduced in the Sixty-third Congress, third session, by the chairman of the House Committee on Interstate Commerce (H. R. 20470)."

Yours, very truly,

T. W. GREGORY,
Attorney General.

MAY 6, 1916.

The FEDERAL TRADE COMMISSION,
Washington, D. C.

GENTLEMEN: It has been stated in the public press, with apparent authority, that, having agreed to an advance in wages, the railroad coal companies will now use that as an excuse for materially increasing the price of anthracite coal to consumers.

It has been brought out in the various legal proceedings against the anthracite railroads that on similar occasions in the past when wages have been advanced the railroad coal companies, on the pretext of increasing prices for the purpose of meeting the increased cost of production resulting from the higher wages, have made much greater increases than were necessary for that purpose.

Since January 1, 1900, there have been three general advances in the wages of mine workers in the anthracite regions, exclusive of the present advance.

In October, 1900, wages were advanced approximately 10 per cent. In the fiscal year immediately preceding this advance (July 1, 1899–June 30, 1900) the cost of production of the Philadelphia & Reading Coal & Iron Co., whose mines are amongst the most expensive to operate, was $1.67 per ton. In the fiscal year immediately following (July 1, 1900–June 30, 1901) its cost of production was $1.826 per ton—an increase of $0.156 per ton, which includes not only the increase due to the advance in wages but the increase due to all other factors. On the other hand, the same company (the others following suit) increased prices by $0.232 per ton on all sizes, making the excess of price increase over cost increase $0.076 per ton.

On November 1, 1902, there was another general advance in wages of approximately 14 per cent. In the fiscal year immediately preceding this advance (July 1, 1901–June 30, 1902) the cost of production of the Philadelphia & Reading Coal & Iron Co. was $2.066 per ton. In the fiscal year immediately following (July 1, 1902–June 30, 1903) its cost of production was $2.199 per ton, an increase of $0.133 per ton, which includes not only the increase due to the advance in wages but the increase due to all other factors. On the other hand, the same company (the others following) increased prices by $0.494 per ton on all sizes, making the excess of price increase over cost increase $0.363 per ton.

Undoubtedly the prices immediately following the wage increase in 1902 were abnormally high, due to the scarcity of coal in consequence of the long strike. It will be fairer, therefore, to take the prices prevailing in the fiscal year ended June 30, 1904, as the basis for comparison. This would show an excess of price increase over cost increase of $0.245 per ton.

In 1912 another advance in wages took place amounting to about 5.6 per cent net. Again, prices were increased on the pretext of meeting the resulting increase in the cost of production. On this occasion the House of Representatives directed the Bureau of Labor to make an investigation. The bureau found that whereas the advanced wages increased the cost of production only $0.09 per ton, prices were increased $0.25 per ton, making the disparity between price increase and cost increase $0.16 per ton.

The report of the Bureau of Labor states:

"Following the agreement of May 20, 1912, the wholesale price of anthracite coal was advanced by the mining companies about 25 cents per ton when all sizes are taken into consideration. The advance in miners' wages under the above agreement and the increase in wages granted to men not specifically covered by the agreement was equivalent to an increase of between 8 and 10 cents per ton in the cost of labor, or an average increase of about 9 cents per ton for the anthracite region as a whole. Deducting this increase in labor cost from the increase in the selling price per ton it will be seen that the prices realized by the coal mining companies were increased about 16 cents per ton more than was required by the new scale of wages alone. (H. Doc. 1442, p. 33.)"

As the total consumption for some years past has been in the neighborhood of 75,000,000 tons, this excess of price increase over cost increase following the advance in wages in 1912 meant a surtax upon consumers of about $12,000,000 annually.

In view of these facts, I take the liberty of suggesting that if the advance in wages just agreed upon shall be followed, as in the past, by an increase in the price of coal to consumers, the Federal Trade Commission, under the authority of section 6 of the act creating it, institute a searching investigation into the operations and accounts of the great producing companies for the purpose of ascertaining all the facts upon which such increase in price may be based, including the relation between any increase in the cost of production due to advance of wages and the increase of profits caused by the increase in price.

Very truly, yours,

T. W. GREGORY,
Attorney General.

This all shows, Mr. Chairman, that the laws are not sufficient apparently to meet these robbers and gamblers, so I am for giving arbitrary power to the President to cure the situation. It is the only thing to do if we are not to starve for food and freeze for want of fuel during the coming winter. Food is not scarce, neither is coal to the extent of the high prices prevailing. It is the food gamblers, the hoarders of food, the coal barons, and such enemies of our country. Let us put an end to them. [Applause.]

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and Mr. FITZGERALD having taken the chair as Speaker pro tempore, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 4961 and had come to no resolution thereon.

EXTENSION OF REMARKS.

Mr. RANDALL. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of war-time prohibition.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

RECESS.

Mr. LEVER. Mr. Speaker, I ask unanimous consent that the House stand in recess until 8 o'clock to-night.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Accordingly the House stood in recess until 8 o'clock p. m.

AFTER THE RECESS.

At 8 o'clock p. m., the recess having expired, the House was called to order by Mr. FITZGERALD as Speaker pro tempore.

FOOD CONTROL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 4961) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961, with Mr. HAMLIN in the chair.

The Clerk reported the bill by title.

Mr. LEVER. Mr. Chairman, I yield 30 minutes to the gentleman from Missouri [Mr. HAMLIN].

Mr. RANDALL assumed the chair.

Mr. HAMLIN. Mr. Chairman, I take advantage of this opportunity to submit some observations, not especially upon this bill, but refer to it incidentally as a type of the character of legislation which we have been passing for some time and perhaps will continue to consider until the end of this session. Some weeks ago I became very much interested in the question of the constitutionality of this character of legislation. I have examined some of the authorities, and I desire now to submit my views for what they may be worth.

Mr. Chairman, we are seeking to pass bills which give to the executive department of the Government autocratic powers to deal with certain things during the war. Powers not to be thought of in times of peace. It seems to me, therefore, that the first thing we ought to determine is, Have we authority under the Constitution to enact such legislation; and if so, does the present situation warrant us in taking a step which we all concede is a radical departure from our time-honored customs? If so, why?

We are now face to face with grim war. War means large and often profligate expenditures of money. Large expendi-

tures mean inflation of values. Inflation always means extravagances. War also means increased necessities. Increased necessities mean increased opportunities for speculation. Increased speculation means increase in prices, and increase in prices means increased hardship, in fact, often increased misery and distress. In a word, war is an abnormal condition and abnormal conditions require abnormal and radical remedies to neutralize and control inevitable abuses. Therefore, I, as a natural Democrat, not in a partisan but in the broadest sense, am willing to adjust my conduct to meet existing conditions and necessities, provided always that I am convinced that we have a right to take such action and stay within the limits of the Constitution.

We have already passed several drastic measures and are contemplating the passage of others. It is not necessary for me to stop to mention all these bills, but I think that it will suffice to call attention to the espionage bill, the ship bill, the explosive bill, and I might mention others, all of which give to the President large and ample powers to act during the war.

Only a few days ago we passed through the House what is known as the explosive bill, by the terms of which, during the war, the President is practically given control of the manufacture, possession, storage, and distribution of powder, explosives, blasting supplies, etc. I realize that this is giving him great powers, but I feel as every one else must, that in times of war when men's minds are inflamed and prejudices run high, they are liable to do things that they would not do under normal conditions, and it is the part of wisdom for us to make it as difficult as possible for them to do harm to their fellows. I think that it is necessary to give some one person authority to act in such matters so as to promptly meet any unforeseen emergencies.

There are two things, especially in times of war, which ought to be safely guarded, regulated, and controlled. I refer to the two opposing agencies, to wit, the one which sustains life and the other which destroys it. The one you must have to sustain your friends and the other is indispensable in the destruction of your enemies. Food and firearms ought therefore, to be under the control of the Commander in Chief of the Army and Navy.

I realize, and feel that everyone else must, that an effective war can not be carried on without the most perfect teamwork, and that you can not have this teamwork unless the power to direct and control is centered in one place. No one who reads history will doubt for a moment that the secret of the success of the Napoleonic armies was Napoleon.

We have now taken up for consideration the bill known as the "Lever food-control bill," and which, I think, easily ranks as among the most important measures to be considered by Congress at this session. The bill as drawn gives to the President practically unlimited powers during the war to control the supply, distribution, and movements of foods, feeds, fuel, and other necessaries of life. I am not going to discuss the merits of this bill except in a general way, but I am impressed with the wisdom of passing legislation of the character sought to be enacted by this bill, and I also am impressed with the fact that the things treated of in this bill are of such vital importance to every individual in the United States that we ought not to hesitate to provide for the most effective and rapid means of accomplishing the things which this bill seeks to have done. If that effective way is to delegate to the President full authority to act, then I favor it, and I believe that we ought not to hesitate to do it, because no one doubts for a moment the good intentions, patriotism, and intelligence of the President.

Whatever may be our opinions as to the merits of this bill or the wisdom of passing it at this time, I think that we will all agree that, under the circumstances, the Committee on Agriculture, and especially the chairman thereof, who comes, as many of the members of his committee do, from a section of the country where the "shibboleth" of the people is "States rights" and a "strict construction" of the Constitution the only passport into polite society, have demonstrated rare courage born of real patriotism in reporting a bill which gives broad powers to the Federal Government to deal with a vital situation which is so critical as to well-nigh appall us all. It is just such unselfish patriotic statesmanship as this that will save the situation and help to win this war.

Among other things which the bill seeks to accomplish is to prohibit waste, destruction, hoarding, storing, or holding by any individual, firm, or corporation, or of any person or combination of persons, other than the individual farmer or gardener, of any of the necessaries of life beyond the amount reasonably required for the individual use or business requirements of persons engaged in the production or handling of such necessities.

The evident purpose of this bill being to prevent the possibility of rendering inadequate the food supply of the country by any artificial means whatsoever, and to prevent the enhancement of the price thereof to the consumer, and also to see that the opportunity to buy is available to all on equal terms.

If the enactment of this law will accomplish these things, it will surely be a godsend, and we ought not long to delay its passage.

How true I do not know, but we too frequently hear of willful and criminal storage and sometimes actual destruction of food products after they have passed out of the hands of the producer into the hands of the speculators. The purpose of this evidently is to render scarce this vital necessity in order to enable them to receive large and inordinate profits. If these reports be true, then the lamp-posts of the cities where these criminals reside have not yet been utilized in the most needful way. Every monther's son of them ought to be hanged.

The handling of the necessaries of life offers one of the most fruitful fields for speculation and oppression. The person or persons who will take advantage of his fellow man and rob him by increasing, by artificial means, the price in dollars and cents, or by short weights or measures, in the handling of these vital necessaries is a criminal and ought to be punished. It is hardly necessary for me to point out the class who engage in this nefarious business, as we all know them. As a rule, it is not the farmer, who produces the raw material, nor, of course, the people who ultimately consume it, but it is the fellow through whose greedy hands the products must pass on their way from the producer to the consumer. Unfortunately this condition is not a result of the war. We have all realized that this nefarious business has been going on for years, but the somewhat chaotic condition incident to the war only increases the opportunity for this infamous practice, and accentuates the importance of us taking some steps to put an end to this thing. I repeat, if autocratic power placed in the hands of the President is the most effective way to deal with this situation, then let us do it, provided, of course, we have authority under the Constitution to do so.

The bill to which I have referred covers many other activities incidental to the production and handling of the vital necessities of life, all of which are undoubtedly of the greatest importance. Whether this particular bill should pass or not is a question upon which we will not likely all agree, but, after all, I am persuaded that the disagreement, if any will come, will be on the plan rather than on the principle.

I think we ought not to overlook the fact that at this session we are having to legislate under conditions and in the face of circumstances different from any which have confronted the Members now composing the American Congress. This session is destined to go down into history as one of the notable ones in the life of our Nation. The work of this Congress will be to the credit of those of us who are Members, or else the mere mention of it will be a sufficient condemnation of those of us who are responsible for its work.

We have been and are dealing with grim war—real war—to last how long, God only knows. If the inventive wizards of our country, or of the countries with which we are allied, can find a way to destroy the deadly submarine, then I believe that this war will soon be over. If not, then the end is not in sight, and the crimson stream which is now flowing through northern France will be swollen by the blood of thousands of our American boys.

In this session nothing common or ordinary has been considered. In appropriations we have dealt only in billions, in international matters we have done nothing less than to declare war, in the raising of armies we have provided for the conscription of millions of men; but after all I predict that the food and fuel question to which I have referred will overtop all else in importance and interest, for it forms the very basis of all our activities. It affects every man, woman, and child in our land—and in every other land, for that matter, throughout the world. Modern implements of warfare may be destroyed, and yet men could go on fighting with stones, staves, and pickaxes, as they did of old; but if the food supply should be destroyed or exhausted, both sides and all people would suffer and die. I plead, therefore, that in the consideration of this character of legislation we throw aside all preconceived ideas and notions which may have been formed under the influence of peculiar environments, and demonstrate our real statesmanship and patriotism by finding a solution to these most vital questions, not only for our own salvation but for the salvation of the world.

Of course, whatever we do must be done within the power granted to us by the Constitution. That brings me to the point of making a few observations on the constitutionality of the kind of legislation about which I have been speaking. Certainly I

would not presume to impose my limited knowledge of this question upon the House, among the membership of which are so many eminent lawyers, but I only dare do it in justification of my action in supporting this character of legislation. I know that there are some Members who affect to believe that some of us think that when the country is engaged in war the Constitution, or some portions of it, is suspended.

I think a sufficient answer to that criticism will be to paraphrase a statement made at one time by Chief Justice Marshall, when he said, in effect, that no legislative dreamer was ever wild enough to think that there has been a moment of time since it was first declared in effect down to this good hour when the Constitution, and every part thereof, was not in full force and effect as the supreme law of the land. If, indeed, the time should ever come when a majority in Congress should ignore that bulwark of human liberty, it will be the beginning of the end of this Republic.

May I suggest that perhaps the trouble with some Members who doubt our right to enact this character of legislation is that they seem to be unable to differentiate between the purposes for which certain authority is given in the Constitution and under which Congress must perform its functions. For them all authority granted for any end or purpose is of equal importance. So far as that authority is the voice of sovereignty I agree with them, but when we come to consider the effect and purposes for which certain authority is granted we can readily discover very great differences. Let me illustrate: The Constitution gives to Congress the right to prohibit—in fact, to make it a crime—to do certain things and to fix a penalty for a violation of the same. In the natural order of things it frequently occurs that this regulatory power affects but a small percentage of the people, because only a few in comparison ever violate the law, and the enforcement of that law is quite simple.

But the authority to declare war, while not any more of an authority under the Constitution than the other, is infinitely more far-reaching and important, for a declaration of war vitally affects not a few only, but every citizen, whether law-abiding or criminal, sane or insane, mature or immature. The things necessary to be done in order to carry that declaration of war into effect are multitudinous and of necessity drastic, and, as compared to peace times, well nigh revolutionary. Therefore no thoughtful person, it seems to me, can fail to realize that Congress is authorized to do things after it has exercised its authority under the Constitution to declare war that it could not do before that declaration was made, because without the declaration there would be no basis or necessity for the doing of these other things.

The Constitution, I think, clearly recognizes this difference. For instance, no soldier shall in times of peace be quartered in any house without the consent of the owner, but this may be done after Congress has declared that a state of war exists.

No property may be taken in times of peace without the consent of the owner or just compensation made, but in times of war the President as Commander in Chief of the Army and Navy may, without the consent of the owner or without the ordinary condemnation proceedings familiar to peace times, certainly when authorized by Congress, commandeer private property for the use and in aid of a successful prosecution of the war.

While Congress, I am inclined to think, would have a right to compel enlistments in the Army in time of peace—before war has been declared—yet I doubt that any Congress would have the temerity to attempt such a thing; yet it will not hesitate, and frequently in the interest of public safety ought not to hesitate, to provide for conscription in the times of war.

While the Constitution is just as effective in times of war as in peace times, the purpose always being to insure domestic tranquillity, provide for the common defense, and promote the general welfare, and thereby make secure the blessings of liberty, not only to the present generation but to the generations of those who are to live after us, yet I maintain that there is a vast difference as to the duty of Congress in making effective this splendid purpose in times of war as compared to that of peace times.

The legislation which we are enacting is not only drastic, but radical; but I believe it reasonably necessary to a successful prosecution of the war, and if it is, then, in my opinion, there can be no doubt of its constitutionality.

Mr. YOUNG of North Dakota. Mr. Chairman, will the gentleman yield?

Mr. HAMLIN. Yes.

Mr. YOUNG of North Dakota. Does the gentleman believe the constitutionality of this act is likely to be attacked in the court?

Mr. HAMLIN. Of course, I can not tell. It may be. It has been attacked on the floor of the House and very likely will be attacked again before it is finally passed.

Our Supreme Court has repeatedly said in unmistakable terms that Congress has authority under the Constitution to do anything which is necessary to make effective the authority given it under the Constitution. I think the language of our Supreme Court in the case of Cohens against Virginia, in Sixth Wheaton, pages 264, 413, from which I quote, is significant:

> That the United States, for many and for most important purposes, is a single Nation, has not yet been denied. In war, we are one people. In making peace, we are one people. In all commercial relations, we are one and the same people. In many other respects the American people are one; and the Government, which is alone capable of controlling and managing their interest in all these respects, is the Government of the Union. * * * The people have declared that in the exercise of all powers given for the objects it is supreme. * * *

In One hundred and thirtieth United States, page 606, this significant language is used:

> To preserve its independence and give security against foreign aggression and encroachment, is the highest duty of ever nation, and to attain these ends nearly all other considerations are to be subordinated. It matters not in what form such aggression and encroachment may come, whether from a foreign nation acting in its national character or from vast hordes of its people crowding in upon us. The Government possessing the powers which are to be exercised for protection and security is clothed with the authority to determine the occasion on which the powers shall be called forth; and its determination, so far as the subjects affected are concerned, are necessarily conclusive upon all its departments and officers.

By the way, that comes pretty nearly answering the question which was injected yesterday into the debate to this effect, that our declaration that certain kinds of legislation is a war necessity will not bind the court. If the constitutionality of this question should arise before the court, I believe they would be bound by the decision of Congress expressed in its enactment.

In the case of Miller against the United States, in Eleventh Wallace, page 305, the court says:

> The Constitution confers upon Congress, expressly, power to declare war, grant letters of marque and reprisal, and make rules respecting captures on land and water. Upon the exercise of these powers no restrictions are imposed. Of course—

Says the court—

> the power to declare war involves the power to prosecute it by all means and in any manner in which war may be ligitimately prosecuted.

Language could scarcely be stronger or broader than that.

But some may say this clearly refers to the things expressly mentioned in the Constitution and does not include the right to control the manufacture, handling, and distribution of such things as explosives or the control of the foodstuffs of the country. But I think it does. War can not be successfully prosecuted in these times without the use of modern implements of warfare. The Government must have them. Neither can war be prosecuted unless food, feed, and fuel are furnished to the soldiers and the noncombatants as well, and I do not believe for a minute that the framers of the Constitution were silly enough and short-sighted enough to intend to limit the power of Congress to a simple declaration of war and the granting of letters of marque and reprisal; and the making of rules respecting captures on land and water. That very authority carried with it, of course, the right to do anything else necessary to make the declaration of war effective. But we are not left to speculate on that. Again, the Supreme Court, in the case of Nishimura Ekiu against the United States, in One hundred and forty-second United States, page 659, said:

> That there is granted Congress under the Constitution certain powers, among which is one "to declare war and to provide and maintain armies and navies; and to make all laws which may be necessary and proper for carrying into effect these powers and all other powers vested by the Constitution in the Government of the United States, or in any department or officer thereof."

This, you will readily recognize, is a literal quotation of the eighteenth paragraph of section 8 of the Constitution.

In the case of Logan, in One hundred and forty-fourth United States, page 283, we find this same article quoted, and then the court says:

> In the exercise of this general power of legislation, Congress may use any means appearing to it most eligible and appropriate which are adapted to the end to be accomplished and are consistent with the letter and spirit of the Constitution.
>
> Although the Constitution contains no grant, general or specific, to Congress of the power to provide for the punishment of crimes, excepting piracies and felonies on the high seas, offenses against the laws of nations, treasons, and counterfeiting the securities and current coin of the United States, no one doubts the power of Congress to provide for the punishment of all crimes and offenses against the United States, etc.

The Constitution must be construed in the light of reason.

Mr. SMITH of Michigan. Mr. Chairman, will the gentleman yield?

Mr. HAMLIN. Yes.

Mr. SMITH of Michigan. What does the gentleman think about the power of Congress to fix the prices of food products or other commodities of manufacture, both minimum and maximum prices?

Mr. HAMLIN. If the fixing of the price of things absolutely necessary for the maintenance of our armies or our people in time of war, I believe that we would have a right under the Constitution to do so. My study of these decisions leads me to believe that after all is said and done, it depends upon the one central fact—is it necessary to do this particular thing in order to make effective the declaration of war? If so, then we have the authority to do it.

Mr. SWITZER. Does the gentleman believe that the court would have the right to set aside our declaration of necessity?

Mr. HAMLIN. Whether they would have the right to declare it not a necessity? I very seriously doubt that they would have that right. I think the quotation from the court's decision I called attention to a moment ago indicates that our conclusion on this matter is final. I do not believe the Supreme Court would go back of the opinion of Congress on the question of what is necessary to prosecute the war.

Perhaps the case of McCulloch *v.* State of Maryland, reported in Fourth Wheaton, 316 et seq., can well be regarded as a leading case, and in which case the opinion was rendered by Chief Justice Marshall. I shall refer to only such parts of this opinion as I think directly affects the questions now confronting us. I want to say for the benefit of our "strict constructionist" that in this elaborate opinion the court did not overlook that phase of the case. There were those arguing that the Federal Government had only such powers as were "expressly" granted to it by the people. Chief Justice Marshall calls attention to the fact that the tenth amendment was evidently framed for the very purpose of negativing the contention just referred to. He calls attention to the fact that the amendment provides that the powers "not delegated to the United States nor prohibited to the States are reserved to the States or to the people," and emphasized the fact that the word "expressly" was left out of the amendment, and he reasons, and I think correctly, that it was purposely left out. In other words, that the powers granted to the Federal Government are to be considered and construed in a reasonable, sensible way, with the view of giving to Congress power to do anything reasonably necessary to carry out the things which the Constitution gives it permission to do and the conditions require should be done. He says:

> But it may with great reason be contended that a Government intrusted with such ample powers, on the due execution of which the happiness and prosperity of a Nation so vitally depends, must also be intrusted with ample means for their execution. The power being given, it is the interest of the Nation to facilitate its execution. It could never be their interest, and can not be presumed to have been their intention, to clog and embarrass its execution by withholding the most appropriate means. * * *

Also—

> It is then the subject of fair inquiry how far such means may be employed. It is not denied that the powers given to the Government imply the ordinary means of execution. * * * But the Constitution of the United States has not left the right of Congress to employ the necessary means for the execution of the powers conferred on the Government to general reasoning. To its enumeration of powers is added that of making all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States or any department thereof. * * * The subject is the execution of those great powers on which the welfare of the Nation essentially depends. It must have been the intention of those who gave these powers to insure, as far as human prudence could insure, their beneficial execution. * * * The result of the most careful and attentive consideration bestowed upon this clause is that if it does not enlarge it can not be construed to restrain the powers of Congress or to impair the right of the Legislature to exercise its best judgment in the selection of measures to carry into execution the constitutional powers of the Government. * * * We admit, as all must admit, that the powers of the Government are limited and that its limits are not to be transcended. But we think the sound construction of the Constitution must allow to the National Legislature that discretion with respect to the means by which the powers it confers ought to be carried into execution, which will enable that body to perform the high duties assigned to it in a manner most beneficial to the people.

That pretty nearly answers the question of the gentleman from North Dakota [Mr. YOUNG].

I do not hesitate to say that if I did not believe it is necessary to enact legislation such as is provided in the pending bill in order to successfully and properly conduct this war, I would not vote for it. I would not vote for it in time of peace; but believing, as I do, that it is necessary now, I do not hesitate to vote for it, because I believe it is constitutional. [Applause.]

I could go on almost ad infinitum, adding citation upon citation to this same effect, but I feel sure that no lawyer after careful and serious investigation will doubt the authority of Congress to enact such legislation, though drastic, as may be necessary to a successful prosecution of the war viewed from every possible corner and angle.

Mr. Chairman, I presume there never has been a war fought when there have not been those who hesitated, criticized, and objected to the doing of the things which were necessary to a successful prosecution of the war and otherwise hindered rather than helped to bring about the very victory which they so much desired. I presume it will ever be thus. Unfortunately we have in this country now those who are willing to be the beneficiaries of the Government's insurance of "life, liberty, and pursuit of happiness," but who are not willing to pay the premiums. They are willing to delegate to the other fellow the sole and exclusive right to represent them in the trenches in the face of the enemy, but are not willing to delegate to the President authority necessary for him to care for and provide for those who are there defending with their lives that liberty which these critics so much desire.

Some go so far as to contend that Congress has no constitutional right to grant to the Executive the power to make and promulgate rules and regulations for the carrying into effect the general laws which we enact, and I suggest that the difficulty perhaps is that they fail to appreciate that a law may be complete within itself, so far as declaring what may or may not be done, and yet leave to the Executive, whose duty it is to enforce it, the working out of details in the way of rules and regulations for the convenience in its enforcement.

In the Stranahan case, reported in One hundred and ninety-second United States, 470, the court seems to hold that Congress may leave to the Executive the duty of providing certain details in the execution of the law, which details involve certain independent action in the nature of discretion to the Executive. In that case Congress had passed a law giving the Secretary of the Treasury a right to appoint a board to consist of seven members, whose duty it should be to recommend to the Secretary certain uniform standards of purity, quality, and fitness of certain teas being imported into the United States, and upon said recommendation the Secretary should establish and promulgate a standard, and so forth.

The validity of this statute was contested on the ground that it was unconstitutional, because it granted to an executive official of the Government legislative power. The court said in that case that the contention was without merit; that the duty devolved upon the Secretary of the Treasury was merely an executive duty to effectuate the legislation as declared in the statute. The court then cites the case of Field *v.* Clark (143 United States, 649), where it was contended that the third section of the tariff act of October 1, 1890, was repugnant to the Constitution as conferring legislative and treaty-making power on the President, because it authorized him to suspend the provision of the act relating to the free introduction of sugar, molasses, coffee, tea, and hides. The court goes on to say that—

> We may say of the legislation in this case as we said of the legislation considered in Field versus Clark, that it does not, in any real sense, invest administrative officials with the power of legislation. Congress legislated on the subject as far as was reasonably practicable, and from the necessities of the case was compelled to leave to the executive officials the duty of bringing about the result pointed out by the statute. To deny the power of Congress to delegate such a duty would in effect amount but to declaring that the plenary power vested in Congress to regulate foreign commerce could not be efficaciously asserted.

It seems to me that this effectually covers this question. I think that we must all realize that it would be a physical impossibility for Congress, in these stirring, changing, kaleidescopic times to provide in the law every minute and necessary detail for its enforcement. We know that condtions are changing constantly. What may be necessary to be done to-day may not be necessary to be done to-morrow, or vice versa. Therefore, we recognize and the court recognized that the only practical thing for Congress to do is to legislate generally upon these subjects and then delegate to the Executive authority to make such rules and regulations for carrying out the law as may be necessary for its intelligent and effective execution.

To the same effect is the holdings of the court in One hundred and forty-second United States, page 651, to which I have referred in another connection. In the matter to which I now refer, Congress had, by law, in a general way, regulated the admission of aliens into the United States. The first section of that law simply declared that certain kinds of aliens should not be admitted, and section 8 thereof provided:

> That the Secretary of the Treasury may prescribe rules for the inspection along the borders of Canada, British Columbia, and Mexico so as not to obstruct or unnecessarily delay, impede, or annoy passengers in the ordinary travel between said countries, etc.

The right of the Immigration Commissioner under appointment by the Secretary of the Treasury to enforce certain rules and regulations which had been promulgated, based upon that law, was challenged. In the course of the opinion on this

point the court after first quoting paragraph 18 of section 8 of the Constitution, said:

The supervision of the admission of aliens into the United States may be intrusted by Congress either to the Department of State, having the general management of foreign relations, or to the Department of the Treasury, charged with the enforcement of the laws regulating foreign commerce; and Congress has often passed acts forbidding the immigration of particular classes of foreigners and has committed the execution of these acts to the Secretary of the Treasury, to collectors of customs, and inspectors acting under their authority.

So in the food-control bill, to which I have been referring, it is proposed by Congress to prohibit preventable waste or deterioration of foodstuffs or to prevent the hoarding of the same, or discrimnatory, unfair, or deceptive methods in the handling of the same; to do anything which is necessary to conserve the foodstuffs of the country and fixing a penalty for the violation of these inhibitions but of necessity leaving to the President the making of such rules and regulations as shall be necessary for carrying out in the most effective way the will of Congress thus expressed. I can not believe that in doing this we in any sense transcend our authority.

What is the final test? War has been declared. Is the doing of these things to which I have just referred necessary to a successful prosecution of the war and for the general welfare of all the people? If so, there can be no doubt in my mind of the right of Congress to enact such laws.

In the language of the court—

Let the end be legitimate, let it be within the scope of the Constitution, and all powers which are appropriate, which are plainly adapted to that end, which are not prohibited but consistent with the letter and spirit of the Constitution, are constitutional.

Mr. Chairman, we all love liberty, and in times of peace we may enjoy to the fullest that freedom of thought and action which can be had only in a democracy. But when the sovereignty of our Nation is challenged, when the very freedom we love is in danger, when the sacredness of home, of liberty and of ideals are imperiled, when to maintain and defend them we must fight, then every loyal, true patriot should not hesitate to forego that individual freedom of action and thought incident to peace times but lay that right, together with his life, upon the sacrificial altar of his country to the end that a concerted and united effort, under the Commander in Chief, may be made, so that the enemies of that liberty and freedom may be driven from the face of the earth. [Applause.]

The CHAIRMAN. The gentleman yields back five minutes.

Mr. HAMLIN resumed the chair.

Mr. YOUNG of North Dakota. Mr. Chairman, I yield 20 minutes to the gentleman from Oklahoma [Mr. MORGAN]. [Applause.]

Mr. MORGAN. Mr. Chairman, in considering this bill we should, of course, keep in mind the fact that we are engaged in war and that this bill is a war measure, and I have no doubt that this one thing will be very important in securing votes for it, as it should, because this bill is intended to strengthen our country, to bring this war to a successful conclusion at the earliest date possible with the least possible sacrifice on the part of our people.

It is intended to safeguard our citizens at home, but that is not all; it is intended also to aid our allies and their people. But it is not simply ourselves and our allies that this bill is intended to aid; but, as I believe we recognize, it has a world-wide scope, because through this measure and others we hope to bring this war to a successful conclusion, and if we do so all the nations of the earth and all the people of the earth will be benefited and blessed by the result. [Applause.]

I intend to support this bill. I intend to vote for it. There are some things about it that do not satisfy me. There are some things about it that I feel like criticizing, and I shall make some of those suggestions here to-night.

Now, this bill, according to its title, is designed primarily to encourage the production of foodstuffs and fuel; it is designed to carry out three things, namely, to encourage the production, to conserve the supply, and facilitate the equitable distribution of foodstuffs and fuel. But the encouragement of production is the chief object and purpose of this bill, as indicated by its title. Production is placed first in the title, in the first section, and in the third section; and I submit that the production of food is the great purpose and object of this bill. I do not want to underestimate the importance of conserving the supply of food or facilitating its equitable distribution. Certainly those things are of the very highest importance, and yet I think the increase in production is still the most important problem that we should deal with in this bill.

And yet here is a bill covering 18 pages of printed matter and a little over two pages devoted to the section which provides for the stimulating of food production. There are 21 sections and only one section relates in any way to provisions which are designed to stimulate and encourage the production of food. In other words, those who had charge of this bill, those who have had much to do in the discussion of this measure outside of the committee, those who are to have charge probably of its administration, have placed too much prominence, too much stress, too much emphasis upon the control of foodstuffs and not enough upon the increase of production.

Take the distinguished gentleman, Mr. Hoover, a gentleman whom I have never met but for whom, of course, I have great respect and admiration, as I know him by reputation, and his work has been largely not upon questions relating to the increase of production of food but in the distribution of food. That has been the great problem in Belgium, while the increased production of food for the next year, it seems to be, is a question of the very highest importance.

Now then, take the discussion of this matter in the public press, take the hearings before the Committees on Agriculture of the two Houses, take the speeches made by the distinguished chairman of this committee and other distinguished members of the Committee on Agriculture, and they tell us there is a shortage of food products; they tell us that our allies and our own country must have a largely increased amount of food or else somebody must go hungry. They emphasize the fact in introducing their discussion of this bill that we need so many hundred million bushels of wheat and corn, and so on and so forth, and yet here is your bill which I contend does not give any assurance that it will increase the production of food to any material extent.

Mr. LEVER. Will the gentleman permit a question?

Mr. MORGAN. I certainly shall be glad to yield to the distinguished chairman.

Mr. LEVER. Has the gentleman any suggestion which would more encourage farmers to produce than, in the first place, to guarantee to them a free and open market for the sale of their goods as against the market now manipulated by gamblers and speculators on the one hand and, in the second place, to guarantee to them a reasonable and fair profit upon that which they produce? Can the gentleman suggest any way by which we can increase production other than that, except by conscripting men and putting them on the farm?

Mr. MORGAN. That is a fair question. And, of course, I shall do my very best to answer that question, because that is the very thing I wish to discuss.

Now, then, the free and open market to which the gentleman refers, I think, is somewhat indirect and indefinite. I do not see how the farmers will comprehend that in a way that will induce them to enlarge their production in any manner. It may have some effect and may be of some benefit to the farmer, but on the other hand, it may be some detriment because the speculator sometimes serves the interests of the farmer. It is true the farmer usually sells a greater part of his grain early after it is harvested and the farmer does not get the benefits of the advanced price, but sometimes the speculators play in the hands of a large portion of our farmers. So it is not altogether an evil, this speculation, so far as farmers are concerned. But there is danger with this large control that you place in the hands of the Government or the man who has control of these matters; that when the Government controls large amounts of wheat or corn or any other product it will tend to depress prices rather than to enhance them.

Mr. SWITZER. Now will the gentleman yield?

Mr. MORGAN. Yes.

Mr. SWITZER. Is it not true that with the enormous supply of coal, with the mines in this country open and profits on coal greater than ever before known, the production of coal has not been greatly stimulated in the last year, or the quantity enhanced, rather?

Mr. MORGAN. I am not so familiar as the gentleman is with that question, but I am inclined to think that is true.

Mr. HOWARD. Mr. Chairman, will the gentleman yield?

Mr. MORGAN. Yes.

Mr. HOWARD. The gentleman is talking about wheat?

Mr. MORGAN. Yes.

Mr. HOWARD. Does the gentleman know that the farmers of the United States got for the 1916 wheat crop, by actual statistics of the Agricultural Department, an average price of $1.22, and to-day it is selling for $2.15 a bushel?

Mr. MORGAN. That may be perfectly true, and yet I know that last November, just before the election, as I went over my district my farmers were hauling their wheat to town and getting $1.75 a bushel. I know also that I read in my local papers only a few days ago that some of my farmers hauled their wheat into town and got $3 a bushel for it.

Mr. SWITZER. Is it not also true that some of that $1.22 wheat made flour that sold for $8 a barrel?

Mr. MORGAN. That may be true. Now, what is the effect of this provision which gives the President the right to fix a reasonable guaranteed price? That is the term used, "a reasonable guaranteed price."

Mr. BLANTON. Mr. Chairman, will the gentleman yield?

Mr. MORGAN. Yes.

Mr. BLANTON. Along the line of the gentleman's argument, is it not a fact that the farmers of our country through necessity are forced to market their product within 60 days?

Mr. MORGAN. That is true to a large extent.

Mr. LEVER. And for that reason is it not true that if you guarantee to these farmers a reasonable profit you will increase the stimulus of production?

Mr. MORGAN. That is a question I want to discuss in a little while.

The bill gives the President the power to fix a reasonable guaranteed price, and that is the one thing that is intended to stimulate production. Now, then, who can tell me, except by conjecture or opinion, what will be the effect of that? My friend from South Carolina says it will stimulate production. That is only an opinion; that is only a conjecture. I have heard a farmer say, talking to him personally in Indiana a few days ago, that that would discourage production. He said: "We want no price fixing. We want to be let alone. We are willing to take our chances." I repeat, it is only a matter of conjecture and opinion whether that will increase production or not.

It is too general also. How much will it increase production? I will ask that question. Would it add 10 per cent, will you say—is that your opinion—to last year's production? Will it add 20 per cent? Is that your opinion? Will it add 25 per cent or 50 per cent? There is the question. No man can tell. One man will say one thing and another man will say another thing. But no man living can tell what stimulating effect that will have on production. It is a matter of absolute conjecture on your part.

Mr. LEVER. The gentleman and I will agree, I presume, that we do want to stimulate production.

Mr. MORGAN. Yes, sir.

Mr. LEVER. The committee has tried to provide two methods of doing it, one by guaranteeing a free market and another by guaranteeing a reasonable profit.

Mr. MORGAN. We have in the United States nearly 3,000 counties—about 2,850 counties altogether. We have, I think, now something like 2,000 county agents. I would put a county agent in every one of those other counties, as I believe the other bill we passed authorized. I would immediately put those agents to work making contracts with farmers to increase their production in wheat and corn and other products such as are wanted. It would be absolutely a practical way. I would put 3,000 men to work, and, if necessary, let them appoint deputies in the counties, and within 30 days you can contract for any additional amount of acreage of wheat or corn or other products within the power of the farmers to produce. You could go at it in a systematical and plain and practical way. If you want an extra million acres of wheat, you can contract for that. If you wanted 2,000,000 extra acres of corn, you can contract for that.

Is not that the practical way? You would know then just about how much you would have, taking in the possibilities of failure, and so forth. You would at least know what additional acreage you would have. I insist if one of our great business corporations had this proposition to handle that is the way it would handle it. It would send out its agents and make contracts for so much additional acreage of corn or wheat or potatoes.

But under this provision it is absolutely indefinite. This provision may bring 50,000 additional acres of wheat or a million additional acres of wheat. You can not tell. It is only conjecture. There is no head, no knowledge about it at all. When the time is over for planting wheat, you know then what you have got, but then it is too late for the next season.

Mr. LEVER. The gentleman's theory is very nice and interesting, and it is that you just put folks out in the field and hook up with the farmer and make a contract with him for so many acres of wheat. But on what basis? What price?

Mr. MORGAN. Right there, the gentleman says, "At what price?" The question of price is not the most vital thing, so far as this Government is concerned, and so far as our allies are concerned. The question of price to the consumers at home, the great masses of our people, is supremely important, but to this Government and our allies it is unimportant and insignificant. Whether it is $1 or $2 or $3 a bushel, is not the essential thing. It is the food that we want to sustain life and to sustain our armies until we can win a victory. Did we talk about price when we proposed to make a loan to our allies? Oh, no; we voted to loan $3,000,000,000. We did not higgle with our allies. We said to them, "How much do you want? Here it is, and there is more to come if you want it." Three billion dollars in a gift, so to speak, or for 40 years' time. But when you come to deal with the farmers of the country, then you higgle with them and higgle with them and higgle with them about the price. The price is unimportant. It is our national life that is at stake, and the question of price so far as the Government is concerned is a secondary matter. I know the farmers would respond with patriotic hearts. They would not hold up this Government in this great cause. They would contract to plant that wheat at reasonable prices, and do their utmost to produce the food necessary to feed our people and our allies.

Mr. LEVER. Is it the gentleman's idea that we should call upon these farmers to produce millions and millions of bushels of wheat, and run the risk of an increase in submarine warfare to such an extent that prices would go far below the cost of production to the farmer? Is the gentleman absolutely ignoring the proposition of a reasonable and profitable price to the farmer in this matter?

Mr. MORGAN. There is danger, gentlemen, that when the Government decides what is a reasonable guaranteed price, when the Government decides what will give the farmers a reasonable profit, what is sometimes called the minimum price or reasonable price will become largely the maximum price that the farmer gets for his grain. It will go out over the Nation to dealers, millers, and everybody that the Government has said, "So and so is a reasonable price to the farmer," and it will be difficult for the farmer to get anything in excess of that. I am expressing my honest conviction, as well as my fear, that that so-called "reasonable price" will be a price that will tend to depress the natural and fair price to the farmer.

Mr. WASON. Will the gentleman yield?

Mr. MORGAN. I am glad to yield to my friend from New Hampshire.

Mr. WASON. Does the gentleman think that a reasonable profit in fixing this guaranteed price would be prejudicial to the interest of the producer on the land?

Mr. MORGAN. Just as I have said, the farmer certainly is not any more selfish than the rest of us. He naturally magnifies the increased cost of production. As has been said here frequently, everything the farmer uses in producing this grain has increased, especially the price of labor. Our munition factories and other great demands in the cities are paying labor what might be called excessive wages and taking the farm labor away from the farm, so it has largely increased in price. It is natural for the farmer to take these things into consideration, while it is natural for the nonfarmer to think that what the farmer gets is all profit.

The CHAIRMAN. The time of the gentleman has expired.

Mr. YOUNG of North Dakota. I yield to the gentleman 10 minutes more.

Mr. SWITZER. I should like to ask the gentleman from Oklahoma a question, because I have been having some correspondence along this line. Suppose it costs $1.50 a bushel to produce wheat. In some parts of the country it costs on an average this year certainly $1.25. What would the gentleman call a reasonable profit where it costs $1.50 to produce wheat, taking into consideration that this year you may not have any, that you may not have any wheat on that land next year, although you plant it, and you may have a crop the third year? What does the gentleman call a reasonable profit?

Mr. MORGAN. That is hard to tell. I have a letter from a grain dealer in one of my counties, in the extreme western part of my district. He said, "Last year we had a good wheat crop, but this year it is an entire failure, so the farmers this year will make nothing."

Mr. WASON. In your contract that you speak of, made by the Government and the farmer, what would be the consideration expressed in that contract?

Mr. MORGAN. I would say in consideration that the farmer did so-and-so, the Government of the United States agrees to do so-and-so, or, if necessary, I would put in the nominal consideration of $1. There would be no trouble about the consideration.

Mr. WASON. When you have done that, would you provide in the contract which you are talking about that the price of the product the farmer will raise under that contract shall be so arrived at that he shall receive a reasonable profit for his labor?

Mr. MORGAN. I am not going into details. I would give him a reasonable profit; pay him $1.50 or $2; but that is a detail. I would make some contract with the farmers that would be reasonable.

Now, I want to present this proposition: You propose to give a reasonable price as the best way to encourage production. It seems to me that if you are in earnest that is not the proper way to do it. The proper way is to say to the farmer, "We will give you a bonus of 10 cents or 15 cents or 25 cents a bushel if you will produce so many additional bushels to what you produced last year, or if you will produce so many bushels we will give you 10 per cent or 15 per cent or 25 per cent above the market price for your stuff. That would encourage production. That would be an inducement to the farmer to increase his crop. That would be an encouragement, because then he would know that we were giving him something extra for his labor, but under this proposition the farmer does not know but that the effect will be to depress the regular prices. So if you want to encourage the farmer to increase the production, give him a bonus above the regular price. That would be fair. Or the two propositions might be combined. Let the guaranteed price stand and, in addition, give the farmer a bonus or premium on his increased production.

Mr. SMITH of Michigan. Will the gentleman yield?

Mr. MORGAN. Certainly.

Mr. SMITH of Michigan. Suppose the crop was an entire failure, like it is in some States in the West, and the man did not raise anything, what would be the basis of the reasonable profit in that case?

Mr. MORGAN. Like what it is now; he would make nothing.

Mr. SMITH of Michigan. But the Government says it will guarantee a reasonable profit.

Mr. MORGAN. Yes; on what he produces.

Mr. WASON. Suppose the market price was away below the cost of production. You would give the farmer a bonus which might not under some circumstances amount to the cost of production plus the reasonable profit. Would he not be better off under this bill?

Mr. MORGAN. If the supposition is true, but the gentleman is assuming that the price will be below the cost of the reasonable profit. At any rate, under this bill you do not pretend to give the farmer anything extra, you give him a reasonable price and make him believe he is going to get something higher. To this reasonable price you can give him a bonus.

Mr. WASON. How does the gentleman construe this language," And fix and to give public notice of what under specified conditions is a reasonable guaranty price for any such product"?

Mr. MORGAN. I do not think that will encourage production. If you want to encourage production, the way is to give the farmer a premium on the ordinary price he would get in the regular trade. Then there would be some inducement, but under this there is no inducement.

Another proposition that is practical and that would tend to help the farmer is the question of credit, and I want to close on that point. You know I have talked about that a good deal, but it is a subject that ought to be talked about a good deal. If the farmer is to increase the production he must have increased facilities, better tools, better machinery, better equipment for the farm, and he must have more labor. One-third of the farmers of the United States are tenants; they do not own the farms. One-third of the farmers of the country who own farms have mortgages on them. So that two-thirds of the farmers, over 4,000,000 of them, either have their farms mortgaged or they are men who have no farms and have little credit. To enlarge the business of the farmers means you must enlarge their credit, and you can not increase that business unless the farmer does have increased credit. It can not be enlarged on cash. The farmers do not have the cash.

It takes money to put in wheat; it takes money to buy seed wheat; it costs money to prepare a farm for seeding and sowing wheat, and there is a large percentage of farmers who have not the money and neither have they the credit. So the bill ought to provide some way that the farmer may secure personal credit and increase their farming operations at a reasonable, if not a nominal, rate of interest. Remember that the fate of the Nation, remember that the destiny of the world depends on this proposition, whether we can feed ourselves and our allies and the people inhabiting these great nations. The fate of the Nation is hanging on that, and here you higgle and haggle over a few dollars and cents. Why not extend to the farmers of the United States ample personal credit; authorize the Secretary of the Treasury, through the Federal Farm Loan Board and the Federal land banks, to go to the farmers of the Nation and see if they need credit, and give it to them on reasonable terms so that they may be equipped and ready to do this work. That, then, would be along the right line. I repeat that in my honest judgment, certainly without any partisan spirit, as I study this bill, so far as it is a measure to increase the production of food products I regard it a comparative failure, and it ought to be amended. We ought in some way to put propositions in here that would insure that during the next season we shall produce all of the foodstuffs necessary for ourselves and for our allies, for our armies and navies, to the end that this great conflict in which we have entered so unselfishly shall be carried to triumph and victory, that all of the nations of the world shall be blessed through our efforts and sacrifices. [Applause.]

Mr. LEVER. Mr. Chairman, I yield 15 minutes to the gentleman from Georgia [Mr. HOWARD].

Mr. HOWARD. Mr. Chairman and gentlemen of the committee, I do not know that I can add anything to this debate beyond what has already been said, and ably said. I do not want to say anything in criticism of this committee; I would not say it. I think the able and distinguished gentleman who is the chairman of the Agricultural Committee has done as much, if not more, in the time that he has been chairman of this committee in this House, with the assistance of his able associates on the committee, the gentleman from Georgia, my able colleague, Mr. LEE, and others, for the agricultural interests of this country as has ever been done for the country by any committee in the history of the country. [Applause.]

If I were to make any criticism of this bill at all it would be upon the ground that it is not drastic enough. For instance, take these gentlemen who hail from the North Atlantic States, the great industrial centers of the country. They have, in many instances, been paying their labor liberally. Their labor comes to them day after day and week after week with the plea that upon the wage they are now receiving they can not exist, and some of these great manufacturers and owners of these great industrial plants have been granting increases to the wage scale until they have about reached the breaking point, where they can not give these poor fellows any more, under the circumstances, because they have existing contracts for future delivery. Yet in 90 days, from the 1st day of March until the 1st day of June, the principal commodities consumed upon the average American citizen's table daily have increased 51 per cent. Let us take the statement of my good and very able friend, the gentleman from Oklahoma [Mr. MORGAN]. He thinks this bill will be prejudicial to the farmer's credit. What does this bill do? Let us see how it affects the farmer. You are talking about credit. What could stimulate the credit of the farmer more in this great crisis, when no man can look beyond the day, than for the banking interests of the country to know that the farmer was planting his crop on a certain reasonable-profit basis? It would give him a credit he never had before in his life, and the thing that he has been dreaming of under the shade of the apple trees while the June bugs and bumblebees were playing among the clover blossoms, would come true—a reasonable rate of interest from the banks to meet his financial demands.

Mr. Chairman, there are a lot of tender-footed people, I know. I have some colleagues here that I am very fond of, but I know some of them who weigh as much as 180 pounds who could walk on eggs and never crack a shell. [Laughter.] They are absolutely afraid to take the bridle off of their intellect or give it free rein. My friend YOUNG, of Texas, is afraid that his little yearlings down in Texas will not sell for a dollar a pound on the hoof if this bill passes. He raises 2,000 bushels of wheat, so I understand, in his whole district.

Mr. BLANTON. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. Not now.

Mr. BLANTON. Just for one question?

Mr. HOWARD. Very well.

Mr. BLANTON. The gentleman spoke of contracts existing.

Mr. HOWARD. Yes.

Mr. BLANTON. Does not the gentleman from Georgia know that right at this season of the year the cattlemen of the South are making their contracts for their calves, and the purchasers who pay them are expecting to get a certain price for them after developing them?

Mr. HOWARD. Yes; I know that; and I know that these very men who are producing these calves you are talking about would make my wife and yours pay 60 cents a pound for round steak if they could do it, and I am against them on that proposition. [Applause.] There is a limit to this extortion in food, and you might as well meet this proposition manfully. You need not think that the farmers of the United States are less patriotic than any other class of men. They are not. What the farmer has been asking for 50 years of this Nation is not for any false profits, not any get-rich-quick schemes, not extortionate profits. He has been asking nothing on the face of the earth but justice, and that is all he expects—a fair and reasonable profit on his toil and sweat. What is the farmer making

out of this? Take them in my section of the country, as good a section of country as God's sun ever smiled on.

They are paying two prices for fertilizers. They are paying 100 per cent increased prices for farm implements. They are paying and buying back this minute the wheat on which they averaged $1.25 a bushel on a basis of $3.80 per bushel, and the miller retains the shorts in the bran. It is all wrong to be approaching a great question in a tender-footed manner, afraid you are going to offend some farmer friend back home. I will tell you what the farmers of Georgia want, irrespective of what some people that have some legislative functions to perform may think. They want the great President of the United States to have in his hands in this crisis the power to relieve him of every burden it is possible to relieve him of in bringing this war to a speedy and successful conclusion, and they are willing to trust this great and just man implicitly in this war. All the demagogues under the sun can not shake their confidence in him or their affection for him. They are no longer his critics, they are his sympathizers. [Applause.] Now, what have you got? You have got a whole lot of mink-eyed, conscienceless speculators in this country that are squeezing the lifeblood out of the citizens of the country by exacting outrageous and unheard of prices for the commodities they get their hands on. Why, if this thing keeps up, if some regulation is not speedily enacted, the ordinary workingman's child that sees a biscuit six months from now will be so unaccustomed to the sight of one that it will put a coal of fire on it to see if it will not crawl like a terrapin. [Laughter.] And, talking about biscuits, why everybody has quit eating biscuits except the millionaire. We commenced to eat corn bread. And it is mighty good when you know how to make it; but I never saw a Yankee in my life that did know how to make it. [Laughter.] The minute we commenced with corn bread, corn that these speculators had cornered went to $2 a bushel. If you go to eating round steak and abandon porterhouse, these beef barons will put up the round steak and allow the porterhouse to stand where it is. There never was in the history of this country as much high-handed robbery going on as there is to-day in the United States without any justification for it on the face of this earth, and yet gentlemen say they are afraid of vesting the President with plenary power to take these speculators by the scruff of the neck and shake them loose from their hoardings. Take my friend HAUGEN's great dairy folks up there.

The greatest philanthropists that ever lived are the dairy people of the Northwest. Elgin, Ill., fixes the price of butter every morning. Let us see what they are doing for their dear patrons at this time. Right at this time the production of milk and butter can be made cheaper than at any other season in the year. Grass is the best balanced ration on earth for the production of milk and butter. Milk and butter are being produced this month cheaper on an average all over the United States than during any other month of the year; but yesterday morning I paid 60 cents for 1 pound of Elgin butter.

Now, you talk about being tender-footed about this thing. You are talking about offending the farmer. This bill starts after the product leaves the farmer. It does not touch food in the hands of the actual producer. It formulates an effective marketing system, it regulates the price between the farmer and the retail merchant, and I can understand readily why my good and distinguished friend, the chairman of this committee, did not reach out and get the retailer. I would like to drive a few pegs around him in this bill if I could get at him. But there are about 250,000 of them in the United States, and we would have to employ an army of employees to run around and catch them.

Now, getting back to this foodstuff, I want to leave the farmer just a minute. We want to leave him sitting under the June apple tree and not worrying, like my friend Morgan is, about what is going to happen, but perfectly contented with provisions of this bill, because I tell you right now, and you mark my prediction, it will be 10 years after this war before the products of the farm will reach anything like the normal prices of the spring of 1914. I will not take time to go into it, but a man that has enough brains to fill a mustard seed can see it is a physical impossibility for the farmers, not only of this country but of the world, to produce enough in the next 10 years to meet the demand occasioned by the great devastation that has taken place because of this war, if the war did not last another minute.

There is another class of gentlemen I want to pay my respects to. I do not know of but two or three prosecutions have taken place against these coal operators in the country. You are all jumping onto the manufacturers and saying that they are exacting outrageous prices. Yes; they have been doing so. They have exacted them, and some of them are robbing the folks in their prices, but there is a great number of these honest manufacturers in this country that have had their overhead charges increased by a 100 per cent increase in coal in the last six months, that is as unjustifiable as the murder of an innocent babe, so far as the circumstances surrounding this increase are concerned.

I know of one coal-operating company—I will not name it, but I will state it authoritatively from the inside—that declared a 54 per cent dividend in 10 months on a $14,000,000 capitalization, and on the 1st day of June divided in their office in the city of New York $9,000,000 net profits. The people in the great city of Atlanta, the labor organizations and the poor people and the manufacturers have been appealing to me for relief in the region where the increased cost of producing a ton of coal now over the cost in 1915 has been only 12 cents per ton, and that has been paid to an underpaid crowd of mine workers.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. Yes.

Mr. SWITZER. Have you ever heard anyone say what methods or means are to be employed to bring about a reduction of coal prices? That is one thing I have not heard discussed at all.

Mr. HOWARD. Just suppose for a minute—it is a violent presumption; but just suppose—that I was President of the United States for 20 minutes. [Applause and laughter.]

Mr. SWITZER. Along that line please state, if you know——

Mr. HOWARD. It seems as if I would get all the Democrats and a good many Republican votes. [Laughter.]

Mr. SWITZER. I think you would. Please state just who is looking after that on this Council of National Defense?

Mr. HOWARD. I do not know. But let me tell you about the Council of National Defense. Do not condemn the Council of National Defense too quickly. There are a lot of good, patriotic gentlemen on that council that are down here trying to serve their country patriotically and without compensation. They may not all be in that class, but the great majority of them that I have met I have found to be conscientious, alert business men who are patriotically attempting to drive good bargains for their country, and I am glad to say they are driving many good bargains for Uncle Sam. [Applause.]

And right here I want to say I had received some information from my district, and I made a statement here on the floor of this House about contracts that were let in the South, and after I had made a thorough and sifting investigation of it I found out that the Council of National Defense did not let that contract, but that it was let by other parties in authority, and that the statements made about high prices paid were made about two or three thousand feet of lumber instead of the great bulk of lumber that was used in that construction. That was simply bought to finish up this job, which was one of emergency. Probably this statement should be made at another time, and I shall, if the opportunity presents itself, tell the House what I know of the splendid service being rendered the country by these gentlemen comprising this Council of National Defense.

Mr. SWITZER. I wanted to know what they are doing. I was not trying to discredit them. I wanted simply to know what they were trying to do.

Mr. HOWARD. Let us see what they are trying to do. They are trying to drive a bargain for coal for the Government of the United States, and they are in this position—here is what the coal operators say: They say, "We have not been making any money. We have got a chance to make it now. We have got the coal. You need this coal badly, and you have got to pay for it." That is their attitude.

Mr. JACOWAY. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. Yes.

Mr. JACOWAY. I would like to ask the gentleman from Georgia if he thinks the coal operators and the men who have the coal now in their possession and now hoard it would at once double the price of coal and make it twice as high as it was this time last year?

Mr. HOWARD. Of course. That is what I am telling you. The people of the United States will suffer, and do not you fret about the President of the United States. I have as much confidence in him as any living man, and I am not by myself. The people of this country believe that he has got the courage to do anything he believes is for the preservation of this Nation and to see to it that the common people get a square deal; and as soon as this bill becomes a law, under it he can go to these coal operators, and if they will not run the mines on a reasonable profit basis he will and he will give the people coal at a reasonable price. That is what will happen, and that is what ought to happen. [Applause on the floor and in the galleries.]

The CHAIRMAN. The Chair wants to admonish the occupants of the galleries that they have no right to express approval or disapproval of anything that is said on the floor. The people in the galleries will kindly pay attention to that.

Mr. HOWARD. The coal fields near my great city and in the surrounding territory, from which all the surrounding manufacturers get their supply of coal, have increased, as I said a little while ago, their cost of production 12 cents a ton, and yet that coal has risen in price from $4 a ton to $8 a ton, and the retail coal dealers in the city of Atlanta have notified their regular customers that if they do not get their winter supply by the 1st of September they will have to pay between $9 and $11 a ton for it.

Mr. ROBBINS. Will the gentleman permit a question there?

Mr. HOWARD. With pleasure.

Mr. ROBBINS. Are there not some elements in this coal situation that are peculiar—for instance, lack of transportation and lack of labor? I admit the gentleman's argument, but I want him to consider those things.

Mr. HOWARD. Good. I can answer that. I see both the gentleman's questions now, and I will answer both. In the winter of 1916 the coal operators said there was a shortage of coal cars. The people believed it, and they said that if there was a shortage of coal cars and the railroads could not get the cars to transport the coal, they would pay the price. That was when coal cars were supposed to be used to their utmost capacity in the transportation of coal. But here it is in June, in the summer time, when the great quantity of coal to keep the people from the shivering blasts of winter is not being used or moved, and yet these conscienceless coal operators in the month of June, when they can get plenty of cars, are saying to the American people, "Pay the price or freeze next winter."

Mr. GALLAGHER. Is it not a fact that it was established that hundreds of cars were loaded and kept on sidetracks last year?

Mr. HOWARD. Why, certainly. I saw hundreds of cars of coal in the month of December away out on a spur track 4 miles from the city of Atlanta.

Now, I want to answer the other question about labor.

Mr. ROBBINS. Before the gentleman goes on I want to say this, that conditions are different in different parts of the country.

Mr. HOWARD. Yes. You have been congested up in your country; I will admit that. Congestion brought about by lack of storage facilities at the great ports for the supplies of our allies.

Mr. ROBBINS. For instance, in the Pittsburgh district there is the lake trade that takes the coal in the summer.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HOWARD. Will you give me five minutes more?

Mr. YOUNG of North Dakota. If the gentleman will tell us what he will do when he becomes President, I will give him five minutes more.

Mr. HOWARD. I appreciate that courtesy. I said that was a very violent presumption, and as I am so well satisfied with my President now, I must refrain from saying all that I would do.

Mr. PLATT. I should like to ask the gentleman whether it is not a fact that people who are not in any danger of freezing to death are buying coal?

Mr. HOWARD. Why, certainly. It is being delivered all over the country. People are panic-stricken, and I do not blame them. I do not know any more uncomfortable condition than to be nearly frozen to death, especially when we know that there is plenty of coal in the ground and willing hands to dig it, but a lot of operators who will withhold the normal output and make coal scarce so as to exact blood money from the people.

There is enough coal in the United States to furnish plenty of coal for the people on the basis of past increase in population and consumption for over a thousand years. God Almighty gave this country that fuel for the protection of our families from cold and to furnish power for our industries. We are entitled to this God-given product at a reasonable price, plus cost of transportation and labor. If these men who have these properties continue to rob us, then the only alternative is given in this bill. The President can commandeer these mines and operate them for our people.

There is one subject dealt with in this bill in which I am deeply interested, and I am always ready to talk about it. It is this: You have in section 13 in this bill, which provides for the conservation of grain in the manufacture of alcoholic and nonalcoholic beverages. I do not think I will support that section in its original form, and I will tell you why I will not do it. I am going to offer an amendment, and I think my amendment is going to be adopted. I believe it will be adopted when that part of this bill is reached. I want you gentlemen to think about that phase of it between now and the day when that section is reached. There never was a more important or greater economic question than the liquor question in this country, and there never will be until we get rid of it.

You are fixing to conserve the grain for the manufacture of distilled spirits and the grain for the manufacture of malt liquor—beer. Now, what do you do? In five months every drop of beer in the United States will have been consumed. Then you will have these delightful friends of the people, the liquor distillers, in possession of between 300,000,000 and 500,000,000 gallons of distilled liquor, and the men who are inclined to consume alcoholic beverages will be forced to drink distilled liquors or liquor. And if this war lasts three years, by the enactment of that very section of this bill you will create more drunkards than have been created in a decade before, because you will force every man who has a craving for alcohol to drink distilled liquors. My friends, I believe that the President of the United States is expecting this Congress to assume some of the responsibilities and some of the burdens of the Government. I believe firmly that the President is waiting for this Congress to initiate some legislation along that line. We have no right to go out and ask the mothers and the fathers of this Nation to give their sons to us and move them into an atmosphere of immoral influences. I will admit that we took a long step when we said you shall not sell this stuff to an officer or a private in the uniform of this country. But we are going to make a mistake if we adopt this section 13 and stop there. I am as good a prohibitionist as any man; I am mighty near as good a prohibitionist as the gentleman from California [Mr. RANDALL]. I am bone dry; I am as dry as a bone in the Desert of Sahara. [Laughter.] But I am not going to vote to give these liquor people a monopoly on alcoholic beverages in this country and enhance the value of their liquor from $3.50 or $4 a gallon to $8 or $9 or $10 a gallon. Of course, they will pay the additional tax of $1.10; of course, the patriotic gentlemen who have defrauded the Government out of not less than $150,000,000 in the last six or eight years on all sorts of schemes and conspiracies to defraud the internal-revenue office will pay this additional tax.

Mr. SABATH. Will the gentleman yield?

Mr. HOWARD. Yes.

Mr. SABATH. Will the gentleman enlighten the House as to who would pay $8 or $10 a gallon for this liquor?

Mr. HOWARD. Did the gentleman ever see a man who wanted a drink right bad? If he has, he will see one who will give his soul, let alone his money, for a drink.

Mr. SABATH. I did not know that we had any people who wanted a drink so badly as that.

Mr. HOWARD. The pawnshops have been run from time immemorial by men who loved liquor better than the most esteemed and revered heirloom. Talk about enhancing the value of liquor; of course it will. The man that does not know that it will do it—I can put the brains of that man in a mustard seed, and it will have as much room as a bat in a meeting-house. [Laughter.] Of course it will do it. It will give them a monopoly unless the President of the United States steps in and fixes the maximum price of liquor.

Mr. SABATH. Would the people of the gentleman's State pay an exorbitant price for this liquor?

Mr. HOWARD. I do not know; it is bone-dry now. If they could get a gallon to-day, I suppose they would give $10, and they might give $20. I expect you could get $1 a drink for it right now in some quarters of my State.

Mr. SABATH. Does the gentleman want to say to this House that none of it can be secured in his State?

Mr. HOWARD. Of course, it can not legally be bought. I will tell the gentleman the result of prohibition in my State. I got a letter last week from a gentleman in my district. He stated that the city was now forced to hire free labor to work the streets. Since the Reed amendment was made the law of Georgia by a session of the legislature, drunkenness and crime in the entire State has been reduced 75 per cent. That is the effect of prohibition in Georgia. The reason we have never been able to enforce it is because the liquor men polluted our territory by setting up blind tigers and financing them and shipping liquor into our State, debauching the people with the meanest kind of liquor at that. This is a serious problem during the war. If I can not get absolute prohibition during the war, for which I pray most earnestly, then between the two give the people the less harmful and the more wholesome—beer. But for the sake of the country let us have war prohibition, and after the war peace prohibition. [Applause.]

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. YOUNG of North Dakota. Mr. Chairman, I yield 15 minutes to the gentleman from California [Mr. OSBORNE].

Mr. OSBORNE. Mr. Chairman, I support and shall vote for this bill. Why?

I admit that it is the most drastic, the most restrictive, and the most far-reaching bill in its application to what are ordinarily considered the rights of citizens ever introduced into the American Congress.

The gentleman from Texas [Mr. YOUNG] and the gentleman from Indiana [Mr. WOOD] are fully justified in their scathing criticism of the bill but for one supreme fact—the fact of war.

That supreme fact changes and revolutionizes the ordinary and accepted rules of society and the laws governing human rights that prevail in times of peace.

None of us like these drastic laws and autocratic interferences with the freedom of action of the individual.

When we voted the resolutions declaring a state of war on the 5th of April, however, we took the supreme and irrevocable step, and removed ourselves from the orderly rules and sensitive protection of a condition of peace.

Speaking for myself, the great struggle of mind and heart was over the question of declaring war. I realized that all these other distressing things would follow—the raising of a great army; the voting of vast sums of money for war purposes; unusual and burdensome taxation in a war-revenue bill; restrictions upon the freedom of individuals in many ways, to render more effective our own efforts in war, as well as those of our allies.

When I voted for war I voted for all these things, and I knew it then. The great struggle with me occurred before and when I cast that solemn vote. I speak for no one but myself, and I judge none other; but when I voted that there was no path of national safety and honor except that of war and placed the conduct of that war, so far as my own vote was effective, in the hands of our Chief Executive I felt in honor bound to extend to the President as Commander in Chief of our forces all the power that may be necessary to bring the war to a successful issue. [Applause.] In good conscience I can not escape that responsibility if I would. However objectionable might be the measure under consideration in time of peace, in time of war, and especially in the present terrible and unexampled war, which it seems more than likely finally will be decided upon the question of food supply, it appears to me to be necessary and desirable, and I shall vote for it as a war measure without hesitation.

In discussing the emergency military bill on this floor on April 26 I used the following language:

> The United States has been at peace for more than 50 years, with the exception of the brief War with Spain in 1898. Two generations have come into the world since the close of the great Civil War in 1865, who have no knowledge of the grim character of war except as they have gained it in their reading of history. It is difficult for them to realize that the necessities of war demand repressive and restrictive rules of conduct and a concentration of the entire power of the Nation in ways that are unusual, harsh, and sometimes even cruel, in order that war may be effectively carried on.
>
> From the moment the President signed the resolutions declaring a state of war, conditions were fundamentally changed. The Congress by its own act had placed upon the President the responsibility of successfully conducting that war. In the performance of that great duty he was entitled to receive from the Congress the widest latitude of power and authority, and this extraordinary power must be extended throughout the entire period of the war. Congress having delegated this extraordinary task upon the President should accompany it with the utmost degree of confidence that justly, wisely, and considerately it will be exercised, and that at the conclusion of the war these extraordinary powers conferred for the accomplishment of a great purpose will be returned to the Congress and to the people by whom they have been conferred.
>
> For my own part, as the Representative in Congress of a constituency of a half million American people, I do feel and I do extend that confidence, and in good faith it is my intention to carry out upon the floor of the House of Representatives the mandate which was given the President when the resolution declaring war was passed by voting him in principle and in detail every power necessary to a successful outcome of the great adventure of liberty and freedom of the peoples upon which our country has thus been launched.

The rapidly increasing prices of foodstuffs growing out of the rivalry of the powers engaged in war in their efforts to obtain food for their own armies and peoples, combined with a diminution of crops in this country, present an emergency which must be met immediately and by extraordinary exercise of national power. In whom shall that power be placed? Who can we trust with greater confidence than the chosen representative of the entire people—the President of the United States. [Applause.]

It was truthfully said on this floor that this is a greater exercise of power than was ever given to a President throughout our history. But we were never involved in a war so vast as the present war, and no combination of circumstances has ever before arisen like that which confronts us to-day—the whole world in war and an extremely limited food supply. That the President desires this power for any other purpose than that of the welfare of the Nation, I can not conceive and do not believe. That he will exercise this power with justice and moderation and with an eye single to the welfare of the people and the success of the great cause in which we are engaged I do firmly believe.

Within our history more than one President has been charged by opposing partisans with a desire to exercise the powers of a dictatorship and, in fact, to become a dictator. Such charges were freely made against the grim victor of the Battle of New Orleans—President Andrew Jackson. During the Civil War our beloved President Lincoln was continuously assailed with charges of exercising tyrannical powers and of desiring to be the dictator of the country. When Ulysses S. Grant was a nominee for President of the United States and after he became President he was accused of an ambition to be the dictator of the country, and was constantly referred to in ribald print as "The man on horseback." One of our living ex-Presidents, whose devoted patriotism to-day none denies, was similarly charged. The same charge will probably be made against the present President of the United States.

It is to the everlasting honor, however, of every man who has ever held the exalted place of President that not one could ever truthfully be charged with such unholy ambitions. Every President, from Washington to Wilson—holding a commission of higher honor than that of any king, emperor, or dictator—has arisen to the high altitude of his exalted position in human society and has exercised his great power and authority in a conscientious discharge of his duties to the highest and best interests of the American people. I look for no less devotion and integrity in the present distinguished incumbent of that great place. I speak as one who is not a member of the political party of which the President is the head and who did not vote for him for President, but I accept the judgment of the American people and honor and trust him as the freely chosen head of the Nation and worthy of the great place. [Applause.]

I shall support the President by voting for this bill for these reasons:

First. I believe that some extraordinary power must be exercised to conserve the food supply of America and provide for feeding the world.

Second. I believe that this extraordinary power is necessary to stabilize the cost of food and, without injury to the farmer and producer, keep the price from being inflated by groundless alarm and the manipulation of speculators, so that the poor shall not go hungry and the working man and woman shall be able to secure food at reasonable and moderate cost.

Third. Because this is one of the most effective measures proposed for successfully prosecuting the war.

Fourth. Because its exercise will be confined to the war, and will close by its own provisions when the war is over.

During the long Civil War of four years there was a stalwart body of patriots on the floor of this House and in the Senate who differed with President Lincoln on political questions, but who accorded him the most unreserved and absolute support in all his war measures. They were known as "war Democrats." They were honored then and ever will be honored by their political opponents and by the press for their unswerving loyalty. On the other hand, there was a small body of Representatives in Congress, generally known and generally despised, who were denominated as "Copperheads." I sincerely hope that during this great war, which is still before us, we will have no counterpart in Congress of the men of the Vallandigham type.

For myself, I would desire that in the future, when this war shall be over and the victory won, if mention should be made in history of the actions of this Congress in prosecuting this war, I might have a humble place among those who shall be recorded as composing the body of war Republicans of the House of Representatives. I trust that their record shall be that they gave invariable and loyal support to the Commander in Chief of the Army and Navy in such legislation as was necessary for the conduct of the greatest war in history.

In conclusion I shall say that I gladly give my support and vote to this bill. [Applause.]

I ask unanimous consent to extend my remarks in the RECORD by adding the following telegram received this morning from the American League of California:

SAN FRANCISCO, CAL., *June 18, 1917.*

Hon. HENRY Z. OSBORNE,
Washington, D. C.:

At a meeting of the executive committee of the American League of California, held to-day, the following resolution was unanimously adopted:

"*Resolved*, That the Senators and Congressmen of the State of California be urged to do everything in their power in support of the food-

administration bill and the appointment of Herbert C. Hoover as director of food supply and control. Mr. Hoover is personally known to many members of the American League, many Californians, and to many officials of the league. We not only believe, but we know that Mr. Hoover is eminently endowed to serve his country and the world in the administration of such a bill, and we believe that the fullest powers should be given in the bill, knowing that the more power he is given the more wisely and the less he will use it. We also believe that prompt action on the above administration bill, with the appointment of Mr. Hoover, will satisfy and stimulate the American people."

W. B. BOURN, *Acting Chairman.*

Mr. LEVER. Mr. Chairman, I yield 20 minutes to the gentleman from Alabama [Mr. BANKHEAD].

Mr. BANKHEAD. Mr. Chairman, on the 5th day of April last this House by an overwhelming vote, exercising its constitutional function, declared a state of war to exist between this Government and that of Germany. It was the final and determined, though reluctant, protest of a proud but patient people against a series of outrageous and indefensible aggressions against our citizenship and our national sovereignty. To have longer endured them without a resort to arms would not only have righteously subjected us to the contemptuous scorn of our national contemporaries, but would inevitably have hopelessly cankered and mildewed our own self-respect, without which no free people can aspire or hope to endure. [Applause.]

By the fateful resolution of April 5 we as a Nation put our hands to the plow; and what man is there here who would turn back? By that resolution the Congress pledged all the resources of the Government to carry on the war to a speedy and successful conclusion. We have so far, despite clamorous disputation here and at the other end of the Capitol, held resolutely to a legislative program to make available and to scientifically mobilize the resources of the people for an effective prosecution of the war. We have voted unlimited credit; we have made it possible to call to the colors unnumbered soldiers; the people have oversubscribed an unparalleled bond issue; legislation will be enacted to raise ample revenues; the shipyards ring with the clamor of construction, building a great host of ships to carry commerce and supplies to our brethren in arms across the sea; and, better than all else, there lives in the hearts of the people of this Republic a suppressed but nevertheless a stern and unconquerable resolution to win, and to win gloriously, this fight. So, I say, we are making headway in making preparation for the grim business which lies ahead of us, for God alone knows how many, many months. But we have not completed the task.

We will have made a miserable failure if we do not provide for the safeguarding of the food supply of our people under the most adverse conditions that may be visited upon them, for that is necessarily the ever-present and always paramount problem of economics; it is so brutally persistent that it is inevitably compelling.

We all recognize that it is a legislative problem fraught with many difficulties. An absolutely unique and most heavy burden was laid on the Committee on Agriculture to conceive and construct this bill, and likewise a grave responsibility rests upon this House to consider it; to correct its defects, if they exist; to nullify its dangers, if any appear; to modify its harsh or unjust operation, if argument here points out such effects; but when those efforts are made and their benefit obtained, then, gentlemen, we must pass the bill. [Applause.]

Candor compels the admission that there is contained in this measure the delegation of plenary powers to the President or his selected agents which in ordinary times would be regarded as repugnant to every conception of a democratic government and subversive of individual freedom of action and management of one's affairs. But these are not ordinary times.

The conditions of the world require, at least temporarily, a readjustment of preconceived standards. If essential results are to be obtained by new means or by traveling uncharted courses, we must not and we will not in this tremendous issue be too tenderfooted or hesitant about adopting them. [Applause.]

Gentlemen here have invoked the limitations and the inhibitions of the Constitution against this bill. I am not disturbed at the prospect of doing violence to that sacred document by an affirmative vote for this measure. The legal aspect has been ably presented by gentlemen who have preceded me, showing ample warrant for constitutional favor under the war power and the general welfare clause to justify the provisions of the bill as framed. It is amazing to what lengths some men will go in constitutional interpretation to conjure up fictitious objections of organic violations in order to make Representatives hesitate as to the propriety of voting for a measure the validity of which might be assailed. This is always a persuasive and sometimes insidious weapon of forensic attack, for no Member is willing deliberately to violate that instrument which he has sworn to uphold; but I challenge any lawyer here to produce one single decision or even a fragmentary dictum handed down by John Marshall or Chief Justice Taney or any other of our great juridical luminaries to the effect that the Constitution, a great covenant for the preservation of the liberty of the people, in time of war can stand in the way of any measures necessary for the saving of the life and very sovereignty of the Government itself when in desperate peril. To take that view would be tantamount to saying that our supposed ark of the covenant of safety may be used by our enemies as the inviolable agency of our own destruction.

I repudiate the doctrine that the Kaiser of Germany can invisibly but potentially assail us in the most vulnerable part of our autonomy behind the mask of our own organic law.

And we have heard much in this debate concerning a dictatorship for the free people of this Nation. Great apprehension has been expressed that we are on the threshold of disaster and that the iron hand of despotic regulation is the precursor of total destruction of personal liberty among our people, and we are solemnly admonished that the ghastly apparition of a new and unbridled autocracy will soon stalk abroad, and that liberty will soon lie dead in the street.

Over against that imaginary fear I catch the vision of a real and sinister calamity. Already there comes to this Congress from the weltering beehives of concentrated populations the ominous appeal "We can not live upon what we make." As already shown here, in the last 10 years, while union wages in the country have increased 19 per cent the cost of living has risen over 60 per cent. There is no reason to expect during this war that the conditions will be improved, but upon the contrary that they will become more harsh and unbearable. They will inevitably become so unless by sumptuary and drastic legislation now we forestall the possibilities of actual famine and a rebellious people.

For one, I am not afraid of the application of healthy power, equally and humanely administered, to crush and destroy an existing power that is rooted in iniquity and has no longer an excuse to live. [Applause.] I am not afraid of a war-time dictatorship to help and to save our people and our Government, but I am deeply apprehensive of the continuance of an existing dictatorship, which by manipulation and jugglery and secret connivance and sinister cupidity feeds and fattens upon the substance, if not upon the souls, of helpless people. I am not afraid of a so-called food dictatorship, counseled and dominated by that best loved and most trusted of all Americans, who now presides in large measure over the destiny of this Nation, Woodrow Wilson, who has no ambition to lure him and no inducement to oppress. [Applause.] But, sir, I shiver at the possibility of a dictatorship directed by the morals and inspired by the conscience of that "imperial impersonation of blood and murder," called William the Second.

It is to save us against such a contingency that this bill is urged. Primarily, it is a domestic problem, but incidentally a community enterprise with our allies.

We must not attempt to cure the cancer of food speculation, exorbitant middle profits, and secret compacts with salves and blisters; we must cut it out by the roots, and this measure confers the power to apply the knife.

I represent a district composed very largely of men whose occupation is farming. For two years, on account of floods, droughts, and the depredations of the boll weevil, there has been an almost total failure of crops. And though the opponents of this bill argue with great zeal that it means the destruction of the farming interests of this country, practically all the letters I have received from home urging me for the love of God to try to do something to reduce the price of meat and bread are from farmers themselves. If a temporary crop failure by farmers can so deeply disturb their condition, what must be the fate of the 70,000,000 of our people who never produce anything?

But can we who represent farming districts in this hour of national peril afford to fail to consider the interests of the millions who toil in other industries and occupations, and out of a sense of territorial greed be mindful only of our own household, and let our fellow citizens at a distance go starve? Speaking for my people, I am unwilling to certify to that as the measure of either their humanity or their patriotism.

I shall vote for the bill, because it is urgently requested by our Commander in Chief as a war measure of tremendous importance. I shall vote for it because I believe that in its conservative administration it will assure and insure a reasonable food supply for domestic consumption and a surplus for our needy allies. I shall vote for it because I believe that it will bring the producer and the consumer into more equitable and just relations of profit and understanding; because it will encourage production by a guaranty of a minimum price insuring a fair profit to the producers of foodstuffs, if such guaranty be found necessary; because it will tend greatly to reduce the cost

of living to millions of our fellow citizens, now so sorely pressed to make tongue and buckle meet; because it affords an absolute curb to the ruthless and merciless gambler and manipulator; and because it finishes our program of national defense.

And then America mobilized; America ready for all eventualities; America conscious of the justice of her cause and the righteousness of her quarrel, calling upon the God of battles and the God of our fathers to witness the integrity of her high purpose and the unselfish motives which impelled her action in accepting the gage of battle, will strike with her full power. And we will win.

If need be, soon upon the far-flung battle line of France, touching elbows and in gracious comradeship with the descendants of the fellow citizens of Lafayette, will stand a million Americans of the iron blood and race type of the men who, drunk with the liquor of battle, whirled around the dragon standard at Senlac; who fought with Richard Grenville; who rode to immortality at Balaklava; who went down with the *Cumberland* at Hampton Roads; who charged to deathless fame and martial glory with Pickett at Gettysburg—the Anglo-Saxon race, unconquered and, please God, unconquerable. [Applause.]

And some day, after the captains and the kings depart—when "the pomp and circumstance of glorious war" shall be known no longer in the land—then peace. A temporary truce? No. Just a time for recuperation, then another and more tremendous Saternalia? No. My countrymen, let me here and now adjure you, in the name and by the token of the sacrifices this war will entail upon us, not using it as a pretext but seizing it as an opportunity, make common purpose to see to it that before this bitter business is concluded arrangements shall be made and covenants signed and sealed which will insure that hereafter war as a recognized human institution shall perish from the face of the earth. [Applause.] And when that deliverance shall happily come the people of this great Nation, God's last and best experiment in human freedom, shall go about their business of rebuilding in their national life the music and the dream of having given back to them the upward looking and the light and of being retouched with civic immortality. [Applause.]

Mr. YOUNG of North Dakota. Mr. Chairman, I yield 20 minutes to the gentleman from Indiana [Mr. FAIRFIELD].

Mr. FAIRFIELD. Mr. Chairman and gentlemen, there is no legislation that has come before this body in this session in which I have been more intensely interested, save in that legislation on that fateful night when we declared war against Germany. No thoughtful man but could have seen that that declaration would carry with it much legislation different in kind from what we had had before and strange to our people. It is not my purpose to speak to any constitutional questions, because I am not competent to do so. Reared in that political school which believes in the implied powers of the Constitution, believes that any government in its organic capacity has a right to take whatever means are necessary for its perpetuity, I can have no hesitation in supporting this bill on the ground of its constitutionality. Very little of correspondence has come to me in connection with this bill. When the first bill or possibly the second draft was prepared—I understand that this is the third draft that has been prepared—I read the bill very carefully and sent it to a number of men in my own district and said to those men, competent men, business men, professional men, lawyers, "Study it and report to me if you have objection to any particular part of it," because I assured them that it is a character of legislation, in part at least, too long delayed. One of them replied, "I have waited for four long years, wondering if the Department of Justice in this great Nation of ours had gone to sleep and left the people of this country to be robbed at will by the most conscienceless body of men that ever had to do with business in a free government."

Then, too, upon the coal question, which the gentleman from Georgia [Mr. HOWARD] so pointedly discussed. We have had recently in Indiana an investigation of coal operations. Some time prior to that a gentleman who is at the head of large business interests wrote me and said, "I tell you that the situation in our town of only 4,000 people is becoming dangerous." Hitherto the people of the Middle West, in the northern part, have been able to go to the forests and get their fuel, but the towns and cities and even the villages in these country districts now depend absolutely upon coal to keep them warm in winter. This letter came from no alarmist. It came from no man who was in the habit of complaining, whose attitude of mind was unfriendly to business. Another letter came from my own town, saying that that town in the middle of summer was out of coal; that it could be secured only by paying two and three times the price that was charged only a year ago. So the matter was taken up by the governor of the State and investigated. The coal men took a lofty, independent attitude with regard to it, but it was discovered upon investigation that not only 100 per cent but 200 per cent and 300 per cent and 400 per cent had been charged for the delivery of coal. Not only that, but the local dealers, gripped by those who were producing it, would make no contracts. We face danger in this country, Mr. Chairman, unless there is some control over fuel. In the centers of population we face danger unless there is something done with regard to food control. No man believes that this bill is perfect. It is said to be a war measure, but, gentlemen, some legislation, drastic in character, would have had to come, peace or war, for those who have controlled are willing selfishly to let people freeze and starve—crushed under economic power.

Talk about a dictatorship, talk about dangers to freedom! Already too long have we permitted men to almost crush out the poor in the great cities.

Then, too, a letter came from a farmer to me, which illustrates the essential difficulty of the legislation. He told me in this letter that in 1915 he planted 40 acres and reaped nothing; that in 1916 he planted 40 acres of wheat and reaped a half crop, about 400 bushels; and now he says, "My crop bids fair to be a good one, and what is a fair price to me under these circumstances?" I recognize, Mr. Chairman, the essential difficulty involved in this legislation, but I want to call your attention to this fact, that this legislation is framed in a right attitude of mind. The men who are responsible for the bill are honest and earnest in their desire to do for this country what ought to be done.

I want to say to you that the American people when they have set themselves to the solution of a problem have never been discouraged.

May I digress a moment? We hear much of efficiency in this day, and no doubt the German Government has been very efficient in its organization; but we have in this country subdued a continent, we have organized a Government, we have had the evolution of a Nation. That is general and not specific. But, men, when you want to think of the efficiency of our people do it by concrete illustrative example. The German Empire has 208,000 square miles of territory, and into that territory they have crowded all their thought power, all their man power, all their money power, and they have wrought wonderfully.

The State of Texas has 276,000 square miles. In its extent it would about accommodate the population of the United States without greater crowding than has been done in the German Empire, and if you want to know how efficient the American people have been, crowd every railroad into Texas, dig every canal through Texas, including the Panama Canal, put every trolley line into Texas, put the great cities of New York, Chicago, Boston, and Philadelphia, and all the other great cities, within the confines of Texas, put every hamlet and every town into Texas. Ah, men, no people on the face of the earth have ever wrought as we have wrought in the subduing and development of this continent. [Applause.] And I am not afraid that a people like that, earnestly and honestly desirous of solving this problem, will fail.

This bill undertakes to control food and fuel; it did include clothing, boots, and shoes, and I was very glad this afternoon to have it explained why they were eliminated at this particular time; but men, this legislation is a warning to godless men and unprincipled men that, if need be, we shall go further—if they will not take the warning—in the control of these essentials of fuel and food. [Applause.]

There is no desire to cripple the farmer. There is no protest, except in this letter, so far as I know. And I do not believe that every man who criticizes the bill is the opponent of such legislation. Many things have come to my mind as I have listened to the discussion to-day that I otherwise could not have thought of. Many suggestions have been made, and when the bill is taken up in regular order and amended, much that has been objected to will be taken out of it. But, men, if there were only one provision, and that for the control of the fuel of this country, I should gladly support this bill. [Applause.] It undertakes to control the fuel and the food, and in the controlling of that we shall have friction, we shall have difficulty. Solutions of that kind are not easily arrived at. But I have faith in the ability of this people to solve the problem. So far as the Members of Congress are concerned, this little audience here to-night is no indication at all of the profound interest that every man in this House has in this subject. Each of the men is studying and desiring, earnestly and honestly, to do the right thing. The law will succeed if it is efficiently administered. After all, government finally in its efficiency depends upon who is to execute it. Those in power have asked that we give them this responsibility. It is up to them to make good, and it is up to us to see that every safeguard is thrown around the bill that will make it possible for them to do the work efficiently and with the least possible criticism. [Applause.]

Mr. LEVER. Mr. Chairman, I yield 10 minutes to the gentleman from Connecticut [Mr. LONERGAN].

Mr. LONERGAN. Mr Chairman, on April 16, 1917, I introduced in the House of Representatives the following resolution:

Resolved, That the Secretary of War be, and he is hereby, directed to furnish to the House of Representatives copies of all regulations and orders pertaining to the inspection of food supplies for the Army in time of war, and to state whether or not the present regulations and orders for the inspection of such supplies are applicable and feasible in time of war.

On the same day I also introduced a similar resolution, requesting that the Secretary of the Navy furnish to the House of Representatives like information concerning the inspection of food supplies in the Navy in time of war.

These resolutions were referred, respectively, to the Committee on Military Affairs and to the Committee on Naval Affairs, and in accordance with the stipulations therein the Secretary of War forwarded through the proper channels to the Committee on Military Affairs information concerning the inspection of food supplies in the Army in time of war; in a letter written under his direction to the chairman of the committee, the Hon. J. HUBERT DENT, jr., and signed by Assistant Secretary of War William M. Ingraham.

Also Secretary of the Navy Josephus Daniels forwarded to Chairman L. P. PADGETT, of the House Committee on Naval Affairs, complete information as to the inspection of food supplies in the Navy in time of war.

In these days when the Navy and the Army, as the fighting arms of the Nation, must at all times be maintained at the highest point of efficiency, it is proper to inquire into the method of supplying and inspecting food intended for both branches of the service. If every precaution to safeguard the health of the men, as far as the food supply is concerned, obtains, it will be reassuring to know this: If there are certain points which can better be looked after, the responsibility lies with us to make such changes as will effect the results desired.

The Navy, recognized as the first line of defense, might properly be first considered. There are two general classes of provisions purchased for the Navy—perishable provisions such as fresh and refrigerated meats, fresh vegetables, fresh fruits, bread, butter, eggs, and the like; and nonperishable provisions such as tinned meats, tinned vegetables, coffee, sugar, flour, rice, and other articles sometimes designated as groceries.

Owing to the difference in the keeping qualities of these two classes of provisions and the fact that the Navy does not own any cold-storage plant, the two classes are necessarily purchased under different conditions. The nonperishable provisions are purchased in large and specific quantities for storage and subsequent supply to the fleet, whereas the perishable articles are purchased for monthly and quarterly deliveries—the quantities being estimated only and the contract being in effect merely an agreement on the part of the contractor to supply such quantities of the articles contracted for as may be required by the Navy during the life of the contract.

All provisions are covered by leaflet specifications, and provisions delivered must be strictly in accordance with these specifications—no deviation whatever being allowed.

All bidders are required to submit samples of what they propose to furnish with their bids. The contract is awarded to the lowest bidder, whose articles are in accordance with the standard samples.

The greatest danger from inferior quality, of course, lies in tinned meats. In looking after such supplies, inspection is made by a representative of the Bureau of Animal Industry at the plants where these meats are put up. Specifications require that such meats shall be United States inspected and passed in accordance with the regulations of the United States Department of Agriculture. Upon delivery, samples are taken at random from the quantity delivered, and a rigid inspection made at the provisions and clothing depot to see whether or not these samples are in strict accordance with the specifications. If they are not, the delivery is rejected. All inspections of nonperishable provisions, without regard to where these provisions are delivered, are made at the provisions and clothing depot at New York, thus insuring uniformity of inspection.

Tinned butter is inspected at the factories where made, by inspectors of the Bureau of Animal Industry, and every process in its manufacture and packing is carefully watched.

Fresh and refrigerated meats and meat products are also inspected by Government inspectors at the packers' plants, in addition to which they are inspected upon delivery at the navy yard by a representative of the Bureau of Animal Industry stationed at the yard for this particular purpose. This also applies to fresh vegetables, fruits, and dairy products, final inspection of these articles being made according to the Navy Regulations by the medical officer of the ship to which they are delivered.

Reviewing these regulations, it is well to recall here the statement of the present Paymaster General of the Navy in one of his first intrabureau orders issued by him after taking office, in which he said:

Enlisted men have no choice as to what they shall eat, being compelled by the very necessities of the service to take whatever is served out to them. For this reason and because adequate and satisfactory subsistence is the very foundation not only of real efficiency but of discipline itself, there is no class of purchases for the naval service that needs to be more constantly watched than provisions, our men being no "poison squad," but human beings and American citizens for whom we stand in the relation of trustees in so far as relates to the question of food.

As a result of this statement there were uniformly good reports from the medical officers submitted to the Surgeon General in 1915, and in turn passed on by the Surgeon General of the Navy to the Paymaster General. Again in 1916 similar gratifying reports were made, to which the Surgeon General added in his official report:

I can assure you that no navy in the world is as well fed, as well clothed, its general welfare so thoroughly looked out for, as that of the United States; and I am glad to offer you and the entire personnel of your corps my heartiest congratulations for the large share you have had in producing this well-being and its resultant contentment.

The food supply of the Army is similarly safeguarded. Due to the passage of the food and drugs act of 1906, and amendments since, as to the sale of poisoned or deleterious food, and also the meat-inspection law of 1906, and amendments since, against the use of meat that is "unsound, unhealthful, unwholesome, or otherwise unfit for human food," the supply is carefully watched.

Meat for the use of the Army is rigidly inspected at the packing houses, the inspection beginning with the animal before it is killed and all through the afterprocess, by inspectors of the Agriculture Department stationed at the various packing houses throughout the country. In addition to this, meat inspectors and experts of the Quartermaster Corps are also stationed at the great packing houses in such centers as Chicago, Kansas City, Omaha, Buffalo, and elsewhere where meat is prepared or cured for the Army, and they also watch it through the whole process from the killing of the animal until turned over to the Government.

With regard to other food articles or stores purchased for the Army, trained experts at depots and purchasing stations carefully inspect all supplies purchased, and at stations where troops are actually located, inspections are made by the officers who procure the supplies.

All provisions, of whatsoever nature, must measure up to the specifications and conditions imposed by the Quartermaster Corps for subsistence and supplies. Beef, for instance, which is perhaps the principal item of the soldier's fare, must be fit for immediate use, and equal numbers of fore and hind quarters must be delivered, including all the best cuts; no carcass to weigh less than 500 pounds when trimmed; the difference in weight between fore and hind quarters not to exceed 25 pounds per carcass. Every article is specifically covered, including mutton, canned beef, bacon, ham, and the like.

All trade labels on provisions and other articles must conform to the requirements of the meat-inspection and pure-food laws, and rulings thereunder, and also to the laws of the State in which delivery is made. All packing-house products canned after date of award must have the required labels stamped in the can. Authority from the Secretary of Agriculture has been obtained for a stamped-in-the-tin label on containers of canned meats or meat food products, in lieu of the trade label, but in order to prevent the appearance of misleading statements on containers of food products, it is required that copies of all labels be submitted for the approval of the Department of Agriculture prior to the making of the dies.

All these regulations govern the furnishing of supplies up to the time of delivery to the Army. Thereafter, when the provisions have been received at the various Army posts and camps, care is taken that the food is properly handled. In addition there has been printed by order of the Secretary of War a "Manual for Army Cooks," prepared under the direction of the Quartermaster General of the Army and approved by the Major General, Chief of Staff. This is for the information and guidance of the Regular Army and of the Organized Militia of the various States, and covers the handling, care, and preparation of food for the table in an admirable manner. A similar manual has been prepared for Army bakers, and both, besides being replete with information and instructions, are well illustrated.

The costly errors that have been made in the past in regard to the inspection of food supplies for our fighting forces must in the present war be avoided. Strict enforcement of the regulations just cited will aid materially in this. If other steps should, from

time to time appear best to be taken we should be ready at all events to take them, to the end that our men in the field and at sea shall have every guarantee of health that we can possibly give them. [Applause.]

Mr. YOUNG of North Dakota. Mr. Chairman, I yield 20 minutes to the gentleman from New Jersey [Mr. LEHLBACH].

Mr. LEHLBACH. Mr. Chairman, this bill is avowedly a war measure. Otherwise its advocacy would be wholly indefensible. In normal times, vesting in the Executive of our Government such complete powers over the every-day activities of a large proportion of the people, and further over the very means of subsistence of all, is repugnant to the genius of American institutions. It is asserted that the need of control over the necessaries of life and the activities of those engaged in their production and distribution arises out of the war which has engulfed not only our country but also all civilization.

The present exercise of such control is in reality consonant, not repugnant, to American institutions and the Constitution, which is their index. America always has and can adapt herself to every emergency, and her Constitution has adjusted itself to every crisis. The right and privileges of the American citizen in times of peace and safety are subject to the minimum of interference and limitation consistent with the public weal. But in times of stress and danger, when we are forced to unsheathe the sword to preserve undiminished our right as a free people to live and move and pursue our destiny among the nations of the world, then it behooves our Government to emphasize the duties and obligations of the citizen rather than his rights and privileges, and to exercise such control over him and his as may be necessary for the national defense. The spirit of America demands it, and the Constitution permits it.

The continual destruction of supplies in transit, the shadow of the specter of famine already creeping over the peoples with whom we have made common cause in the fight for mutual self-preservation, the barometer of market prices presaging the gathering of the storm clouds of need at home must necessarily convince the reasonable mind that a real emergency exists. Hence the normal ways of peace regarding the raising and distribution of food products must be suspended, and the wisdom and power of the Government must temporarily control, if we are successfully to ride the storm. The power of such control must of necessity be vested in that branch of the Government solely adapted for its exercise—the Executive. Such power should be given freely, measured by the exigencies of the case out of which the need for its exercise arises. While the power that may be necessary should be given without stint, it should be limited absolutely to meet the emergency. It is always the duty of the legislature, as the guardian of the liberties of the people, not only, in a case like this, to grant the Executive the necessary power to protect those liberties but to guard against, under the guise of necessity, wanton and unreasonable interference with popular rights.

The purposes to be attained by this bill are twofold. To eliminate waste and confusion which the production and distribution of food by unguided and uncontrolled individual initiative would in these abnormal conditions entail, and second, to prevent the conscienceless depredations of food speculators, price manipulators, and the rest of the evil crew, who always seek to prey upon the necessities of the people. Such purposes are set forth in the first section of the bill.

Section 3 of the bill provides that there is hereby established a governmental control of necessaries, including in terms every conceivable activity in connection therewith from the planting of the seed to the eating of a piece of bread, which shall be exercised and administered by the President for the purposes of this act. Manifestly a power so absolute as to be practically inconceivable is far beyond the necessities of the situation, far beyond the necessities of any plight in which our country could within human probability ever find herself. This language makes of the remainder of the bill a work of supererogation, for greater than such power can not be vested in mortal man. The fact is that subsequent provisions of the bill set forth with particularity all conceivable powers necessary to be exercised by the Executive to fight the evils apprehended, and this section should either be stricken out in its entirety, or at least so amended that by it there is established such governmental control of necessaries as hereinafter set forth in this act.

Section 4 makes it unlawful to do any and all of a series of acts, specifically enumerated, which would tend to interfere with an adequate supply and the equitable distribution of necessaries. This catalogue of crimes is so exhaustive and complete as to cover every nefarious scheme that an ingenious malefactor could devise. With these proposals I find no fault, but there is inserted in the section a clause making the following unlawful:

To engage in any discriminatory and unfair, or any deceptive or wasteful practice or device, or to make any unjust or unreasonable rate or charge, in handling or dealing in or with any necessaries.

It has been the curse of American business in recent years to have prohibited alleged practices in vague and uncertain language susceptible of as many constructions as there are many minds. This has resulted in the indulgence in practices, pronounced legitimate in certain jurisdictions, by the more unscrupulous or venturesome spirits in business who thus obtained unconscionable advantages over their more scrupulous or fearsome competitors. Our soundest authorities, in dealing with the subject of antitrust legislation, have repeatedly declared that unlawful and unfair practices ought to be defined specifically in statutes, and then the perpetrators punished. Here we have a splendid example of how the American business man is hampered, harrowed, and harassed by unwise and ill-considered legislation. He is afforded no star or compass and must steer his course by guess. In consequence he may wake up some morning and find himself a felon in a prison cell, or else he may wake up and find a receiver in charge of his affairs.

If any possible necessity for this provision could be pointed out, its presence in the bill might be defended, but the rest of the section so completely covers the evils sought to be prevented that its incorporation is inexcusable.

Evidently the bedevilment of men engaged in useful and necessary pursuits was not sufficiently thorough by creating a class of unascertainable crimes, but the guilt of such a hapless offender is not to be established by the ordinary judicial process. Under section 5 the President, and that may mean in reality one of hundreds of uncompensated volunteers, may, by order, after the commission of the act, decide it a crime, and such order shall be prima facie evidence in any court of competent jurisdiction even in a criminal trial. Here we have ex post facto legislation by imperial ukase.

Section 13 provides for the limitation, regulation, or prohibition of the use of foods or feeds in the production of alcohol or beverages, when essential to assure an adequate and continuous supply of food. The inclusion of alcohol in this provision is unfortunate, as its use in the arts, particularly in war time, is of much greater value than the food material consumed in its manufacture could possibly be. With reference to beverages, it includes both alcoholic and nonalcoholic kinds. However, the section draws an unwise distinction between the two kinds of beverages.

It provides for the elimination of nonalcoholic beverages, or such nonalcoholic beverages as the President shall determine, and expressly omits the authority to exercise such discrimination between various kinds of alcoholic beverages. Manifestly this differentiation would seem to compel the construction that the President was not authorized to make such discrimination between various kinds of alcoholic beverages, but must apply whatever regulation or limitation is deemed essential to all such beverages alike. The restriction of the President's right to discriminate may easily result in harmful consequences neither contemplated by Congress nor desired by the President, and which could easily be forestalled by him if this distinction between alcoholic and nonalcoholic beverages were removed.

I intend to support this bill. I believe the exercise of the control therein provided in an emergency is compatible with American institutions and permissible under the law of the land. I believe the emergency is here.

I have endeavored very briefly to point out wherein certain provisions of the bill transcend the need of the emergency and consequently do violence to the principles upon which such legislation should be framed. I sincerely trust the bill will be perfected and, when so perfected, passed. [Applause.]

Mr. YOUNG of North Dakota. Mr. Chairman, I yield 15 minutes to the gentleman from Pennsylvania [Mr. ROBBINS].

Mr. ROBBINS. Mr. Chairman and gentlemen of the committee, the bill now pending before Congress for consideration is known as House bill 4961 and is entitled "A bill to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel."

This bill has been rightly characterized as the most far-reaching and drastic of any of the extreme legislation that has been enacted or proposed in this Congress. The law passed for the purpose of contracting national indebtedness by the bond issue, after all, affects only a portion of the people. Those without property, those under age or disability are free entirely from its provisions.

The law passed to conscript soldiers affects less than one-tenth of our people, and the law we have passed to raise revenue by taxation to prosecute the war does not concern a very large portion of our population.

But this act proposes to deal with the necessaries of life, and affects every man, woman, and child in the Nation, and, indeed,

extends its influence directly to our allies by attempting to relieve them from high prices and give them constant supply of food.

In the enactment of any law the lawmaking body should consider—

1. The evil to be corrected;
2. The old law; and
3. The proposed remedy and its effects.

Considering these briefly in the order suggested:

1. The evil to be corrected is, as I view it, a serious situation that is universally admitted. Everyone agrees that the necessaries of life are to-day at such high level in price as to make it impossible for many of our people, especially those who are working for a day's wage or at a fixed salary, to enjoy the essentials and, in many instances, the actual necessities of life. But even more appalling than this present situation, which is bad enough, is the conditions which confront us of the probable danger of a famine in the near future unless some action is taken to, if possible, avert it. And it may also be admitted that there is no action that can be taken that will bring any relief except congressional action, and that action when taken must be such as will meet the emergency.

The only law we have on the statute books now that deals with this situation in any way is the Sherman antitrust law, which has been amended by the Clayton Act and the Federal Trade Commission act. Under these acts an unlawful combination in restraint of trade is punishable by indictment; but these laws have proved ineffectual and are entirely too slow to meet the existing emergency that confronts the people of the United States. Hence it is universally admitted that new legislation is required, and the present bill is the answer of Congress to this popular demand.

It has been charged, especially concerning the war-tax bill, that Congress gave no hearings or investigations, but simply hurriedly framed a bill because "we needed the money." Such can not be charged against the present bill. The committee have given many hearings and have rewritten and reprinted the bill at least five times, as has been asserted during the argument by the members of the committee, so that this legislation comes from the committee bearing evidence of careful investigation and preparation, and it therefore ought to command the respect of the House. It certainly must command its most careful scrutiny because of its importance, its drastic provisions, and its telling effect upon the production and distribution of food and fuel.

To those of us who come from the eastern and more populous section of the United States this bill comes with an appealing purpose. Our people have felt the oppression of high prices and hardship of the diminishing purchasing power of money. Throughout western Pennsylvania, where it can confidently be asserted the highest wages are paid to the working people and usually the greatest contentment and prosperity prevails, they have been singularly met with and shocked by the rapid advance in the price of the necessaries of life.

For instance, in Greensburg, Pa., my native city, which can be taken as fairly indicative of the whole section of western Pennsylvania, eastern Ohio, and West Virginia, the prices of necessaries within the last two years have changed thus:

Flour in 1915 sold for $5.50 a barrel; in 1916, $7.50; 1917, $15, an increase of 100 per cent in the last year.

Sugar in 1915 sold for 6 cents per pound; 1916, 7 cents per pound; 1917, 9½ cents per pound, an increase of 36 per cent.

Potatoes, 1915, $1 per bushel; 1916, $1.40 per bushel; 1917, $4.50 per bushel, an increase of over 250 per cent.

Meat of all kinds advanced from 33⅓ per cent to 80 per cent.

Shoes and clothing have advanced from 40 per cent to 100 per cent, and in fact it is difficult to procure shoes, even at that price, such as workmen and the people generally wear. The advance in prices is further shown by the following table:

Comparison of retail prices of foods during April, 1914, before the war, and April, 1917.

[From Government reports.]

	April, 1914.	April, 1917.	Increase.
Groceries:			*Per cent.*
Sugar, granulated, pound	$0.04	$0.09	125
Flour—			
Gold Medal, barrel	7.25	14.00	93
Hecker's, barrel	6.50	13.50	107
Milk—			
Condensed, can	.09	.15	67
Evaporated, tall can	.07½	.12	65
Evaporated, small can	.03½	.06	70
Tomatoes, standard 2½'s, can	.07	.17	142
Corn, standard 2½'s, can	.07	.13	85
Peas, E. J.	.07	.10	45
Baked beans	.08	.13	65
Corn meal, pound	.02½	.05	100

Comparison of retail prices of foods during April, 1914, and 1917—Contd.

	April, 1914.	April, 1917.	Increase.
Groceries—Continued.			*Per cent.*
Hominy, pound	$0.03	$0.05	66
Rice, best, pound	.08	.09	12
Oatmeal, pound	.03½	.06	70
Prunes, small, pound	.05	.08	60
Salmon, chum, can	.08	.14	75
Beef:			
Rib, roast, pound	.20	.25	25
Chuck roast, pound	.17	.22	30
Plate (soup meat), pound	.13	.16	23
Porterhouse steak, pound	.28	.37	30
Sirloin steak, pound	.24	.34	42
Round steak, pound	.20	.32	60
Pork:			
Fresh hams	.15	.27	80
Fresh shoulders	.13½	.22	58
Fresh pork chops, lean	.16	.28	80
Fresh pork chops, loin	.18	.32	80
Fresh pork roast, lean	.16	.28	75
Fresh pork roast, center	.18	.30	66
Butter, first grade, pound	.30	.55	83
Eggs, fresh, dozen	.21	.38	80
Vegetables:			
Potatoes, peck	.23	.90	291
Spinach, peck	.20	.40	100
Onions, yellow, pound	.04	.13	250

Comparison of retail prices of foods, January, 1917, and May, 1917.

	January, 1917.	May, 1917.	Increase.
Groceries:			*Per cent.*
Granulated sugar, pound	$0.07	$0.10	43
Gold Medal flour, barrel	9.60	15.20	58
Pride of Columbia, barrel	8.00	13.20	65
Standard tomatoes, No. 3 can	.12	.18	50
Maine corn	.13	.17	30
Wagner's baked beans, No. 2	.10	.15	50
White corn meal	.04	.06	50
Broken rice	.04	.06	50
Oatmeal	.04	.06	50
Macaroni, bulk	.08	.13	62
Prunes, small	.05	.08	60
Beef:			
Rib roast	.24	.25	4
Plate beef	.15	.16	7
Porterhouse steak	.32	.37	16
Sirloin steak	.28	.34	22
Round steak	.25	.32	28
Butter, extra creamery	.43	.55	28
Pork:			
Fresh hams	.22	.27	23
Fresh shoulders	.18	.22	22
Fresh pork chops, shoulder	.22	.28	27
Fresh pork chops, loin	.26	.32	23
Fresh pork roast, blade	.22	.28	27
Fresh pork roast, loin	.25	.30	20
Vegetables:			
Potatoes, peck	.60	1.00	66
Onions, pound	.08	.10	25
Sweet potatoes, peck	.45	.75	66
Cabbage, pound	.10	.15	50
Fruits:			
Apples, peck	.40	.60	50
Bananas, dozen	.20	.25	25
Lemons, dozen	.08	.20	150

The wages, while they have been advanced in all our mills, at our mines, and in our factories, they have not been increased commensurate with the increase in the cost of the necessaries of life. Those who work by the day and those who work for a fixed salary and those who work on the farms and in small factories have had comparatively small increase, in many instances none at all, as in case of the salaried employee, and yet they are confronted with this arbitrary and extraordinary increase in the cost of living. The advance in wages is not equal to the advance in the cost of living.

Comparison of wage rates of labor, 1907 to 1916, and of price of food, 1907 to May, 1917 showing difference in advance in wages and food.

[From record of committee, filed by its chairman.]

Year.	Rates of wages per hour.	Retail prices of food.
	Per cent.	*Per cent.*
1907	100	100
1908	101	103
1909	102	108
1910	105	113
1911	107	112
1912	109	119
1913	111	122
1914	114	125
1915	115	123
1916	119	139
January, 1917		156
February, 1917		162

I now assert that the situation, so far as my district is concerned—the twenty-second district of Pennsylvania—is critical and demands and requires at the hands of this Congress some relief.

Which proviso safeguards the farmer in the ownership and pressing and demands correction, which answers the first matter to be considered.

In the second place, in considering the pending proposition, I further assert that the old law—that is, the antitrust law above referred to—is entirely inadequate, and that we must enact some other law to meet the existing, imminent, and pressing emergency.

This bill is leading us into a new and untried legislative field. Never before in the 141 years of our history has Congress been called upon to appoint a food dictator or to place in the hands of the President the arbitrary and unlimited power contained in this bill to control the food supply of the Nation. We might well consider it in its extreme aspect, because our people will feel its operation and criticize us if we pass an act the full force and probable effect of which we do not comprehend. Therefore I characterize this bill as the most extreme, arbitrary, and unlimited piece of legislation ever proposed in the American Congress, and the only justification for even considering such legislation is to avert a condition which will be far more terrible on our people than can be brought about by its extreme enforcement.

If I did not believe that we are in danger of a famine, to be brought about by the shortage of the food supply, not only in America but in Europe, and that our food shortage is so extreme and the demands on it are so great that unless we enact this law, which in its first section declares "is to prevent monopolization, hoarding, injurious speculation, manipulations, and private controls, affecting the supply, distribution, and movement of such food supplies"—we can not prevent hunger and distress among our people, and especially among the poor, I would not support this bill at all; but, believing that these conditions are imminent and will exist more and more during the coming fall and winter, I am going to support this bill and vest in the President all the power and authority that it confers, with the hope that this dreadful foreboding and these coming conditions of suffering and distress may be averted. [Applause.]

This bill provides in a general way for control of the food and fuel supply of the Nation and arranges that the price thereof be kept upon a reasonable basis, and that the supply be conserved in every possible way and neither wasted nor hoarded.

The third section of the act provides as follows:

SEC. 3. That there is hereby established a governmental control of necessaries which shall extend to and include all the processes, methods, activities of, and for the production manufacture, procurement, storage, distribution, sale, marketing pledging, financing, and consumption of necessaries, which shall be exercised and administered by the President for the purposes of this act; and all such necessaries, processes, methods, and activities are hereby declared to be affected with a public interest. And in carrying out the purposes of this section the President is authorized to enter into any voluntary arrangements or agreements, to use any agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person, to utilize any department or agency of the Government, and to coordinate their activities so as to avoid any preventable loss or duplication of effort or funds: *Provided*, That none of the penalties of this act shall apply to this section.

This section is the one that contains the declaration of the power and purposes of the whole act, because if the intendments of this section are carried out the whole purpose of the act will be accomplished.

The act has been attacked vigorously, because it is held to be unfriendly, in its effect, on the farmer and producer. It has been asserted by members of the committee who attacked it that it fixes the prices of farm products but fails to fix the prices of the articles that the farmer must buy. This is not my understanding of the bill at all. It fixes the price of every manufactured commodity in section 10 and controls the method of production and distribution. Hence, under this bill the President, through the proper bureau, ought to fix the price of shoes, sugar, flour, clothing and all the articles that are covered by the general terms used in this act. It would be manifestly unfair that the President could fix the price of corn, wheat, oats, cotton, which the farmer produces, and not be able to deliver to the farmer agricultural implements, shoes, clothing, sugar, and coffee at a price also controlled and fixed by him through the same bureau. This act has no such narrow purpose in view and will not be administered to produce a result so unfair and arbitrary.

The farmer is the one that enjoys the immunity of this act and for that reason it has been styled "class legislation." Section 6 contains this proviso:

Provided, however, That any accumulating or withholding by any farmer, gardener, or any other person, of the products of any farm, garden, or other and owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

Which proviso safeguards the farmer in the ownership and supply of his own products, and he ought to be so protected. There is no espionage provision in this act. The granary and cellar are the farmers' storehouses, and they are secure and their contents are not to be considered under its terms, but when the farmer wishes to sell, he will, of course, be met by a price, that is established by law, under the provisions of this act for his protection and benefit. In the same market in which he sells his grain and buys his supplies, he will find the same law protecting him, as to the price he received for his product and the price he must pay for the necessaries of life, which he must buy in the same or other market with the money received for his own products.

This law also protects the wage earner and the poor by allowing the President to fix the prices of the necessaries of life to them also.

This appears to me to be equitable and fair. It may, it is true, modify the fixed law of supply and demand, but the law of supply and demand as we have it to-day is fixed by artificial war conditions, and they are leading us into an abyss, not the result of the legitimate law of supply and demand but the result of war and its evils, which we must meet by the extraordinary legislation that this bill proposes. It is only because of war that we, of course, justify this proposed law. It must be discussed and considered always with that thought in view.

This bill concerns especially western Pennsylvania, where coal mines and factories exist, such as abound in the district, which I have the honor to represent. It vests in the President power to requisition and take possession of coal mines or factories "in which any necessaries are or may be manufactured, produced, prepared, or mined" (section 10). The price of bituminous coal to the poor has increased from $1.50 to $2 a ton in 1915 and from $4.50 to $5.50 at present, and the increase in anthracite is greater than bituminous.

This increase in the cost of coal has been brought about by car shortage, lack of labor supply. In other words, failure of both production and distribution. There is just as much coal and as many mines, and the facilities are just the same as when the coal was at the normal price. The fault is with the production and distribution, and it is difficult for one, who is familiar with the situation, and I claim some familiarity with these conditions, to see how this bill is going to bring about the relief desired in coal prices.

This industry is met with another difficulty. The Government has taken control of the railroads, has given preference to the movement of its freight, and thereby preventing coal operators from handling the amount of coal they can produce, even with the short supply of labor. Indeed, the coal situation is more critical than the people are willing to admit, and unless there can be some loosening up in the distribution of coal, the poor people of our cities will be great sufferers from cold in addition to hunger during the next winter.

I wish to now and here sound the alarm to those controlling car distribution to coal mines, and movement of coal traffic to its destination, and warn them that they are during this good weather pursuing a course that will cause intense suffering to the poor and humble in all our great cities during the cold days of the coming winter for lack of coal to warm their homes.

Mr. Chairman, I have gone over very carefully the voluminous reports of the hearings before the Agricultural Committee on this bill, and they disclose a startling state of facts, with reference to the grain crop and visible supply of wheat, corn, and oats on hand in the United States. It seems to me from the arguments made by the members of the committee here on the floor they have either purposely or unintentionally neglected to disclose these facts. Whether it is because there are astonishing, alarming, and fear producing, in their effect, on the American people or whether it is because there is a hope that we can "just muddle through," as we generally do somehow, I do not know.

Now, Mr. Chairman, the statement has been authentically made by those who know that on the 12th of May, 1915, the visible supply of wheat in the United States was 102,000,000 bushels; in May, 1916, 62,000,000 bushels; and in May, 1917, 33,000,000 bushels; and at the present time less than 15,000,000 bushels. Why conceal these facts? If this law is to accomplish its full purpose, it must have the hearty support and endorsement of the American people, and certainly this statement of facts, which come from authentic sources, calls for immediate action by Congress and for universal support toward the conservation of our grain and food supply from the American people.

Last year's crop was short, and last year's demand from abroad was unprecedented, hence the low visible supply of wheat at this time and the visible supply of corn is practically exhausted.

This year's estimated crop of wheat will be 750,000,000 bushels, which is much below normal. It requires 600,000,000 bushels to feed the United States and furnish seed for the new crop. Thus we will have but 150,000,000 bushels for export. This will not supply one-fifth of the foreign demand, because the United States must feed the armies of the allies that are fighting at the front, for the reason that they are now fighting our war. They stand between us and German invasion. The liberty of the United States is at this time only protected by the armies and navies of our allies. We must feed these armies and support them in the field, even if we deny our own people bread by doing so.

It does not require much of an imagination to see our American people living on corn meal and our poor people going hungry next winter. Why, therefore, at this time, when we can do something to alleviate this coming calamity, should we hesitate, discuss constitutional questions, or argue about vesting arbitrary power in the President?

If there are those who believe that the Constitution is being transgressed by this legislation, it ought only to be necessary to cite them to the words of the Constitution itself and to some of the well-known decisions of the Supreme Court thereunder:

Provisions of the Constitution authorizing the legislation.

The preamble to the Constitution, among other things, states the purpose of government as follows: "To promote the general welfare—to provide for the common defense." These purposes are carried out by the legislation authorized in the Constitution.

Section 8 of Article I of the Constitution provides: "The Congress shall have power to declare war, to raise and support armies, to maintain a Navy, to provide for the common defense and general welfare."

"To make rules for the government of the land and naval forces, to make all laws necessary and proper for carrying into execution the foregoing powers, and all other powers vested by the Constitution in the Government of the United States."

The tendency of the Supreme Court has been to construe the powers contained in this section of the Constitution most liberally. During the Civil War new vitality was given to this section when considering the legal-tender acts and other war legislation.

Thus the Supreme Court has expressed itself in considering the power of Congress under this section of the Constitution:

It is not indispensable to the existence of any power claimed for the Federal Government that it can be found specified in the words of the Constitution, or clearly and directly traceable to some one of the substantive powers expressly defined, or from them all combined. It is allowable to group together any number of them and infer from them all that the power claimed has been conferred. Such a treatment of the Constitution is recognized by its own provisions.

It is absolutely essential to independent national existence that government should have a firm hold on the two great sovereign instrumentalities of the sword and the purse, and the right to wield them without restriction on occasions of national peril. In certain emergencies government must have at its command not only the personal services, the bodies, and lives of its citizens, but the lesser, though not less essential, power of absolute control over the resources of the country. Its armies must be filled, and its navies manned by the citizens in person. Its material of war, its munitions, equipment, and commissary stores must come from the industry of the country.

I deem further citation of authority as to the constitutionality of this proposed legislation entirely unnecessary.

The bill itself provides that should any section be stricken down the remaining sections shall retain their original vitality. We need not worry about the Constitution, it is safe in the hands of the courts of last resort. Our concern, and serious concern too, is the conditions which confront our people.

This is no time for talking about preserving our liberty. Our liberties are in much more danger from German aggression than from the President. And our liberties are only being temporarily suspended and authority vested in the President of the United States during the stress of a foreign war.

Mr. Chairman, the same indomitable love of liberty that characterized our fathers and has been our lamp and guide for almost a century and a half will, when this crisis is past, assert itself and take back, if need be, our liberties from the President or any other authority in whose hands arbitrary power has been temporarily placed pending this emergency.

A republican form of government, where liberty is universally enjoyed by all its citizens, can not carry on a war without halting and turning about and forming an efficient national organization, whereby its strength and power may be concentrated in the hands of one man, who is necessarily the President, so that it can be effectually used to carry on such war.

In the present war we are endeavoring to accomplish this result by centering in the President the full power and strength of the Republic by acts of Congress enacted for that purpose, but all of these have a limitation in them that when the war is over the power they have taken from the people and vested in the Chief Executive shall cease.

This present bill has a specific provision in it to cover this, in section 21, which provides:

This act shall cease to be in effect when the national emergency resulting from the existing state of war shall have passed, * * * which shall not be later than one year after the termination of the war.

Why, then, should any Member of this House, or any citizen, claim that this bill deprives our citizens of their liberty, or creates a dictator, or vests in the hands of one man arbitrary, unlimited, or unreasonable power permanently? Such is not the case.

There is another important feature in this bill that should not be overlooked. The provision relating to the storage of food and food products and the prevention of speculation therein.

During the month of May the allies in Europe were bidding against each other and the price of wheat ran up to $3.50 per bushel. To remedy this they centered all their purchasing power in one agency. This eliminated competitive bidding against themselves, but this has not cured the evil. Private speculators were buying up wheat on the exchanges of the country—in Chicago and New York—by dealing in what is known as "futures"; that is, buying wheat for future delivery. The result was all stock exchanges have closed entirely or restricted that branch of their business, and wheat men can only buy wheat to-day like coal or brick or sand—cash on delivery, at a price fixed when the deal is made.

Speaking of the market conditions, the secretary of the Chicago exchange stated on May 15 last:

At the present time they contract to purchase in a market where there is really no wheat to sell. I think that practically all the wheat in this country is sold for delivery for export. I think that this Congress might well consider the question of controlling exports. I think it would be the part of wisdom to have a food-control commission who would, so far as exports are concerned, have the absolute control and who would allow grain to go out only by permit.

Thus indicating that those who know most about the wheat situation regard it as most critical and favor this bill.

What has brought about this great transformation in the method of conducting the grain business? Two causes—short crops, which made speculative control possible, and excessive foreign demand, which made a market in excess of the supply.

This created a condition whereby the speculator had absolute control of the food supply, and I assert it on the authority of one of the largest grain men of the country that if the New York and Chicago Exchanges would open and permit dealing in wheat for future delivery unrestricted wheat would sell at $5 per bushel within a week and flour would go to $20 or $30 per barrel in the same time.

Thus we see that the food situation of the country is resting on a dangerous basis. We are at the mercy of speculators. What could be more terrible than a corner in wheat or a corner in bread? An event of this kind would try the strength of popular government.

This bill provides for summary conviction of the food speculators who buy up our food supplies and hold them in warehouses, cold-storage depots, and force up the prices, thus causing great distress among our people, especially among the people of moderate means and the very poor. These speculators are the enemies of the people. They are the highwaymen of commerce. They sail under the black flag of treason and leave in their trail misery, suffering, and death. Let us pass this act and exterminate them as we would exterminate smallpox and filth from our midst. I have no patience with delay or waste of time in discussing a law that proposes to remove from the body of our people these leeches upon the commerce of our country.

The existing law is helpless to meet such an emergency. It is cumbersome and slow and it has no application to the individual, because it requires more than one party to be guilty of conspiracy.

The Federal Trade Commission law confers authority to investigate, but has no power to punish the guilty corporations or individuals.

For instance, last February when there was a Federal investigation of Wentz, the so-called egg king of Chicago, who had bought millions and millions of dozens of eggs during the summer at a price of from 10 to 15 cents, and placed them in cold storage and was selling them during the winter months at a price ranging from 40 to 80 cents per dozen, a great human cry went up all over the country against this man. At the investigation he simply stated the facts, that he was making enormous profits, amounting to millions of dollars, and that he did not like to be investigated because "it made him laugh and cracked his lips," and that is all that came of it.

This bill proposes to reach not only such cases but all other cases where men speculate in food supplies. The purpose, in the first place, is that no one can deal in food supplies except by the

license issued by the President, which if abused will be revoked; and it proposes, in the next place, to prevent dealing and speculating on any exchange whereby the cost of food supplies is thereby enhanced. Section 11 specifically sounds the death knell to the food speculator, in these words:

That whenever the President finds it essential in order to prevent undue enhancement or fluctuation of prices of, or in order to prevent injurious speculation in, or in order to prevent unjust market manipulation or unfair and misleading market quotations of the prices of necessaries, hereafter in this section called evil practice, he is authorized to prescribe such regulations governing or may either wholly or partly prohibit operations, practices, and transactions at, on, in, or under the rules of any exchange, board of trade, or similar institution or place of business as he may find essential in order to prevent, correct, or remove such evil practices.

It also prevents the accumulation of foods by hoarding either in cold-storage houses or elsewhere as a means of enhancing the prices, and for the violation of its provisions severe and certain penalties are provided.

Under this law it will not be possible to bring about a condition of facts such as exist in the potato market at present and for the last three months. Last September potatoes were selling in Aroostook County, Me., the chief potato-producing district in New England, at $2.50 per barrel. In January and February speculators bought up the supply and forced the price up to $10, $12, and in some instances even $15 per barrel. The farmer did not benefit by this enhanced price, only the speculator and the middleman, but the consumer was compelled to pay this outrageous and exorbitant price for this necessary article of food.

Onions, during the same time, were forced up in price from 1½ cents to 15 cents per pound by pure manipulation of the market. Some 50 dealers were indicted under the Sherman law, but those of us who eat onions know that the prices are still up, and that the cases are still pending and likely to pend for several years in the courts.

Bituminous coal, which ordinarily sells at from $1.50 to $2.50 per ton with freight added, is now selling at from $5 to $6 per ton, and the supply unequal to the demand.

The fact is that when we talk about the economic law of supply and demand controlling prices, these three staple commodities conclusively prove that such is not the case. Manipulation controls the prices largely in the United States to-day, and this law proposes to abolish this artificial, unlawful, and unjust situation, and give to the consumers—to the plain people, to the people of moderate means, and to our poor and helpless, who need relief—the necessaries of life at reasonable prices. If this Congress can bring about this result, it will be entitled to go down in history as the people's Congress, as the just Congress, as the righteous Congress, and receive and be entitled to the grateful plaudits of all the people. [Applause.]

Mr. LEVER. Mr. Chairman, I move the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker pro tempore, Mr. FITZGERALD, having resumed the chair, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 4961) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel and had come to no resolution thereon.

HOUR OF MEETING TO-MORROW—11 O'CLOCK A. M.

Mr. LEVER. Mr. Speaker, I ask unanimous consent that when the House adjourns to-night it adjourn to meet to-morrow at 11 o'clock a. m.

The SPEAKER pro tempore. The gentleman from South Carolina asks that when the House adjourns to-night it adjourn to meet at 11 o'clock to-morrow morning. Is there objection?

There was no objection.

ADJOURNMENT.

Mr. LEVER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 11 o'clock and 5 minutes p. m.) the House adjourned, pursuant to its previous order, until to-morrow, Wednesday, June 20, 1917, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of the Treasury, transmitting copy of communication from the Secretary of War submitting a supplemental estimate of appropriation for the rental of a two-story fireproof warehouse at Washington, D. C., for the use of the medical department from October 1, 1917, to June 30, 1918 (H. Doc. No. 190); to the Committee on Appropriations and ordered to be printed.

2. A letter from the Secretary of the Navy, recommending that House bill 292 be amended so as to exclude the purchase of the special character coal necessary for the Navy and fuel-burning equipment for the Navy (H. Doc. No. 191); to the Committee on Mines and Mining and ordered to be printed.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. JONES of Texas: A bill (H. R. 5098) to provide for the suspending of statutes of limitations as to all crimes and offenses against the United States during the war with Germany; to the Committee on the Judiciary.

By Mr. COOPER of Wisconsin: A bill (H. R. 5099) to provide for the erection of an addition to the Federal building in the city of Kenosha, county of Kenosha and State of Wisconsin; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 5100) to provide for the purchase of a site and the erection of a public building thereon at Whitewater, Walworth County, Wis.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 5101) to provide for the purchase of a site and the erection of a public building thereon at Lake Geneva, Walworth County, Wis.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 5102) to provide for the erection of an addition to the Federal building in the city of Janesville, county of Rock and State of Wisconsin; to the Committee on Public Buildings and Grounds.

By Mr. TAYLOR of Colorado: A bill (H. R. 5111) to draft into the military service all citizens who leave the United States to evade registration or selective draft; to the Committee on Foreign Affairs.

By Mr. RAKER: A bill (H. R. 5112) to relieve homestead and desert entries of alien entrymen until termination of existing war and for a reasonable time thereafter, and for other purposes; to the Committee on the Public Lands.

By Mr. RANDALL: A bill (H. R. 5113) to provide further for the national security and defense by conserving the supply of foods, food products, and feeds; to the Committee on Agriculture.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. COOPER of Wisconsin: A bill (H. R. 5103) granting an increase of pension to Leannah Bullis; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5104) granting an increase of pension to Mrs. F. B. Ward; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5105) granting an increase of pension to Levi L. Beers; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5106) for the relief of the city of Racine; to the Committee on Claims.

Also, a bill (H. R. 5107) for the relief of Charles Akerlund; to the Committe on Claims.

Also, a bill (H. R. 5108) for the relief of William A. Persons; to the Committee on Military Affairs.

By Mr. FERRIS: A bill (H. R. 5109) for the relief of Jacob Osterhus; to the Committee on the Public Lands.

By Mr. TALBOTT: A bill (H. R. 5110) granting an increase of pension to Oliver Sutor; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. COOPER of Wisconsin: Memorial of Wisconsin Association of the Women's National Service League, urging that all contaminating and debauching influences be removed from the vicinity of encampments of the Army; to the Committee on Military Affairs.

Also, petition of dairy farmers of Jefferson and Waukesha Counties, Wis., concerning the feeding of so-called balanced rations; to the Committee on Agriculture.

Also, petition of business men of Kenosha, Wis., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. DALE of New York: Petition of National Association of Game and Fish Commissioners, urging the passage of the bill to give effect to the migratory bird treaty between the United States and Great Britain for the protection of migratory game and insectivorous birds in the United States and Canada; to the Committee on Foreign Affairs.

By Mr. DICKINSON: Petition of 112 citizens of Montrose and Belton, Mo., in favor of legislation prohibiting the use of foodstuffs in the manufacture of alcoholic liquors; to the Committee on the Judiciary.

By Mr. FITZGERALD: Petition of citizens of the Borough of Brooklyn, N. Y., protesting against national prohibition; to the Committee on the Judiciary.

By Mr. GREGG: Petition of Missionary Society of Lowington and Woman's Missionary Society of Palestine, Tex., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. HENSLEY: Petitions of Mrs. S. M. Ivy, secretary Farmington district, St. Louis conference, and Mrs. William Court, secretary Woman's Missionary Society, St. Louis conference, favoring prohibition; to the Committee on the Judiciary.

By Mr. HILL: Petition of Connecticut Branch of the Association of Collegiate Alumnæ, relative to the creation of prohibitive zones around the military camps of the United States Army; to the Committee on Military Affairs.

By Mr. KING: Petition of William A. Whyers and others, of Quincy, Ill., favoring increase in pay of men employed in the Federal buildings under control of the Treasury Department; to the Committee on Appropriations.

By Mr. KINKAID: Petition of members of the American Society of Equity of Nebraska and South Dakota, protesting against the passage of the bill to change the name of oleomargarine to butterine; to the Committee on Agriculture.

By Mr. LONERGAN: Petition of Shell Fish Commission of the State of Connecticut, favoring law regulating the discharge of commercial and other waste into streams and tidal waters; to the Committee on the Merchant Marine and Fisheries.

By Mr. LUNN: Petition of George Blood, J. D. Losher, Cyrus Blood, Ernest Knablauch, Victor Huddleston, and Charles McCreary, asking for the prohibition of the manufacture, sale, and transportation of intoxicating beverages for the period of the war in conservation of the man power, military and industrial efficiency, and the food supply of the Nation, and that all liquors now in bonded warehouses and elsewhere shall be commandeered by the Government and be redistilled for undrinkable alcohol, to be purchased by the Government for war purposes; to the Committee on the Judiciary.

Also, petition of Edgar B. Moyer and citizens of the town of Root, Montgomery County, N. Y., asking for full national prohibition of the manufacture, sale, and transportation of intoxicating beverages for the period of the war, and opposing an increase in tax on intoxicating liquors as a means of raising revenue to prosecute the war; to the Committee on the Judiciary.

Also, petition of Charles L. Travis and citizens of Schnectady, N. Y., asking full national prohibition of the manufacture, sale, and transportation of intoxicating beverages for the period of the war, and opposing an increase in the tax on intoxicating liquors as a means of raising revenue to prosecute the war; to the Committee on the Judiciary.

Also, petition of H. C. French and citizens of Amsterdam, N. Y., asking for full national prohibition of the manufacture, sale, and transportation of alcoholic beverages during the period of the war, and in opposition to an increase of tax on intoxicating liquors as a means of raising a revenue to prosecute the war; to the Committee on the Judiciary.

Also, petition of C. R. Osborn and citizens of Schnectady, N. Y., asking for full national prohibition of the manufacture, sale, and transportation of intoxicating beverages during the period of the war; to the Committe on the Judiciary.

Also, petition of Albert S. Thorn and citizens of Amsterdam, N. Y., asking prohibition of the manufacture, sale, and transportation of intoxicating beverages during the period of the war; to the Commitee on the Judiciary.

Also, petition of John F. Miller and sundry citizens of the town of Root, Montgomery County, N. Y., asking prohibition of the manufacture, sale, and transportation of intoxicating beverages during the period of the war; to the Committee on the Judiciary.

Also, petition of W. J. Davus and sundry citizens of Rotterdam, N. Y., asking prohibition of the manufacture, sale, and transportation of intoxicating beverages during the period of the war; to the Committee on the Judiciary.

By Mr. MORIN: Petition of the Central Trades and Labor Council, Mr. Fred J. Domard, secretary, of Allentown, Pa., urging Congress to immediately take steps to care for soldiers' families while they are in service; to the Committee on Military Affairs.

By Mr. MOTT: Petition of Baptist Church of New Woodstock N. Y., and Home Economics Club of Clayton, N. Y., favoring national prohibition; to the Committee on the Judiciary.

Also, petition of Clayton (N. Y.) Grange 647, favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. NOLAN: Petition of Philip Banwarth and John Burns, of San Francisco, Cal., praying for the passage of House joint resolution No. 88, introduced by Hon. W. E. Mason, of Illinois; to the Committee on Foreign Affairs.

By Mr. O'SHAUNESSY: Petition of the Catholic Total Abstinence Union of the diocese of Providence, R. I., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. OSBORNE: Petition of Asbury Bible Class and others, of the Pico Heights Methodist Episcopal Church, of Los Angeles, Cal., in favor of House bill 2308, and asking that a bill for nationwide prohibition be put through Congress; to the Committee on the Judiciary.

By Mr. RAKER: Petition of Frank B. Peterson Co., of San Francisco, Cal., in re advance in letter-postage rate; to the Committee on Ways and Means.

Also, petition of the Frank B. Peterson Co., protesting against any advance in letter postage; to the Committee on Ways and Means.

By Mr. RANDALL: Petition of George Bradbeer and 25 other citizens of Los Angeles, asking immediate prohibition as a war measure instead of drawing revenue from much larger liquor expenditures of our people; to the Committee on the Judiciary.

By Mr. REED: Resolutions of C. W. Bell, of Zela, W. Va., president; J. Tyree Wells, of Mount Cove, W. Va., secretary; and the delegates to the Hopewell Baptist Association Sunday School Convention, urging the enactment of a national prohibition law and the conservation of foodstuffs; to the Committee on the Judiciary.

By Mr. SANDERS of New York: Petition of representatives of the Epworth League of the 65 churches of the Rochester (N. Y.) district, favoring the prohibition of the manufacture and sale of intoxicating liquors for beverage purposes; to the Committee on the Judiciary.

Also, petition of the 16 ladies of the Sons of Veterans' Auxiliary of Batavia, N. Y., favoring national prohibition of the use of food products in the manufacture of intoxicating liquors; to the Committee on Agriculture.

Also, petition of the S. L. Miner Co., of Rochester, N. Y., favoring national prohibition as a war measure; to the Committee on Military Affairs.

Also, petitions of 113 residents of Rochester, N. Y., favoring national prohibition as a war measure; to the Committee on Military Affairs.

Also, petition of the Alexander Campbell Bible Class of the First Church of Christ Disciple, Rochester, N. Y., with 62 men present, favoring national prohibition as a war measure; to the Committee on Military Affairs.

By Mr. SMITH of Michigan: Petition of Mrs. Hugh Kennedy, of Albion, and W. S. Pullen and others, of Hillsdale, Mich., favoring prohibition; to the Committee on the Judiciary.

By Mr. TIMBERLAKE: Petition of Young Woman's Auxiliary of the First Congregational Church of Colorado Springs, Colo., urging the creation of effective zones around all military camps; to the Committee on Military Affairs.

By Mr. WARD: Petition of 250 citizens of Cobleskill, N. Y., urging the enactment of national prohibition, to continue during the war; to the Committee on the Judiciary.

Also, petition of citizens of Hensonville, Big Hollow, East Jewett, Clintondale, Gilboa, and Forest Glen, N. Y., urging the enactment of a law to prohibit the manufacture and sale of alcoholic liquors as a war measure; to the Committee on the Judiciary.

By Mr. WOODYARD: Petition of Central Woman's Christian Temperance Union of Huntington, W. Va., favoring the passage of a law prohibiting the manufacture of grain into alcoholic liquors and also asking for the purity of cantonments; to the Committee on the Judiciary.

Also, petition of Sussana Wesley Bible Class of the First Methodist Episcopal Church of Parkersburg, W. Va., favoring the passage of a law prohibiting the manufacture of grain into alcoholic liquors and the sale of intoxicating liquors; to the Committee on the Judiciary.

SENATE.

WEDNESDAY, *June 20, 1917.*

(Legislative day of Tuesday, June 19, 1917.)

The Senate reassembled at 12 o'clock m., on the expiration of the recess.

CONSERVATION OF FOOD AND FUEL.

Mr. CHAMBERLAIN. Mr. President, I ask that the unfinished business be laid before the Senate.

The VICE PRESIDENT. It is before the Senate, the Senate having taken a recess.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 2463) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

Mr. GORE. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Harding	Martin	Smith, Md.
Bankhead	Hitchcock	Nelson	Smith, Mich.
Beckham	Hollis	New	Smith, S. C.
Brady	Husting	Norris	Smoot
Brandegee	Johnson, S. Dak.	Overman	Sterling
Broussard	Jones, N. Mex.	Page	Sutherland
Calder	Kellogg	Penrose	Swanson
Chamberlain	Kendrick	Poindexter	Thompson
Colt	Kenyon	Pomerene	Townsend
Culberson	King	Ransdell	Underwood
Cummins	Kirby	Reed	Vardaman
Fernald	La Follette	Shafroth	Wadsworth
Frelinghuysen	McCumber	Sheppard	Warren
Gerry	McKellar	Sherman	Watson
Gore	McLean	Simmons	Williams
Hale	McNary	Smith, Ariz.	Wolcott

Mr. PAGE. I wish to announce that my colleague [Mr. DILLINGHAM] is absent on account of a death in his family. I should like to have this announcement stand for the day.

Mr. SUTHERLAND. I should like to announce the absence of my colleague, the senior Senator from West Virginia [Mr. GOFF], on account of illness. I will let this announcement stand for the day.

Mr. McKELLAR. I desire to announce the unavoidable absence of the senior Senator from Tennessee [Mr. SHIELDS] on account of illness. I should like to have the RECORD show in the proceedings of yesterday that the senior Senator from Tennessee was absent owing to the same cause.

Mr. SMOOT. I wish to announce the unavoidable absence of the junior Senator from Maryland [Mr. FRANCE] on official business.

Mr. KIRBY. I desire to announce that the senior Senator from Arkansas [Mr. ROBINSON] is absent on official business. I will let this announcement stand for the day.

Mr. SHAFROTH. I wish to announce the unavoidable absence of my colleague [Mr. THOMAS] on account of illness.

Mr. WOLCOTT. I desire to announce that the senior Senator from Delaware [Mr. SAULSBURY] is detained on official business.

Mr. GERRY. I desire to announce that the senior Senator from New Jersey [Mr. HUGHES] is detained by illness.

The VICE PRESIDENT. Sixty-four Senators have answered to the roll call. There is a quorum present.

NEWS-PRINT PAPER INDUSTRY (S. DOC. NO. 49).

Mr. SMITH of Arizona. There was referred to the Committee on Printing for printing a paper prepared and facts gathered by the Federal Trade Commission in regard to print paper, together with a draft of a resolution proposing that an investigation should be made. By direction of the committee I report the resolution favorably, and I ask unanimous consent for its present consideration.

The resolution (S. Res. 87) was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That the report on the news-print paper industry, submitted by the Federal Trade Commission on June 13, 1917, in response to Senate resolution 177, Sixty-fourth Congress, be printed as a Senate document, and that 5,000 additional copies be printed for the use of the Senate Document Room.

REPORT OF COMMISSION OF FINE ARTS (S. DOC. NO. 48).

Mr. SMITH of Arizona. To the Committee on Printing there was referred the report of the Commission of Fine Arts for the fiscal year ended June 30, 1916, accompanied by a message from the President of the United States. This report is printed every year, and I report from the committee a resolution providing for the printing. I ask unanimous consent for its present consideration.

Mr. CHAMBERLAIN. I am not going to object to this request, but I must insist that the bill which is now before the Senate as the unfinished business shall be proceeded with.

The resolution (S. Res. 88) was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That the report of the Commission on Fine Arts for the fiscal year ended June 30, 1916, transmitted by the President on June 2, 1917, be printed as a Senate document, with accompanying illustrations.

COAL SITUATION (S. DOC. NO. 50).

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Federal Trade Commission, transmitting, in response to resolutions of the Senate of June 22, 1916, and April 30, 1917, a report on the anthracite and bituminous coal situation and the relation of rail and water transportation to the present fuel problem. The communication and accompanying papers will be referred to the Committee on Interstate Commerce.

Mr. CALDER subsequently said: The Federal Trade Commission sent to the Senate to-day a report on the coal situation, the result of an inquiry in response to resolutions submitted by the Senator from Nebraska [Mr. HITCHCOCK] and myself. I ask unanimous consent that the report be inserted in the RECORD. It is a matter of very grave concern. The Federal Trade Commission have given the subject very attentive study.

The VICE PRESIDENT. Does the Senator from New York realize the size of the report?

Mr. CALDER. It would take about five pages of the RECORD, I think. I have a copy in my hand.

The VICE PRESIDENT. The papers which were handed down by the Chair would fill one volume of the CONGRESSIONAL RECORD.

Mr. CALDER. I think not. I have a copy in my hand.

Mr. SHAFROTH. I suggest to the Senator from New York to have it printed as a document.

Mr. CALDER. Very well. I move that it be printed as a Senate document, and that 10,000 additional copies be printed for the use of the Senate document room.

The VICE PRESIDENT. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, announced that the Speaker of the House had signed the following enrolled bill and joint resolution, and they were thereupon signed by the Vice President:

H. R. 3673. An act to amend the act approved December 23, 1913, known as the Federal reserve act, as amended by the acts of August 4, 1914, August 15, 1914, March 3, 1915, and September 7, 1916; and

H. J. Res. 105. Joint resolution to correct an error in the sundry civil appropriation act for the fiscal year 1918.

PETITIONS.

Mr. MARTIN. I present a communication signed by the President of the Virginia Christian Endeavor Union, which I ask to have printed in the RECORD.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

VIRGINIA CHRISTIAN ENDEAVOR UNION,
June 18, 1917.

The honorable UNITED STATES SENATE,
Care of Hon. THOMAS S. MARTIN,
Washington, D. C.

GENTLEMEN: It is an honor to forward to your honorable body the following message sent to President Woodrow Wilson as adopted at the State convention held in Norfolk, Va. It speaks for itself:

"Loyalty to Christ inspires loyalty to our country. Representatives of 10,000 Christian Endeavorers of Virginia in State convention in Norfolk assure you of their prayers and pledge you their support. May statutory prohibition as an emergency war measure become a reality soon."

We also urge the prompt adoption of proper food regulations in order that the prices of staple foods may not be inflated by unfair speculative dealings, which are an oppression that is neither fair or just. Our members are young people from 14 denominations and of small average earning power, so beg for relief from conditions that it should be possible to correct.

Respectfully, W. J. FINCH, *President.*

Mr. GALLINGER presented the petition of Michael P. Morrisey and sundry other citizens of Portsmouth, N. H., praying for the freedom of Ireland, which was referred to the Committee on Foreign Relations.

Mr. PAGE presented a petition of sundry citizens of Castleton, Vt., praying for national prohibition as a war measure, which was ordered to lie on the table.

Mr. VARDAMAN. I present resolutions adopted by the Winona District Conference of the Methodist Church in session at Drew, Miss., June 14, which I ask to have inserted in the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

The Winona District Conference in session at Drew, Miss., June 14, 1917, representing a communicant membership of more than 5,000, and in harmony with more than 150,000 Methodists and a vast majority of the voters of Mississippi, adopted the declaration set out below, and directed the undersigned to send a copy to the Commercial Appeal for publication in its columns, and a copy to each Senator and Representative in Congress from Mississippi. It is a pleasant duty to comply with the instructions of the conference.

J. R. BINGHAM, *Carrollton, Miss.*

"The church has won its fight for temperance and prohibition to the extent that this great moral reform is now written in the conscience of the people. Great corporations and other employers prohibit the use of intoxicants by employees. Newspapers of wide and powerful influence, notably the Commercial Appeal and others, are potent aids in this and other phases of civic righteousness.

"Impelled by insistent demands from the people, legislatures have enacted stringent prohibitory statutes, and in many States prohibition has been embedded in the constitution.

"Congress has enacted laws to strengthen State prohibition. Such laws came more quickly and in greater number and effectiveness than was thought to be possible less than a decade ago. We commend our Senators and Representatives in Congress for active aid in passing these wise and helpful measures, and urge them to ceaseless activity until nation-wide prohibition shall be the supreme law of the land. National prohibition by statute should be accomplished during the present session, and then should be firmly fixed forever in the Constitution. To this end we pledge our earnest efforts, and invoke the cooperation of all lovers of mankind."

J. R. BINGHAM,
R. L. WARD,
Committee.

Unanimously adopted by a rising vote.

L. M. LIPSCOMB, *President.*
E. L. DWIGGEN, *Secretary.*

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SWANSON:

A bill (S. 2482) to reinstate Armor S. Heffley as a second lieutenant in the United States Marine Corps; to the Committee on Naval Affairs.

By Mr. CHAMBERLAIN:

A bill (S. 2483) for the relief of William Fulton Hedges; to the Committee on Claims.

By Mr. SMITH of Arizona:

A joint resolution (S. J. Res. 81) to provide further for the national security and defense by insuring to the Government of the United States an adequate supply of paper at a fair price and by insuring a supply and equitable distribution at fair prices to the industries of the United States; to the Committee on Printing.

AMENDMENTS TO PENDING BILL.

Mr. McKELLAR submitted four amendments intended to be proposed by him to the bill (S. 2463) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel, which were ordered to lie on the table and be printed.

ILLINOIS 2-CENT RATE CONTROVERSY.

Mr. SHERMAN. I desire to offer a concurrent resolution, which I ask to have referred to the Interstate Commerce Committee. It does not relate to the pending bill, but I ask that it be printed at length in the RECORD, and not read.

I wish to ask the chairman of the Interstate Commerce Committee to have an early consideration of this resolution. There is a conflict of jurisdiction between the State and the Federal courts in Chicago and St. Louis on a matter of rate fixing. There is a case pending in the United States Supreme Court here which will settle the entire question. Judge Dyer, of St. Louis, has threatened to incarcerate the governor of Illinois, the attorney general, the public utilities commission, and a number of subordinate State officers in jail at St. Louis. The State officers themselves are required by oath to enforce, and many persons concerned are insisting that they enforce, the 2-cent rate law in Illinois, so it brings these officers between two fires.

Interstate rate making was originally a function of Congress. That function has been delegated to the Interstate Commerce Commission; and I think it proper, in connection with the resolution I have offered, that the Interstate Commerce Commission take some action, as they have caused this condition, with this pending case, that threatens to disable a portion of the State government by depriving it of its executive head and chief law officer, temporarily at least, until this case shall be heard. It is now set for hearing on the 2d day of October, 1917, by agreement between the railways concerned and the counsel of the Interstate Commerce Commission, Mr. Folk, and the attorney general of Illinois, Mr. Brundage.

I ask the chairman of the committee to give this resolution early consideration.

There being no objection, the concurrent resolution (S. Con. Res. 5) was referred to the Committee on Interstate Commerce, as follows:

Whereas the State of Illinois by an act of its general assembly in force July 1, 1907, provided that it should thereafter be unlawful for any company or corporation engaged in the carriage of passengers between points in such State to charge in excess of 2 cents per mile for the carriage of passengers, and providing penalties for the violation thereof, and requiring the attorney general and other officers of the State concerned therein to prosecute and enforce the same, whereby and by other laws of such State it became, and still is, the duty of the governor of said State, its public-utilities commission, its attorney general, the State's attorneys of the several counties through which any such railway passes, and the various public officers and agencies to enforce such act relating to railways; and

Whereas on December 1, 1914, the railroad companies entering St. Louis, Mo., advanced their passenger fares between Illinois points and St. Louis to a basis of 2½ cents per mile, and in June, 1915, certain business interests in St. Louis complained to the Interstate Commerce Commission that there was discrimination against St. Louis and in favor of certain Illinois points, whereupon said commission in October, 1916, made an order finding that on interstate business to St. Louis 2.4 cents per mile was a reasonable maximum rate of fare, and directed the railways concerned to remove the alleged discrimination against St. Louis without directing whether it should be done by raising the intrastate fare or by lowering the interstate fare, in which proceeding the State of Illinois and none of its officers were a party. The railways concerned interpreted this order to be a permission to make a 20 per cent advance of all intrastate passenger fares in Illinois, contrary to the 2-cent fare act in said State, and instituted suit in the United States district court at Chicago to enjoin the State authorities from prosecuting them for a violation of said State law, which upon application for a temporary injunction was heard by Judges Evans, Landis, and Carpenter, and was by them denied; and such case was thereafter heard on its merit before Judge Landis and the bill dismissed for want of equity, Judge Landis holding that the order of the Interstate Commerce Commission was invalid for the purpose of annulling or modifying the Illinois statute, from which order of dismissal the railways took an appeal to the Supreme Court of the United States, and there applied for an injunction against the Illinois authorities to restrain them from the enforcement of said State law pending the appeal and decision by the United States Supreme Court. Justice Clark of said court denied said injunction so applied for. The railways then asked to have the case advanced for hearing, to which the State of Illinois, through its authorities, consented, and the United States Supreme Court thereupon assigned said case for hearing on October 2, 1917, the decision of which by the Supreme Court will settle and permanently adjudicate the validity of said Illinois statute and the order of the Interstate Commerce Commission herein mentioned. The carriers, pending the decision of said case, have made no attempt to violate the Illinois 2-cent fare law, and it appeared to be assumed by all of the authorities of said State and the railways concerned that the then status of the controversy would be maintained until the final adjudication by the Supreme Court; and

Whereas a few weeks ago the Interstate Commerce Commission, through its attorney, Joseph W. Folk, and not through the Attorney General of the United States, who by law is in charge of such cases, exhibited a bill in the United States District Court at St. Louis against said railways to enforce the order of the commission held invalid by Judge Landis of the court. The railways concerned applied to the district court in St. Louis for an order to make the State of Illinois, its State public-utilities commission, the attorney general, and other State authorities whose duty it is to enforce such 2-cent fare law, parties to that suit. Such railways, however, did not attack the validity of the order of Judge Landis setting aside the order of the Interstate Commerce Commission, which judgment is appealed from and pending to be heard in the Supreme Court October 2, 1917, as stated. The application to make the State of Illinois and its public authorities was heard by Judges Hook and Dyer and denied. The railways, however, practically consented to the entry of a decree requiring them to obey such order of the Interstate Commerce Commission so suspended from operation by the order of Judge Landis and the refusal of Justice Clarke of the Supreme Court to protect by a temporary injunction, and said railways then gave notice that in order to comply with the decree entered by Judges Hook and Dyer that they would advance their Illinois rate to 2.4 cents per mile, upon which suit was brought by the attorney general of Illinois under the direction of the State public-utilities commission to restrain the railroad company from violating the said State 2-cent fare act in the Superior Court of Cook County of Illinois, upon which a preliminary injunction was obtained, and all the railroad companies, with the exception of the Wabash Railroad, elected to obey such superior court's injunction and withdrew their notice and abandoned their intention to advance passenger rates between points in Illinois to more than 2 cents; and

Whereas the Interstate Commerce Commission thereupon brought proceedings in the United States District Court at St. Louis alleging the railroad companies were in contempt for refusing to obey the decree of the latter court to remove the alleged discrimination against St. Louis, in which contempt proceedings said railroads again made further attempts to have the State of Illinois and its authorities made parties, which application was again denied by District Judge Dyer, who heard said case; Judge Dyer in his opinion gave notice to the State of Illinois and its authorities that if they attempted in any way to enforce the injunction issued by the Superior Court of Cook County, or prosecuted the railroad companies concerned if they attempted to advance their rate between Illinois points to 2.4 cents a mile he would adjudge such Illinois State authorities to be in contempt and incarcerate them in jail although in none of the proceedings in said district court in St. Louis was the State of Illinois or any of its authorities party nor was the said 2-cent fare act of Illinois submitted so as to decide upon its validity, and nothing in the order or decree entered by Judge Dyer refers to the Illinois statute or to the action of its State authorities; and

Whereas the circumstances show that the railway companies, or some one of them, such as the Wabash Railroad, is or are attempting indirectly to avoid the effect of said Illinois 2-cent fare act without entering into an inquiry as to its reasonableness applied to railway earnings from passenger fares within the State of Illinois, and are merely using the alleged discrimination against St. Louis as a means or subterfuge to increase passenger rates; and

Whereas it is the duty of the Illinois authorities under the statutes of that State to enforce all the laws thereof including the 2-cent fare act, which has not been held invalid by any State or the United States; and the governor of said State, Frank O. Lowden, Edward J. Brundage, its attorney general, the public utilities commission, and other State authorities are threatened by District Judge Dyer with arrest and confinement in jail in such a way as to impair or temporarily destroy the operation of said State government, while said cause in the United States Supreme Court is pending and which will finally adjudicate by a court of last resort the conflicts of jurisdiction and of orders entered in the foregoing manner, and which could with propriety and justice be disposed of thereby rather than the unseemly and unnecessary controversy between different judicial tribunals, the Interstate Commerce Commission and the State of Illinois: Now therefore be it

Resolved by the Senate (the House concurring therein), That said Interstate Commerce Commission be, and is hereby, directed to dismiss their application or petition in said cause and modify or vacate its order herein referred to in such a way that the status of the parties in the cause pending in the United States Supreme Court shall be preserved in accordance with the order of District Judge Landis and the refusal of Justice Clark of the Supreme Court to grant a temporary injunction until said cause shall have been finally determined in the United States Supreme Court on or after October 2, 1917.

THE COMMITTEE ON PRINTING.

Mr. SMITH of Arizona submitted the following resolution (S. Res. 89), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That the Committee on Printing or any subcommittee thereof be and hereby is, authorized during the Sixty-fifth Congress, to send for persons, books, and papers; to administer oaths and to employ a stenographer, at a cost not exceeding $1 per printed page, to report such hearings as may be had in connection with any subject which may be pending before said committee, the expenses thereof to be paid out of the contingent fund of the Senate, and that the committee, or any subcommittee thereof, may sit during the sessions or recess of the Senate.

EXECUTIVE SESSION.

Mr. MARTIN. Mr. President, in order to dispose of some matters that are rather urgent and which will occupy only a very few moments, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business.

After 10 minutes spent in executive session the doors were reopened.

CONSERVATION OF FOOD AND FUEL.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 2463) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

Mr. GORE. Mr. President, I desire to have a telegram, which I send to the desk, read to the Senate at this juncture. I do not wish the name signed to the telegram read, because I do not feel at liberty to use it

The VICE PRESIDENT. The Secretary will read the telegram, omitting the name of the signer.

The Secretary read the telegram, as follows:

FORT WORTH, TEX., *June 19*.

Hon. T. P GORE,
United States Senate, Washington, D. C.:

Do Congressmen realize the effect produced by the introduction of the food-control bill and the action of exchanges of the country in restricting trading in wheat to short selling? This effect has been to thoroughly disorganize the grain and milling business of this country. The new harvest is on. Our farmers want a fair and open market for their grain. The grain dealer and miller are at sea without a rudder and without a compass. Speculative buying has been prohibited by the exchanges. There is no market for grain. It has been declining an average of 10 cents per bushel every day for nearly a week. Almost before it is released the farmers of this country are going to rise up and sound a protest against the present order that will shake the foundation of this Republic. This simply for your information and guidance.

Mr. GORE. Mr. President, I may say that this telegram comes from a grain concern in Fort Worth, Tex. Perhaps the signer overstates the case, but the statement is at least significant.

I wish to say, Mr. President, that this telegram states as a fact what I have entertained as a most serious fear. I have feared that the farmer would be the chief, if not the only, victim of the proposed legislation and of this entire campaign to hammer down the price of wheat and corn and of other farm products. The farmer is expected to make a vicarious sacrifice for the whole country, and apparently for the whole world. If it be desired in any quarter artificially and arbitrarily to drive down the prices of wheat and corn, no more efficient weapon could have been devised than the pending bill as now drawn.

We may be able to drive down the prices of farm products this year; we may be able to cut down the prices this year. I apprehend that this legislation, if passed, will cost the producers of wheat in the United States $250,000,000 this year; that it will cost the producers of corn $500,000,000 this year. You may cut down prices this year; you may effect an enormous saving this year; but I predict that next year will be a lean year—will be a famine year—if this short-sighted policy is persevered in by the Congress of the United States.

In 1914 the cotton exchanges closed; business collapsed; cotton sold for 5 and 6 cents a pound. That cost the cotton farmers of the South $500,000,000; it cost the cotton farmers of my State $50,000,000. I heard neither "a still, small voice," nor did I hear the mighty voice of any governmental authority, raised at that time to guarantee a minimum price to the cotton producers of the South. They took their loss with widespread sufferings to the people of that section.

I do not mention the closing of the cotton exchanges as the chief but only as a contributing cause of this calamity.

Mr. President, a demoralized market, a disorganized market, a chaotic market, reacts on the producer; all the uncertainties of the situation are discounted, and they react on the man who produces the stuff to sell. Human ingenuity can not prevent such an effect following such a cause.

Take the closing of the exchanges in Chicago on May 12. That was a panic in spots, not a panic in futures. Portugal placed an order for 500,000 bushels of wheat on that day. In the public elevators of Chicago that day there were only 156,000 bushels of wheat. Those two facts furnish the raw materials of a panic. Further, to confirm that conclusion, on that very day millers were bidding and paying 16 cents more for spot wheat than the speculators were offering for future contracts. I repeat, it was a crisis in spots and not a crisis or a panic in futures.

By a strange, grim sort of irony, when the Chicago exchange closed on May 12, buying, the bull factor, was prohibited; selling short, the bear factor, was permitted. I asked a member of the Chicago exchange why that was done. "Why," he said, "buying is the bull factor; selling is the bear factor, and tends to lower prices." That was done on the 12th day of May. Wheat is now being harvested in Texas and in Oklahoma. This action was taken when the farmer was on the eve of marketing his harvest. I will not say that the intention of this whole movement is to drive down the prices of products in the hands of the farmer. But whether that be the intention or not, it will be the inevitable effect unless this measure is materially amended. Rational men are presumed to intend the inevitable consequences of their conduct. Perhaps I ought not to impute to Congress any intention whatever; perhaps I ought not to suggest that they are either voluntary, moral, or political agents exercising a responsibility of their own; I mean no reflection, but I think Senators understand what I do mean. Prior to the French Revolution the "Bed of Justice" in Paris had practically no other function than to register the edicts of the King. What a splendid, dignified performance! I have no reference to Congress in this allusion, but I might say that if Congress should surrender its own self-respect it can not escape forfeiting the respect of everybody else whose respect is worthy of consideration.

I see that the English food controller has ventured to make certain suggestions as to what Congress should do. Of course, we welcome suggestions from any quarter; we need them, perhaps; but I want to repeat, Mr. President, that the pending bill is the sweepings of all the acts of the Canadian Parliament and their orders in council; it is the sweepings of the acts of the British Parliament and the orders of the British privy council. They have been strung together like a string of beads in this bill, without any reference to the Constitution of the United States and without any reference to the situation of the United States.

It seems to be forgotten that the situation in this country is diametrically opposite to the condition or position which prevails across the sea. The allies consume more than they produce; they are importing countries; they have difficulty in securing shipments of food. That raises an immediate and overpowering crisis. We must help them meet it. The United States produces more than it consumes; it is an exporting country. That difference in situation calls for a difference in treatment.

This bill was prepared by an attorney down here in one of the departments, I am informed. Some seem to imagine that it comes to us in the handwriting of Divinity; that it would be a blasphemy and a sacrilege to lay our hands on the bill; and that the wrathful lightnings of an offended Heaven would come down upon us as they did upon the presumptuous man who laid his hands upon the Ark of the Covenant.

There are other measures which ought to be taken with reference to the food situation in the United States. I take it that everybody is in favor of some sort of coordinated purchasing agency that will insure cooperation between this country and the allies in the markets of the world and which will obviate competition among them. They ought not to run up prices against each other, as they have done in the past. Everybody will subscribe to that self-evident necessity. Everybody is in favor of legislation that will penalize the gamblers. I take it that everybody is willing to let loose the thunderbolts of congressional condemnation against them. We can agree upon that.

Possibly some legislation with reference to minimum prices should be enacted. Newspaper dispatches from Washington indicate that that is practically all that is desired by the President in "his food-control legislation." If it is, I take it that it can pass without delay and without serious obstruction. The judgment of this country is no doubt based on these glittering headlines from Washington respecting this legislation, and, basing their judgment upon these glittering generalities, the country may well wonder why Congress refuses to enact legislation that is so self-evidently desirable. When we come to consider the pending bill, however, it in no sense corresponds with those glittering headlines.

It was evident from Mr. Hoover's statement on yesterday that he was not familiar with the provisions of this bill, and that he had no conception of its far-reaching consequences.

He expressed surprise when it was called to his attention that under section 9 he could, if this bill were passed and he were appointed to administer it, commandeer wheat in the crib of the farmer, and not only that but that he could commandeer the crib in which the wheat was stored, and he could fix the price to the farmer. The farmer is, indeed, vouchsafed the inestimable privilege of resorting to the courts to determine whether or not Mr. Hoover's price is a reasonable price, but perhaps the attorney's fee in the case, tried in a Federal court, would more than make up the difference in price fixed by the food controller and the price awarded by the court.

I am not willing to give any one man the power to compel a farmer in Oklahoma to plant corn instead of cotton, to plant wheat instead of corn, to plant oats instead of wheat, to plant rye instead of oats, to plant beans instead of rye and to plant potatoes instead of beans. I think that the farmers of my State and of the United States taken either collectively or individually have more wisdom and better judgment as to what they should plant than any man or set of men who might be chosen to direct their business or to dictate their activities. Are we ready for a dictatorship of this character? In saying this I insist that in point of patriotism the farmers are the equal of any other class of our citizenship.

I hope, Mr. President, that before we take action on this bill it will be rendered constitutional in its provisions, and that it will be restricted to the real needs of the country, to the real needs of the situation, and made to conform to the headlines, the glittering and splendid headlines in Washington press dispatches, which everybody favors and nobody opposes.

I may say, as suggested by my colleague on my right [Mr. REED], that Mr. Hoover expressed some wonderment that this bill contained the power to regulate what should be eaten upon the tables of this country; but there is no doubt that section 3 undertakes to confer that power. If a man should order a sirloin steak and Mr. Hoover should suggest the ordering or the substitution of a round steak, this bill goes to that extent. Under the language of section 3 this governmental control is extended to the production, pledging, financing, and consumption of necessaries and articles required in the production of necessaries. To state the case in extremis, no farmer could mortgage a mule if this universal overseer should forbid it. No bank could make a loan to any farmer, factory, mine, or other plant engaged in the production of necessaries or articles essential to the production of necessaries. In its terms the control is thus universal, without perhaps any sanction equal to its execution. So far as I am able to interpret its terms, paints, powders, and plumes, and like luxuries are about the only things that escape its universal surveillance, authority, and dictatorship.

Mr. President, I have made these remarks merely as suggestions. I may discuss the bill and its merits and demerits before the debate is closed.

Mr. CHAMBERLAIN. Mr. President, just a word or two in reply to the Senator from Oklahoma. I rather infer from the Senator's remarks that he wants to have the bill recommitted to the Committee on Agriculture and Forestry.

Mr. GORE. Mr. President, the Senator is mistaken. If the Senate will pass the bill in this shape I shall content myself with expressing my views against it and casting my vote against it. I thought the bill ought to come to the Senate in this form, and if the Senate feels that it is its duty to accept it in this form it ought, of course, to exercise that duty. My own views as to what the bill should contain differ from the views of those who champion the measure, and perhaps on some other occasion we may reach the point when we can get down to considering amendments in detail; but I would not suggest the recommittal of the bill, certainly not at this time. I think it ought to be fully discussed.

Mr. CHAMBERLAIN. That was my hope, Mr. President, and I understood that was the express desire of the distinguished chairman of the committee when the bill came into the Senate from the committee.

The Senator has read into the RECORD an anonymous telegram from Texas. The gentleman who subscribed his name to the telegram may be all right, but there are distinguished Senators here from Texas who ought to know the man if his name were given, and I hope the Senator from Oklahoma may get the authority of the gentleman who sent the telegram to have his name divulged, so that, if he has any interest, the Senate will be able to judge for itself whether it is a selfish interest or whether he is interested only in behalf of the public.

Mr. President, the Senator, basing his statement on the telegram, calls attention to the fact that the price of wheat when wheat is ready to be sold by the farmer in Texas is going down at the rate of 10 cents a bushel a week. I predict, Senators, that the price of wheat will continue to go down from now until after the harvest while the farmer has it for sale; but just as soon as it is bought up by such men as those who are sending telegrams to the Senator the price will commence to go up. That is what Mr. Hoover says about it.

Mr. REED. Mr. President——

Mr. CHAMBERLAIN. Just a moment. Let me finish with what I have to say. I think Mr. Hoover has expressed in a very few words just exactly what is attempted to be done now, and what is done every year about the time the farmer gets ready to sell his wheat. He testified yesterday before the committee—and I regret that I did not hear his testimony on cross-examination—as follows:

> If we assume that the farmer last year received an average of, at the highest, $1.60 per bushel for his wheat, then with the addition of the normal manufacturing cost, righteous profits of distribution, the price of flour should not throughout the country in the larger consuming centers have exceeded $9 per barrel, and yet the price of flour at a great many centers is $15 per barrel throughout the country and probably averages over $14. Some one is taking $5 per barrel on 10,000,000 barrels per month, which is marketed in this country.

That, Mr. President, answers the suggestion in the telegram which has been read by the Senator from Oklahoma. Wheat is being hammered down now by those who are purchasing it from the farmer, but just as soon as practical control of it is attained, whether it be by the warehousemen or the middlemen or anyone else, then the price of flour will go up to the consumer out of proportion to the price paid for the wheat.

Mr. REED. Mr. President, I think, since the Senator is quoting Mr. Hoover as an authority, he ought now, in connection with what he has read, to read his cross-examination, or his examination, for Mr. Hoover first made a dissertation to the committee——

Mr. CHAMBERLAIN. Mr. President——

Mr. REED. The Senator ought to read that part of it in which Mr. Hoover admitted, as he had to admit, that when wheat was a dollar or a dollar and twenty-five cents in Chicago, flour sold at a proportionate price, and when wheat went to a dollar and thirty-five or a dollar and forty cents, flour did not rise out of proportion to the rise in wheat; that the country was fed with flour at moderate prices until within——

Mr. CHAMBERLAIN. Mr. President——

Mr. REED. I hope the Senator will let me complete the statement—until within the last few weeks, when the wheat crop having been largely consumed and the wheat cornered by the purchases of the allies and the price run up, the price of flour then went up in response to the price of wheat.

Mr. CHAMBERLAIN. Mr. President, let me say to the Senate that I do not object ordinarily to being interrupted, but I am merely trying to reply to the appeal that has been made here by the Senator from Oklahoma [Mr. GORE] in behalf of the American farmer. I am trying to answer that by the record that was made here yesterday, to show that this bill is in the interest of the farmer, and is designed really to control the middleman and to protect the public.

Now, with reference to Mr. Hoover, I did not hear the cross-examination of Mr. Hoover by the distinguished Senator from Missouri, for I was compelled to be on the floor of the Senate. I know, without anybody telling me, that that was a rigid cross-examination, because the able Senator knows how to do that

thing; but I think, in all fairness to Mr. Hoover, it ought to be said that in making his statement to the committee in the outset he said he was not a lawyer; that he did not know what the legal effect of the several provisions of the bill was; that he trusted the legal aspects of the bill to the lawyers of the department, the solicitor and others who had to do with the framing of it, but he got down to the facts as a layman, as a man of large experience, and not as a lawyer. If there is anything wrong about the bill from a legal aspect, if it is in danger of going further than the facts justify going, the Senate of the United States can correct it. To that end our efforts should be directed, with the zeal and patience which the great crisis now pending demands.

Mr. REED. Mr. President, if the Senator will pardon me, I did not raise any legal objection or question Mr. Hoover's legal knowledge.

Mr. CHAMBERLAIN. I know that.

Mr. REED. I am asking the Senator to give to the Senate the fact that Mr. Hoover admitted that it was not true, as has been stated to the country repeatedly and as was in substance stated by him, that the wheat of the country had been bought up at low prices, held by speculators, the price of flour forced up to $17 and $18 a barrel, and the public robbed to that extent, the farmer getting no benefit; but, on the contrary, the fact was that the price of flour went up as the price of wheat went up; that just so long as wheat was low flour was low; that during the greater part of the year flour was at a moderate price throughout the United States; and that it was only when Mr. Hoover and men of his ilk in the United States began to say that this country was going to starve to death, and it was only when the allies had cornered something like 100,000,000 bushels of wheat on the Chicago market and forced up the price that the price of wheat went kiting and the price of flour followed it.

That is a very different thing from a statement to the effect that the farmer was bilked out of his wheat for a few cents and then that the consumer during the entire year was robbed on $17 flour.

Mr. CHAMBERLAIN. Mr. President, as I said a while ago, I am not going to discuss the general statement made by Mr. Hoover, because he covered every branch of this subject, and the record will disclose all that he said. I am simply replying to one proposition now; and the statement that I have read as having been given by Mr. Hoover is verified by the everyday experience of every man in the Senate that has to do with supplying a home. We know that the price of flour has gone up out of proportion to the price of wheat. We know that the farmer has not been getting it. We do know that somebody has been getting it because we have been paying it. Who is it? It is somebody between the farmer and the ultimate consumer, Mr. President.

That is not only true with reference to wheat in this country, but it is true of everything. I got a letter from a friend in New York City this morning. He does not happen to be a dealer, but it illustrates further the truth of what I have said with reference to wheat. He tells me that a man in New Jersey, whose name he gives, can not sell the spinach he raises at $1 a barrel of 60 pounds in the city, and yet that same vegetable which he is buying for an old lady for whom he says he is purchasing agent costs him 15 cents a quart or pound, or at the rate of $9 a barrel. There is the same proportionate increase in the price of wheat after it is manufactured into flour and goes into the hands of the consumers. This bill is intended in the interest of the farmer, if you please, in the interest of the producer of this country, to regulate those prices to the ultimate consumer, and not to injure the farmer or the producer. In other words, to put an end to the iniquitous practices of the middlemen.

Mr. BORAH. Mr. President, I should like to ask the Senator a question. The Senator states that the bill purports to deal with this particular situation. If I can be satisfied that the bill does deal with this particular situation effectively, it will help me very much in casting my vote; but I should like to have the Senator, or some one else supporting this bill, state what provisions they rely upon to deal with this situation. Now, what are the provisions in this bill? Let some one analyze it that will show how that situation is going to be dealt with. Is it by fixing prices, or how are you going to deal with it?

Mr. CHAMBERLAIN. By licensing, preventing waste and hoarding, by governmental purchase, by stimulating production, and preventing unfair practices. These things are specifically provided for by the express terms of the bill, but it is difficult at this time to analyze each section.

Mr. BORAH. I know the generality is there; but in what respect will you deal with it differently from the way you would under the Clayton Act or under the Federal Trade Commission act? In what respect will you deal with it differently under this bill from the way you would under those acts?

Mr. CHAMBERLAIN. The Senator is one of the ablest lawyers in the Senate, and the Senator can analyze this bill better than I can. There are cases, however, where food products may be stored, hoarded, controlled, and sold at high prices to the consumer that would not come within the provisions of the Sherman antitrust law. The individual might do it without forming any combination with his fellows or those dealing in the same commodity, and this bill would enable the Government to reach him.

Mr. BORAH. Mr. President, I ask this question because, after an examination of the bill, I am unable to find anything in the bill which is not already provided for in measures which are now upon the statute books. Unless you are going to assume that this is a price-fixing measure, unless you are going to assume that under it not only the minimum price but the maximum price may be fixed, I can see no difference in the power given to prevent hoarding and speculation and monopoly than the power which is already accorded in other statutes. I should like to know from some of the advocates and sponsors of the bill wherein the distinction lies and wherein we are going to get relief. I for one will waive any doubts I might have as to the constitutionality of some of its provisions if we can be satisfied as a working proposition, as a practical fact, that it will effectuate that which it is claimed that it will effectuate.

Mr. CHAMBERLAIN. Mr. President, I think the sections of the bill to which I have called attention and covering the subjects mentioned, with the power given the executive department to prevent unfair practices, rates, and charges, to establish if necessary a governmental monopoly in all necessaries so as to sell to the consumer at reasonable prices, and the further power to take charge of plants and industries in order to cheapen production, are cases not covered by existing statutes. If there are any statutes to cover the abuses which this bill is intended to remedy, I hope the Senator, when he comes to discuss the measure, will point them out so that there may be no duplication of legislation on this great subject.

Mr. CUMMINS. Mr. President——

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from Iowa?

Mr. CHAMBERLAIN. I do.

Mr. CUMMINS. In saying what I am about to say, I do not want it to be understood that I favor all parts of this bill, for I do not ; but the Senator from Oregon might refer to the latter part of section 4, in which it is made unlawful to exact excessive prices for any necessaries. That is not the law now; but if that provision can be enforced, it will give great relief to the situation.

Mr. BORAH. That is just exactly what I should like to know from the Senator from Iowa. How are you going to enforce that particular provision?

Mr. CUMMINS. I do not intend to answer that question, because I do not know; but those who are responsible for putting that provision in the bill ought to be able to tell how that can be enforced.

Mr. BORAH. Mr. President, I concede that there are enough generalities in this bill to bring on the millenium; but I say in all frankness that I have not been able to find, either in the hearings of Mr. Hoover or anyone else, how you are going to operate under this measure in order to effectuate these things. Now, it is all right to pass a statute saying that no one shall exact a higher price than that which is right and just under all the circumstances. What I want to know from the sponsors of the bill is, How are you going to enforce it if some one does exact such a price? I want practical results. I do not want to vote for a bill which may be ineffective. Of all measures before Congress, this one should be wisely and effectively drawn.

Mr. CHAMBERLAIN. Mr. President, I have no doubt but that the bill provides the means that will enable the executive department of the Government to carry out these provisions. The President, as Commander in Chief of the Army and Navy, ought to be in a better position than anyone else to know exactly what is needed in the way of food conservation at this time, and he approves of this measure, I am advised, and thinks it will enable the executive departments to protect our people during this war. He understands what is necessary to be done to feed the young men who are going to the front, whether in the Navy or in the Army. He understands the situation better than anyone, because he has taken particular pains to find out the conditions with reference to production and consumption in this and other countries as affected by the pending war. I am willing to follow his lead in all matters of policy affecting the present war, and Senators ought not to hesitate to do so, if

they desire to see our country win against the most perfectly systematized Government in the world.

In order that the Senator from Oklahoma may know the President's views I am going to ask to have printed in the RECORD a letter addressed by the President to Mr. BORLAND, Representative from Missouri.

Mr. REED. It has been in the RECORD once.

Mr. CHAMBERLAIN. I am afraid maybe some of our friends in the Senate have not seen it. I am going to ask to have it printed in the RECORD, Mr. President.

Mr. SMITH of Michigan. It will not be the first time a letter has been printed twice.

Mr. CHAMBERLAIN. No; as the Senator from Michigan says, it will not be the first time that a letter has been published the second time, and sometimes it has been published several times.

Mr. REED. I simply wanted to call attention to the fact. I did not know whether the Senator was aware of it or not.

Mr. CHAMBERLAIN. That is all I care to say at this time.

Mr. KENYON. Is the letter to be read?

Mr. CHAMBERLAIN. Yes; I should like to have it read.

The VICE PRESIDENT. Is there any objection? The Chair hears none, and the Secretary will read as requested.

Mr. CHAMBERLAIN. It could be printed in the RECORD if desired.

Mr. KENYON. I was not asking to have it read. I thought the Senator wanted to have it read.

Mr. CHAMBERLAIN. I ask to have it read, Mr. President.

The Secretary read the letter as follows:

JUNE 18, 1917.

MY DEAR MR. BORLAND: You are quite right about the food-administration measure. In my opinion it is one of the most important and most imperativly necessary of the measures which have been prepared in connection with the war.

A certain disservice has been done the measure by speaking of it as the food-control bill. The object of the measure is not to control the food of the country but to release it from the control of speculators and other persons who would seek to make inordinate profits out of it and to protect the people against the extortions which would result.

PLAYING IN ENEMY'S HANDS.

It seems to me that those who oppose the measure ought very seriously to consider whether they are not playing into the hands of such persons and whether they are making themselves responsible should they succeed, for the extraordinary and atrocious price of food in the United States. Foodstuffs will, of course, inevitably be high, but it is possible by perfectly legitimate means to keep them from being unreasonably and oppressively high.

I hope and believe that the Congress will see the measure in this light, and that it will come to an early passage. For time is of the essence. The legislation should be secured by 1st of July to make the country safe against the dangers it is meant to guard against.

Cordially, yours,

WOODROW WILSON.

Mr. KENYON. Mr. President, I want to discuss this bill at some length and explain its provisions.

I am going, Mr. President, to invite interruption to the extent of questions, and any reasonable reasons to sustain the questions, for a while, at least, because this bill is in a most peculiar situation here. It has apparently no parentage, and is a fit subject for adoption. It is brought out of committee without recommendation, because the committee were in an absolutely hopeless difference of opinion about the bill, so the Senate really is now acting as a committee of the whole, in all that the term implies, in the discussion of this bill.

I have no pride in the bill and am not the author thereof, but am earnestly in favor of some action along the lines of the bill. I have some amendments to offer, and believe that we can hammer out here in the Senate, in the next two or three days, this bill so that it will cover these important questions.

The Senator from Oklahoma [Mr. GORE] speaks of the farmer. I represent a great farming State, the greatest in the Union. I do not want to see anything done to injure the farmer, not only for the farmer's sake but for the country's sake. There is no one on the committee or in Congress, who thinks soberly on this question, who wants any injury done to the farmer, because production is the essential thing, and if we do not have anything at all to eat it will not make much difference what the prices are. We can not do anything here to injure the producers of this country and not injure the country in its food power and its man power and its ability to carry on this war.

That is not what the bill does. The farmer should have his reasonable profit, but everyone knows that the man who comes to pay for the things which the farmers produce is paying a price of which the farmer receives a very small or not a very substantial part.

Mr. Dillon, who was before our committee, discussed this question in its relation to the farmer. It would be an advantage to Members of the Senate to read his testimony and his analysis as to what percentage of the price the consumer paid that the farmer really received.

I say this, Mr. President—that the farmers of this country are perfectly patriotic. They want a square deal, and they are entitled to it. They are taking great risks in raising produce by reason of labor and by reason of climate and the high prices they are compelled to pay for what they must have; but I think it was a governor of North Dakota, a real farmer, not a political farmer, who said before the committee that after all was said and done the farmers of this country preferred a food supply controlled by the Nation rather than a food supply controlled by the gamblers.

I appreciate, and appreciate deeply, as every legislator does, the tremendousness of these problems, and I will be apprehensive about the bill in its present form somewhat as to the effect it might have on the producer. That is one viewpoint. But I am also deeply apprehensive as to the effect upon the country if something is not done to curb these high prices. We must in traveling this new field—absolutely new—realize the gravity of the situation in which our Nation is placed. If we do not believe that our Nation is in a grave situation we would not for one moment think of legislation of this character, and unless we can realize the tremendous importance of the position that our Nation has now taken in the affairs of the world, we can not get up a bit of enthusiasm over legislation of this kind.

The people of this country must bear some sacrifices in this war. Farmers may have to bear some sacrifices, laboring men, and everybody. The man with a small salary is certainly bearing it now. The people of this country are willing to bear these sacrifices. The farmer is willing to bear sacrifices, but he wants others to bear their proper part of the sacrifices also.

It is hard for us to realize, it has been hard for me to realize, what the demands are upon us from the allies, and to realize what this question of domestic tranquillity in this country is going to mean on this food question. But I believe we are coming to realize it. We are realizing that we must mobilize our people, every branch of our industries. We must mobilize our energy, we must mobilize our food, we must mobilize the efficiency of this Nation, because efficiency is going eventually to win this war, and this food question may become the most important of all questions that we are compelled to deal with.

You can not live without food. You can live without clothing or shoes, though it is unpleasant to be compelled to do so and you might be put in jail, but you can not live without food. Soldiers can not fight without food. You can not have a nation enthusiastically behind the war that has thousands and thousands of hungry people in it while others have all that wealth can bring.

So I want to discuss this bill as to practical questions. First, its relationship to our duties abroad, and second, its relationship to our duties at home. Then I want, in the third place, to discuss the law of the bill, especially its constitutional features. I do not want to dodge any of its difficulties, and I know they are there. I am perfectly willing and anxious that the meeting be thrown open to suggestions about the bill and amendments. I am going to make them, too, so that we can work out something for this emergency.

Now, Mr. President——

Mr. BORAH. The Senator said he would like to have suggestions as he goes along so as to get at the practical features of the bill. I suppose every one agrees upon the general situation as to the necessity of doing all that can be done to conserve the food supply of the country, and the only debatable question before the Senate is whether or not this bill will accomplish that fact.

Mr. KENYON. There is another question, too, and that is the question of power, whether it is within the constitutional power of Congress.

Mr. BORAH. So far as any view affecting that, it is held in the Senate apparently that the Constitution is not to interfere with anything we want to do. So far at least the question of its constitutionality has not been raised. In any event the first question is whether or not we have a practical and workable measure.

Mr. REED. Will the Senator let me interject there? The Senator says there seems to be a disposition on the part of the Senate to lay the Constitution aside and to proceed regardless of it. I agree with the Senator on that; but does the Senator think when it comes to the enforcement of a bill which we may pass some citizen of the United States may not invoke the protection of the Constitution, and actually go into court and vindicate his rights?

Mr. BORAH. I think that undobutedly will occur. I did not mean to say that I myself was in favor of disregarding the Constitution.

Mr. KENYON. Mr. President, I am willing to throw the meeting open, as far as I am concerned, to both sides, but I am not willing to have a prolonged discussion over that question. I do not agree with the Senator from Idaho that the Senate has set aside the Constitution or that we are exercising or could exercise war powers without the Constitution. Every war power that it is necessary for us to exercise to fight this war can be exercised under the Constitution and not outside the Constitution.

Mr. BORAH. I am delighted to hear the Senator say that.

Mr. KENYON. I have never claimed anything else, and I do not believe anyone in the Senate claims anything else.

Mr. BORAH. If you read the RECORD, you will find it stated in the RECORD.

Mr. KENYON. That the Constitution is abrogated?

Mr. BORAH. It has been stated here upon the floor of the Senate that the Congress of the United States can pass any law which in its judgment might seem necessary to deal with the war situation. Did we not seek to pass a censorship bill in the very teeth of the Constitution, and was it not argued that, regardless of the plain terms of the Constitution, we could do so?

Mr. KENYON. Of course there are certain war powers in the Constitution that are not exercised in time of peace, that are sleeping and are brought forth in times of war. Perhaps somebody has said such a thing as that; but I contend that every single power that we need to exercise is provided for under the Constitution, and those are wide powers. We may differ as to just how far they go.

Mr. BORAH. I am in perfect harmony with the Senator's views on that question; I am delighted to hear him state them; but I do think that if we can arrive at the question whether this is a practical working bill or not we will have progressed rapidly, and perhaps by the time it has been resolved into a practical bill many of the unconstitutional propositions will disappear. It seems to me that we ought to determine first what the bill means, and, second, what we hope to accomplish.

I wish to ask the Senator as to page 1, line 8, which says:

To facilitate the movement of foods, feeds, fuel, and articles required for their production.

What does the Senator understand by the words "articles required for their production"? What would enter into that? What would the bill cover?

Mr. KENYON. I think the bill covers the question of steel, and I think it ought to do so. It enters into the manufacture of farm implements.

Mr. BORAH. Does the Senator understand, then, that the term "articles required for their production" would include farm implements, binder twine, and fertilizer and shoes or goods and clothing that are ordinarily used by agriculturists?

Mr. KENYON. I do not think that food and clothing properly would come within the term "articles required for their production." I do think all those other matters the Senator has enumerated would come under those terms. Binder twine, fertilizer, and farm implements would be included.

Mr. BORAH. Would the Senator and the sponsors of the bill be willing to insert so there could be no mistake about it that it includes binder twine and farm implements?

Mr. KENYON. The bill as originally introduced covered clothing and shoes and things of that character. That was stricken out.

Mr. BORAH. I take it that if it was stricken out it was intended that it should not cover it.

Mr. KENYON. I do not think it does cover shoes because they are not essential to the production of food, feed, and fuel. The Senator can go back to the days of his boyhood on the farm when he did not have many shoes.

Mr. BORAH. I did not wear shoes, but I did have clothing. I think if under any reasonable construction the Senator will include binder twine and farm implements, he would have to include the others.

Mr. KENYON. I think by their nature they must enter into the production of the articles. I think it would include fertilizer. I think it would include steel. It is hard to lay down a rule. I do not think it would go to the question of clothing.

Mr. WADSWORTH. May I interject an observation in respect to the regulation of the price of binder twine? It would be quite useless for the Government to undertake to regulate the price of binder twine. It is absolutely regulated, with no hope of any interference whatsoever, by the Government of Mexico.

Mr. BORAH. I know that, but——

Mr. KENYON. That is a combination this Government is now trying to get at.

Mr. BORAH. There are several banks in this country which are fostering and sustaining the monopoly which controls the binder-twine proposition. We might possibly reach it in that way. I have some facts which I shall present to the Senate later on upon that proposition. But it would include farm implements. I should like to know then if the Senator would be willing to include those things.

Mr. KENYON. I am not in charge of the bill, I will state to the Senator. I should like to cover those questions in some kind of a bill and to cover the steel question if there is any doubt about it, and particularly after the evidence we had here yesterday of the attempt to hold up the Government of the United States in the purchase of steel.

Mr. BORAH. Does the Senator believe it would include the power to control and fix prices of meat products of the Armour Co., the Swift Co., and such institutions?

Mr. KENYON. Oh, yes.

Mr. BORAH. The Senator would have no objection to including them?

Mr. KENYON. That is covered by the food, feed, and fuel proposition.

Mr. BORAH. It would be if that stood alone, but in view of other provisions of the bill I think it ought to be made plain.

Mr. KENYON. Does the Senator think that we can go ahead and cover everything by specific reference? One of the essential things that section 5 certainly covers is necessaries—food, feed, fuel, and matters entering therein. Any of those necessaries under section 5 are included.

Mr. BORAH. What is the objection, so that there may be no doubt about the construction, to specifically including those things?

Mr. KENYON. I do not know that there is any objection to it, but the limits of human language are such that you can not put in all those things in any kind of a reasonably lengthened bill. We do not do that in bills.

Mr. BORAH. I have drawn an amendment here of four lines which I think will cover them all. I will not submit it at the present time in the Senator's speech. Do I understand the Senator would be an advocate of the proposition that they should be practically included?

Mr. KENYON. I would be.

Mr. President, I started to make an observation or two before getting to the bill as to the general circumstances under which the bill is presented. Here we have a situation in the world of 25,000,000 men under arms, of $60,000,000,000 already spent, of our own Government advancing $7,000,000,000 in bonds or authorizing them, of half a million men now in service in our country, and probably 2,000,000 more will be in service, and of the needs of the allies. If we are in good faith, and no one questions it, we must do our part in feeding the allies. If the allies collapse for want of food, then the burden is squarely on us. So those things enter into the purposes of this bill. These powers granted are tremendous. Our part in this war is tremendous. They may be abused, but that is, of course, no argument against the existence of power. The remedy for abuse of power is with the people. It is certainly giving tremendous authority to one man, and there is danger, of course, as the Senator from California [Mr. JOHNSON] so well expressed it at one time, that in the attempt to set up democracy for Europe we may lose our own democracy.

I do not know just how much democracy can thrive in times of war, but there has to be some strong central authoritative power, and that is given under this bill. If Russia had some strong power to-day it would be better for Russia as far as this war is concerned. I am not, however, ready to surrender my belief that we can fight this war as a democracy. There is no need of Kaiserizing the United States to overturn the Kaiser abroad.

These powers are only given for the war. They will end as quickly as the war is over by the universal demand of the American people, who would not stand for any such exercise of power unless it was an absolutely essential thing.

I do not believe, Mr. President, in giving all of the power that Congress has to exercise to the President. We have our duties and we have our powers and we ought not to shirk them or shift responsibility. This still remains a Government of three branches. But we must in this crisis give more power to the President than perhaps many people want to do. Under this bill Mr. Hoover will have great power.

There seems to have been a persistent attempt in this Chamber to rather discredit Mr. Hoover by calling him a food dictator. England has adopted strenuous acts on the food question. They practically have a food controller. The orders which he has issued have seldom been disobeyed. The power being there to remedy the situation has made unnecessary the exercise of that power. When we give these great powers to Mr. Hoover, as it is conceded he will be the man, then probably they never

will be exercised. But if they are to be exercised, there is no better man to do it. Mr. Hoover does not want to put the American people on rations. Mr. Hoover does not want to injure the American farmer or the American business man. He does not want to injure his country. He is just as patriotic as we are, and he has made the sacrifice, I understand, of coming here without any compensation at all and giving his time and his talent to the tremendous critical and abusive work that he will have to carry on, because no man can occupy that position and not be condemned by criticism throughout the length and breadth of the country.

The Senator from Oklahoma [Mr. GORE] referred this morning to the statement of the British food controller. I think perhaps it may be well to place that in the RECORD, and I will ask that that be done. This is as it appeared in the morning papers. I place it in the RECORD merely as a matter of information.

The PRESIDING OFFICER (Mr. GALLINGER in the chair). Without objection, that order is made.

The matter referred to is as follows:

BRITAIN'S MEASURES ARE TIED UP PENDING ACTION OF UNITED STATES CONGRESS, SAYS CONTROLLER—TRUSTS HOOVER—LORD RHONDDA DECLARES PROBLEM OF SUPPLIES COEQUAL WITH MAN POWER—DEPENDENT UPON AMERICA AND CANADA FOR EDIBLES—SURE GERMANY CAN NOT STARVE ALLIES OUT.

LONDON, *June 19.*

"In this war, and especially at this stage, food power is coequal with man power," said Lord Rhondda, the new food controller, in an interview to-day. 'The problem of Great Britain's food primarily depends upon the supply, and in the main the solution of the problem of supply lies in America. I am sure they will not 'let us down.'"

Lord Rhondda took over the duties of food controller to-day, and this was his first interview with members of the American press.

MUST BE ASSURED OF FOOD.

"The whole problem of the nation's food primarily depends upon the supply," he continued, "and unless we can be assured of food sufficient to enable this and the other allied countries of Europe to carry on the war to a successful conclusion it would be almost superfluous to appoint a food controller.

"For this food supply we depend to a vital degree upon the United States and Canada. No one recognizes that more fully than I do.

CONFIDENCE IN CONGRESS.

"In accepting this office one of its few attractions—perhaps its only attraction—was the knowledge that President Wilson had asked a man of Mr. Hoover's caliber, experience, and understanding of the allies to tackle in America those problems which have an intimate bearing day by day upon the food situation in this country. I have perfect confidence that the American Congress and the American people will respond to the calls now being made to them.

"I hope I shall not be misconstrued or thought impatient if I say that the sooner your food administration measures are enacted the sooner we shall breathe more easily. At present our policy and the practical details of our buying are rendered more difficult, more complex, by the uncertainty regarding the future.

SURE GERMANY WILL FAIL.

"My experiences in America before and since the war have given me an unusual opportunity of appreciating the vastness of her resources. If these are organized to their full capacity I am confident the German hope of starving the allies or of causing civilians unrest by the scarcity of food or high price is doomed to failure.

"We are doing what we can 'off our own bat' by increasing home production and decreasing consumption, but in the main the solution of the primary problem of supply lies in the hands of our American allies. I am sure they will not 'let us down.'"

Mr. KENYON. I wish to refer for a minute to the question of the Nation's needs.

Mr. NELSON. You mean in the United States?

Mr. KENYON. In the United States, I am referring to.

WHEAT.

The Nation needs 640,000,000 bushels. That includes a carry over of 50,000,000 bushels, and 80,000,000 of that for seed. The crop this last year was just about that.

Export of wheat up to within a year or so of the breaking out of the war averaged 105,000,000 bushels.

The year before the war we exported 145,000,000 bushels.

The year after the war broke out we exported 332,000,000 bushels.

The second year of the war we exported 245,000,000 bushels.

From the 1st of July last year to the 1st of March this year 130,000,000 bushels, which is no more on the average than the year before.

We carried over last year 170,000,000 bushels. So there was enough wheat to supply the Nation's domestic needs.

The corn crop last year was 2,600,000,000 bushels—less than the five-year average.

Oats, barley, and rye were about the five-year average.

Rice, 40,000,000 bushels, against 29,000,000 the year before.

Apples, peaches, and pears were about the five-year average.

Oranges, 2,600,000 boxes more than the last year.

Meat products were over 22,000,000,000 pounds, as against a five-year average of 19,000,000,000. This is the fiscal year I refer to.

Milk was 7,900,000,000 gallons against a five-year average of 7,500,000,000.

Butter was over 1,059,000,000 pounds, as against the five-year average of 1,007,000,000.

Eggs were 1,847,000,000 dozen, as against the five-year average of 1,700,000,000.

Fowls were 567,000,000, as against the five-year average of 522,000,000, showing there is not a shortage unless covered by increase in exports.

The exports for the year preceding the war from July 1, 1913, to June 30, 1914, were—meats—1,200,000,000 pounds; from July 1, 1915, to June 30, 1916, 2,000,000,000 pounds. The meat supply, however, increased last year 2,000,000,000 pounds. The export of cereals for the year before the war was 166,000,000 bushels; for the last year, 419,000,000 bushels.

Meat and dairy animals increased in the South last year in the neighborhood of three-quarters of a million.

The Department of Agriculture has rendered a report that the condition of the winter-wheat crop is the poorest for a long series of years. The report forecast puts the winter-wheat crop for the year at 266,000,000 bushels, the smallest in 13 years. Spring wheat is not yet estimated. The largest spring-wheat crop was in 1915, it being 352,000,000 bushels. The five-year average of the spring-wheat crop, from 1910 to 1914, was 234,000,000 bushels. The estimated production this year of 266,000,000 bushels of winter wheat falls 116,000,000 bushels below the last year's crop and 308,000,000 bushels below the crop of 1915, and is 129,000,000 bushels below the average for the preceding five years.

The allies will demand and need over 500,000,000 bushels of wheat, of which we are expected to furnish one-half. In this country we can learn to use corn as a substitute for wheat, but that seems to have been a difficult proposition to our allies across the sea. They do not know how to make corn bread, which we regard as such a splendid article of food. I received this morning a letter on the back of which was inscribed "Be patriotic and eat corn bread," though out in our country we think it does not require any unusual amount of patriotism to eat corn bread. The food strain of the world is on wheat. That is a troublesome thing throughout the world, and it can be relieved somewhat by the American people in the greater use of corn.

There is a strange thing about the wheat question. A loaf of wheat bread seems to be the fetish of foreign nations, as it is our own. The people demand bread. If there are any riots, they are not cake riots or caviar-sandwich riots, but they are always bread riots. If you take the people abroad and furnish them with the same amount of nutrition in something else, it does not seem to accomplish the same purpose as bread, which they regard as the staff of life, and which has come down to us from the old prophets as the staff of life. So that "bread" means essentially wheat bread, though I believe the allies will have to learn, and I do not know why they should not learn, to eat corn bread and to eat the products of corn. There is already a movement to send abroad people who shall instruct them in the art of making corn products and corn bread.

Mr. SHERMAN. Will the Senator yield to me a moment on that subject?

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Illinois?

Mr. KENYON. Yes.

Mr. SHERMAN. I wish to say that they have been instructed as to the uses of corn bread for 20 or 25 years.

Mr. KENYON. That is true.

Mr. SHERMAN. But they have persistently and very steadfastly refused to eat corn bread, fried mush, or any thing else that is made in the breadstuff form out of corn. They want to take it in a liquid form, if they take it at all. [Laughter.] We tried instructing them in the various uses of corn.

Mr. SMITH of Arizona. It may be that it depends on how the corn bread is made.

Mr. KENYON. There is corn bread and corn bread.

Mr. SHERMAN. The making of corn bread and the uses of corn have been taught in many of the large centers of Europe by the diplomatic representatives of this country, for instance, in Denmark, in Sweden, in France, and in certain parts of England. Notwithstanding that, although that began 25 years ago, Mr. President, Europeans refuse to eat anything except wheat bread. The riots in the large cities, about which the Senator from Iowa talks, could not be appeased by offering the rioters bread made from barley or rye or corn. I venture to say it would increase the intensity of the riots if the people were sought to be placated with corn bread, on which we people out West were raised.

Mr. KENYON. And we offer ourselves as exhibits of what corn bread will do. [Laughter.]

Mr. SHERMAN. Yes, sir.

Mr. KENYON. Mr. President, I thank the Senator from Illinois for this little diversion. I am making this statement more to get into the RECORD the necessities of our allies, before proceeding with some points I want to make in relation to the bill, than for any other purpose.

The cereal supplies, especially of England, France, and Italy under prewar conditions originated in large measure in Russia, Roumania, Bulgaria, Australia, India, and the Argentine. Now, Russia, Bulgaria, and Roumania are cut off; Australia and India are probably cut off by distance; and the Argentine now has an embargo. The harvest carried on with a reduction of man power is an important item. The women have not been able to put all the fields into grain. That must be considered. The winter wheat in parts of Europe has had a blight from the hard frosts at the end of March. So the French Government have estimated their wheat harvest as being down 55 per cent which amounts to 150,000,000 bushels of a deficit.

Where are the allies going to get this wheat? Outside of wheat, they will demand other cereals—oats for the cavalry, some barley, and they seem to be shipping some barley over there to make booze out of it. I trust that will be ended. They will need between 900,000,000 and a billion bushels of cereals.

Then, take into consideration that since the 1st of February 15 per cent of the foodstuff en route has been sunk by submarines. So the United States is called on to perform a mighty task in furnishing food supplies to the allies, though I insist that we shall take care of our own people first. The allies can get a couple of hundred million bushels of wheat in Canada; they may draw a couple of hundred million bushels from other parts of the globe; and then it becomes our business to furnish them what they require if we can without injury to our people. The better food they have the better fighters they will be and the sooner this war will end.

I think I will not take any more time putting in the figures as to the food situation abroad. The condition as to sugar in England is most serious. They are down to about one-fifth of the amount of sugar per person they had before the war—less than 1 ounce a day for human consumption, whereas the average man needs from 6 to 8 ounces.

So much for our duty abroad and so much for the needs of the allies. I desire now, before discussing the legal aspects, to refer to the situation at home.

I insist, Mr. President, that this Nation is not going to be brought to the position of feeding its soldiers in the field on food the price of which is fixed by gamblers and speculators in this country. It is all very well to theorize about high prices, and of course in war times prices will be high. We must expect that; we can not prevent it. There will be some speculation, and we can not prevent that, for there is a perfectly legitimate speculation; but it is idle to cite the increased gold supply as an excuse for the prices that people are compelled to pay in this country.

It is necessary, Mr. President, to have domestic tranquillity in the United States. That is a condition which enters into this war; it enters into legislation; and we can not have domestic tranquillity under present circumstances. The Senator from Oklahoma is apprehensive about how this proposed legislation may affect the producers, and so am I; but I am also apprehensive about how present conditions are going to affect the people of this country who are working on salaries and small wages. That is fundamental. Senators can talk about the Government taking the food and somebody controlling the amount and kind of food a mother shall give her baby to eat. Some Senators do not like that; they say it involves too much power; but it is far better that there be such power granted if by that drastic action we may have something to give to the babies whose mothers in many places of this country can not get enough for them to eat.

We are told constantly that there is nothing to this outcry against speculation, and that whatever speculation there is is perfectly legitimate. I concede there must be speculation to some extent. The egg crop can not all be dumped on the market as it comes along; it must be kept for a while; and so must other things, or we would have a perfectly impossible situation, and that might be called speculation. That is not what we are trying to get at. This bill does not stop legitimate business along that line; but we are trying to clear a channel between the farmer, who works and toils to produce these commodities, and the people who are to eat them, so as to get rid of some of the middlemen in the transaction. In other words, the Government may be compelled as to many of these commodities to be the middleman.

There is a statement in the paper this morning as to the increase in prices here in Washington from January of this year to May—five months. In that time granulated sugar has gone up 43 per cent, evaporated milk 30 per cent, standard tomatoes 50 per cent, baked beans 50 per cent, hominy 25 per cent, oatmeal 50 per cent, cornstarch 40 per cent, smoked hams 25 per cent, pure lard 31 per cent. I will not read all the figures in detail, but ask unanimous consent to insert the table in the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

The table referred to is as follows:

GOING UP.

Mr. Hoover makes the declaration that with a plentiful supply, food is still going up. The following table shows the increase in retail prices in May of this year as compared with January, four months previous:

	January, 1917.	May, 1917.	Increase per cent.
Granulated sugar, pound	$0.07	$0.10	43
Evaporated milk	.10	.13	30
Standard tomatoes, No. 3 can	.12	.18	50
Sugar corn	.09	.15	66
Sifted E. J. peas	.12	.19	58
Baked beans	.10	.15	50
White corn meal	.04	.06	50
Hominy	.04	.05	25
Head rice	.08	.10	25
Broken rice	.04	.06	50
Oatmeal	.04	.06	50
Macaroni, bulk	.08	.13	62
Spaghetti, bulk	.08	.13	62
Salmon	.09	.16	77
Navy beans	.12	.19	58
Lima beans	.10	.20	100
Split peas	.08	.12	50
Domestic sardines	.04	.06	50
Molasses, No. 3 can	.10	.18	80
California peaches, extra standard, No. 3	.15	.20	33
Peanut butter, bulk	.10	.15	50
Lump starch	.04	.06	50
Corn starch	.05	.07	40
Rib roast	.24	.25	4
Chuck roast	.20	.22	10
Plate beef	.15	.16	7
Porterhouse steak	.32	.37	16
Sirloin steak	.28	.34	22
Round steak	.25	.32	28
Chuck steak	.20	.25	25
Hamburg steak	.16	.20	25
Butter	.43	.55	28
Fresh hams	.22	.27	23
Fresh shoulders	.18	.22	22
Fresh pork chops, loin	.26	.32	23
Fresh pork roast, loin	.25	.30	20
Smoked hams	.20	.25	25
Smoked bacon	.27	.34	26
Smoked sausage	.22	.25	14
Pure lard	.19	.25	31

Average net increase in these and 39 other staple articles, 51 per cent.

Mr. KENYON. Mr. President, I do not know how poor people are going to stand the ever-increasing high prices. We have tried in this country to break up the trusts and monopolies, but have not succeeded. There has been, I think, only one jail sentence imposed on conviction under the Sherman Anti-trust Act, and that case was reversed by the Supreme Court of the United States. Fines have been imposed; but this class of lawbreakers does not care anything about fines. The gentlemen who always rise when the orchestra plays the Star-Spangled Banner, who put an extra flag on their automobiles, and then mark up prices to the people, might as well understand that this country is not going to endure this kind of business; and we, interested in the success of this war, have a duty upon us to stop them. If they can not be controlled under the Sherman Act, if we can not reach them under other laws, we will take their product for the benefit of the people of the country, who are supreme in this matter.

These food speculators—and I do not want to say anything very mean about them—are the highwaymen of internal commerce. I want, however, to apologize for using the term "highwaymen of internal commerce" in connection with them. The highwayman or the sea pirate is a Christian gentleman compared to them. It takes some courage to be a highwayman, but no courage to be a food speculator. It is unfair to the highwayman to use him for a comparison. These gentlemen at the present time are allies of the Kaiser, as they are weakening the American Nation in its contest. The men who fight must be fed, the mothers of the Nation must be fed, the babies of the Nation likewise, and the men who work to make the things with which to fight must be fed. Napoleon's statement is true—that an army fights on its stomach.

We have heard on the floor about this bill giving the right to a food controller to tell mothers how much food they shall give their babies, a matter to which I referred a few moments ago. The bill does not do that at all; but, as I have already said, there are some questions just as important as the question of the amount of food a mother shall give her baby; and one of those questions is whether the baby shall have any food at all or whether the food that should go to feed the babies of the poor shall feed the poodle dogs of the rich. We are contending that the babies of the poor shall have food; that there shall be no extraordinary profits during this war, either in foodstuffs or in steel or in anything else.

In the days of French trouble Foullon sneeringly remarked that the people could eat grass, and Marie Antoinette talked about the people eating cake. The people of this country are not going to eat grass and they can not get cake. The people of France did not eat grass, although Foullon was kind enough to invite them to eat it; but they took him and stuffed his mouth, his ears, and his eyes with grass, and Foullon, the tyrant, ate the grass he intended for the people.

We are paying more for food in this city and in this country—for bread, and I think for meat—than they are in the city of London. Belgium has bread for less than we have it. France has bread for 50 per cent less than we have it, made out of our own wheat.

Mr. SMITH of South Carolina. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from South Carolina?

Mr. KENYON. I do.

Mr. SMITH of South Carolina. So far as controlling these combinations that unjustly lay a burden upon the people in foodstuffs is concerned, in reference to the point that the Senator made, is it not true that France buys wheat at the competitive price, and that she pays as much for it as we pay for ours, but, by a law, sells it at 50 per cent cheaper to her people, and then lays that tax on the people of the country generally? I am informed—I will bring the document to the Senate later on, in connection with some remarks that I want to make—that last year, I think, her deficit between the price at which she furnished wheat to the people and the price she had to pay for it was something like $150,000,000. I am not officially advised as to England, but I have been informed that the Government there is pursuing the same course; that they are buying wheat at the ordinary market price, selling it to the people for a less price, and charging the difference in the ordinary budget of taxation.

Mr. KENYON. I do not know as to that; but it is the result of France having what may be termed a food controller.

Mr. SMITH of South Carolina. The reason I said that was because I did not think the impression should go out that under their superior management in the general markets these things were cheaper, because what we are seeking to do here under this legislation is to see that those who are unjustly getting an extraordinary profit shall share and share alike with whoever is concerned in the handling of food.

Mr. KENYON. I can not make my statement accurate as to the French situation concerning the remarks the Senator makes; but they have a food controller there, and their system, at least, has brought down the price of bread to one-half what we are paying for bread in this country, and a lot of it is made out of American wheat.

Mr. SMITH of South Carolina. Yes.

Mr. KENYON. But I may not be entirely accurate in my statement as to causes.

Mr. SMITH of South Carolina. I happened to get from official sources here the manner in which France was controlling her food products; and I might say in passing that there has been in operation since 1791 a municipal control of bread in France.

Mr. JOHNSON of South Dakota. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from South Dakota?

Mr. KENYON. I yield to the Senator.

Mr. JOHNSON of South Dakota. I simply want to ask the Senator if he does not think the logic of those who are opposed to this bill or something of this kind is entirely wrong, based upon the fact that they do not want the food of the country controlled, and if the object of this bill is not to prevent that very thing being done by food speculators?

Mr. KENYON. Absolutely; but I do not want to criticize anyone else's view about things. I am not dogmatic in my own views, but like to accord to everybody the same right to think about and discuss a proposition that I claim for myself, realizing my view is not always correct.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Idaho?

Mr. KENYON. I do.

Mr. BORAH. I do not know that I am against this bill, but I know that I am not against the thing which the Senator from Iowa desires to achieve. I am very much in favor of the proposition and very much in favor of what seems to be the desire of the Senator from South Dakota [Mr. JOHNSON]; but there is the question whether or not this is the way to do it, and whether or not this bill in its terms will effectuate that which you desire.

Mr. KENYON. The Senator will admit that we have not been able to do it in any other way.

Mr. BORAH. Well, no; I do not admit that we have not been able to do it in any other way. I admit that we have not done it; but if there has been any settled attempt to enforce the Clayton Act, or if the Federal Trade Commission has performed any service in this matter, I have yet to have any knowledge of it. I do not admit that we are not able to do it or would not have been able to do it. I simply admit that we have not done it.

I want to call the Senator's attention to the fact that if the reports of the Agricultural Department are correct, there is ample evidence in the possession of the Government now to effectuate many things which are desired to be effectuated under this bill.

Mr. KENYON. The Senator has had a good deal of experience with the Sherman Act, and so have I. I spent about six months of the hardest work of my life trying to convict the packers under the Sherman Act in a case that I thought was as complete as any case could be, but the jury very promptly acquitted them. I discovered at that time that there is a general running sentiment among business men particularly that the Sherman Act is interfering with business, and the tentacles are such that they can reach out everywhere and unconsciously—I do not say consciously—affect juries who come from towns where these matters are discussed; and the Sherman Act in its criminal features has been almost impossible to enforce. While now you can punish monopoly under the Sherman Act, as to the individual and combinations as to others, this bill tries to get at the zone between such a control as would be a monopoly and a control that might merely affect the price to some extent. It supplements the Sherman Act.

Mr. BORAH. Mr. President, I realize that the provisions of the Sherman Act which relate to criminal prosecutions have not been successful. After the Government has stood by for three or four years and witnessed the formation of a trust and permitted men to go on and form the trust with the full knowledge in the possession of the Government that they were forming the trust, I think it is very difficult then to call upon a jury to convict them for doing that which the Government has connived at their doing; and that has been the trouble with the enforcement of the Sherman law from the beginning. There is a provision of the Sherman law, however, by which you can inhibit and prevent the formation of the trust, and by which you can preclude the monopoly before it arrives at the point where you need to call in a jury at all; and that provision of the Sherman law has never been called into action by any administration that I know of with any persistency whatever. Now, it is there. Here only a short time ago one of the business concerns of this country advertised that it was going to form a trust. It was flouted through the country in the newspapers. We were in full possession of the facts as to what they were going to do, and no steps at all were taken in regard to the matter. It could have been prevented; and there are numerous instances prior to that in which the knowledge was in the possession of the Government.

After all those things have been permitted, it would be difficult, of course, to enforce the criminal feature of the law. But in addition to that, you have the Clayton Act, which was specifically designed to supplement the Sherman law for that purpose; and you have the Federal Trade Commission act, which was specifically designed to prevent the formation of trusts and to prevent unfair competition and speculation, and so forth.

I want to say again that I have been unable to discover in this bill any discriminating feature of it which distinguishes it from these acts which are already upon the statute books.

Mr. KENYON. I am going to discuss it later, but I will say to the Senator now that in my judgment section 5 covers the matter entirely.

Mr. BORAH. I will not interrupt the Senator, then.

Mr. KENYON. I am very glad to have the Senator interrupt me.

Mr. BORAH. The Senator says he is going to discuss it later, and I will await that discussion. I know what section 5 says; but in my inquiry as to how that is going to be enforced and carried into effect, I have yet to receive any enlightenment as to any feature which distinguishes it from these others.

Mr. KENYON. I can answer that in a word, as I see it. I may be wrong. The people have grown a little tired of waiting for the Sherman Act and political platforms to reduce the price of living. Now, we are up to the proposition of taking the food, and that is what you can do under this bill.

Mr. BORAH. That throws a good deal of light on the subject.

Mr. KENYON. And I want to add to that section 9, too, which gives the President power to buy food.

Mr. BORAH. Do I understand, then, that the ultimate object of this bill, in order to effectuate the purposes, will be to take possession of such institutions as the Armour Co. and the Swift Co. and those who are dealing in foodstuffs, and so forth, and operate them upon the part of the Government itself?

Mr. KENYON. I will go as far as the first part of the Senator's question—that the taking of them can be carried out under section 5.

Mr. BORAH. Exactly.

Mr. KENYON. Now, as to operating them, it could be carried out under another section—section 10.

Mr. BORAH. Then this bill contemplates, and those who believe it will effectuate the things we have to accomplish contemplate, the Government taking possession of these plants, commandeering them?

Mr. KENYON. This bill contemplates that where extortion or hoarding is going on in necessaries the President can prescribe regulations governing the conduct of that business. He can ask and compel them to take out licenses and he can fix the rates under which they can operate. Now, whether they could under section 5 take the business itself, in contradistinction from the products of the business, I am not quite prepared to say.

Mr. BORAH. Did I understand the Senator to say that the President can fix the price of the articles which they sell?

Mr. KENYON. He can find what is a just, reasonable, nondiscriminatory, and fair or economical rate, charge, or practice. That is, taking the case of packing-house products, he could fix a rate at which they should be sold, provided the other portion of section 5 had been carried out. That is my present construction of it.

Mr. BORAH. I am very glad to have the Senator's view of that.

Mr. KENYON. I wish the Senator would study that over and see whether he does not agree with me about it.

Mr. BORAH. I will say to the Senator frankly that I am not disagreeing with him; but I have had statements from other advocates of the bill that this did not contemplate the Government taking over these plants, or the Government operating them, or even fixing prices; and I must say, with all due respect to those who have drafted the bill, that it is not, it seems to me, plain and distinct in its authoritative power. Now, I agree with the Senator that under the provisions of this bill that might be done; but I am told by many advocates of the bill that it is not contemplated, and, in fact, if I read correctly the President's address and his letter, that is not in contemplation of the President at all.

Mr. KENYON. Has the Senator read section 10?

Mr. BORAH. Yes.

Mr. KENYON. I will read just a part of it:

That whenever the President shall find that it is impossible by license or by voluntary arrangement or agreement to assure an adequate and continuous supply of necessaries, he is authorized to requisition and take over, for use or operation by the Government, any factory, mine, or other plant, or any part thereof, in which any necessaries are or may be manufactured, produced, prepared, or mined.

The word "prepared" would cover the packing houses. He can then go ahead and prescribe the terms of labor under that; and that objection has been raised—that the bill gave him the power to fix wages.

Mr. BORAH. Precisely. The Senator's opinion is, then, that in its final operation this bill results in the President or the Government taking over these institutions, commandeering them, and, as it were, operating them through the Government?

Mr. KENYON. I will say that, in my judgment, the power to do that is in this bill.

Mr. BRANDEGEE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Connecticut?

Mr. KENYON. I do.

Mr. BRANDEGEE. If the bill contains power under which the Government can take over or commandeer a food-producing plant, for instance, like that of the Armour Packing Co., does it also contain power for the President to commandeer the skilled force of employees and managers of that company in its service and compel them to continue the production?

Mr. KENYON. It does not, but I think our draft bill covers that.

Mr. BRANDEGEE. Very well. I did not remember whether that was so or not, but unless it did, if the Government should take over a concern of the magnitude of the Armour Co., with the ramifications of that company, unless they could commandeer those who were accustomed to the business, instead of increasing the food supply it would absolutely halt it.

Mr. KENYON. I agree with the Senator, but under the draft bill the President can conscript men for those services as well as for war.

Mr. BORAH. I was going to say that it seems to me the draft bill would cover that proposition.

Mr. KENYON. I think so; and if without violating the Constitution we can conscript men to go out and give up their lives, I think it is entirely feasible to conscript the plants making the things to feed those men; that the property is not more sacred than the lives.

I think I had finished what I had to say about that. I had just as soon, when we talk about a dictatorship, have the dictatorship of a food controller as the dictatorship of these food gamblers; and while we talk about the farmer, he has raised the food, while the speculator has raised the price, and the farmer has not had the benefit of it.

Again, on this wage question, which enters into it, in volume 2, page 100, of the hearings before the committee will be found a most interesting discussion of the wage question by Dr. King, saying that while wages have not increased over 20 per cent foods have increased about 33 per cent. However the doctor figures that out, he did not figure it out on the basis on which I have been figuring, because I think food has increased a great deal more than that; but he went ahead to tell the committee that these food prices were affecting the standards of living, and that is an important thing for us to consider—hungry, emaciated children and men and women without enough to eat. It affects the very life and heart of the Nation. Those children can not grow to be the best and strongest citizens, and those husbands and wives can not be happy and enthusiastic and patriotic. Of the price of a manufactured article as he set forth paid by the consumer, 30 or 40 per cent goes for food production and 50 to 60 per cent for distribution and for perishable products. The consumer's price, as Dr. King set forth, is 130 to 136 per cent greater than the price the farmer receives.

Now, Mr. President, as bearing on how the people—the average, everyday, common folks around the country who do not understand some of these theories of an inflated currency—feel about this matter, I am going to ask the Secretary to read from the desk an editorial from the Manson Democrat, a paper published in my State having an editor who is a very mild-mannered and sensible man.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The Secretary read as follows:

THE FOOD GRABBER.

[Manson Democrat.]

The food grabber is even worse than the slacker. Like a vulture he trains his greedy eyes on the field of business to discern what article of food is likely to be most in demand and then he prepares to buy all he can of it, store it away in his bins, and hold it until he can squeeze a robber's ransom for it. The food grabber has been the curse of every European country engaged in the war and now he is the curse of the United States. Nothing is being done to stop his villainous incursions into the food supply of the country and he is buying butter, eggs, meat, flour, sugar, coffee, tea, beans, corn, canned goods, and everything he can get his talons on to place in storage until such time as he and his coconspirators can shriek "Pay or starve!" at the people who must eat to exist.

The people are asked to plant, plant, plant; to increase the acreage of all crops and especially the crops that produce human food. The newspapers are urged to keep continually pounding away at the people to get them to plant more food crops, raise more meat animals, and conserve everything.

And for whom are the people doing this?

For the food grabbers only—unless Congress puts its iron heel down on the necks of the robbers so tight that it will strangle the life out of them, vipers and vultures that they are.

The people are asked to produce more food and then see it gobbled up and stored away by traitorous thieves in order to get more gold to spend in lavish living.

Congress must at once enact drastic legislation to conserve the food and fuel supply of the United States or there will be widespread distress, and the industries of the country will be paralyzed. Men can not be paid wages enough to enable them to live if the prices of foodstuffs are allowed to be manipulated by the food grabbers, hence labor will be thrown out of employment and industry will be at a standstill, for the limit of profit has been reached by manufacturers and they will refuse longer to comply with the demands of labor for wages sufficient to pay the penalty imposed by the food vultures.

Conserve the food supply of the Nation. Let the Government assume immediate control of the visible food supply and establish supervision over future production. Put every coal mine under Government super-

vision. Fstablish a rigid censorship over the use of gasoline and motor fuels. Conserve everything. Waste nothing.

And how about traitors, you say?

There is little difference between them and the slacker and the food grabber. They surely are little worse, but they can be shot or hung, and that is something that can not be done to the other two greatest enemies of the flag.

Mr. KENYON That is an editorial from a very mild-speaking Democrat in my State, who never voted for more than one Republican in his life. I do not know what might be the expression of some radical Democrat in that State, but it illustrates how some of the common folks feel about it.

I turn here to the testimony before our committee of a distinguished New York gentleman, who is not at all in the poverty shadow of the fence, Mr. Perkins, who had been in charge of the food situation in New York. He said this among other things:

Why, you know the way this country has been held up by speculation this last year in foodstuffs is something appalling. You take the matter of fish in New York Some of you may know that one of the things we did was to go out on the Pacific coast when a certain kind of fish known as "Pacific coast smelts" were running out there. We bought large numbers of them and brought them to New York by express in refrigerator cars, and they were landed in New York in four and one-half days after they had been swimming in the Pacific Ocean. We brought those to New York and retailed them at 6 cents a pound. We paid for catching them, we paid for loading them and boxing them, paid the expressage to New York, and delivered them to the fish dealers at 4½ cents a pound; and the fish dealers and meat dealers sold those fish at retail at 6 cents, so that they made a fair profit and we came out within $80 of even—we only lost $80 on the entire transaction of 10 or 11 carloads of fish.

I may say in passing that an amendment was offered to one of the bills here enabling the Government to get fish from Alaska. Enough could be secured there to relieve the situation. But there is so much antipathy to the Government going into any kind of business, even if the people are going to starve, that we secured very little support for that measure. It was the thought of a man whose heart was always for the common, everyday fellow, the late Senator from Oregon, Mr. Lane.

Mr. Perkins further said:

The people are not going to stand for the conditions, and we are going to have trouble just as sure as can be on the eastern side of New York on the food question if there is not something done pretty soon. In the rioting and the disturbances we had three or four months ago, we were only able to quiet the people by such methods as we took in bringing those fish there and educating the people as to substitute foods.

Pretty strong language, but none too strong.

I asked him what caused the riots? He said:

The riots were caused by the price of foods. You know in New York City there are a very large percentage of men working on fixed salaries, clerks in banks and clerks of corporations, clerks in large stores, and all that sort of thing, and their wages have not gone up.

That is from a man who knew the situation in New York and had much to do with the attempt to relieve it. I could go on and quote from this record if it was the trial of a lawsuit and cite the various witnesses before the committee which give the contrary thought to the suggestion that has been made on this floor so many times, that there is no speculation or nothing but legitimate speculation. There are no more interesting statements than some of this testimony before the committee.

Mr. KELLOGG. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Minnesota?

Mr. KENYON I yield.

Mr. KELLOGG. I should like to ask the Senator from Iowa if it is not a fact that every time we have orders for the purchase of grain by a foreign Government in the grain exchanges of this country there is a perfect swarm of purchasers?

Mr. KENYON. Yes, that is true; and I may say since the Senator suggested it, this competitive buying between agents of the allies and our country ought to be stopped. The allies' buying is largely responsible for the great advance in the price of wheat; and to-day I understand the allies and our Nation are competing against each other for the sugar crop of Cuba, which is some 180,000,000 tons less this year.

Mr. KELLOGG. I should like to have the Senator's opinion as to whether it is not absolutely necessary to prevent this competitive buying by foreign Governments in our market? I should like to have the Senator's opinion.

Mr. KENYON Unquestionably there must be absolute cooperation in buying in common. Nobody can tell just what the shortage of the wheat crop is going to be. I see it is estimated by the agricultural bureau at Rome that the world shortage will be 150,000,000 bushels this year. It seems to me that that can not be accurate. I fear it will be double that.

Mr. McKELLAR. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Tennessee?

Mr. KENYON. I yield.

Mr. McKELLAR. I wish to ask the Senator how the provisions of this bill affect the matter that the Senator from Minnesota [Mr. KELLOGG] has just pointed out. In other words, is there any control vested anywhere over the buying by foreign Governments of food supplies in this country, and if so will the Senator point it out?

Mr. KENYON. I think there is in the general provisions of the bill. I will say to the Senator I have that in mind as something that we should make absolutely clear in this bill. I think it is not clear enough.

Mr. McKELLAR. Does not the Senator think the bill ought to be amended so as to provide that our Government should in some way control the purchase of foodstuffs in this country by foreign Governments and their agents?

Mr. KENYON. I do. I agree with the Senator.

Mr. REED. Mr. President——

Mr. KENYON. I yield to the Senator from Missouri.

Mr. REED. That question I intend to discuss at some length, but I will say now there is not any necessity for one single word of legislation upon that proposition. First, we have already made a law which gives the President the full right to declare an embargo upon the shipment of any grain whatsoever, and in the exercise of that authority alone he could control the situation. But, in addition to that, we are loaning the allies some billions of money. Mr. Hoover, who was in very great doubt about the meaning of his own bill, and who evidently had never read it, disclosed by his examination yesterday——

Mr. KENYON. Why does the Senator call it Mr. Hoover's bill? He did not draft the bill.

Mr. REED. Because I think I have a right to, and I think I shall be able to prove it. But I will call it this bill. Yesterday Mr. Hoover stated that the organization was already perfected by which the allies would buy through one agent. Surely our Government, when it is loaning $5,000,000,000 to the allies and cooperating with them on the field of battle, can cooperate in the mere purchase of grain, so that the entire foreign market, every part of our exports, shall be thus brought into one control. Everybody knows that it is the law in this country that whosoever controls the price of the surplus likewise controls, or largely controls, the price of that which remains for home consumption.

I thank the Senator for his permission to interrupt him.

Mr. KENYON. I am very glad of the interruption. I remember the Senator made the suggestion before the committee, and it had escaped my mind when the Senator from Tennessee spoke, that under the embargo clause of the act which we passed the power would undoubtedly be with the President, and that he can exercise the power by virtue of the club he might have under the embargo act. But I am afraid the terms of this bill do not cover that question, and it may be best to amend it.

Mr. McKELLAR. In dealing with this particular question, does not the Senator think it would be very advisable for the specific power to be vested somewhere, in a board, or some method given so that they can deal with the entire matter of the selling of food to our allies, and to neutrals for that matter?

Mr. KENYON. I was inclined when the Senator from Missouri made the suggestion before the committee the other day to think that the power was in the hands of the President under his authority to place an embargo. Of course the power should be somewhere. I agree with the Senator that it should be made clear in this bill, if that power does not exist under present law. I want to think about that a little before reaching a definite conclusion.

Mr. SMITH of Arizona. If the Senator from Iowa will permit me, how does the mere fact of an embargo fix in any degree the price France or England or Italy might pay for wheat? It seems to me that the power used by the President would not prevent those abroad who have purchased from shipping it to their homes.

Mr. KENYON. Does not the Senator believe that if the agents of the allies would bid in this country against our buyers the President could place an embargo and stop such competitive bidding?

Mr. SMITH of Arizona. Yes. I think the President should place an embargo in such event. I am only arguing in the light of the suggestion of the Senator from Tennessee [Mr. McKELLAR].

Mr. KENYON. I am not antagonistic to that at all.

Mr. SMITH of Arizona. It seems to me in the mere matter of placing an embargo on purchases to go to any foreign country the President would feel very much inclined to let the grain go at whatever price it had been purchased. It seems to me also that the embargo might very well act as a deterrent against competition.

Mr. KENYON. I am sure we all agree that there should not be this competition in buying.

Mr. McKELLAR. Will it discommode the Senator if I interrupt him again?

Mr. KENYON. I am very glad to yield.

Mr. McKELLAR. This thought has been running through my mind, and I intend to enlarge upon it later in the discussion: If power is given to a board to act as the agent of the allies' governments to make purchases, it would prevent fluctuations in price by the present system of foreign governments sending their agents here and buying up as much wheat as possible, as the Senator has just pointed out. In other words, to regulate it and make the prices more stable would in time absolutely control the disposition of our surplus foodstuffs in this country. I want at some subsequent time to urge this position on the Senate.

Mr. KENYON. I shall listen with great interest to the Senator on that subject.

I return to one or two letters, parts of which I wish to put in the RECORD. Here is a letter which I received a short time ago:

The writer can place his hands on two cars of sugar purchased at $7.65 for speculative purposes only. This sugar is stored in a small town in Iowa.

This two carloads of sugar causes sacrifice to from 2,000 to 4,000 families for a given period, while only one or two men are benefited in the advance caused by holding.

This writer further says:

It seems very necessary that the producer and the consumer should have protection against the speculator.

* * * * * * *

The mass of the people can not survive with the present high price of potatoes, sugar, flour, coal, etc., and while the producer should, in my opinion, be protected with a minimum price, the consumer should likewise be protected with a maximum price.

Patriotic men and women give their lives to their country; patriotic men and women advance money to their country; but a few sharks sacrifice nothing and can take advantage of both the above conditions and drain from the mass a tax for profits on the necessities of life.

I read a little from a letter from one of the editors of a great farm paper in the Middle West:

People are wondering why Congress moves so slowly in the matter of food legislation.

Mr. STERLING. Will the Senator state the name of the writer?

Mr. KENYON. I think there is nothing confidential about it. He is one of the editors of Successful Farming, a paper with a very great circulation. He says:

It is already too late this season to influence planting by enactment of minimum prices on staple products. If it comes at once it would have some influence in the attempt made to harvest the crops. We have tried to assure the farmers that they would not be the losers if there was an unusual production, and I am sure that the farm press is getting anxious to see these often-repeated statements made good. I am glad to know that Mr. Hoover is chosen as the power behind the throne in these matters. I understand that those who will be hit by any food regulation are lobbying as never before.

Then he goes on and speaks of the local situation and says it is "almost intolerable."

I have another letter from an editor of a great farm paper. He says in part:

Something should be done to prevent the few from profiting unduly by the war. One thing I do not like about the packing industry, it is reaching out for everything eatable. Swift, in particular, is getting into the poultry, butter, and egg business, into the fruit, fruit juice, and canning business, and somebody told me that they were even getting into the bakery business. How true this is I do not know. When we as a nation must get down on our knees and beg food from one or two packing concerns, we have ceased to be a free people. Conditions are ripe for a revolution.

And he is a very conservative citizen. He continues:

They will make Russia's troubles look like a side show. I am not a calamity howler, but it is my business to watch which way the wind blows by noticing the straws. The direction of the wind indicates the coming storm. I believe in digging a cyclone cellar now before it breaks.

I wish to put into the RECORD without stopping to read them a statement by Mr. Joseph Hartigan, city commissioner of weights and measures of New York; also a letter from the United Mine Workers of America from Tipperary, Iowa, which is not a long way to go, and a resolution of that organization; also a statement that appeared in the Chicago Tribune of April 20 concerning food speculators.

The matter referred to is as follows:

SAYS FOOD DEALERS ARE PILING UP CASH—NEVER MADE SUCH PROFIT BEFORE, ADDS NEW YORK OFFICIAL.

NEW YORK, *May 28.*

Joseph Hartigan, city commissioner of weights and measures, in a statement issued to-night, declared that never in the city's history had so much money been made by individuals and corporations dealing in foodstuffs as in the last few months.

"While foods have been kept in abundance in storehouses and while prices have been advancing by leaps and bounds," asserted Mr. Hartigan, "no thought has been given to the consumers. The dealers have said, 'Here is our golden opportunity,' and they have seized it."

"Reports made to him by inspectors of his department," Mr. Hartigan said, "showed that the food jobbers and brokers resented Government interference with speculation, which they call 'business acumen.'"

"The wholesalers are surprised and disappointed that the Government should place so little reliance upon their ability to handle the situation without Government interference," added Mr. Hartigan. "The Government's effort will not work well, they say, because it will take so long to set in operation and because the highly complicated food trade will be tampered with by men of little or no experience."

—

UNITED MINE WORKERS OF AMERICA,
Tipperary, Iowa, May 21, 1917.

Hon. W. S. KENYON,
United States Senate, Washington, D. C.

YOUR HONOR: I write at this time to say that—

Whereas the ever increasing cost of foodstuffs and other necessities is making it more difficult for the wage earners of our country to provide the food and clothing needful for themselves and those dependent on them; and

Whereas the high cost of living has reached larger proportions than any increase of wages that the wage earners are likely to receive; and

Whereas we believe that speculating interests in our country are taking advantage of the abnormal conditions now existing throughout the world and are forcing prices to unreasonable proportions: Therefore be it

Resolved by Local Union 550, United Mine Workers of America, Tipperary, Iowa, That we demand the following:

First. That the Government of the United States take over all food supplies and other necessities of life and regulate distribution and prices so that even the poorest paid laborer may be able to purchase a just portion of the necessities of life.

Second. That exports of foodstuffs are prohibited until the 1917 crops are available or a food census can be had to determine what portion of our food supply can be termed a surplus available for export.

Third. We ask that this matter be taken up before the respective assembly of the United States Senate.

Respectfully,

DAVID HENDERSON,
President.
ANTHONY JURES,
Recording Secretary.
C. A. CROSS,
Financial Secretary.
FRANK GREENHALGH,
Treasurer.

—

FEED OUR COUNTRY FIRST.

Resolution.

Whereas the food supply of our country is in the possession of private individuals who are arbitrarily fixing prices which places food beyond the reach of many of our people, and are constantly and insidiously increasing prices without warrant or justification; and

Whereas the greed for profit on the part of those who control and fix prices of our country's food has led them into wild speculation whereby vast fortunes have been won on gambling devices popularly known as "boards of trade," "stock exchanges," and the like, all of which fortunes are wrung from the toiling masses of our country through increased prices of food, and as a result of such manipulations our country is facing one of the gravest problems in its history, starvation in the midst of plenty; and

Whereas starvation is already stalking abroad in our country, food riots are occurring in our large cities, and the condition of many of the working classes is gradually becoming more precarious, while cold-storage plants are filled with food products, packing plants are producing an abundance of meat, grain elevators are filled to overflowing, fruit and vegetables are rotting in cars and warehouses, and fish is being thrown back into the water by those who control our country's food, in order to maintain and further advance the already exorbitant prices; and

Whereas past experience, coupled with the action of all belligerent and most neutral countries of Europe, justify the belief that it is a dangerous proposition to allow the food supply of our country to remain in private hands, even in time of peace and doubly dangerous in time of war: Therefore be it

Resolved, That the food supply should command the first consideration of the President and Congress of our country; that starvation is not conducive to patriotic enthusiasm; that our flag can not command the reverence and respect which is due it, either at home or abroad, so long as it stands for the starvation or enforced underfeeding of the great mass of our people by a few profiters and food gamblers; neither can our people rally to the defense of their country with the physical stamina and whole-heartedness which is necessary to victory after having been underfed previous to entering the Army, and while knowing that their wives and children at home are at the mercy of unscrupulous patriots for profit, and are suffering the pangs of hunger and privation: And be it further

Resolved, That we urge upon Congress and the President of the United States to immediately take such measures as may be necessary to eliminate all sources of profit in the production, transportation, and distribution of the food supply of our country, to the end that every man, woman, and child shall be supplied with sufficient good and wholesome food to keep them in perfect physical condition.

Adopted this the 18th day of May by Council Bluffs (Iowa) Central Labor Union.

P. H. REUERMANN, *Secretary.*

—

HIDDEN FOOD FOUND STORED BY SPECULATORS.

CHICAGO, *April 20.*

With food prices mounting daily on the grounds of scarcity, investigators in Chicago have learned that storage houses of this city were stocked to the roofs with stores of hitherto unapproached magnitude.

Not only are the private warehouses of the dealers and jobbers fairly bursting with food, but the public warehouses as well, while thousands of tons are in cars on sidings.

The bulk of the stored products consist of sugar, rice, canned goods, coffee, and other nonperishables. Ownership of these goods is not confined to regular dealers and the brokers, but in many instances by men in other lines who have "taken a flyer" in food.

Mr. KENYON. The people of the District of Columbia had some experience in this matter. A committee was appointed along about January or February, 1917, to investigate the question of the cost of living in the District of Columbia. I have here the report, which is very voluminous. I wish to read short extracts from it here and there:

It was the uniform testimony that any foodstuffs ordinarily on the market at this time of year could be obtained by paying the price demanded.

They sought to show that there was no shortage.

Interesting figures were obtained from the proprietors of some of the smaller stores, whose business is with the poorer people. They show clearly that the poor have been compelled to resort to the strictest economy in order to provide food, on account of high prices. Their purchases are of the cheapest possible articles and in smaller quantities than heretofore. The sale of ordinary cuts of meat in this class of stores seems to have been discontinued, and the meat now purchased consists of hog livers, hog kidneys, neck bones, hog faces, etc.

Then this committee also shows, which is most interesting, how cars were held and deliveries of foodstuffs were delayed. In one case, from January 24 to March 7, a car of sugar leaving New York February 2 arrived in Washington February 14; another car of sugar left New York February 15 and arrived in Washington Febuary 24. A car of corn meal left Indianapolis February 6 and arrived in Washington March 2; 200 cases of salad dressing left Bradford, Mass., February 15 and arrived in Washington March 7; 200 cases of condensed milk left Oconomowoc, Wis., January 16 and arrived in Washington March 7; 200 cases of pancake flour left Indianapolis February 12 and arrived March 6.

They discuss the relation of that problem of the distribution to the cost of living.

Now, on speculation, here is more testimony:

In the opinion of the committee the element of speculation in food products has been one of the potent factors in the enormous increase in prices which consumers have been compelled to pay. Investigations made by the Federal authorities seem to have established this fact. In Chicago, for instance, the number of carloads of potatoes in the railroad yards "held for orders" day by day a year ago and this year, as disclosed by investigators of the Department of Justice, were as follows:

I will not read them, but they show nearly double the holding. I am still reading from the committee report:

On February 26 potatoes were selling in Washington at $8 per barrel, onions were selling for $14 per 100 pounds, eggs were selling for 43 cents a dozen. Three days later, on March 1, after this committee and certain departments of the Federal Government had begun to make an investigation of the situation, these articles had dropped to the following prices:

Potatoes, per barrel	$6.50
Onions, per 100 pounds	11.00
Eggs, per dozen	.30

Showing the value of investigation.

There had, of course, been no increase in the total potato and onion supply of the country between these dates. It is also a fact which should be considered that the shipments to the belligerent countries of these commodities have not affected prices because there have been practically no shipments of either of them. There was no addition to the American stock and no reduction in the American demand, yet prices dropped.

Mr. McCUMBER. Mr. President——

Mr. KENYON. I yield to the Senator from North Dakota.

Mr. McCUMBER. I have been wanting to ask the Senator a question for some time in his able discussion of this matter, and that is what relation the retail prices have to do with the fixing of what we will call a very high cost of living. A short time ago I made an investigation on my own account as to the retail prices of food in this city, and I found that the price of those products had risen away out of proportion to the wholesale price. According to the statement of the Senator, now, the prices which he quoted are the retail prices, and it was the retailers who reduced their prices when the investigation was made. The Senator from Oregon [Mr. CHAMBERLAIN] cited one instance where a farmer could not get 90 cents a barrel for his spinach in New York, and yet it was sold by the retailer in New York, I think, for $9 a barrel, or something like that figure.

It seems to me that we are giving so much attention to what we call the food speculators, those who have been conserving the food for future sale, that we have forgotten entirely the retailer whose prices are so enormous they are out of proportion to the rise in the price of the products which he purchases. I notice in the bill that retailers are especially excepted from its provisions. Therefore, no matter how cheaply the retailer may buy his products if he can hold up the public he is at perfect liberty to do so. Does not the Senator from Iowa think that that provision ought to be changed or modified?

Mr. KENYON. That is one of the questions which I asked Mr. Hoover yesterday. I think the Senator will find it in the printed testimony. He gives some reason for that which may be satisfactory or not. That it is absolutely impossible under the license system to license all retailers. That is where the retailers are excepted, I think.

Mr. McCUMBER. Yes.

Mr. KENYON. It is absolutely impossible to handle that question as to all the retailers of the country. When it is known what the wholesaler has to pay, then the people knowing that will not permit the retailer to advance the price to such a degree as to oppress the people. That is his theory.

Mr. McCUMBER. I wish to say to the Senator that notwithstanding the fact that the wholesale prices have been published right along the retail prices in the last two years have risen enormously beyond the wholesale prices.

Mr. KENYON. That may be true. I think there are other provisions of the bill, however, which apply to that situation. Section 5 of the bill provides for that question. I think it is a very important question to discuss here.

Mr. LEWIS. Mr. President——

Mr. KENYON. I yield to the Senator from Illinois.

Mr. LEWIS. May I refer the Senator to the last observation in which he concludes that the fall of the prices was no doubt incited by the result of the investigation? I ask the Senator if a measure were put through Congress that gives the President the right, through his own hands or those he might choose, to seize the food products whenever they are held for the apparent purpose of being monopolized and for the object of raising prices exceeding cost, giving to him the right of distribution and remitting the owner to a jury, where they would not take a fair price, would not that serve the public and serve equally to keep the prices down because of the knowledge that the moment they began to raise prices in the manner referred to the articles could be promptly seized?

Mr. KENYON. I think there is a great deal in what the Senator says, and I will call his attention to the English act—a very drastic act—of August 28, 1914, which authorized the board of trade to take possession of any article of commerce unreasonably withheld on the payment of a reasonable price, and so forth. The fact is that it has never been necessary to use that particular power, because the knowledge that it existed remedied the situation.

Mr. LEWIS. Mr. President, I call the able Senator's attention, thanking him for that reference, to the fact that I have a measure pending here to give such power to the President, because I felt that it would operate in that way. I am glad to have the suggestion made, as I was not conscious that the English act went to the extent the Senator indicates.

Mr. WEEKS. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Massachusetts?

Mr. KENYON. Certainly.

Mr. WEEKS. I hope the Senator from Iowa, who is a member of the committee, and has given a great deal of attention to this subject, will investigate further the suggestion which has been made by the Senator from North Dakota. The complaint which the people have to make is more particularly about the retail prices. The wholesale prices are only a drop in the bucket compared with the retail prices in most of the products which the people buy for food purposes.

The evidence is found right here in this Capitol of the extreme to which prices may go before they reach the actual consumer. If one will take the menu which is furnished in the restaurant below and compare the prices which we pay—and I understand that the net results of the restaurant are a loss—with the wholesale prices which have been complained about, he will find in many cases they are five or six times greater. Something must be done, if we are going to get food prices down to a reasonable level, to regulate the many steps between the wholesaler or the producer and the actual consumer. That is a matter which should have the attention of the committee and of those who have given most attention to this bill.

Mr. KENYON. I entirely agree with the Senator from Massachusetts, and I think the only exception found in this bill as to the retailer is under section 5. That shows the value of taking the matter up and discussing it very frankly, because if this bill does not give the power to reach the retailer it should do so. It is impossible to license all the retailers of the United States, and that is the theory under which the exception should be made.

Mr. KING. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Utah?

Mr. KENYON. I yield to the Senator.

Mr. KING. I should like to ask the Senator whether or not in the investigations which his committee made an inquiry was

made into the various State laws punishing monopolies in food products and combinations in restraint of intrastate trade, and if such an investigation was made, whether it was not found that in most States there were very drastic laws to punish such monopolies and combinations, especially with respect to food products? I should like also to ask the Senator if it was not found that the State authorities rarely ever prosecuted under their statutes or attempted to invoke local statutes against those who were violating them?

Mr. KENYON. The same observation, I think, would be in point as that which I made a moment ago, as to the difficulty of enforcing such laws. Such laws do exist in many of the States.

Mr. KING. In the light of what was said by the Senator from North Dakota, did not the Senator from Iowa in his investigations find that in many instances the complaint should have been that there were combinations on the part of the retailers to unduly enhance prices?

Mr. KENYON. Undoubtedly. I think, Mr. President, I shall read no more of this, but I would commend the report of the committee to anyone seeking the evidence on the question of whether or not there is any speculation.

There is one thing more on this subject which I desire to put into the RECORD, an extract from a letter of a gentleman in Iowa, who writes me. I shall quote a part of the letter, as follows:

From information gathered I find that the sweet-corn pack for Iowa for 1917 will approximate 2,000,000 cases of two dozen cans each. During the month of January this pack was sold to jobbers at from $1.76 to $1.80 per case. In quoting prices for delivery of this pack the jobbers ask $2.90 to $3.20 per case. The sale price by the canners I have from records and the delivery price I obtained from dealers who have asked for quotations. The pack for 1916 was sold at from $1.30 to $1.36, and for this corn, which is in the hands of the jobbers, quotations from $3.20 to $3.50 are made. These figures I have from records of sales and purchases.

He adds:

The people are studying these questions and know that they are being robbed, and thousands of old-line Republicans and Democrats will be found in the ranks of the Socialists unless some relief is soon forthcoming. As for myself, I am still a good Republican, though editor of a Democratic newspaper, and still have faith in my party. Let me tell you, dear Senator, that when the Socialists get rid of some of its radical and unsound ideas that party will become a power in American politics.

I wrote him thanking him for this letter, and received a reply, in which he says:

You are at liberty to use my name in connection with anything I write to you.

But I think I shall not use it. He continues:

If the Government would appoint a committee that would make an honest report on the speculative features of the food question a showing could be made that would astonish the country. Not alone has the canned corn been taken over by the brokers, but every other article of food which passes through their hands. The same is true of the canned peas in Wisconsin and other States, tomatoes, and all other canned goods. This could all be brought to light if an honest committee had full authority to act. As I stated in my former letter, the people of this country will not stand for this robbery for any great length of time, and when they act there will be a general house cleaning of those statesmen who have made present conditions possible.

I think that a little harsh, because the statesmen are probably not responsible.

I have cited these things, Mr. President, on the general question of speculation, because it has been said so many times that there is no speculation. They show a situation in this country which thinking men who love their country, as we all do, must pay some attention to, and we might just as well make up our minds that though this bill may hurt some people, if this thing is going on of cornering foodstuffs and fuel—which is not quite as important, but is getting to be about as outrageous in its handling—if this is going on we are going to have hunger and bread riots in this country, and something worse. There is no use of going around Robin Hood's barn.

The people of this country who have an interest in the welfare of their country and an interest in the living of their own families, and who see enormous fortunes piled up in this country and plenty in the homes of the rich—and I am not blaming the rich particularly for this matter; I am simply pointing to the fact and sounding a note of warning—they are not going to have their children hungry and starving in this country.

Mr. VARDAMAN. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Mississippi?

Mr. KENYON. I do.

Mr. VARDAMAN. I can not command language with which to express the heartiness of my approval of what the Senator from Iowa has said about the necessity for exterminating the food speculator. I think the man who would take advantage of conditions which exist in this country to-day for private gain to corner the food market with all of its attendant evils and sufferings that follow is a monster. The law could not deal with such a creature too harshly. The traitor who reveals his country's secrets in time of war—the midnight assassin that thrusts the dagger into the heart of his unoffending victim—the robber who would invade the quiet of the peaceful home and take human life for plunder is not a more despicable character than the man who would monopolize the food market for personal pecuniary gain. The great purpose to be attained by this bill I most cordially approve. I heard Mr. Hoover's testimony before the committee yesterday, and I confess that I was impressed with the honesty of his purpose and the exalted patriotism and spirit of altruism that inspired him. I think he is bent upon a work which he believes will bring good to the world by ameliorating the suffering of the poorer people. I bid him Godspeed in his every endeavor in that direction, but I think all of that can be accomplished without the aid of powers given by certain sections of this bill. No law can be perfectly enforced without the cooperation and sympathy of the people who are to be governed by it. In all matters of legislation the psychological side of the question should never be lost sight of. I do not think it is necessary to give the food administrator the power carried in section 3, which, if enforced, would necessarily make of the administrator—what Mr. Hoover does not desire, I am sure—a despot in fact. The people of America will not consent that any official shall have the right to prescribe what they shall eat, how it shall be cooked, and whether they shall have meat once a week or not at all. That is a power which governments, except in extreme cases, should never undertake to exercise. I maintain that the time has not come nor the occasion arisen in the United States for conferring such power as that upon any individual, and therefore it ought to be left out of this bill.

Mr. Hoover said he hoped to accomplish the great work designed by this bill by voluntary enlistment and cooperation among the people. He said he hoped to enlist the housewives in the matter of practicing economy and appeal to the patriotism of all classes. And that is the American way of doing it. That is the efficient way to do it. If he finds he can not accomplish it in that way and Congress shall conclude it necessary to go further, Congress will be in session and ready to lend its assistance by any proper enactment to carry out this great scheme. I am growing weary of all this talk heard in Congress these days about the American people being helpless subjects or spineless serfs rather than the free, sovereign, patriotic citizens that they are. If the people are given a chance, unhindered, unproscribed, they will attend to their own private affairs better than any Government official can attend to them for them. All the Government needs to do is to paralyze the hands of the speculator, protect the laborers from the ravages of the usurer, and then leave free and untrammeled that fruitful initiative, that good judgment, sense, and patriotism which have always characterized the American citizen and made him the most potential governmental agency and forceful economic unit on earth.

Mr. KENYON. Mr. President, the Senator from Mississippi has not heard me indulging. I think, in that line of talk, which he condemns; but I am pleading for some of the American people who seem perfectly powerless as against the great gambling proclivities of certain wealthy people in this country.

Mr. FLETCHER. Is it not pretty well established that the American people have not been able to take care of themselves in these circumstances; that the prices of foodstuffs have been controlled by private interests for the benefit of private interests? Is it not time that the Government should intervene, or that some power should intervene, so that foodstuffs may be controlled by the Government in the public interest rather than be controlled by private interests?

Mr. VARDAMAN. Mr. President, if the Senator from Iowa will pardon me, the Senator from Florida does not understand that anything that I have said means or would indicate that I am opposed to the Federal Government using its strong arm to destroy these agencies that have caused the prices of foodstuffs to rise; not at all. I want to destroy these malign agencies; but, in my opinion, that can be done without invading the sacred precincts of a man's home and prescribing how he shall direct his own private life.

Mr. FLETCHER. Precisely. I understood the position of the Senator from Mississippi to be that the American people were perfectly able to take care of themselves——

Mr. VARDAMAN. In that regard, yes.

Mr. FLETCHER. And that the wise and proper course to pursue would be to let the people handle the situation themselves in a voluntary sort of way. I am simply suggesting that they do not seem to be able to handle it. They have been handling it up to this time, but the situation is getting so dis-

tressing now that, as the Senator from Iowa has said, there arises the question of some power intervening somewhere to help the people take care of themselves. That is the position, it seems to me, in which we find ourselves, and this talk about interfering with business and all that sort of thing ignores the fact that the main business of this country to-day is war. That is the business that has got to be taken care of.

Mr. KENYON. The Senator from Mississippi is always such a champion of the people—and one of their best champions in this country, too, and perfectly fearless about it—that I am sure if he believed this bill was for the purpose of helping the people of this country and protecting them against the extortions that have been going on he would be just as much for the bill as I am. That is why I am for the bill. I am willing to give a great deal of power to anybody who can remedy the situation and am not going to tremble very much about that power being granted.

Mr. MYERS. Mr. President, will the Senator yield to me for a question?

Mr. KENYON. Yes.

Mr. MYERS. I have heard a good deal of talk about the despotic provisions of this bill, and particularly about section 3, which has just been referred to by the distinguished Senator from Mississippi [Mr. VARDAMAN]. We all want to protect the people. There is no doubt about that, I am sure, but there seems to be a very grave difference of opinion about the proper method. I will ask the Senator if he finds anything in section 3 which empowers the President or anybody in his behalf to prevent my going to a butcher shop and buying a piece of beef to roast for dinner? If the Senator can not find anything in that section to prevent me from doing that, I will be glad if the Senator from Mississippi will point out something along that line.

Mr. KENYON. The power is not there. We have heard a great deal about the use of the word "consumption." In my opinion it is merely descriptive, and I would have no objection to seeing that word go out of the bill. There is nothing in section 3 that gives the power to anybody to say what the Senator shall eat. He can go to the Willard Hotel, eat two baked potatoes and pay 60 cents for them if he desires to do so, or he can eat a soup bone. Mr. Hoover would have nothing to say about it, nor would anybody else. The terms used in section 3 are merely descriptive terms for the legal effect thereafter in impressing upon them a public interest.

Mr. VARDAMAN. If that power is not conferred in this section, what is the necessity for it?

Mr. KENYON. I was just about to argue that question.

Mr. VARDAMAN. I want the Senator to understand that I am in favor of the purpose, the thing sought to be accomplished by this bill, and, as I stated a moment ago, in Mr. Hoover's testimony yesterday he said he did not expect to invoke the strong arm of the law to accomplish the desired economy in the home, but he expected to do it by voluntary cooperation; he was going to enlist the people. Now, I think that is a very fine way, and an American way of doing it, and I am very much in favor of it, but if this extraordinary power is not given, then I have read the provision incorrectly, and other men who are quite as capable of understanding the English language as I am have construed it to mean the same thing.

Mr. KENYON. I will say to the Senator that if it means that it should go out of the bill. I contend it does not mean that; and further contend that the words are merely descriptive, in order that there may be a public interest attached to these necessities. I do not know whether the Senator is a lawyer or not, and I was going to discuss the legal phases of the question later on, but I will merely say a word on that question now.

There may be things in private life when we are not at war, when we are at peace, that are not at all affected by any public interest, but when war comes many matters that have heretofore been private—and I realize I am going far ahead on that proposition legally—may become affected with a public interest, so that the Government would have the right to regulate them the same as any other public utility.

We regulate gas rates and water rates and things of that character, and I think that the Supreme Court of the United States—I am going to refer to its decisions in a moment or two—has indorsed the proposition that in times of great emergency those things which no one would claim in time of peace could be affected with any public purpose, such as foodstuffs and fuels, may become affected with a public interest; that consequently the Government may regulate them; and they are not in the strict sense of the Constitution private property. While I did not draw that section, that is what I have worked out as the meaning legally of that section.

Mr. VARDAMAN. That is illuminating, and the Senator is always interesting to me; but I think that his statement only proves what I said a moment ago, that the section is designed to give the food dictator or administrator the right to limit consumption. There may a time come some day when that will be necessary, but I do not think it is necessary now.

Mr. KENYON. I agree with the Senator.

Mr. VARDAMAN. I would prefer that Mr. Hoover's original plan be tested and be carried out, and if, in the course of events and the development of affairs as the war progresses, it becomes necessary to compel the practice of this rigid economy, there will be sufficient time for the Congress to act upon that question. The general principle of giving the President the power to break up combinations and trusts, to prohibit the cornering of the market, to provide for purchases for the allies, and to keep the prices down to a fair level—those are all good objects, and those objects of the bill will meet with the approval of the American people; but they have not become sufficiently accustomed to the methods of the Kaiser to submit as yet to legislation prescribing what they shall have on their tables. I think it will be prudent for Congress to move cautiously in this new field of legislation.

Mr. KENYON. The purpose of this bill is to have this war result in such a way that they will never become accustomed to the dictation of the Kaiser.

Mr. VARDAMAN. I hope so.

Mr. MYERS. Mr. President, if the Senator from Iowa will permit me, I am very glad to have my judgment upheld by him; but I find in section 3 no such alleged despotic powers as have been ascribed to it. But I would a great deal rather that the President, or anybody in his behalf, should have the power to tell me what to eat or how much to eat than for Germany to prevail over this country in our war with that nation. I think it would be a great deal better.

Mr. VARDAMAN. Mr. President, I presume that remark of the Senator from Montana is directed to me.

Mr. MYERS. No; it is directed to the Senator from Iowa.

Mr. VARDAMAN. I want to say that I am not called upon to defend my patriotism upon the floor of this Chamber. I yield to no man in my devotion to the American flag and the American cause in this world war. I have no fear whatever of any Kaiser, whether he be German or American, exercising sway over this country very long; but the thing I want to do is to conduct this Government along the lines prescribed by the Constitution, and I do not want to become accustomed to using methods that are un-American when they are not necessary to the happiness of the American people and the integrity of our Government.

Mr. MYERS. Mr. President, if the Senator from Iowa will permit me just a word, I want to say that I think the Senator from Mississippi is unduly sensitive. I did not have him in mind; I made no reference to his patriotism, and had no reference to him whatever.

Mr. KENYON. I am sure the Senator was not questioning anybody's patriotism.

Mr. MYERS. I was not questioning the patriotism of anybody.

Mr. KENYON. If that very important question is settled, I should like to proceed.

Mr. MYERS. I should like to say, if the Senator will allow me a word further in the interpretation of what I had in mind, that I think if we are to have a long war, as many people think we are to have, as to the power of regulating the amount of food to be consumed by the people, how they shall consume it, and what they shall consume, it would be a great deal better for that power to be exercised by our own Government than for it to come as a result of the war, a power in the hands of some alien government, to be exercised as it was toward the people of the South during the Civil War, who were literally starved into submission.

Mr. VARDAMAN. Mr. President, if the Senator from Iowa will permit me just a word further, let me ask does the Senator from Montana not think it would be very much better for the American people, and for the country generally, if economy in the home could be effected in the way Mr. Hoover suggested yesterday before the committee, by voluntary arrangement and voluntary cooperation among the housewives of this country, rather than to issue an edict or a ukase fixing a menu for the home?

Mr. MYERS. It would be better; but I do not think it is possible; I do not think it would be done.

Mr. KENYON. Mr. President, I do not want to lose the floor; and while I am very thankful for the suggestions of the Senator from Montana, I should like to proceed.

Mr. GALLINGER. Mr. President, may I interrupt the Senator a moment?

The PRESIDING OFFICER (Mr. JOHNSON of California in the chair). Does the Senator from Iowa yield to the Senator from New Hampshire?

Mr. KENYON. Yes.

Mr. GALLINGER. In common with certain other provisions of this bill, I have been troubled over the very point—section 3—raised by the Senator from Mississippi [Mr. VARDAMAN].

Mr. KENYON. If the Senator will allow me to proceed, I will soon reach that in the discussion.

Mr. GALLINGER. I will occupy but a moment.

Mr. KENYON. Very well.

Mr. GALLINGER. The section reads in a way that we can not misunderstand it, I think. It reads:

SEC. 3. That there is hereby established a governmental control of necessaries which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries—

Mr. President, there is a provision that the control of these matters shall be put into the hands of some man, and that that control shall include consumption. I think really that that word "consumption" ought to come out. The other provisions cover pretty much everything.

Mr. KENYON. If I had charge of the bill, I would have no objection to the elimination of that word; but I think the words in that clause are merely descriptive, because the "consumption of necessaries" enters into the control of necessaries. The Senator will observe that there are no penalties at all attached to that section. That section is merely a peg on which to hang other sections.

Mr. GALLINGER. I can not bring myself to believe that it is descriptive. I think it is absolutely imposed upon this individual to control those things; and among others is "consumption."

Mr. KENYON. That is a control that is limited by the other sections, I will say to the Senator from New Hampshire. Take the instance that was cited here: Suppose the food dictator, so called, says the Senator from New Hampshire shall eat but one meal a day. It has been advanced by the Senator from Mississippi that that could be done. That or anything of the kind is perfectly impossible under this bill. There is no penalty in connection with the provision regarding the consumption of necessities. The bill goes ahead and hangs up the legal question involved in sections relating to hoarding and licensing on section 3.

Mr. GALLINGER. That is the very reason why I think it ought to come out, because I think it is foolish, unnecessary, and that it could not be enforced even if there were a penalty.

Mr. KENYON. I do not believe it is necessary. The Senator must remember, however, that consumption may not refer entirely to eating; necessaries might be consumed in manufacturing.

Mr. KING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Utah?

Mr. KENYON. I do.

Mr. KING. I dislike to interrupt the Senator; but with his permission, I should like to make a brief suggestion as a foundation for an interrogatory. In attempting to formulate a bill to cover this food situation it occurred to me that the wheat supply was the most important subject for consideration, and the investigations which I made showed that there will be produced approximately 650,000,000 bushels of wheat in the United States this year. The Senator from Iowa has said that the allies require perhaps 300,000,000 bushels of wheat.

Mr. KENYON. Five hundred million bushels.

Mr. KING. But 300,000,000 bushels probably from the United States.

Mr. NELSON. From America.

Mr. KING. I understood the Senator from Iowa to say from the United States. At any rate, the allies will require several hundred million bushels of wheat from the United States. Now, it is obvious that there is not sufficient wheat in the United States to answer the domestic demand and to furnish the amount which we must furnish our allies. It would seem therefore to be important that the wheat supply be acquired or controlled by the Government. I can see no constitutional objection to the Government requisitioning the wheat, paying, of course, the value of the same.

The point I was about to suggest to the Senator from Iowa was this: What objection would there be to a bill authorizing the Government to requisition all of the wheat produced in the United States? It could then furnish the allies 100,000,000 bushels or 200,000,000 bushels or whatever we determine can be spared; and the residue could be held in reserve for distribution to the American people, selling it to them at the same price the Government paid, plus the expenses to which the Government was put in requisitioning, handling, and making disposition of the same.

Now, a policy of that kind would not be subject to any constitutional objection, because, as it appears to me, the Government would have the constitutional power to requisition wheat as it has the constitutional power to requisition the powder or the copper or any other article essential for the prosecution of the war. If the Government should be authorized to acquire the wheat, it could requisition it in the warehouses, granaries, or other depositaries. A fair and just distribution of it could then be made to the States in proportion to their population or their necessities, and at prices that would be equitable and just.

May I make one other observation? It seemed to me that if that course could be pursued it would break down the arch that has been erected by the speculators, and other prices would conform to the price that the Government established, and the owners of other food products would conform their conduct and prices to meet the stabilizing results of the Government and its method of distribution and level of prices for fear that the Government might reach out its hands and requisition other food products and make like distribution. Now, why could not a plan of this kind be adopted rather than the one contemplated by this bill, which possesses so many complications, suggested here during its consideration?

Mr. KENYON. I will answer the Senator from Utah in this way: If he will read section 9 of this bill he will find that that exact proposition is covered, except as to requisitioning the wheat in the hands of the producers. Now, I think we must consider that. You can not do anything in this country to injure production. It is better that we have the things produced, no matter what the cost, than that we do not have them at all; and in enacting this bill we must be very, very careful that we do not injure production. Now, section 9 covers everything else that the Senator has suggested. Under that the President may buy the wheat; he may sell it to the allies, I think. Anyhow, he can buy it; he can requisition it.

Mr. KING. Does the Senator mean that it would interfere with production or stifle production for the Government to buy from the farmers all the wheat that they now have at a fair price?

Mr. KENYON. No; I did not understand the Senator in that way—that the Government was to buy it.

Mr. KING. Yes; the suggestion was for the Government to buy it. When I used the word "requisition," I meant, of course, to buy it.

Mr. KENYON. Does the Senator have in mind that the President should fix the price?

Mr. KING. Yes.

Mr. KENYON. I think it would injure production very much if it went out to the farmers of this country that anybody had the power to fix absolutely the price they were going to get. Now, we must be careful about that. This bill goes to the extent of giving the President power to fix a minimum guaranty, not a minimum price. Even that has affected the farmers' thought on this bill to some extent, who think it is a minimum price. It is not. It is a minimum guaranty, entirely for the purpose of stimulating production. England has been compelled to do that, and so has France. Recognizing that a nation does absolutely nothing sanely, and acting as sane men, to injure or decrease production, I am afraid the Senator's proposition would do that.

Mr. KING. Let me see if I understand the Senator. Do I understand the Senator from Iowa to contend that if it should go out—using his expression—to the farmers of the United States that the Government intended to purchase all of the wheat in the United States at a fair price—indeed, at a price that would give them a large profit, because the Government would be willing that they should have a large profit—it would have any tendency to interfere with production during the coming year?

Mr. KENYON. I certainly do. You must send out to the farmer, then, an assurance as to what his farm implements are going to cost, and fix some limit as to that. You have got to assure him about his labor, and all the things that he has to buy. If you are going to put a price on what the farmer raises, then you must put a price on what he buys.

Mr. KING. Let me ask the Senator this question: Is it not a fact that many of the farmers of the United States have already sold, or have made arrangements to dispose of the wheat crop for the current year?

Mr. KENYON. Oh, I assume that that is so to some extent. I do not know accurately as to this, however.

Mr. KING. What objection would there be to the Government buying the wheat instead of private individuals buying it? I believe that the farmers of the United States would be entirely satisfied with a fair price for their wheat, and that they would prefer to sell it to the Government for honest and fair distribution to the allies and to the people of the United States than to sell it to the food speculators, and have the food speculators rob the allies and rob the people of the United States.

Mr. KENYON. In other words, the farmers are just as patriotic, of course, as anyone else.

Mr. VARDAMAN. Mr. President, will the Senator from Iowa permit me to ask the Senator from Utah just one question?

Mr. KENYON. Certainly.

Mr. VARDAMAN. I want to ask the Senator from Utah whether his plan contemplates taking all of the wheat? Suppose the farmer did not want to sell all his corn or his wheat, but wanted to keep sufficient for his own family: Does the Senator's scheme comprehend taking all of the wheat and then distributing it back among the people?

Mr. KING. The plan which I suggested was that the Government buy all the wheat in the United States.

Mr. VARDAMAN. The corn and the meat, too?

Mr. KING. No; I was speaking only of wheat; and, of course, the plan suggested contemplated the retention by the farmers of sufficient for their own needs.

Mr. SHERMAN. Mr. President——

Mr. KENYON. That is virtually a maximum price, and I will say to the Senator that it has been a failure in every country that has tried it. It does not work, and I am afraid we would have vastly less wheat to distribute if we did anything of that kind.

Mr. WADSWORTH and Mr. McKELLAR addressed the Chair.

Mr. KENYON. Mr. President, I want to yield to every Senator, and I rather invited all of these questions; but I am through the discussion of the facts and do want to take up the law. However, I am going to yield to those who are now on the floor.

Mr. SMITH of Michigan. I will get up, then, so that the Senator may include me. [Laughter.]

Mr. KENYON. I yield first to the Senator from New York.

Mr. WADSWORTH. I thank the Senator for his generosity in this matter; and I know, of course, that we are prolonging his remarks beyond the time he has fixed for himself. But a very interesting little colloquy—and I can state it in about three sentences—has taken place between the Senator from Utah [Mr. KING] and the Senator from Iowa. May I put the question to the Senator somewhat in the form of a statement and wind it up with a question mark at the end?

The Senator from Iowa proposes that the Government shall have the power to requisition the wheat that is in the hands of the wholesaler and, of course, in doing that, fix the price. The Senator from Utah says that we ought to go further than that and have the power placed in the hands of the Government to requisition the wheat in the hands of the farmer, and, of course, fix the price when we do that. Would not either method have exactly the same result in fixing a maximum price to the farmer?

Mr. KENYON. I do not think so, though I know that quite an argument can be made that the price must be reflected back to the farmer, and I am not certain but that it might affect it to some extent. That is one of the troublesome things, to my mind, with regard to this bill.

Mr. SHERMAN. Mr. President——

Mr. KENYON. I yield to the Senator from Illinois.

Mr. SHERMAN. I wish to inquire if the same reasoning processes would not apply to sugar?

Mr. SMITH of Michigan. That is what I was going to ask.

Mr. SHERMAN. Would they not apply to both cane and beet sugar? And if so, how would that work out?

Mr. KENYON. I have no doubt the Senator from Illinois is going to answer that question himself after a while. He can do it better than I can.

Mr. McKELLAR. Mr. President, I want to ask the Senator this question: The Senator stated that the fixing of a maximum price has been a failure whenever tried. Will the Senator, for my information, please state what governments have fixed a maximum price, and whether they have entirely abandoned it?

Mr. KENYON. England endeavored to fix a maximum price.

Mr. McKELLAR. Did she actually fix a maximum price, and try it out?

Mr. KENYON. Yes.

Mr. WADSWORTH. France did.

Mr. KENYON. I have the documents here.

Mr. McKELLAR. I will state frankly to the Senator that I have no information on the subject, and I would like to know what the fact is. Did France try a maximum price?

Mr. KENYON. Yes.

Mr. McKELLAR. And has she abandoned it?

Mr. KENYON. She has abandoned it; yes.

Mr. McKELLAR. Has she abandoned it outright?

Mr. KENYON. And, as I understand it, England did the same thing.

Mr. McKELLAR. Has the Senator those laws?

Mr. KENYON. I have the English acts here, and orders of the board of trade and food controller. I shall be very glad to turn them over to the Senator.

Mr. McKELLAR. Did the Senator put them in the RECORD?

Mr. KENYON. I did not, because they are so extensive; but it shows every order that has been made by the food controller, and all orders of the board of trade and statutes relating to these matters. I shall be very glad to turn them over to the Senator.

Mr. McKELLAR. The reason why I ask the question is because I noticed in the morning's paper that it was rather apparent that the food controller in England is in some doubt as to what step to take next, and I was wondering just what England had done.

Mr. KENYON. I had intended to discuss that, and read from this record. I had a number of notations in regard to it; but time was flying so that I omitted it.

Mr. McKELLAR. I wish the Senator would give those citations.

Mr. KENYON. I may do it at another time. In the meantime, I shall be very glad to turn this over to the Senator if he wants to examine it.

Mr. McKELLAR. I thank the Senator very much.

Mr. SMITH of Michigan. Mr. President——

Mr. KENYON. I think the Senator was not one of those who was on the floor a while ago.

Mr. SMITH of Michigan. I was on my feet, but a little late. I was very much impressed with the suggestion made by the Senator from Utah [Mr. KING], and was prompted to ask this question:

If the price is fixed, and the requisitioning of the crop takes place, and it should turn out to be an unprofitable price to the farmer, one that brought him no return and left him in debt after he had gotten all that he could get, then next year, when the conditions perhaps may be more acute than this year, would he raise the requisitioned crop, or would he raise a profitable crop as to which he could deal in his own way with the consumer? Now, if he would not raise the requisitioned crop which has taken this year, and did raise the sugar beet, as the Senator from Illinois [Mr. SHERMAN] says, at a more profitable figure, the plan of the Senator from Utah would not be effective at just the time when this source of food supply was most needed. It is a very well known fact, I think, that wheat is not a very profitable crop. I do not know how it is in Iowa, but I think in Iowa they prefer to raise corn.

Mr. KENYON. We do not raise any large quantity of wheat.

Mr. SMITH of Michigan. No; but they raise a great deal of stock, and they use their corn to feed their stock. Now, in my State we raise large quantities of wheat, but we also raise large quantities of corn and of sugar beets and other products. The farmer whose wheat is requisitioned at an unfair price will, as a matter of necessity—and necessity begins at home—put such a crop in the ground next year as promises him at least a fair return; and he will not be unpatriotic in taking that course, because sugar may be as important to us as wheat. If it is, he is certain that with a little different kind of labor he can produce a crop which will pay him a much larger price.

Mr. KENYON. Mr. President, I want now to discuss the law of this matter just as briefly as I can. I am not responsible for taking so much time, because so many have spoken.

Mr. SMITH of Michigan. I hope the Senator will take all the time he wants.

Mr. KENYON. I want to offer at this time an amendment to section 9, and ask that it may lie on the table and be printed. It is to clear up the question as to whether that section permits the taking from the farmer of cereals in his hands.

The PRESIDING OFFICER. The amendment will be printed and lie on the table.

Mr. KENYON. I am not going to read from all of the cases or authorities I have. I am going to put them in the RECORD in the hope that perhaps somebody may look at them. Now, I want to talk about this bill and the Constitution.

Mr. WOLCOTT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Delaware?

Mr. KENYON. I do.

Mr. WOLCOTT. I just want to know if the Senator from Iowa still has the intention of discussing section 3?

Mr. KENYON. Yes; if I get a chance.

Mr. WOLCOTT. I will not interrupt the Senator. I want him to get it.

Mr. KENYON. Mr. President, I think there is very little disagreement as to what we want to do; and that brings us to the query, Does the bill do what we want it to do, and is it constitutional?

Whenever anybody refers here to the war powers of Congress, there seems to be an assumption that he is in favor of laying aside the Constitution, and we are always referred to the Milligan case. There are troublesome constitutional questions in this bill.

The Federal Government certainly has some incidental powers; and it is perfectly apparent that it has, if not a specific power, an incidental power to preserve its own existence. The Supreme Court has recognized certain incidental powers.

Where in the Constitution is the national power to charter a corporation? That was sustained in the very famous case of McCulloch *v.* Maryland (4 Wheaton. 316).

Where is the power to take land, by the Government, in a State by the right of eminent domain, which is sustained in Cole *v.* United States (91 U. S., 367)?

And by implication we learn the national inability to tax the salary of an official paid by one of the States, as held by the Supreme Court in Collector *v.* Day (11 Wallace, 113).

There is power that inheres in the United States as a sovereignty, and that certainly covers the power to sustain itself, as I have heretofore said.

There are certain war powers in the Constitution, and everything necessary to carry on a successful war is found in the Constitution. Emergency does not create new law. The Supreme Court, in the eight-hour-day case, has recently said, referring to the Milligan case, that—

Although an emergency may not call into life a power which has never lived, nevertheless emergency may afford a reason for the exertion of a living power already enjoyed.

And in sustaining the Adamson Act, in this case of Wilson against New, the Supreme Court took into consideration the emergency as calling into life powers that, perhaps, had been dormant.

Now, what are the war powers?

Article I, section 11:

To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water.

Part of that comes into effect only when we declare war.

12. To raise and support armies; but no appropriation of money to that use shall be for a longer term than two years.
13. To provide and maintain a Navy.
14. To make rules for the government and regulation of the land and naval forces.
15. To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.
16. To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress.

* * * * * * *

18. To make all laws which shall be necessary and proper for carrying into execution the foregoing powers and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof.

These are the war powers in the Constitution that enable us to do everything necessary, and, I think, everything that we are trying to do in this bill.

I ask to have inserted in the RECORD without reading it a part of the opinion in McCormick and others *v.* Humphrey, in Twenty-seventh Indiana, referring to these war powers of Congress.

The PRESIDING OFFICER. In the absence of objection, it is so ordered.

The matter referred to is as follows:

When Congress declares war, by that declaration it puts in force the laws of war, and the war powers of the Government, which are not to be exercised, under the Constitution, in time of peace, now come into full force by virtue of the Constitution, and are to be exerted by the President and Congress. After the declaration of war every act done in carrying on the war is an act done by virtue of the Constitution, which authorized the war to be commenced. Every measure of Congress and every Executive act performed by the President intended and calculated to carry the war to a successful issue are acts done under the Constitution, whether the act or the measure be for the raising of money to support armies or a declaration of freedom to fill their ranks and weaken the enemy; whether it be the organization of military tribunals to try traitors or the destruction of their property by the advancing army, without due process of law; and the validity of such acts must be determined by the Constitution.

Mr. KENYON. I have no trouble in abiding by the judgment set forth in the Milligan case, that—

The Constitution of the United States—

And we ought to read it often—

is a law for rulers and people, equally in war and in peace, and covers with the shield of its protection all classes of men, at all times and under all circumstances. No doctrine involving more pernicious consequences was ever invented by the wit of man than that any of its provisions can be suspended during any of the great exigencies of government.

I ask to place some extracts from that opinion in the RECORD.

The PRESIDING OFFICER. There being no objection, it is so ordered.

The matter referred to is as follows:

Time has proven the discernment of our ancestors; for even these provisions, expressed in such plain English words that it would seem the ingenuity of man could not evade them, are now, after the lapse of more than 70 years, sought to be avoided. Those great and good men foresaw that troublous times would arise, when rulers and people would become restive under restraint, and seek by sharp and decisive measures to accomplish ends deemed just and proper; and that the principles of constitutional liberty would be in peril, unless established by irrepealable law. The history of the world had taught them that what was done in the past might be attempted in the future. The Constitution of the United States is a law for rulers and people, equally in war and in peace, and covers with the shield of its protection all classes of men, at all times, and under all circumstances. No doctrine, involving more pernicious consequences, was ever invented by the wit of man than that any of its provisions can be suspended during any of the great exigencies of government. Such a doctrine leads directly to anarchy or despotism, but the theory of necessity on which it is based is false; for the Government, within the Constitution, has all the powers granted to it which are necessary to preserve its existence, as has been happily proved by the result of the great effort to throw off its just authority.

Mr. KENYON. We have had decided in our legal history a case where the principle involved was three times before the Supreme Court of the United States that goes to the very limit of the exercise of war powers under the Constitution that no one would ever dream of at other times. I refer to the Legal Tender cases. The first one is in Eighth Wallace, 603, and there the legal-tender act was declared unconstitutional. I think you would find very few lawyers, if the question were presented to them of the issuance of these legal-tender notes and making them payment for contracts already entered into, payable in something else, who would say that even under the stress of war a man could be compelled to take the credit of the United States. When the second Legal Tender case reached the Supreme Court (12 Wall., 529), the act was held constitutional. I want to read, just as bearing on this general question, an extract or two from that decision. The court says:

It would be difficult to overestimate the consequences which must follow our decision. They will affect the entire business of the country, and take hold of the possible continued existence of the Government. If it be held by this court that Congress has no constitutional power, under any circumstances, or in any emergency, to make Treasury notes a legal tender for the payment of all debts (a power confessedly possessed by every independent sovereignty other than the United States), the Government is without those means of self-preservation which, all must admit, may, in certain contingencies, become indispensable.

Mr. KING. Bad economics and bad law.

Mr. KENYON. My friend from Utah says it is bad law, but it has never been reversed.

Again, on page 551:

As in a state of civil society, property of a citizen or subject is ownership, subject to the lawful demands of the sovereign, so contracts must be understood as made in reference to the possible exercise of the rightful authority of the Government, and an obligation of a contract can extend to the defeat of legitimate Government authority.

* * * * * * *

Admit it was a hardship—

The court says, on page 552:

But it is not every hardship that is unjust, much less that is unconstitutional, and certainly it would be an anomaly for us to hold an act of Congress invalid merely because we might think its provisions harsh and unjust. * * * What we do assert is that Congress has power to enact that the Government's promises to pay money shall be, for the time being, equivalent in value to the representative of value determined by the coinage acts or to multiples thereof. It is hardly correct to speak of a standard of value. The Constitution does not speak of it.

I know there is a tendency to decry the Legal Tender cases, and possibly justly so, but it was a time of a great war emergency. Justice Bradley, in a concurring opinion, which is most illuminating, says, among other things, page 561:

In time of war or public danger Congress, representing the sovereign power, by its right of eminent domain, may authorize the President to take private property for the public use and give Government certificates therefor.

About as far as you could go with any kind of power.

This is largely done on such occasions. It is an indirect way of compelling the owner of property to lend to the Government. He is forced to rely on the national credit.

Further quoting:

It might subserve the present good if we should declare the legal-tender act unconstitutional, and a temporary public satisfaction might be the result. But what a miserable consideration would that be for a permanent loss of one of the just and necessary powers of the Government, a power which, had Congress failed to exercise it when it did, we might have had no court here to-day to consider the question nor a Government or a country to make it important to do so.

And that is right in point on taking over food. Food, which may be, in private life and when we are at peace, an absolutely private matter, when we are at war becomes charged with a public interest, because the Government can not exist unless soldiers are fed, and the soldiers can not be fed unless the Government has some power to take the things if necessary to feed them, so they are charged in a way with a public interest.

I will insert, I think, without reading, an extract on page 563 of this case, which I have marked.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

It is absolutely essential to independent national existence that government should have a firm hold on the two great sovereign instrumentalities of the sword and the purse, and the right to wield them without restriction on occasions of national peril. In certain emergencies government must have at its command not only the personal services—the bodies and lives—of its citizens, but the lesser, though not less essential, power of absolute control over the resources of the country. Its armies must be filled and its navies manned by the citizens in person. Its material of war, its munitions, equipment, and commissary stores must come from the industry of the country. This can only be stimulated into activity by a proper financial system, especially as regards the currency.

A constitutional government, notwithstanding the right of eminent domain, can not take physical and forcible possession of all that it may need to defend the country, and is reluctant to exercise such a power when it can be avoided. It must purchase, and by purchase command materials and supplies, products of manufacture, labor, service of every kind. The government can not, by physical power, compel the workshops to turn out millions of dollars' worth of manufactures in leather and cloth and wood and iron, which are the very first conditions of military equipment. It must stimulate and set in motion the industry of the country. In other words, it must purchase. But it can not purchase with specie. That is soon exhausted, hidden, or exported. It must purchase by credit. It can not force its citizens to take its bonds. It must be able to lay its hands on the currency—that great instrument of exchange by which the people transact all their own affairs with each other; that thing which they must have and which lies at the foundation of all industrial effort and all business in the community. When the ordinary currency disappears, as it often does in time of war, when business begins to stagnate and general bankruptcy is imminent, then the government must have power at the same time to renovate its own resources and to revive the drooping energies of the nation by supplying it with a circulating medium. What that medium shall be, what its character and qualities, will depend upon the greatness of the exigency and the degree of promptitude which it demands.

Mr. KENYON. Further quoting from page 564:

These are legislative questions. The heart of the Nation must not be crushed out. The people must be aided to pay their debts and meet their obligations. The debtor interests of the country represents its bone and sinew and must be encouraged to pursue its avocations. If relief were not afforded universal bankruptcy would ensue and industry would be stopped, and government would be paralyzed in the paralysis of the people. It is an undoubted fact that during the late Civil War the activity of the workshops and factories, mines and machinery, shipyards, railroads, and canals of the loyal States, caused by the issue of the legal-tender currency, constituted an inexhaustible fountain of strength to the national cause.

These views are exhibited, not for the purpose of showing that the power is a desirable one and therefore ought to be assumed, much less for the purpose of giving judgment on the expediency of its exercise in any particular case, but for the purpose of showing that it is one of those vital and essential powers inhering in every national sovereignty and necessary to its self-preservation.

But the creditor interest will lose some of its gold. Is gold the one thing needful? Is it worse for the creditor to lose a little by depreciation than everything by the bankruptcy of his debtor? Nay, is it worse than to lose everything by the subversion of the Government? What is it that protects him in the accumulation and possession of his wealth? Is it not the Government and its laws?

And so goes on the case.

The third legal-tender case was Julliard *v.* Greenman (110 U. S., 421). See pages 438, 493, and 440.

I desire to place in the RECORD a reference to the case of Miller *v.* The United States (11 Wallace) on the subject of constitutional limitations in time of war. It was a proceeding to confiscate stocks in a railroad company held by a person alleged to be a rebel, and the question of war powers is discussed. The court says, on page 304:

The Constitution confers upon Congress expressly power to declare war, grant letters of marque and reprisal, and make rules respecting captures on land and water. Upon the exercise of these powers no restrictions are imposed.

There is a very strong dissenting opinion on page 315.

The war powers of the Government have no express limitation in the Constitution, and the only limitation to which their exercise is subject is the law of nations.

This case applies entirely to the confiscation of the property of the enemy.

A most interesting case, if Senators would read it, on this subject is the United States against Gettysburg Electric Railway Co. The language of that case would do for a Fourth of July address. Here is a case of condemning the battle ground of Gettysburg. There is no power in the Constitution therefor, unless you get it from the war powers. The court practically said in that language that under the war power the Government had the right to take property to bury its soldiers. If so, can we not say that under the war power the Government has the right to take property to feed its soldiers? The principle is the same. The court says:

It results from the powers that are given, and it is implied because of its necessity, or because it is appropriate in exercising those powers. Congress has power to declare war and to create and equip armies and navies. It has the great power of taxation to be exercised for the common defense and general welfare. Having such powers, it has such other and implied ones as are necessary and appropriate for the purpose of carrying the powers expressly given into effect. Any act of Congress—

Listen to this—

which plainly and directly tends to enhance the respect and love of the citizen for the institutions of his country and to quicken and strengthen his motives to defend them, and which is germane to and intimately connected with and appropriate to the exercise of some one or all of the powers granted by Congress, must be valid.

* * * * * * *

The end to be attained by this proposed use, as provided for by the act of Congress—

That is, the condemnation of this property—

is legitimate and lies within the scope of the Constitution. The Battle of Gettysburg was one of the great battles of the world. The numbers contained in the opposing armies were great; the sacrifice of life was dreadful; while the bravery and, indeed, heroism displayed by both the contending forces rank with the highest exhibition of those qualities ever made by man. The importance of the issue involved in the contest of which this great battle was a part can not be overestimated. The existence of the Government itself and the perpetuity of our institutions depended upon the result. Valuable lessons in the art of war can now be learned from an examination of this great battle field in connection with the history of the events which there took place. Can it be that the Government is without power to preserve the land, and properly mark out the various sites upon which this struggle took place? Can it not erect the monuments provided for by these acts of Congress, or even take possession of the field of battle in the name and for the benefit of all the citizens of the country for the present and for the future?

Where is the power in the Constitution to do it? Nowhere, except as a war power.

Such a use seems necessarily not only a public use—

Now, listen—

but one so closely connected with the welfare of the Republic itself as to be within the powers granted Congress by the Constitution for the purpose of protecting and preserving the whole country.

Is the burying of soldiers as necessary for the preservation of the Nation as keeping the soldiers alive with food, and if we can find constitutional authority under the war power to condemn cemeteries in which to bury soldiers have we not the constitutional power to take over food supplies to keep soldiers alive, as the court says, for the welfare of the Republic?

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Idaho?

Mr. KENYON. I was not through reading what the court said but I will gladly yield.

Mr. BORAH. I will wait then.

Mr. KENYON. I would like to read all this if I had time, and I recommend it to any Senators who are getting ready for the Fourth of July.

Mr. BORAH. I do want to ask the Senator a question right here.

Mr. KENYON. All right.

Mr. BORAH. I take it from what the Senator says that in all probability the Senator would not have written that opinion.

Mr. KENYON. I certainly would. I wish the ability was in me to write such an opinion.

Mr. BORAH. Then do I understand when the Senator referred to a Fourth of July speech it was not with any disrespect to the opinion?

Mr. KENYON. Not at all. I have known the Senator to make Fourth of July speeches, I have made a few myself, and I do not want to refer to them in a disrespectful way.

Now, I will read just a little more:

Such action on the part of Congress touches the heart, and comes home to the imagination of every citizen, and greatly tends to enhance his love and respect for those institutions for which these heroic sacrifices were made. The greater the love of the citizen for the institutions of his country, the greater is the dependence properly to be placed upon him for their defense in time of necessity, and it is to such men that the country must look for its safety.

* * * * * * *

The right to take land for cemeteries for the burial of the deceased soldiers of the country rests on the same footing and is connected with and springs from the same powers of the Constitution. It seems very clear that the Government has the right to bury its own soldiers and to see to it that their graves shall not remain unknown or unhonored.

No narrow view of the character of this proposed use should be taken. Its national character and importance, we think, are plain. The power to condemn for this purpose need not be plainly and unmistakably deduced from any one of the particularly specified powers. Any number of those powers may be grouped together, and an inference from them all may be drawn that the power claimed has been conferred.

I can not think of anything much stronger than that. I may be stupid about it, but where there is no power in the Constitution to condemn except as you draw it from all these war powers—the Supreme Court of the United States says that is enough—the Government has the power to take care of its soldier dead. It certainly must have the power to keep its soldiers alive by seeing that the food that goes to them is proper and sufficient.

Mr. BORAH. What I rose to say a moment ago was this: It seems to me that we might sustain this bill in its essential principles without appealing, as the court apparently there did, to the general-welfare clause upon the theory that Congress has power to raise and support armies. Certainly one means of supporting armies is to conserve the food, and under the provisions of the Constitution, which authorizes the passage of any law to carry into effect the power granted by the Constitution, it seems to me it might be very properly sustained. I ask the Senator if he does not think so.

Mr. KENYON. Of course there is no question about that.

Mr. BORAH. It has always seemed to me that the opinion which the Senator has been reading from is one of those opinions which are brought forth by reason of the peculiar exigency of the case. But it is not necessary. In other words, if I had to rely upon the doctrine of that opinion to support the proposed measure, I do not think I could support it.

Mr. KENYON. We do not have to rely upon that, of course. I was citing it to show to what extent we might go if necessary to sustain the pending bill. We do not have to do it.

Mr. KELLOGG. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Minnesota?

Mr. KENYON. I do.

Mr. KELLOGG. I should like to ask the Senator from Iowa if he has the slightest doubt of the power of Congress to commandeer men, wealth, food, transportation, property, or anything else in the country?

Mr. KENYON. Of course we have the power to conscript men. It is not taking life without due process of law. It is not a violation of the fifth amendment. We can conscript men and take their lives without infringing on the Constitution, and certainly we can take the property necessary to sustain the lives of those men without impairing the Constitution. There is no particular sanctity that surrounds property which does not surround life.

Mr. KELLOGG. Then we can do in a less degree what is necessary to conserve those things without taking them over bodily, can we not?

Mr. KENYON. Absolutely.

I was leading up to the next section, section 3. Section 3, it will be observed, has no penalty attached to it. I have regarded it more as a descriptive section. The purpose of section 3 was more to be found in these words than in any others:

And all such necessaries, processes, methods, and activities are hereby declared to be affected with a public interest.

Mr. WOLCOTT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Delaware?

Mr. KENYON. I do.

Mr. WOLCOTT. Is it the idea of the Senator that the language of section 3 might as well be put in the shape of a whereas? Just to enable me to get clearly the idea of the Senator, suppose the proposed statute started off with a recital—whereas it is deemed advisable to establish a control over necessaries, and whereas the things that are necessary are affected with a public interest: Therefore, be it enacted, and so forth—would the statute in that case express any more than the Senator states it expresses now?

Mr. KENYON. It would be expressive of everything that seems to me to be necessary for it to express on constitutional ground. I think the balance of the proposed statute is merely descriptive. I do not want to say it should not be there, but it covers a general description of what the bill is—the governmental control of necessaries.

Mr. WOLCOTT. I am impressed with the same idea the Senator has, namely, that section 3 confers no power except that in a very limited sense the President is authorized to make voluntary arrangements. What these are we do not know.

Mr. BORAH. The Senator refers to the language authorizing the President to make voluntary arrangements. He has that power without it.

Mr. WOLCOTT. We may eliminate that part of it.

Mr. KENYON. That part of the section is not necessary. It is a statement of policy and it does no harm.

Mr. WOLCOTT. So we have left in the section simply a sort of a declaration of the legislative state of mind.

Mr. KENYON. I think that is right; it is a legislative declaration that these things are affected with a public interest.

Mr. WOLCOTT. That might as well be in a whereas, might it not?

Mr. KENYON. Possibly it might.

Mr. WOLCOTT. I merely wanted to say, if the Senator would agree with us on that point, it could be placed anywhere else just as effectively.

Mr. KENYON. My judgment is that it could be just as well set out anywhere else. The public-interest question is the peg on which is hung section 5. Where these necessities are affected with a public interest, then I think you have a different rule as to the compensation therefor. If they are affected with a public interest, the rule of compensation is a legislative one and not a judicial one; and, besides, it gets away somewhat from the question of taking private property for public use. I do not think we can legislate and say that a stove is something else, or things of that kind; but I do believe that in war times this can be done as to food and other necessaries to carry on war and keep alive our Army and Navy.

Mr. BORAH. Can the mere fiat of legislation make something a public use that is not?

Mr. KENYON. No; but the Supreme Court has said, I think, practically this—at least it is what I have worked out in my own mind in the Munn case and the Boyd case and another one that has escaped my mind, a case that is better than either one of these—that certain things would merely be private property when there was no great emergency, as food and fuel; but where the emergency comes, such as war, then they become affected with a necessary public interest, and that goes to the very vitals of the Government. The Government can not live without them. They become in a way public, so that they can be regulated, so that they can be taken without offending the Constitution prohibiting taking private property for public use; and there is also a different rule as to compensation, as I said, it being a legislative question instead of a judicial one.

Mr. McKELLAR. Mr. President——

Mr. KENYON. I yield to the Senator.

Mr. McKELLAR. The Senator shows familiarity with this bill, and he has mentioned the fact once or twice that there was an absence of a penalty. Does the Senator consider the absence of a penalty to be important?

Mr. KENYON. If there was a penalty for these voluntary agents disobeying an order of the President I think it would be most unfortunate. This is a great voluntary organization that has to be built up of the women of the country, the children of the country, and everybody who will help in a patriotic way to save the waste in this country, which now amounts to $700,000,000 in the course of a year.

Mr. McKELLAR. That is a very laudable purpose, and I understand the President has that power now. But the reason why I asked that question was for the purpose of asking a second one, and that is, if the Senator will notice section 4, which prescribes quite a number of things as being unlawful, to wit:

To hoard * * * to conspire, combine, agree, or arrange with any other person, (a) to limit the facilities for transporting, producing, manufacturing, supplying, storing, or dealing in any necessaries; (b) to restrict the supply of any necessaries; (c) to restrict distribution of any necessaries; (d) to prevent, limit, or lessen the manufacture or production of any necessaries.

All of which is set out in this section and no penalty attached to them. Why should there not be a penalty? I am asking for information merely.

Mr. KENYON. I will say to the Senator the question of hoarding is covered by a subsequent section.

Mr. McKELLAR. I know that, but as to the rest?

Mr. KENYON. The destruction is covered by a penalty. The others are not covered by a penalty.

Mr. McKELLAR. Why the distinction?

Mr. KENYON. I do not know. I think they should be covered by a penalty or taken out.

Mr. McLEAN. If the Senator will pardon me, the Senator in charge of the bill called the attention of the committee to it and said that section 8 should be transposed so as provide penalties for the other provisions in section 4.

Mr. McKELLAR. There are quite a number of very important offenses created by the act without any penalty at all, and I

should think they may all be meaningless. Merely to call them unlawful would not be a very effective way to deal with those propositions.

Mr. KENYON. I agree with the Senator. I had supposed there was some general Federal statute fixing penalties when certain acts were declared to be unlawful, but after a very careful search I am unable to find any such provision. I asked a gentleman who has had something to do with this bill why the omission of penalty as to section 4, and the answer was not very satisfactory to me. He suggested that permitting willful waste and deterioration are difficult matters to interfere with and would arouse a great deal of irritation. So they were just left as a sort of proclamation of a policy. I do not agree with him.

Mr. McKELLAR. The Senator agrees with the idea that there should be an amendment which would fix a penalty for a violation of all these offenses set out?

Mr. KENYON. Absolutely; or else they should be taken out of the bill.

Mr. McKELLAR. Or else they should be taken out of the bill. I believe they ought to be left and a penalty affixed.

Mr. KENYON. I do, too.

Now, Mr. President, to get back to this troublesome section 3 that brings us right down to the proposition as to what the term "affected with a public interest" amounts to, whether Congress can make a declaration that certain things are affected with a public interest, whether Congress can take a blacksmith shop or a bakery or a clothing shop and say it is affected with a public interest. That is a pretty difficult proposition. I wish to put in the RECORD some authorities. I will say first Congress is authorized to make all laws necessary and proper to carry into effect a grant of power. And Congress has wide latitude in determining what is a public use. Such decision of Congress must not be merely arbitrary and without reason. Dillon on Municipal Corporations, fourth edition, page 600, says:

> When legislation has declared the use or purpose to be public, its judgment will be respected by the courts, unless the use be palpably without reasonable foundation.

That seems to be the rule. Whether under the circumstances in which this Nation is now placed these uses are without reasonable foundation will have to be a question first for Congress to settle, and if the question is raised later it will be for the courts to settle.

On the question of public necessity warehouses and storage of grain have a public interest.

Ownership of property may be private and the use public.

We find such terms as "public wharves," "public roads," "public houses," "public warehouses," even though the property is the subject of private ownership.

In the Munn case—Munn *v.* Illinois (94 U. S., 113)—which is a leading case along this line, in the brief of counsel is found this statement:

> Whenever any person pursues a public calling and sustains such relations to the public that the people must of necessity deal with him and are under a moral duress to submit to his terms if he is unrestrained by law, then, in order to prevent extortion and an abuse of his position, the price he may charge for his services may be regulated by law. (Commonwealth *v.* Duane, 98 Mass., 1; Murray's Lessee et al. *v.* Hoboken Land & Imp. Co., 18 Howard, 272.)

That is not the statement of the court; it is the statement of one of the attorneys in the case, but I believe it to be an accurate legal statement.

I wish to recur for a minute to the Munn case.

Let me make first these observations:

The Constitution contains no definition of the word "deprive" as used in the fifth and fourteenth amendments.

When one becomes a member of society, he necessarily parts with some rights or privileges which, as an individual not affected by his relations to others, he might retain.

Under powers of government, it has been customary in England from time immemorial, and in this country, to regulate ferries, common carriers, hackmen, bakers, millers wharfingers, innkeepers, etc., and the fixing of a maximum charge for services rendered, accommodations furnished, and articles sold.

Statutes of that kind can be found in most of the States.

Here in Washington Congress conferred power upon the city of Washington "to regulate the rates of wharfage at private wharves, the sweeping of chimneys, and to fix the rates of fees therefor, and the weight and quality of bread, rates of fare of carriages, rates of commission of auctioneers," on the theory that there was some public interest involved.

I want to read a little from the Munn case. In that case the court said:

> When private property "is affected with a public interest, it ceases to be juris privati only."
>
> These are the words of Lord Chief Justice Hale more than 200 years ago.
>
> * * * * * * * *
>
> Property does become clothed with a public interest when used in a manner to make it of public consequence and affect the community at large.

That is to say, things that may not be of public consequence in peace may become such in war.

If the property is devoted to public use, it is subject to public regulation.

The question arises whether the property in this bill is in any way devoted to public use.

On page 134 of the Munn case the court further says:

> Undoubtedly, in mere private contracts relating to matters in which the public has no interest, what is reasonable must be ascertained judicially.

The dissenting opinion in the Munn case, which arose over a statute of Illinois fixing storage charges on grain, makes plain some of the points at least that were in issue, because in that dissenting opinion the justice said:

> Whether the State can fix the compensation which an individual may receive for the use of his own property in his private business and for his services in connection with it. (P. 138, Munn case; 4 Otto.)

They discuss exactly what comes up in this bill.

> No magic in language, they say, which can convert a private business into a public one.
>
> A tailor shop would still retain its private character even though the State should declare it a public workshop.

Question of fixing rates for water and gas is akin to the proposition we are discussing.

It has been held that it is within the power of the legislature to regulate the price at which water shall be sold to one who enjoys a virtual monopoly of the sale. (Spring Valley Water Works *v.* Schottler, 110 U. S., 354.)

These things come within the scope of general legislation. So if these matters which we are trying to affect with a public interest can be brought by the circumstances within a rule of reason, then the rule of compensation is different, and then Congress has a right to regulate these matters the same as any public utility.

Mr. GORE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Oklahoma?

Mr. KENYON. I yield.

Mr. GORE. I think the point of distinction may be illustrated by this fact. The Munn case related to the public elevators in Chicago, elevators that were in the business of receiving and storing grain for private individuals and companies. Those public elevators would receive the grain of Jones, Smith, and Brown and hold it on their account, charging them for that service. The court held that those were public elevators and that those charges were subject to regulation by public authority.

There are in Chicago now private elevators. The owners and operators of those elevators do not receive and hold grain or store grain for the public. They buy the grain from Jones, Smith, and Brown before it is covered into these private elevators and cover it in on their own account and hold it in their own name and for their own purpose. Those are private elevators and are not subject to control or regulation by public authority. I think that clearly illustrates the point.

Now, as the Senator knows, in the recent case of Macfarland against the American Sugar Refining Co. the Legislature of Louisiana undertook to stamp the Sugar Refining Co. with the character of a public utility by declaring that they were affected with a public interest. Both the lower court and the Supreme Court of the United States held that that recital in the statute was a vain thing, that the legislature could not change the character of the business, that its character depended on the fact, that it was a matter of fact and not of law.

In those instances the refiners purchased the cane or the raw material and converted it into sugar on their own account. If they received the raw material from Brown, Smith, and Jones, and converted it into sugar for those parties, then it would undoubtedly be affected with a public character and would be subject to regulation.

The Senator will pardon me for interjecting this statement. I think probably it illustrates the difference between the two characters of property.

Mr. NELSON. Will the Senator yield to me?

Mr. KENYON. I yield to the Senator from Minnesota.

Mr. NELSON. There is a case entirely different from the Munn case. I can not give the exact title of it, but we know it in Minnesota as the Lanesboro Elevator Case. It was the case of an elevator company that refused to become a public elevator. We passed a law in Minnesota requiring every grain elevator in the State on the right of way of any railroad to take out a license and pay $1 to get it on the State book, so that we could regulate them. This elevator company refused to do it, and the Supreme Court held it was amenable to our law and was re-

quired to take out a license like the other elevators. They decided that every elevator on the right of way was a public market place where the farmers had to go and have their grain weighed and inspected. They put it on the principle of the market overt of Europe and held that it was subject to public control.

If the Senator will allow me to go one step further, I think this power that is sought to be exercised under the bill can be put on much stronger ground than that of the Munn case. It can be placed under the war-making power. Congress can operate and legislate under any of the powers conferred upon it. It can exercise it in connection with what we call the police power in carrying out one of the powers conferred upon Congress. I have a quotation here from Judge Cooley in his work on Constitutional Limitations to that effect.

It has time and again been decided by our Supreme Court, particularly in the Adair case, and also in other cases, that the right of personal liberty, the right to make a contract, is all subrogated to what we call the police power of the State; in other words, under the war-making power the Government of the United States has a right to exercise the police power, and the police power extends to everything that pertains to the life, the safety, and the well-being of the Republic. I put the right of this legislation upon that ground, rather than upon the principle laid down in the Munn case.

Mr. KENYON. Mr. President, I thank the Senator from Minnesota. I am trying to put the bill on a number of grounds. It would seem that if the storing of grain in an elevator is a public matter. the transportation and hoarding of grain would likewise be a public matter, and if the business of grain is affected with a public interest the production of foodstuffs and feed would be affected with a public interest.

Mr. CALDER. Mr. President——

Mr. KENYON. I yield to the Senator from New York.

Mr. CALDER. Mr. President, in view of an opinion of a distinguished ancestor of the Senator from Iowa, I am going, with his permission, to read from Lord Kenyon during the reign of King George.

Mr. KENYON. I think I will make a point of order on that. I want to interrupt to say that I never had an ancestor who was a lord. I do not want such a statement to go out to my people. [Laughter.]

Mr. CALDER. I desire to read from the distinguished Lord Kenyon in his charge to a jury in a very important case during the reign of King George. Parliament sought to repeal all the existing statutes relating to offenses of regrating, forestalling, and engrossing; but the courts of England, under the leadership of Lord Kenyon, held that, without the aid of statutes, regrating was an offense at common law. Among other things, in his charge to the jury, the distinguished gentleman, who bears the same name as does the Senator from Iowa, said:

> This cause presents itself to your notice on behalf of all ranks—rich and poor, but more especially the latter. Though in a state of society, some must have greater comforts and luxuries than others, yet all should have the necessaries of life; and if the poor can not exist, in vain may the rich look for happiness and prosperity. The legislature is never so well employed as when they look to the interests of those who are at a distance from them in the ranks of society. It is their duty to do so; religion calls for it, humanity calls for it, and if there are hearts who are not awake to either of those feelings, then, our interests would dictate it. The law has not been disputed; for though in an evil hour all the statutes which had been existing above a century were at one blow repealed, yet, thank God, the provisions of the common law were not destroyed. The common law, though not to be found in the written records of the realm, has long been well known. It is coeval with civilized society itself, and have been formed from time to time by the wisdom of man. Good sense did not come in with the conquest or any other time, but grew and increased from time to time with the wisdom of mankind. Even amongst the laws of Saxons are to be found many wise provisions against forestalling and offenses of this kind, and those laws laid the foundation of our common law; that is, remains an offense nobody has controverted.

Mr. President, the courts of England and our States in their statutes have followed the common law of England in this regard, and I am very glad to put into the RECORD at this time the judgment of so distinguished a gentleman as Lord Kenyon.

Mr. GORE. Mr. President——

The PRESIDING OFFICER (Mr. NORRIS in the chair). Does the Senator from Iowa yield to the Senator from Oklahoma?

Mr. KENYON. Of course, I yield to the Senator from Oklahoma, though I am anxious to get through.

Mr. GORE. I think it but pertinent to follow the statement which has been made by the Senator from New York [Mr. CALDER] with a suggestion. It is true that forestalling was a crime at common law before the Norman Conquest. Afterwards engrossing and regrating came to be offenses at common law and a number of statutes were passed reinforcing the common-law penalties in regard to the crime of engrossing, forestalling, and regrating.

In the year 1772 Parliament repealed those statutes, as suggested by the Senator from New York. Lord Kenyon did hold, however, that the acts were still offenses at common law, notwithstanding the statutes had been repealed; but in 1843 and 1844 the British Parliament abrogated the common law making those acts penal at common law. So they are to-day not offenses at common law.

Mr. KENYON. Mr. President, I wish to insert in the RECORD from the syllabus in the case of Budd *v.* New York (143 U. S., 517), the following:

> An act of the Legislature of New York (Laws of 1888, ch. 581) provided that the maximum charge for elevating, receiving, weighing, and discharging grain should not exceed five-eighths of 1 cent a bushel, and that in the process of handling grain by means of floating and stationary elevators the Lake vessels or propellers, the ocean vessels or steamships, and canal boats should only be required to pay the actual cost of trimming or shoveling to the leg of the elevator when unloading and trimming cargo when loading: *Held*, that the act was a legitimate exercise of the police power of the State over a business affected with a public interest and did not violate the Constitution of the United States and was valid.

In this connection let me observe—

If the elevation of grain in warehouses is a public matter, why is not the transportation and the hoarding of grain likewise public?

If the business of elevating grain is affected with a public interest, why is not the production of foodstuffs to feed an army affected with a public interest?

If the business is clothed with a public interest, what is reasonable compensation is not a judicial but a legislative question.

The question will be raised that this was the exercise of police power and that the Nation has no police power.

The Nation really has a police power such as under the interstate-commerce act it has power to keep the channels of interstate commerce free.

A number of cases are cited in Budd against New York, on pages 538 and 539, that are interesting, all following the line of the Munn case.

In Davis *v.* the State (68 Ala., 58) it was held—

> That a statute declaring it unlawful, within certain counties, to transport or move, after sunset and before sunrise of the succeeding day, any cotton in the seed, but permitting the owner or purchaser to remove it from the field to a place of storage, was not unconstitutional.

It was claimed—

> That the statute was such a despotic interference with the rights of private property as to be tantamount, in its practical effect, to a deprivation of ownership without due process of law.

But the court held otherwise, relying on Munn against Illinois. The court said:

> That the object of the statute was to regulate traffic in the staple agricultural products of the State so as to revent a prevalent evil, which, in the opinion of the lawmaking power might do much to demoralize agricultural pursuits to the public detriment, at least within the specified territory.

The court of appeals of Kentucky in Nash *v.* Page (80 Ky., 539, 545), held that the character of the business of the tobacco warehousemen was that of a public employment, subject to legislative regulation.

In Sawyer *v.* Davis (136 Mass., 239) the Supreme Judicial Court of Massachusetts said:

> That nothing is better established than the power of the legislature to make what are called police regulations, declaring in what manner property shall be used and enjoyed and business carried on, with a view to the good order and benefit of the communty, even though they may interfere to some extent with the full enjoyment of private property.

In Hockett *v.* the State (105 Ind., 250) the Supreme Court of Indiana held—

> That a statute of the State which prescribed the maximum price which a telephone company should charge for the use of its telephones was constitutional, and that in legal contemplation all the instruments and appliances used by a telephone company in the transaction of its business were devoted to a public use.

Hence the property was a legitimate subject of legislative regulation.

Then I want to refer—and I should like attention—to what I think is the most important case of all. I do not know whether or not the Senator from Minnesota [Mr. NELSON] has seen the case, though perhaps he has. It is on the question of public interest. I refer to the case of the German Alliance Insurance Co. against Lewis, Two hundred and twenty-third United States, page 389, on which I place reliance for the position I am taking, that foodstuffs and fuels can be affected with a public interest in times of war.

This was a statute regulating the price of insurance that could be paid. The question, of course, at once was raised that it was taking private property for public use, and that it was infringing on the Constitution, especially on the fourteenth amendment. The syllabus in this case, in part, says:

The business of insurance is so far affected with a public interest as to justify legislative regulation of its rates.

A public interest can exist in a business, such as insurance, distinct from a public use of property and can be the basis of the power of the legislature to regulate the personal contracts involved in such business.

Where a business, such as insurance, is affected by a public use, it is the business that is the fundamental thing; property is but the instrument of such business.

I want to read now just a short extract from this case, for I regard it as a most remarkable case. On page 411 the court says:

The cases need no explanatory or fortifying comment. They demonstrate that a business, by circumstances and its nature, may rise from private to be of public concern and be subject, in consequence, to governmental regulation.

That is the question that is involved in section 3. If we can under section 3 say that these necessaries are involved with a public interest, that sustains section 5, the licensing section, which is a very important section of the bill. They speak of the language of Judge Andrews in the case of The People against Budd but do not particularly indorse it.

Mr. KING. If the Senator will permit me to ask him a question, was not that case construing the interstate-commerce clause of the Constitution?

Mr. KENYON. No. This case involved the question of whether the statute of Kansas offends the fourteenth amendment to the Constitution fixing insurance rates. The opinion of the court continues:

Is the business of insurance within the principle? It would be a bold thing to say that the principle is fixed, inelastic, in the precedents of the past and can not be applied, though modern economic conditions may make necessary or beneficial its aplication. In other words, to say that Government possessed at one time a greater power to recognize the public interest in a business and its regulation to promote the general welfare than Government possesses to-day. We proceed then to consider whether the business of insurance is within the principle.

A contract for fire insurance is one for indemnity against loss and is personal. The admission, however, does not take us far in the solution of the question presented. Its personal character certainly does not of itself preclude regulation, for there are many examples of governmental regulation of personal contracts, and in the statutes of every State in the Union superintendence and control over the business of insurance are exercised, varying in details and extent. We need not particularize in detail. We need only say that there was quite early (in Massachusetts, 1837, New York, 1853) State provision for what is known as the unearned premium fund or reserve; then came the limitation of dividends, the publishing of accounts, valued policies, standards of policies, prescribing investment, requiring deposits in money or bonds, confining the business to corporations, preventing discrimination in rates, limitation of risks, and other regulations equally restrictive. In other words, the State has stepped in and imposed conditions upon the companies, restraining the absolute liberty which businesses strictly private are permitted to exercise.

Those regulations exhibit it to be the conception of the law-making bodies of the country without exception that the business of insurance so far affects the public welfare as to invoke and require governmental regulation. A conception so general can not be without cause. The universal sense of a people can not be accidental; its persistence saves it from the charge of unconsidered impulse, and its estimate of insurance certainly has substantial basis. Accidental fires are inevitable and the extent of loss very great. The effect of insurance—indeed, it has been said to be its fundamental object—is to distribute the loss over as wide an area as possible. In other words, the loss is spread over the country, the disaster to an individual is shared by many, the disaster to a community shared by other communities.

Further quoting, from page 413:

Their efficiency, therefore, and solvency are of great concern. The other objects, direct and indirect, of insurance we need not mention. Indeed, it may be enough to say, without stating other effects of insurance, that a large part of the country's wealth, subject to uncertainty of loss through fire, is protected by insurance. This demonstrates the interest of the public in it, and we need not dispute with the economists that this is the result of the "substitution of certain for uncertain loss" or the diffusion of positive loss over a large group of persons, as we have already said to be certainly one of its effects. We can see, therefore, how it has come to be considered a matter of public concern to regulate it, and, governmental insurance has its advocates and even examples.

The restrictions upon the legislative power which complainant urges, we have discussed; or, rather, the considerations which take, it is contended, the business of insurance outside of the sphere of the power. To the contention that the business is private we have opposed the conception of the public interest. We have shown that the business of insurance has very definite characteristics, with a reach of influence and consequence beyond and different from that of the ordinary businesses of the commercial world, to pursue which a greater liberty may be asserted.

Just one thing more on another branch of this question, namely, the exemption of farmers. In the case from which I have quoted the statute exempted farmers' mutual insurance companies, just as we exempt farmers in certain sections of this bill, and I have offered an amendment to section 9 to exempt the farmers, and that case holds that that is not arbitrary and that such an exemption can be sustained as being within the doctrine of a reasonable rule. Here we have a case where insurance, because of the losses which would be inflicted upon the people and the harshness which would result if one man should be compelled to bear them, becomes a matter of public interest subject to regulation. It seems to me, Mr. President, that pretty nearly settles the question involved in section 3. If it is within the power of the legislative body to go so far as to say that insurance against the burning of property is a matter of public concern, because the insurance spreads the loss over a number and does not put the loss on one, the taking over and regulating of food, coal, storing plants, and packing houses in time of war merely for one purpose, the public interest, is certainly sustainable. No one in this Chamber, I think, has any doubt in his mind—I said "in this Chamber"—that the Supreme Court will ever say that we can not in war times affect these things with a public interest and regulate them without violating the Constitution.

On the question of the exemption of farmers under this bill I also place in the RECORD extracts from the case of Ozan Lumber Co. against Union County National Bank of Liberty, in Two hundred and seventh United States, pages 251, 256, 257.

The extracts referred to are as follows:

The manufacturer of a patented article, who also sells it in the usual course of business in his store or factory, would probably come within the exception of section 4. He may be none the less a dealer, selling in the usual course of his business, because he is also a manufacturer of the article dealt in.

It is almost impossible in some matters to foresee and provide for every imaginable and exceptional case, and a legislature ought not to be required to do so at the risk of having its legislation declared void, although appropriate and proper upon the general subject upon which such legislation is to act so long as there is no substantial and fair ground to say that the statute makes an unreasonable and unfounded general classification, and thereby denies to any person the equal protection of the laws. In a classification for governmental purposes there can not be an exact exclusion or inclusion of persons and things. See Gulf, etc., Co. *v.* May, 165 U. S., 150, and cases cited; Missouri, etc., Co. *v.* May, 194 U. S., 267. We can see reasons for excepting merchants and dealers who sell patented things, in the usual course of business, from the provisions of the statute, and we think the failure to exempt some few others, as above suggested, ought not to render the whole statute void, as resulting in an unjust and unreasonable discrimination.

Mr. KENYON. The action was upon certain promissory notes which the defendant alleged had been given in payment of a patented article. Such notes not being executed upon a printed form as required by the statute of Arkansas.

The circuit court held the act in violation of the fourteenth amendment.

The question arose on the fourth section, excepting merchants and tailors who sold in the usual course of business.

The Supreme Court of the United States differed from the circuit court.

On the question of invading State rights—I am not going to take the time to read it, but I will place in the RECORD extracts from the cases of Pensacola Telephone Co. *v.* Western Union Telegraph Co. (96 U. S., p. 1) and Houston, and so forth, R. R. Co. *v.* United States (234 U. S., 342).

The extracts referred to are as follows:

Pensacola Telephone Co. *v.* Western Union Telegraph Co., 96 U. S., 1, 10, the court says: "The Government of the United States, within the scope of its powers, operates upon every foot of territory under its jurisdiction. It legislates for the whole Nation, and is not embarrassed by State lines. Its peculiar duty is to protect one part of the country from encroachments by another upon the national rights which belong to all."

"Wherever the interstate and intrastate transactions of carriers are so related that the government of the one involves the control of the other, it is Congress, and not the State, that is entitled to prescribe the final and dominant rule, for otherwise Congress would be denied the exercise of its constitutional authority, and the State, and not the Nation, would be supreme within the national field." (Houston, etc., R. R. Co. *v.* U. S., 234 U. S., 342. This quotation is found in vol. 215 Fed. Rep., p. 951.)

Mr. KENYON. On the question of the delegation of power of which we hear so much, and the suggestion that this bill proposes an unconstitutional delegation of power, I desire to refer to the case of Interstate Commerce Commission *v.* C. R. I. & P. Ry. (218 U. S., 88). This case is not particularly of interest. It is cited to bring to attention the point that Congress has given to the Interstate Commerce Commission the power to make reasonable rates. That is a delegation of power not against constitutional limitation.

I refer also to the case of St. Louis & Iron Mountain Railway *v.* Taylor (210 U. S., 281), in which the court discussed the safety-appliance act of March 2, 1893, and provision 5 thereof, referring to the American Railway Association and the Interstate Commerce Commission the power to designate and promulgate the standard height and maximum variation of drawbars for freight cars, and holds it is not unconstitutional as a delegation of legislative power.

The court said:

"It is contended that there is here an unconstitutional delegation of legislative power to the railway association and to the Interstate Commerce Commission. This is clearly a Federal question. Briefly stated, the statute enacted that after a date named only cars with drawbars of uniform height should be used in interstate commerce, and that the standard should be fixed by the association and declared by the commission. Nothing need be said upon this question except

that it was settled adversely to the contention of the plaintiff in error in Buttfield *v.* Stranahan (192 U. S., 470), a case which in principle is completely in point.'

In this connection I call attention also to the case of Buttfield *v.* Stranahan (192 U. S., 470, 496), which is a leading case.

This is a case with reference to the constitutionality of the tea-inspection act, approved March 2, 1897. The act will be found in the margin of the case.

It was claimed that the act of March 2, 1897, conferred authority to establish standards, and that such power is legislative and can not be delegated by Congress to administrative officers. The court says:

The claim that the statute commits to the arbitrary discretion of the Secretary of the Treasury the determination of what teas may be imported, and therefore in effect vests that official with legislative power, is without merit. We are of opinion that the statute, when properly construed, as said by the circuit court of appeals, but expresses the purpose to exclude the lowest grades of tea, whether demonstrably of inferior purity, or unfit for consumption, or presumably so because of their inferior quality. This in effect was the fixing of a primary standard and devolved upon the Secretary of the Treasury the mere executive duty to effectuate the legislative policy declared in the statute. The case is within the principle of Field *v.* Clark (143 U. S., 649), where it was decided that the third section of the tariff act of October 1, 1890, was not repugnant to the Constitution as conferring legislative and treaty-making power on the President, because it authorized him to suspend the provisions of the act relating to the free introduction of sugar, molasses, coffee, tea, and hides. We may say of the legislation in this case, as was said of the legislation considered in Field *v.* Clark, that it does not in any real sense invest administrative officials with the power of legislation. Congress legislated on the subject as far as was reasonably practicable, and from the necessities of the case was compelled to leave to executive officials the duty of bringing about the result pointed out by the statute. To deny the power of Congress to delegate such a duty would in effect amount but to declaring that the plenary power vested in Congress to regulate foreign commerce could not be efficaciously exerted.

I also cite the case of Field *v.* Clark (143 U. S., 649), construing the tariff act of October 1, 1890. In that case it was claimed that Congress conferred legislative and treaty-making power on the President because it authorized him to suspend the provisions of the act relating to the free introduction of sugar, molasses, coffee, tea, and hides. The Supreme Court held otherwise.

I also refer to the case of Union Bridge Co. *v.* United States (204 U. S., 364.)

The river and harbor act of 1899 provided for the removal or alteration of bridges which are unreasonable obstructions to navigation, after the Secretary of War has, pursuant to the procedure prescribed in the act, ascertained that they are such obstructions. This was held not unconstitutional either as a delegation of legislative or judicial power to an executive officer or as taking of property for public use without compensation.

I also cite the case in re Kollock (165 U. S., 526), where a question arose under the act of August 2, 1886, imposing a tax on oleomargarine. The act authorized the Commissioner of Revenue to make regulations describing the marks, stamps, and brands to be used. It was held that this involved no unconstitutional delegation of power.

In the case of Interstate Commerce Commission *v.* Goodrich Transit Co. (224 U. S., 194) found on page 943 of Federal Reporter, volume 215, it was held that—

The Congress may not delegate its purely legislative power to a commission, but, having laid down the general rules of action under which a commission shall proceed, it may require of that commission the application of such rules to particular situations and the investigation of facts, with a view to making orders in a particular matter within the rules laid down by the Congress.

Mr. President, during Washington's administration Congress authorized the President, when Congress was not in session, when public safety so required, to lay an embargo on all ships and vessels in ports of the United States.

Congress passed, during Adams's administration, an act suspending commercial intercourse between the United States and France, and providing that if France should disavow certain things before the next session of Congress, the President could remit and discontinue the prohibition. Those were not unconstitutional delegations of power.

Congress in 1806 passed an act making it unlawful to import into the United States from Great Britain or Ireland articles of which leather, silk, hemp, flax, and so forth, were parts. The operation of this act, not subsequently suspended by another act and the last act, gave to the President of the United States the power to suspend the operation of the act if in his judgment the public interest should require it. At this session we have passed an act authorizing the President to place an embargo on certain products.

So there have been all through the history of the Nation similar delegations of power, which did not authorize the President or anyone else to make laws, but simply, under the law, to act when a certain state of facts developed. In this connection I may refer to the act with reference to the importation of neat cattle, the operation of the act to be suspended by the Secretary of the Treasury whenever he should officially determine, and give public notice thereof, that such importation would not tend to the introduction or spread of contagious diseases. This act does not invest at present with the power of legislation. Legislative power is exercised when Congress declares that upon a named contingency prices shall be fixed. The President does not make any law with reference thereto. He merely acts under the law of Congress. He is the agent of Congress to ascertain the event upon which prices shall be fixed.

The true distinction (p. 693, 143 U. S., Field *v.* Clark) is between the delegation of power to make the law, which necessarily involves a discretion as to what it shall be, and conferring authority or discretion as to its execution, to be exercised under and in pursuance of the law.

The legislature can not delegate its power to make the law. We have not done so. The legislature may make a law to delegate a power to determine some fact or state of things upon which the law makes, or tends to make, its own action depend. This we have done. The question of delegation of power under section 12 is the most serious constitutional question in the bill.

Mr. President, I think I said, in reply to the Senator from Tennessee, that section 4 does not provide penalties for the commission of certain prohibited acts. That, it would seem, should be changed.

Section 5, it seems to me, is the all-important section of this bill. That section gives power to the President to license dealers in necessaries. I say that that section does not cover farmers. It gives no power to the President to take over any farm and license it, and I do not think there can be found in it language that sustains that view, although it has been stated that it did both before the committee and on the floor of the Senate. That section does compel the submission of reports. It does give the right to the President's duly authorized agents to enter the places of business of licensees. Does that violate the fourth and fifth amendments of the Constitution? There is no immunity granted in any way in this proposed statute. That could be done, but those who have drawn the statute seem to have preferred simply to rely on the barrier that could be raised by any citizen that he was not compelled to submit any reports that might criminate him, nor was he compelled to permit the search of his place of business for the purpose of securing criminating testimony. They are subjects which I think we should consider; but when we come to consider them, Senators, bear in mind, too, that the same section provides a penalty for those who willfully violate any of the provisions of the section. "Willfully" has a well-defined legal meaning. "Without legal excuse," I believe, would be a good definition, so that if reports are required, and a person claims that reports are being required that criminate him and he does not make these reports, when he comes to prosecution under this act he can simply say that he did not willfully do this, because he had a legal excuse, namely, his constitutional rights. So the situation is the same as if we wrote into this section the exception that the reports and searches must be such as do not violate the Constitution of the United States.

I place in the RECORD a few extracts on this question. In the case of Boyd *v.* United States (116 U. S., 616), on the question of producing books and papers and violating the fourth and fifth amendments, fifth section of the act of June 22, 1874, requiring the defendant to produce in court his private books, invoices, and papers, or else the allegations of the attorney to be taken as confessed, was held unconstitutional and repugnant to the fourth and fifth amendments to the Constitution.

The court held that—

It does not require actual entry upon premises and search for and seizure of papers to constitute an unreasonable search and seizure within the meaning of the fourth amendment; a compulsory production of a party's private books and papers to be used against himself or his property in a criminal or penal proceeding, or for a forfeiture, is within the spirit and meaning of the amendment. It is equivalent to a compulsory production of papers to make the nonproduction of them a confession of the allegations which it is pretended they will prove.

The court says that the two amendments are alike when the object of the search and seizure is to secure testimony against a person. In other words, compelling him to be a witness against himself, it is an unreasonable search and seizure.

A leading case on self-incrimination is Brown *v.* Walker (161 U. S.), summed up on page 609. The doctrine of the case may in brief be said to be this: Where there is immunity from punishment a person is not protected from testifying. If his testimony can not be used against him, then he must testify. There was a strong dissenting opinion rendered in this case.

The case of Wilson *v.* United States (221 U. S., 361) relates to the fourth and fifth amendments.

The fourth amendment protects a person from the compulsory production of private books and papers, but it does not extend to the corporate books.

If they are his private papers they could not be produced.

The correct doctrine is that the corporation books can not be withheld even though they might show the party guilty of a crime. But if one has the papers himself, as a private matter, he can withhold them if incriminating.

In the case of Weeks *v.* United States (232 U. S., 383), the general subject of the fourth amendment is discussed.

The court says:

> Personal property, personal security, and private property can not be invaded.
>
> It is to forever secure the people, their persons, houses, papers, and effects against all unreasonable searches and seizures under the guise of law.

This was the search of a man's house.

Query: Is there any difference in the law between house and place of business?

The house is more the man's castle than place of business, but the place of business could not be searched to secure incriminating evidence.

I quote from the case of Dent *v.* West Virginia (129 U. S., 114, 123–124), as follows:

> As we have said on more than one occasion, it may be difficult, if not impossible, to give to the terms "due process of law" a definition which will embrace every permissible exertion of power affecting private rights and exclude such as are forbidden. They come to us from the law of England, from which country our jurisprudence is to a great extent derived, and their requirement was there designed to secure the subject against the arbitrary action of the Crown and place him under the protection of the law. They were deemed to be equivalent to "the law of the land." In this country the requirement is intended to have a similar effect against legislative power; that is, to secure the citizen against any arbitrary deprivation of his rights, whether relating to his life, his liberty, or his property. Legislation must necessarily vary with the different objects upon which it is designed to operate. It is sufficient, for the purposes of this case, to say that legislation is not open to the charge of depriving one of his rights without due process of law, if it be general in its operation upon the subjects to which it relates, and is enforceable in the usual modes established in the administration of government with respect to kindred matters; that is, by process or proceedings adapted to the nature of the case. The great purpose of the requirement is to exclude everything that is arbitrary and capricious in legislation affecting the rights of the citizen. As said by this court in Yick Wo against Hopkins, speaking by Mr. Justice Matthews: "When we consider the nature and the theory of our institutions of government, the principles upon which they are supposed to rest, and review the history of their development, we are constrained to conclude that they do not mean to leave room for the play and action of purely personal and arbitrary power."

In the case of Commonwealth against Farmers and Mechanics' Bank, in Twenty-first Pickering, page 542, the question arose over a provision of the statutes providing for the appointment of bank commissioners, giving them power to visit the banks, to make inquiries concerning the conditions of the banks, and examine under oath all officers and agents of the banks, and punishment where the officer or agent refused, without justifiable cause, to appear and testify.

Held that the statute is not unconstitutional on the ground of its compelling the officers and agents of a bank to furnish evidence to criminate themselves; it imposes a penalty only upon those who "without justifiable cause" refuse to testify.

The court says:

> It will be presumed that the provision was to be taken with the implied exception that no one shall be obliged to criminate himself.

Further, the exemption is a privilege which each individual may claim or waive.

But the act used the term "without justifiable cause."

Declining to answer under protection of the constitutional privilege would plainly be a justifiable cause, so it would be as to section 5 of this bill.

In the case of Counselman against Hitchcock, in One hundred and forty-second United States, page 547, with which all lawyers are familiar, it was held that a party was not compelled to testify where he claimed it would criminate him.

The statute under question did not fully protect the party, and the court held—

> In view of the constitutional provision a statutory enactment to be valid must afford absolute immunity against future prosecutions for the offense to which the question relates.

There is no immunity clause in this bill, but two methods are left—one to have immunity, the other to let the barrier remain. The latter is here deemed the better.

In Billings against United States, in Two hundred and thirty-second United States, pages 261 and 282, the court says:

> It is also settled beyond dispute that the Constitution is not self-destructive. In other words, that the powers which it confers on the one hand it does not immediately take away on the other; that is to say, that the authority to tax which is given in express terms is not limited or restricted by the subsequent provisions of the Constitution or the amendments thereto, especially by the due-process clause of the fifth amendment.

I have tried to quote briefly from these decisions the parts that bear on the question.

In the case of Interstate Commerce Commission *v.* Brimson (154 U. S., 476, 477, and 478), the court said:

> We have before us an act of Congress authorizing the Interstate Commerce Commission to summon witnesses and to require the production of books, papers, tariffs, contracts, agreements, and documents relating to the matter under investigation. The constitutionality of this provision—assuming it to be applicable to a matter that may be legally intrusted to an administrative body for investigation—is, we repeat, not disputed, and is beyond dispute. Upon everyone, therefore, who owes allegiance to the United States or who is within its jurisdiction enjoying the protection that its Government affords, rests an obligation to respect the national will as thus expressed in conformity with the Constitution. As every citizen is bound to obey the law and to yield obedience to the constituted authorities acting within the law, this power conferred upon the commission imposes upon anyone summoned by that body to appear and to testify, the duty of appearing and testifying, and upon anyone required to produce such books, papers, tariffs, contracts, agreements, and documents, the duty of producing them, if the testimony sought and the books, papers, etc., called for relate to the matter under investigation, if such matter is one which the commission is legally entitled to investigate, and if the witness is not excused on some personal ground from doing what the commission requires at his hands. These propositions seem to be so clear and indisputable that any attempt to sustain them by argument would be of no value in the discussion. Whether the commission is entitled to the evidence it seeks and whether the refusal of the witness to testify or to produce books, papers, etc., in his possession is or is not in violation of his duty or in derogation of the rights of the United States seeking to execute a power expressly granted to Congress, are the distinct issues between that body and the witness. They are issues between the United States and those who dispute the validity of an act of Congress and seek to obstruct its enforcement. And these issues, made in the form prescribed by the act of Congress, are so presented that the judicial power is capable of acting on them. The question so presented is substantially, if not precisely, that which would arise if the witness was proceeded against by indictment under an act of Congress declaring it to be an offense against the United States for anyone to refuse to testify before the commission after being duly summoned, or to produce books, papers, etc., in his possession upon notice to do so, or imposing penalties for such refusal to testify or to produce the required books, papers, and documents. A prosecution for such offense or a proceeding by information to recover such penalties would have as its real and ultimate object to compel obedience to the rightful orders of the commission while it was exerting the powers given to it by Congress. And such is the sole object of the present direct proceeding. The United States asserts its right, under the Constitution and laws, to have these appellees answer the questions propounded to them by the commission and to produce specified books, papers, etc., in their possession or under their control. It insists that the evidence called for is material in the matter under investigation; that the subject of investigation is within legislative cognizance and may be inquired of by any tribunal constituted by Congress for that purpose.
>
> The appellees deny that any such rights exist in the General Government, or that they are under a legal duty, even if such evidence be important or vital in the enforcement of the interstate-commerce act, to do what is required of them by the commission. Thus has arisen a dispute involving rights or claims asserted by the respective parties to it. And the power to determine it directly, and as between the parties finally, must reside somewhere. It can not be that the General Government, with all the power conferred upon it by the people of the United States, is helpless in such an emergency and is unable to provide some method, judicial in form and direct in its operation, for the prompt and conclusive determination of this dispute.
>
> We do not overlook these constitutional limitations which, for the protection of personal rights, must necessarily attend all investigations conducted under the authority of Congress. Neither branch of the legislative department, still less any merely administrative body established by Congress, possesses or can be invested with a general power of making inquiry into the private affairs of the citizen.

Mr. BORAH. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Idaho?

Mr. KENYON. I do.

Mr. BORAH. I should like to ask the Senator a question. Section 5 provides:

> That, from time to time, whenever the President shall find it essential to license the importation, exportation, manufacture, storage, or distribution of any necessaries—

What does the Senator understand by the word "necessaries" there?

Mr. KENYON. "Necessaries" is defined by section 1 of the bill.

Mr. BORAH. Yes.

Mr. KENYON. "Necessaries" are foods, feeds, fuel, and those things entering into their production.

Mr. BORAH. "And articles required for their production."

Mr. KENYON. Yes.

Mr. BORAH. Mr. President, if the section said "foods, feeds, and fuel" there would be something definite and ascertainable about it, but when it says "articles required for their production" it puts us upon a sea without rudder or compass.

Mr. KENYON. We are on that kind of a sea in a good many statutory enactments.

Mr. BORAH. One can not sit down himself and work out in his own mind how many things enter into the production of "foods, feeds, and fuel." "All articles which enter into their production," unquestionably, Mr. President, would include farm implements; it would include such clothing as is used in the ordinary walks of life in agriculture.

Mr. KENYON. No.

Mr. BORAH. Well, they are "necessaries."

Mr. KENYON. They do not enter into the production of "necessaries."

Mr. BORAH. But they do enter into the production, just as much, I venture to say, as many other articles which would be readily accepted as entering into the production.

Mr. WOLCOTT. The phrase is "required for their production," not "entering into their production."

Mr. BORAH. That would be still broader.

Mr. NELSON. Mr. President, will the Senator yield to me?

Mr. KENYON. I yield.

Mr. NELSON. I agree with the Senator from Idaho that the phrase is unfortunate; and I think if we should substitute the words "raw materials," then we would have it within well-defined limits. It would then read "and to facilitate the movement of foods, feeds, fuel, and the raw materials required for their production." I think that the term "raw materials" in such connection has a well-defined meaning in the courts. Then, it would not reach any of the commodities to which the Senator has referred—agricultural implements, binding twine, and the like of that. The raw material for flour would be wheat, and so on. That would make it clearer and limit its scope.

Mr. BORAH. It would make it clearer, but, in my judgment, the limitation would be manifestly unfair in its working. As the Senator who sits beside me [Mr. WOLCOTT] has suggested, the wording here is "and articles required for their production," which, in my judgment, would include almost everything that a farmer has to buy to run a farm.

Mr. KENYON. Does the Senator object to that?

Mr. BORAH. No; I do not, if it can be made definite; and I have an amendment on my desk to make it definite. The reason why I am anxious to have it definite is because the bill carries all the way through it the word "necessaries," and refers back, as the Senator from Iowa has said, to section 1 for a definition of the word "necessaries"; and when we get back to section 1 we have what, in my judgment, is such an indefinite description that it makes the entire bill nebulous and uncertain.

Mr. KENYON. I would be glad to consider with the Senator that amendment. The points which have been brought up show that the discussion has not been in vain.

Mr. WOLCOTT. Mr. President——

Mr. KENYON. I yield to the Senator.

Mr. WOLCOTT. I should like to ask the Senator for his views as to another phase of section 5. Does not the Senator think that under section 5 there is the power to regulate the prices—to name the prices at which necessaries as defined in the bill may be bought and sold by certain classes?

Mr. KENYON. Just what does the Senator mean by that? Can he give me an illustration?

Mr. WOLCOTT. I will take, for illustration, an elevator man who buys quantities of wheat. Has not the President, under section 5, the power to specify at what figure he shall sell his wheat?

Mr. KENYON. I can not answer that "yes" or "no." The President would have the power, for instance, to require licenses——

Mr. WOLCOTT. Yes.

Mr. KENYON. And then to make rules and regulations for the licensee. If he finds that the rates being charged by the licensee are unreasonable, unfair, and discriminatory, he can issue an order providing what will be a reasonable rate.

Mr. WOLCOTT. Then, it is true that the President is constituted a tribunal before whom is brought the question of what is a reasonable price for these commodities in certain hands?

Mr. KENYON. I think so; just the same as the Interstate Commerce Commission so acts in cases within its jurisdiction.

Mr. WOLCOTT. Then, let me go a step further——

Mr. KENYON. I want to say that that does not apply to the farmer or the gardener or the producer.

Mr. WOLCOTT. No; I said, "in certain hands." I except the farmer.

Mr. KENYON. After it leaves their hands, the provision may apply.

Mr. WOLCOTT. It applies to the manufacturer and the retailer; but if the term "necessaries" is so broad as to include steel, as the Senator indicated by an expression this morning he thought it did, then the President has power under section 5 to fix the price of steel, has he not?

Mr. KENYON. I am inclined to think so. There is, however, opportunity for great differences of opinion on that question.

Mr. WOLCOTT. And unquestionably he has the authority to fix the price of coal and other fuel, and so on, and so on.

Mr. KENYON. I think so. I wish somebody would fix it.

Mr. WOLCOTT. Does not the Senator think it wise that there should, as suggested by the Senator from Idaho [Mr. BORAH], be a more accurate definition of the term "necessaries," so that we may know just what we are embracing in the terms of this bill?

Mr. KENYON. I am not prepared to say. My judgment is that the powers conferred by this bill will never be exercised; that the very enactment of the bill will end these troubles. I may be dreaming about that, but personally, speaking only for myself—because in this instance each member of the committee can only speak for himself—I see no objection to a more specific definition. I think in the other House there was some objection when the words "clothing and shoes" were originally included. My platform as to this matter is simply this: That nobody ought to make unreasonable profits out of this war, and that if we can not some way stop that being done, we had better resign and go home and let some one else try it.

Mr. WOLCOTT. I quite agree with the Senator; I am quite in harmony with that view.

Mr. BORAH. We can arrange that when we come to the tax bill, if we will just do it. We can then get at the profits.

Mr. KENYON. Oh, yes; I am with the Senator on that, too.

Mr. WOLCOTT. I should like to ask the Senator another question.

Mr. KENYON. The people who have made millions and hundreds of millions in the last few years ought to have a very substantial tax levied upon them. I suggested here one day that the tax be increased——

Mr. VARDAMAN. Has the Senator any hope that that is going to be done by Congress?

Mr. KENYON. We are going to stand here and fight for a long time to see if it can not be done.

Mr. VARDAMAN. I am very much in sympathy with the Senator's position on that.

Mr. KENYON. I happened to say one day here that we ought to conscript all incomes over $100,000 in this country during the war, and some of these papers immediately said that that bordered close on to treason, because "it disturbed conditions in this country." If those of tremendous wealth in this country do not bear the heavy part of this war burden it "will disturb conditions in this country." That is true as Holy Writ.

Mr. VARDAMAN. Why did the Senator want to make it $100,000? Why not cut it down to $50,000? That would not hurt a good many people. It would not affect a great many people.

Mr. WOLCOTT. Mr. President, may I ask the Senator one other question?

Mr. KENYON. Yes.

Mr. WOLCOTT. Section 3 establishes a governmental control of necessaries. This control extends to a control over the consumption of necessaries. Now, section 5 provides that—

> The President is authorized to prescribe such regulations governing the conduct of the business of licensees as may be essential to prevent uneconomical manufacture and inequitable distribution of necessaries, and otherwise to carry out the purposes of this act.

One of the purposes of the act is to exercise control over consumption. Does the Senator think there is any danger in the view that section 5, by tying in with section 3, might establish an authority to regulate in some way the consumption of food?

Mr. KENYON. I have not thought so; but if there is danger of that I should be one of those who would favor striking out the consumption feature of section 3. I do not think it is of any practical importance, anyhow.

Mr. WOLCOTT. I do not think it is, either.

Mr. KENYON. I think it is merely descriptive, and it raises so much trouble in the discussion that it might as well go out.

A question that has troubled me, also, along this line is that we do compel a person to sell his product to some one else. That may raise a serious constitutional question as to whether you are taking private property for public use; but whatever there may be to that the selling is merely incidental to the purposes of the bill. We have compelled the selling of stocks owned by companies, as in the Northern Securities Co. case.

I want to put in a decision or two under the question of taking private property, of police power, whether it exists as to the National Government, and also one decision on the constitutionality of the revolving-fund theory.

The PRESIDING OFFICER. In the absence of objection, the matter referred to will be printed in the RECORD.

The matter referred to is as follows:

QUESTION OF PRIVATE PROPERTY TAKEN FOR PUBLIC USE.

This question is discussed in Union Bridge Co. v. United States (204 U. S., 390):

"The point is made that the incidental consequence of the lawful and proper exercise of a governmental power in taking of private property for public use without compensation. It is damnum absque injuria."

See also language of the court on page 399.

In Northern Securities Co. v. United States (193 U. S., 197) the decree of the court provided for "enjoining the holding company from voting such stock and from exercising any control whatever over the acts and doings of the railroad companies, and also to enjoin the railroad companies from paying any dividends to the holding corporation on any of their stock held by it." In other words, they compelled the sale of the stock. Many statutes have provided for the forfeitures of property shipped in interstate commerce, such as under the pure food and drug act. (See Hipolite Egg Co. v. United States, 220 U. S., 45.)

On the question of police power in Hoke v. United States (227 U. S., 308; found in 239 U. S., 514) the court said:

There, after stating that "if the facility of interstate transportation" can be denied in the case of lotteries, obscene literature, diseased cattle and persons, and impure food and drugs, the like facility could be taken away from "the systematic enticement of and the enslavement in prostitution and debauchery of women," the court concluded with the reassertion of the simple principle that Congress is not to be denied the exercise of its constitutional authority over interstate commerce, and its power to adopt not only means necessary but convenient to its exercise, because these means may have the quality of police regulations. (227 U. S., 322, 323; see Gloucester Ferry Co. v. Pennsylvania, 114 U. S., 196, 215; Hipolite Egg Co. v. United States, 220 U. S., 45, 57; Lottery case, 188 U. S., 321.)

REVOLVING FUND.

The question of the revolving fund being contrary to subdivision 7, section 8:

"No moneys shall be drawn from the Treasury but in consequence of appropriation made by law."

Knote v. United States (95 U. S., 149) holds that the constitutional provision applies only to moneys which are actually in the Treasury and not to moneys which remain under the control of the President.

The "revolving-fund" principle is not new.

We have it in Forest Service (37 Stat., 828); Alaskan Railway (38 Stat., 1145); the United States Reclamation Service (33 Stat., 1032); United States Revenue-Cutter Service (30 Stat., 604).

Mr. KENYON. Mr. President, I thought I was discussing this matter rather hurriedly, but I am not responsible for all the time that has been taken.

Mr. BORAH. I think the Senator has done us a favor by occupying the time. We are glad to hear from somebody who will discuss this bill.

Mr. KENYON. My purpose has been to throw whatever light I could on the bill. I want to say, as to section 9, that I am offering an amendment to that section which makes it clear that it does not cover the farmer or the gardener or the producer. I have emphasized before, and I can not emphasize too much, that we must not do anything here to injure the producers of this country. The farmers are willing to go and till their fields at a loss, if it becomes necessary, to support our armies or our navies. Such conditions have not as yet been reached. There are no more patriotic lot of people in the world. What we need is more production and still more production. If we fix a maximum price for the farmer, we are going to injure production. Now, there is not any doubt about it; and it is not fair to the farmer unless you go ahead and fix a maximum price on everything that he has to buy. The farmer is not wanting in patriotism; and I am not pleading for the farmers as a class. I am pleading, on the great question of public policy, that we must have the foodstuffs produced. I do say there must be a "square deal" for the great producing classes of the country. The more we can stimulate production in this country the sooner these questions will be solved.

Mr. BORAH. Mr. President, if this bill results through the license process in fixing the price at which the middleman may sell the product, must it not inevitably fix the price of the farmer?

Mr. KENYON. I do not believe so, though I have been troubled a great deal about that question. There are so many of these obstacles between the producer and the consumer, so many of these middlemen. Now, you fix the price; you say that certain middlemen shall not charge over so much. That will have some effect, as it gets near to the farmer. If it is the immediate purchase from the farmer it will have a great deal of effect; but if it is on down the line, that is another matter. Now, I do not believe the farmers got over $1.34 or $1.50 for their wheat last year. I will ask the Senator from Minnesota about that. They were not getting more than that out of the last year's crop, were they?

Mr. NELSON. The average price the farmer received out of the last year's crop has been variously estimated from $1.50 to $1.60.

Mr. KENYON. Yes.

Mr. NELSON. And yet wheat went up here in the early part of April, under speculation, to $3.33.

Mr. KENYON. Yes.

Mr. BORAH. Exactly; but the price which the farmer got was paid several months before that.

Mr. KENYON. Well, suppose the farmer got his price several months before that? You come along to a great lot of hoarded stuff which has gone up in price. If you take that and fix a price on it, do you think you are affecting the farmer?

Mr. BORAH. Suppose we take the packing houses and fix the price at which they can dispose of their product. Is there any possible doubt that that will fix the price at which they will purchase the animal from the farmer?

Mr. KENYON. Oh, well, the packing houses have robbed the farmers all of these years, and they will keep on robbing them if they can. They always have done it, and they always will attempt to. The Government under this bill may take over the packing houses.

Mr. BORAH. But the point with me is this: We say that this is not to fix the price for the farmer or the producer, and not to injure the producer. Now, I do not believe it is within the compass of the human mind to adjust prices and fix them for the men standing between the farmer and the consumer without at the same time materially affecting, if not actually fixing, the price which the producer will get for his product.

I think that is inevitable; and if we are going to deal with this price-fixing proposition at all I think we have got to come to the question of fixing a price not only for the farmer but fixing a certain price. As Mr. Hoover says in one instance, it is the only workable proposition which they have ever had in Europe; because when you say that you are not going to fix the price of the product of the farmer and turn around and fix the price at which the man who is dealing with it sells it, you do fix the price of the farmer.

Mr. HARDING. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Ohio?

Mr. KENYON. I yield to the Senator.

Mr. HARDING. I want to ask either of the Senators on the floor if it is not the intention of this bill that the Government shall become the sole and exclusive purchaser of food grains, and in that way fix the price to the farmer?

Mr. KENYON. Oh, no; I think not. I think the suggestion of the Senator might possibly be pertinent as to wheat, which is the one thing for which there is a great export demand, and where there is something of which a large amount is exported the Government possibly might be able to do that by purchase. But you take the corn supply, with 3,000,000,000 bushels, and it is an impossible proposition.

Mr. HARDING. I have gotten the impression that the object of this bill was to enable the Government to enter into the purchase of wheat in particular for both the allies and our own Army supply and for our civilian use.

Mr. KENYON. Section 9 gives that power.

Mr. BORAH. I do not think we ought to mislead ourselves or mislead the country, and I know we will not do it intentionally; but the country ought to understand, it seems to me, that this is going to result in the fixing of prices all along the line, if you fix a price anywhere along the line. You can not stop the business world and fix a price at a certain point and say that the prices beyond that and the prices below that will fix themselves. The very moment you fix the price anywhere in the transaction, you must necessarily fix the price all along the line.

Mr. NELSON. Mr. President, will the Senator yield to me?

Mr. KENYON. Yes.

Mr. NELSON. As I understand it, but I am not clear, this is not an absolute price fixing. It simply amounts to this: At whatever price the retailer succeeds in buying the stuff, either from the farmer or the jobber or the manufacturer, it is simply to regulate what percentage would be a reasonable profit upon the sale. It is not to say at what rate, absolutely, he shall sell it; but it is simply to say, "If you pay so much for this commodity when you buy it, either of the commission man or the manufacturer or the farmer, you shall only get such a percentage of profit"—25 or 30 per cent, or whatever it may be. It is not an absolute price fixing.

Mr. KENYON. That is, the President would have the power to do just as the Senator from Minnesota has said. He would have the power to say to the elevator man, "Your profit shall be so and so," and to the miller, "Your profit shall not exceed so and so." Now, he has that power under this bill.

Mr. BORAH. And then the elevator man and the mill man will say to the farmer, "Your profit shall be so and so," and they have the right and the power to say it under this bill. The very moment you start in to say that you shall have such and such a profit, you inevitably, under the laws of business

and of trade, fix the price of the other men with whom you are dealing.

Mr. KENYON. There is, of course, something in that, though it is not clear to me how the elevator man could enforce any such thing as to the farmer. You have got to rely now on the President, or whoever is to be food controller, to see that the interests of the producing classes are not affected; and he has got to make a price that is going to enable the farmer, the gardener, the producer, to raise his stuff without loss. If the President does not do that, we have involved this country in a terrible condition. There is no doubt about that. I am willing to rely on Mr. Hoover's doing that.

This is a time when we must rely on others to a large extent. We are relying on our Army and Navy, on our President, and on each other to do the right and patriotic thing.

Mr. BORAH. Mr. President, I have a very profound respect for Mr. Hoover and for what he has done, and I have no doubt in the world of his great desire to serve in this situation; but I do doubt Mr. Hoover's ability to annul the laws of supply and demand and to change the laws of business as they have built themselves up inevitably out of human character for the last thousand years. I do not believe that can be done.

I have no doubt Mr. Hoover will do the very best he can under the circumstances, and I think the President did exactly right, if he was going to select anybody to execute this law, in selecting Mr. Hoover; but I do not want to be placed in the position of voting for a measure which has gone to the country and to my constituents, most of whom are farmers, as a measure which will not affect them at all, which will leave them in full power to charge what they see fit, when I know as well as I know anything that this measure, if it is carried out, will fix the price of their products.

Mr. KENYON. Well, how would the Senator regulate these excessive profits? In any way but by taxation, or would he let them alone?

Mr. BORAH. There are a number of ways in which you can regulate excessive profits; but I do not flatter myself at all that you can enter into the regulation of these things and exempt the farmer. I think where the mistake has been made for the purpose of giving this bill standing has been in sending out to the country the statement that the great agricultural classes are not going to be affected by it. We had infinitely better say to them: "This is a crisis. It is a situation where you must take your chances with the rest of the economic world. We will protect you in so far as we can; but when we enter into the economic world and undertake to change the laws which fix trade and fix prices, you must understand that you will be affected just the same as the rest of us."

Mr. CHAMBERLAIN. Mr. President, may I interrupt the Senator for just a moment?

Mr. KENYON. I was going to stop at this point, but I will yield to the Senator from Oregon.

Mr. CHAMBERLAIN. I do not believe that I place the same construction on section 5 that the Senator does. I believe he takes the position that section 5 permits the Government or the executive department to place the price on the commodities mentioned in section 5. I do not so understand section 5, and I do not think it was the purpose of the framer of the bill to give that power to the executive department.

The Senator will notice that section 5 has reference to the licensing of the importation, exportation, manufacture, storage, or distribution of any necessaries. That is the purpose of the section. Farther down, in line 16—

> The President is authorized to prescribe such regulations governing the conduct of the business of licensees as may be essential to prevent uneconomical manufacture and inequitable distribution of necessaries and otherwise to carry out the purposes of this act.

That is limited to carrying out——

Mr. KENYON. Now, will the Senator read the top of page 5?

Mr. CHAMBERLAIN. Just a moment. I am coming to that now. At the top of page 5, to which the Senator calls attention, it says:

> Whenever the President shall find that any rate, charge, or practice of any licensee is unjust, or unreasonable, or discriminatory and unfair, or wasteful, and shall order such licensee, within a reasonable time fixed in the order to discontinue any such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice.

Mr. KENYON. What is the charge, except what it sells for?

Mr. CHAMBERLAIN. I have construed that section to apply particularly to the methods of carrying on the business and the distribution of the commodities and the rate of storage charged. The word "price" is not anywhere mentioned in that section.

Mr. KENYON. No; that is true.

Mr. CHAMBERLAIN. My view of that is that it simply regulates the business under a license system. The license can be withheld or granted, as the President sees fit. Now, the matter of regulating the prices of steel and other commodities that the Senator is anxious to control—and I am in accord with him in the hope that they may be regulated—comes under another section, where the President is authorized, for instance, to take charge of a plant and operate it if the charges are unjust; or he can buy and store wheat and other commodities for the purpose of selling them at a reasonable price. I think that those subsequent sections are the sections which fix the price, and that section 5 only fixes the regulation for the conduct of the business. I may be mistaken in my construction of it, however.

Mr. JOHNSON of California. The Senator refers to section 9.

Mr. CHAMBERLAIN. Section 9, I think, and section 11.

Mr. KENYON. Section 10 is the one that gives the power to take over factories and mines, but I understand that is a section that Mr. Hoover feels is not at all essential to this bill. I am inclined to think it a very important section.

Mr. CHAMBERLAIN. If the President found, for instance, that a steel company was charging an unjust rate for a commodity that the Government needed to carry on the war, he could take charge of the company's plant and operate it.

Mr. KENYON. What does the Senator mean by "an unjust rate"?

Mr. CHAMBERLAIN. An unjust rate for storage.

Mr. KENYON. Is not that what the licensee is charging for what he is selling or manufacturing? If he is unjust about it, it is because his charge is too high, or it is discriminatory; and so the President makes the rule, just like the Interstate Commerce Commission. My thought is that it is just the same as the Interstate Commerce Commission.

Mr. CHAMBERLAIN. I draw a distinction between a rate and a price.

Mr. KENYON. I see. There is confusion in the words used. This should be cleared up.

Mr. CHAMBERLAIN. The Senator will notice, on reading that over carefully, that it has reference to the storage and the distribution and the manufacture of a commodity, but it does not undertake to fix the price. Now, if these concerns that are licensed should undertake to distribute all of their imported product to one concern, for instance, so that a monopoly might be built up, or if they undertook to unfairly distribute it in any way, the license would control them.

Mr. KELLOGG and Mr. BORAH addressed the Chair.

Mr. KENYON. I want to give up the floor at this point. I have been on my feet for nearly five hours and, with this oppressive heat, I am somewhat wearied.

Mr. CHAMBERLAIN. I simply wished to suggest that that was the view I had of this section.

Mr. BORAH. Mr. President, I should like to ask the Senator from Oregon a question.

Mr. KENYON. The Senator does not want to ask me the question?

Mr. BORAH. No.

Mr. KENYON. I want to say that I have given careful study to section 5 and have reached the conclusion, as I have suggested here, that it gives the President practically the same kind of power that we are giving to the Interstate Commerce Commission over any of the matters for which he may require a license.

That is all I care to say about the bill, Mr. President. I did not mean to take so much of the time of the Senate, but I have been interrupted so many times that I am not entirely to blame. I am glad that Senators have been willing to remain here and listen and offer suggestions.

Mr. BORAH. Mr. President, I desire to ask the Senator from Oregon [Mr. CHAMBERLAIN] a question in regard to section 5.

This section says:

> That, from time to time, whenever the President shall find it essential to license the importation, exportation, manufacture, storage, or distribution of any necessaries, in order to carry into effect any of the purposes of this act, and shall publicly so announce, no person shall, after a date fixed in the announcement; engage in or carry on any such business specified in the announcement of importation, exportation, manufacture, storage, or distribution of any necessaries as set forth in such announcement, unless he shall secure and hold a license issued pursuant to this section. The President is authorized to prescribe such regulations governing the conduct of the business of licensees as may be essential to prevent uneconomical manufacture and inequitable distribution of necessaries and otherwise to carry out the purposes of this act. Such regulations may also include requirements for the issuance of licenses and requirements for systems of accounts and auditing of accounts to be kept by licensees, submission of reports

by them, with or without oath or affirmation, and the entry and inspection by the President's duly authorized agents of the places of business of licensees. Whenever the President shall find that any rate, charge, or practice of any licensee is unjust, or unreasonable, or discriminatory and unfair, or wasteful, and shall order such licensee, within a reasonable time fixed in the order to discontinue any such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice, thereafter unless such order is revoked or suspended, such licensee shall, within the time prescribed in the order, discontinue such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice.

Now, suppose the President were dealing with an institution like the Armour Packing Co. or the Swift Packing Co. If I correctly understand the Senator's construction of this provision, there would be very little that the President could effect with reference to them, because they have no charges and no rates such as the Senator supposes this section to cover.

Mr. CHAMBERLAIN. That is correct. Just as the Senator from Iowa says, the powers granted under this section are a good deal like the powers granted to the Interstate Commerce Commission. Now, suppose the President, having these books of account before him or his agents, ascertains that they are doing an unfair business. He could take over those plants, under a subsequent section of the bill, and fix the rates himself if they refused to obey the order of the President to fix a fair and nondiscriminatory rate.

Mr. BORAH. In the first place, however, there would not be anything under section 5, according to the construction I understand the Senator to place upon it, which the packing company would have done in violation of the order, because it does not enter into the rate question or the charge question, and so forth, if those rates and charges are to be limited merely to the question of storage. They buy this stuff; they own it themselves. They are not simply storing it for somebody else. They are not simply holding it for some one else. They are the owners of it, and they buy it, and they resell it. Now, if the President wishes to fix a rate at which they must resell it, he could not do it under section 5, according to the Senator's construction.

Mr. CHAMBERLAIN. Only by an order.

Mr. BORAH. Yes.

Mr. CHAMBERLAIN. If he found that the rate was unfair.

Mr. BORAH. But the rate for what? The Senator means the price when he says the rate there, does he not?

Mr. CHAMBERLAIN. I am speaking of the rates of storage.

Mr. BORAH. But the packing company is not engaged in storage. It is engaged in purchasing the product itself from the farmer; and when it purchases the product it owns it. It manufacturers it, puts it into salable form, and sells it. Now, unless you understand "charge" to mean "price," there is nothing which the President could do with reference to the Armour Co. under section 5 at all.

Mr. CHAMBERLAIN. I do not think the President has the power, under section 5, to fix the price of the commodity at all.

Mr. BORAH. Then he could not deal with anybody except those who are engaged in the storage business.

Mr. CHAMBERLAIN. Only indirectly could he fix the price, and that would be under a subsequent section. If he found the prices charged under this section were excessive or exorbitant, he might do it.

Mr. WALSH. Mr. President, permit me to suggest to the Senator that he could regulate packing houses under the exportation clause.

Mr. BORAH. Exactly. But only to a limited and ineffective extent. He might make them licensees. But as licensees, he could not, according to the Senator from Oregon, control their prices.

Mr. WALSH. That is to say, the Armour Packing Co., being engaged in the business of exporting, could be licensed under the provisions of section 9?

Mr. BORAH. Oh, yes; but after they had licensed them under that provision the President could not do anything with reference to fixing the price at which they could sell abroad, could he?

Mr. WALSH. I quite agree with the Senator from Oregon that he could not.

Mr. BORAH. Then section 5 is a dead letter so far as institutions of that kind are concerned?

Mr. WALSH. No; not at all.

Mr. CHAMBERLAIN. I think not, because the company being engaged in this business and having the license, it brings them right under the jurisdiction.

Mr. BORAH. But when you get them under the jurisdiction, what do you do to them? You can ask them to take out a license, but they are not storing stuff. They are not engaged in that kind of business. They own it, just the same as one owns a farm.

Mr. CHAMBERLAIN. The class of company that the Senator mentioned awhile ago, it was charged here on the floor of the Senate, was going into the storage business in every walk of life.

Mr. BORAH. The cold-storage business?

Mr. CHAMBERLAIN. Yes; everything.

Mr. BORAH. Well, suppose you limit the amount that they can charge for cold storage. Does the Senator contend that that stops with the mere question of the price for storage? They own the car in which they store it.

Mr. CHAMBERLAIN. I am satisfied that my construction of this act is correct. If it does not carry out that purpose, I think it ought to be amended. It seems to me that it does, in that it brings these businesses under the jurisdiction of the executive department, and gives the President power, after an inspection of their books, to fix these rates.

Mr. BORAH. I agree with the Senator from Montana that the President could bring them under the license by reason of the exportation clause; but what I want to know is: After the President gets them in the attitude of a licensee, what can he do, if anything, toward fixing the price at which they may sell their products to the people of the United States? What power has he under that? I do not think he has any power at all.

Mr. CHAMBERLAIN. I do not think he has power to fix the price.

Mr. BORAH. Let me call the attention of the Senator to this proposition. I have mentioned it here before on the floor of the Senate:

Last year the Armour Packing Co. declared a cash dividend of $20,000,000 and a stock dividend of $80,000,000. The Swift Packing Co., I think, declared a cash dividend of $23,000,000 and a stock dividend of $75,000,000. I am not certain as to the latter figures. It is not at all difficult to arrive at the reason why meat products in this country are high under those conditions. The Armour Co. made about $14,000,000 last year in excess of what they made in 1913, to say nothing of their stock dividends, and the Swift Co. made about the same amount, although I have not the exact figures. Now, unless this bill deals with that kind of a situation we are merely fulminating in the air, because there is where the profits have gone and where they have been accumulating; and they are gathered from the millions of pockets in the United States, from the people who buy meat products, because we know that these meats are shipped from the great inland places into Chicago, shipped back again, and purchased again. Unless we can deal with that situation, it seems to me that we are not regulating this matter at all.

Mr. VARDAMAN. Mr. President——

Mr. BORAH. Just a moment. On the other hand, Mr. President, if we take possession of that class of institutions and operate them ourselves as a Government—which I believe we may have to do—and fix the price, it is useless to say to the intelligent farmer of this country that you are not fixing the price of his animal when you fix the price of the article which is made out of the animal.

Mr. VARDAMAN. I was called from the Chamber. I have so much confidence in the Senator's judgment I want to ask him if it is his opinion that section 5 of the bill does not give the President the right to fix the price of the products of the packers?

Mr. BORAH. Yes; I am inclined to agree with that proposition.

Mr. VARDAMAN. That the word "charge" employed here does not mean the price that the packers charge?

Mr. BORAH. I am inclined to think that the word "charge" was not intended there as synonymous with the word "price." In the first place, there is no occasion for using the word "charge" if it meant price. In popular parlance it would mean the same thing, but, technically speaking, I am inclined to agree with the Senator from Montana and the Senator from Oregon that it has reference to another kind of charge than the price of the article.

Mr. VARDAMAN. I am obliged to the Senator for his opinion.

Mr. McLEAN. I call the attention of the Senator from Idaho to page 3, line 22, section 4, where precisely the same language is used—

or to make any unjust or unreasonable rate or charge in handling or dealing in or with any necessaries.

That section was under consideration and the Senator from Texas [Mr. SHEPPARD] stated that the words "rate or charge" meant price, as he understood them, dealing in these goods, and if that were not so then there would be no prohibition at all

against a retailer charging an excessive price; the law would only apply to conspiracies.

Mr. BORAH. Mr. President, I wish to say while I am on the floor just a word generally with reference to the bill. It seems to me that we may not occupy very much time in discussing the general situation as to the necessity of dealing with the situation if it can be dealt with from a legislative standpoint to effectuate a better condition of affairs in the country. I suppose we all realize the exigency which is upon us and are desirous of arriving at some intelligent conclusion as to how we can deal with the situation.

I read in the newspapers of the last day or two a statement which purported to come from the White House. Of course, I do not know whether it is authentic or not, but upon the face of it it purports to be, and if it is correct, and if this is the idea which the President has in his mind, it seems to me we could incorporate it in a bill and effectuate all he desires without very much extended discussion or controversy. It is altogether a different proposition from what we find in this bill. I do not think I offend anyone because I do not think anybody in the Chamber drew this bill, when I say that the bill has all the appearance to me of a town-meeting resolution instead of a statute. It seems to express that which we want to do in general terms, but when it comes to authorize and specify the manner in which we shall do it there are no two minds agreeing upon what the bill means. It is rather the description of a situation.

Mr. CHAMBERLAIN. May I interrupt the Senator for just a moment?

Mr. BORAH. Certainly.

Mr. CHAMBERLAIN. The Senator is right about the draft of the bill. It was drawn as a matter of fact by the Solicitor and attorneys in the Agricultural Department. But if the Senator will compare it with the statutes of some of the other countries engaged in this war he will find that the essential provisions of it are taken from the statutes of those countries.

Mr. BORAH. I have no desire to be offensive. But I wish to say with reference to these foreign statutes, it is not meeting the situation to take down the statutes of some foreign country and rewrite them for the United States unless we know what has been the effect of those statutes in those countries. I have undertaken to inform myself to some extent as to what has been the effect of those statutes in Canada and other countries, and I sincerely trust that we will put something through the Congress of the United States which will better deal with the situation than those statutes have done in those countries. They have practically changed the situation in no respect whatever, so far as prices and economic conditions are concerned. Those statutes are in countries where the very worst conditions prevail with reference to the poor or those living upon small salaries, and they have not dealt with the situation at all, so far as the situation ought to be dealt with in protecting them against high prices.

Mr. POMERENE. Mr. President——

Mr. BORAH. I yield to the Senator from Ohio.

Mr. POMERENE. As I recall it, the statement was made by Mr. Hoover yesterday that in France and Great Britain the prices of breadstuffs were 25 and 40 per cent—I may not give the exact figures—less than they were in this country. The Senator has just stated, if I understood him correctly, that the statutes which have been adopted in those countries had not been effective. How does the Senator account for the reduction in the price of foodstuffs in those countries as compared with the price of foodstuffs in this country, which is the producer?

Mr. BORAH. I will state to the Senator one way by which they have dealt with it. The Governments have purchased the food products and redistributed them to the people and have made up the deficit by large sums through taxation which have gone into their budgets. France alone, I think, paid in $38,000,000 last year as a deficit of this nature.

Mr. GORE. And expects to pay $65,000,000 this year.

Mr. BORAH. They simply went into the market, bought the food, sold it to the people at a lower price, and then put the deficit up to the taxpayers. That is the way by which they have dealt with that situation in those countries. But I was going to read from this newspaper article, and then take my seat.

Mr. POMERENE. May I ask the Senator if they have not, to a certain extent, eliminated the middle classes between the producer and the consumer, and in that way saved a large part of the price?

Mr. BORAH. In some instances the Governments have actually taken possession of the institutions and are running them themselves.

This statement which was put out, as I understand, from the White House, states:

1. A food control office, which will do all the buying of foodstuffs for the United States and her allies, with a view to eliminating the bidding against each other of the entente powers, and to distributing the purchases and shipments on an orderly basis, thus tending to stabilize the market instead of upsetting it.

It seems to me that could be done wisely and effectively, and, as far as I am concerned, I shall be glad to support that kind of a proposition.

Mr. WALSH. Let me inquire of the Senator if we could do anything about that? Would not that come from the entente powers?

Mr. BORAH. The President wants, I understand, a food-control officer for the purpose of becoming a common disbursing agent for the United States and the entente powers. If he desires the creation of that kind of an office and designates Mr. Hoover for the place I would be very glad myself to vote for it.

Mr. WALSH. The idea the Senator infers from this is that we shall pass a law prohibiting them from purchasing in this country except through an agent to be designated by us?

Mr. BORAH. No; I do not understand that that is called for, but I take it if a food-control office was provided for and filled, owing to the relationship which exists between this country and the allies in all probability there would be but one purchasing agent.

Mr. WALSH. I had an idea that probably it could be accomplished by a voluntary arrangement between the allies, that they would agree to unite on one agent, so that we would not have to impose that kind of an arrangement upon them.

Mr. BORAH. I think myself that this matter could be covered by a voluntary arrangement, but as I said if the President sees in it a situation which should be taken care of by making the purchasing agent an officer of the Government of the United States I would have no objection to creating the office.

Mr. KELLOGG. Mr. President——

The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from Minnesota?

Mr. BORAH. I yield.

Mr. KELLOGG. Is it not a fact that so far as the purchases by all foreign Governments for export are concerned, the matter is now in the hands of the President to compel all purchases to be made through one agent named by him?

Mr. BORAH. I have assumed so.

Mr. JOHNSON of California. Under the recent law.

Mr. KELLOGG. Under the embargo act which we passed giving the President power to embargo all commerce.

Mr. BORAH. I believe that bill has been signed.

Mr. KELLOGG. Yes.

Mr. BORAH. However, Mr. President, as I was saying, if the President sees in the situation the necessity for the creation of such an office, I certainly would have no objection to it. I yield to his judgment.

2. Power to be vested in this office to make hoarding impossible. The right would be given the office to take hoarded stocks by force and sell them, turning the proceeds over to the owners after subjecting them to the penalty clause of the bill.

That at least would have the virtue of being direct, and we would know precisely what we were doing. If that kind of a provision is brought in here to deal with some of these institutions I should support it.

Mr. President, that is not the bill which is before Congress. Indeed, with all due respect to the authors of the bill, I am satisfied that Congress is not certain what is before it. It is drawn in such a way that we are about to pass a law the powers and terms of which we ourselves do not undertake to define or circumscribe. We are dealing with the business world, we are dealing with the economic world. If the statute has any effect at all, it might have a very bad effect unless we can know in advance ourselves something of its terms, something of its conditions, and the manner in which it will probably affect reasoning men on the outside. It is in a measure a fulmination; it is a general clause of universal authority filled with, I may say, glittering generalities. It will have the effect of bewildering or confusing or benumbing the initiative, the self-reliance, the voluntarism, which it is absolutely essential to maintain and keep alive among the producers and the business men of the country.

Mr. CHAMBERLAIN. I move that the Senate adjourn until to-morrow at 12 o'clock.

The motion was agreed to; and (at 5 o'clock and 15 minutes p. m.) the Senate adjourned until to-morrow, Thursday, June 21, 1917, at 12 o'clock meridian.

NOMINATIONS.

Executive nominations received by the Senate June 20 (legislative day of June 19), 1917.

REGISTERS OF LAND OFFICES.

James F. Burgess, of Oregon, to be register of the land office at Lakeview, Oreg., his term of office having expired. Reappointment.

Wade H. Fowler, of Wyoming, to be register of the land office at Douglas, Wyo., his present term expiring June 22, 1917. Reappointment.

PROVISIONAL APPOINTMENT IN THE ARMY.

William B. B. Wilson, of Massachusetts, to be a second lieutenant of Field Artillery in the Army of the United States, with rank from date of appointment.

PROMOTIONS AND APPOINTMENTS IN THE NAVY.

Acting Pay Clerk David P. Polatty to be an assistant paymaster in the Navy from the 18th day of June, 1917.

Commander Reginald R. Belknap to be a captain in the Navy from the 23d day of May, 1917.

Lieut. Commander Austin Kautz to be a commander in the Navy from the 29th day of August, 1916.

Lieut. Commander John W. Timmons to be a commander in the Navy from the 23d day of May, 1917.

Lieut. (Junior Grade) John M. Ashley to be a lieutenant in the Navy from the 5th day of June, 1917.

Ensign Edwin J. Gillam to be a lieutenant (junior grade) in the Navy from the 7th day of March, 1915.

The following-named ensigns to be assistant naval constructors in the Navy from the 6th day of June, 1917:

Edward Ellsberg,
Edward L. Cochrane,
Robert W. Ferrell,
George C. Manning,
Donald Royce,
Fred E. Pelton,
Adrian R. Marron,
Gordon W. Nelson,
Joseph L. McGuigan,
Fred M. Earle, and
John I. Hale.

The following-named ensigns to be assistant civil engineers in the Navy from the 6th day of June, 1917:

James T. Mathews, and
Paul J. Searles.

The following-named citizens to be assistant civil engineers in the Navy from the 15th day of June, 1917:

Cuthbert P. Conrad, a citizen of Wisconsin,
Roy E. McCorkindale, a citizen of Massachusetts,
Ben Moreell, a citizen of Missouri,
Robert L. Pettigrew, a citizen of Wisconsin,
Carl A. Trexel, a citizen of Iowa,
Kendal B. Bragg, a citizen of Ohio,
Thomas J. Shack, a citizen of New York,
Alden K. Fogg, a citizen of Illinois,
Arthur F. Peaslee, a citizen of Massachusetts,
Robert E. Thomas, a citizen of Illinois,
Edward C. Selbert, a citizen of Maryland,
Walter N. Moore, a citizen of Missouri,
George W. Plaisted, a citizen of Massachusetts,
Arthur H. Bond, a citizen of Massachusetts,
Joseph J. Strachan, a citizen of New York,
Hector C. Griswold, a citizen of New York,
William H. Smith, a citizen of Massachusetts,
Henry G. Lehrbach, a citizen of New York,
Thomas E. Dunham, a citizen of New York,
Henry Niemann, a citizen of Massachusetts,
James L. McDonald, a citizen of New York,
Robert S. Johnson, a citizen of Iowa,
Edward L. Marshall, a citizen of Massachusetts,
Richard H. Gifford, a citizen of Delaware, and
George D. Wetsel, a citizen of New York.

Capt. Frank E. Evans, United States Marine Corps, retired, to be a major on the active list of the Marine Corps, an additional number in grade, to rank next after Harold C. Reisinger, from the 25th day of May, 1917.

First Lieut. Charles A. E. King to be a captain in the Marine Corps from the 29th day of August, 1916.

Second Lieut. David H. Miller to be a first lieutenant in the Marine Corps from the 29th day of August, 1916.

Roy C. Swink, a citizen of Pennsylvania, to be a second lieutenant in the Marine Corps for a probationary period of two years from the 5th day of May, 1917.

Boatswain Frank Bruce to be a chief boatswain in the Navy from the 6th day of February, 1917.

Lieut. Commander Julius F. Hellweg to be a commander in the Navy from the 23d day of May, 1917.

CONFIRMATIONS.

Executive nominations confirmed by the Senate June 20 (legislative day of June 19), 1917.

ASSISTANT SECRETARY OF THE TREASURY.

Leo S. Rowe to be Assistant Secretary of the Treasury.

SURVEYOR OF CUSTOMS.

A. Arnold Barksdale to be surveyor of customs in customs-collection district No. 20, with headquarters at New Orleans, La.

PROMOTION IN THE NAVY.

Acting Pay Clerk David P. Polatty to be an assistant paymaster.

WITHDRAWAL.

Executive nominations withdrawn June 20 (legislative day of June 19), 1917.

James C. McNally, of Pennsylvania, to be a consul general of class 5 of the United States of America.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, *June 20, 1917.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

O Lord, our God and our Father, let Thy blessing descend, we beseech Thee, in full measure and give to us the receptive mind and open heart, that we may be inspired to go forward and do Thy will in whatsoever our hand findeth to do this day, that the law and the prophets may be fulfilled in us as it was in Jesus Christ; for Thine is the kingdom and the power and the glory forever. Amen.

The Journal of the proceedings of yesterday was read and approved.

WASHINGTON MEMORIAL ARCH AT VALLEY FORGE.

Mr. WATSON of Pennsylvania. Mr Speaker, I ask unanimous consent to print in the RECORD the speech of Hon. CHAMP CLARK at the dedication of the United States Washington Memorial Arch at Valley Forge yesterday. [Applause.]

The SPEAKER. The Chair will suggest to the gentleman that Gov. Brumbaugh's speech also be printed.

Mr. WASTON of Pennsylvania. I also ask unanimous consent to print in the RECORD the speech of Hon. Martin G. Brumbaugh on the same occasion.

The SPEAKER. The gentleman also asks unanimous consent to print in the RECORD the speech of Gov. Brumbaugh on the same occasion. Is there objection?

There was no objection.

ENROLLED BILL AND JOINT RESOLUTION SIGNED.

Mr. LAZARO, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bill and joint resolution of the following titles, when the Speaker signed the same:

H. R. 3673. An act to amend the act approved December 23, 1913, known as the Federal reserve act, as amended by the acts of August 4, 1914, August 15, 1914, March 3, 1915, and September 7, 1916; and

H. J. Res. 105. Joint resolution to correct an error in the sundry civil appropriation act for the fiscal year 1918.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, its enrolling clerk, announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 346. An act to increase the area of the United States Botanic Garden in the city of Washington, D. C.

The message also announced that the President had approved and signed bill and joint resolution of the following titles:

On June 14, 1917:

S. 995. An act to authorize the issue to States and Territories and the District of Columbia of rifles and other property for the equipment of organizations of home guards.

On June 15, 1917:

S. J. Res. 70. Joint resolution relating to the service of certain retired officers of the Army.

SENATE BILL REFERRED.

Under clause 2 of Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. 346. An act to increase the area of the United States Botanic Garden in the city of Washington, D. C.; to the Committee on the Library.

CONTROL OF FOOD AND FUEL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the food-control bill, H. R. 4961.

The SPEAKER. The gentleman moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of H. R. 4961.

Mr. LEVER. And pending that I should like to have the attention of the gentleman from Iowa [Mr. HAUGEN] for a moment. I should like to see if we can not agree this morning to an hour for closing general debate on this bill. We have been running now for two days solidly and have accommodated a good many of the gentlemen who desired to be heard, and I am inclined to think we might agree to close general debate at some time to-night.

Mr. AUSTIN. Can we not close it this morning? We have had two days and two nights of continuous debate, and if there is any bill that ought to be passed promptly it is this bill.

Mr. DIES. Has the gentleman from Tennessee got his speech in?

Mr. AUSTIN. No; but I can put it in in five minutes under the five-minute rule, and I am even willing to forego any speech at all if we can get prompt action.

Mr. LEVER. I appreciate the attitude of the gentleman from Tennessee [Mr. AUSTIN], but there are a number of gentlemen on both sides who have had time promised them, and I hope we can take care of most of these gentlemen, if they are willing to take a little reduction of time.

Mr. HAUGEN. Mr. Speaker, may we be advised how much time has been used on each side?

The SPEAKER. Seven hours and thirty-five minutes by the gentleman from Iowa [Mr. HAUGEN] and 7 hours and 40 minutes by the gentleman from South Carolina [Mr. LEVER].

Mr. WELLING. They are running neck and neck.

Mr. LEVER. I ask unanimous consent that the general debate on this bill close not later than 11 o'clock to-night.

The SPEAKER. The gentleman from South Carolina asks unanimous consent that general debate on this bill close not later than 11 o'clock to-night. Is there objection?

Mr. HAUGEN. Mr. Speaker, as I stated before, there are quite a good many requests for time, and I rather think we can get through; but I would like to consult with some of the gentlemen who have asked for time, as I shall have to cut down the time considerably in order to accommodate them all.

Mr. LEVER. I suggest to my friend from Iowa that I am autocratic in cutting down time on this side very much, with the consent of the gentlemen who have been promised time. I think there is a feeling here that the debate on this bill has been exceedingly liberal, and that we ought to close the general debate to-night in order to be certain that we pass the bill this week.

Mr. HAUGEN. Mr. Speaker, as I said at the beginning, I do not want to delay the passage of this bill.

Mr. LEVER. I am sure that is true.

Mr. HAUGEN. But, after all, I know that the gentleman wants to accommodate all those gentlemen who desire to speak on this most important proposition.

Mr. LEVER. Certainly.

Mr. HAUGEN. As I said at the beginning, I do not think any time can be gained by cutting off debate, and my candid opinion is that most of the Members who desire to speak can be taken care of in that time. So I do not desire to make any objection to closing at 11 o'clock to-night, so far as I am concerned.

Mr. LEVER. If the gentleman will permit, we have been taking a recess from 5.30 until 8, and I think there would not be any objection to running right along without any recess to-day. Some of us can go to our dinners while others remain, and then others go in relays. I think the House is in a temper to make progress on this bill.

Mr. HAUGEN. In consenting to close debate at 11 o'clock to-night it is in the expectation that we may go on with the good feeling that has prevailed, and that no point of no quorum or anything of that kind will be made.

The SPEAKER. Is there objection?

Mr. CANNON. One moment. There are just a handful of us here, and you are closing debate on this important bill with nearly everybody absent, and are trying to get an agreement that the point of no quorum shall not be made. This debate, if it is important at all, ought to have the House here to listen to it, and I make the point of no quorum.

Mr. LEVER. If the gentleman from Illinois will withdraw that point, I will withdraw my suggestion for the time being, until there are more Members present.

Mr. CANNON. Well, but has the gentleman any intimation when they will be present?

Mr. LEVER. No more than the gentleman has, I am sure.

Mr. BARNHART. Most of the gentlemen who have made speeches do not stay here after making them.

Mr. CANNON. But we have not had 50 speeches.

Mr. BARNHART. The gentleman from Illinois [Mr. CANNON] has not made any speech.

Mr. CANNON. I do not know that I will.

Mr. BARNHART. And "the gentleman from Indiana" has not made any, but we have heard most of the speeches that have been made, and we are fully convinced, and the country is waiting, and the House is tired of this debate, and we ought to get through with it and do business.

Mr. CANNON. Get through with it! Gentlemen say this is the most important bill of this session.

Mr. BARNHART. Yes.

Mr. CANNON. Does the absence of the Members suggest that that is true? I am not questioning the fact that it is an important bill.

Mr. BARNHART. The RECORD will show, from these remarks, that there are not very many here.

Mr. CANNON. I make the point of no quorum.

Mr. FOSTER. I would not do that.

Mr. CANNON. The gentleman says he would not do it.

Mr. FOSTER. I would not.

Mr. LEVER. Let me suggest to my friend from Illinois that at 5.30 this afternoon, when the committee rises, I will ask to close debate to-night at 11 o'clock. I want to be fair in this matter, and I do not want to take advantage of those who are absent and who may not have known that the House was meeting this morning at 11 o'clock; and, for the time being, if the gentleman will withdraw his point of no quorum, I will withdraw my request.

Mr. SIMS. Mr. Speaker, it seems to me that the handful of Members who remain here and keep the House running ought not to suffer for the sins of those who are absent. If Members do not think it is important enough for them to remain here I do not think those who do remain should be made to suffer.

Mr. LEVER. I hope the gentleman from Illinois will let us get an agreement on this proposition, but I do not want to take any advantage of those who are absent.

Mr. AUSTIN. Mr. Speaker, let me submit this proposition: If you will take up the bill under the five-minute rule you will have a quorum, but if you go on with general debate as it has been running for the last two days you will not have 50 Members upon the floor of the House to-day.

Mr. LEVER. No one knows that better than the gentleman from South Carolina.

Mr. CANNON. Mr. Speaker, I will withdraw the point of no quorum.

Mr. LEVER. Does the gentleman withdraw it on the theory that I withdraw my request?

Mr. CANNON. I thought the gentleman had withdrawn it.

Mr. LEVER. I do withdraw it, Mr. Speaker.

The motion of Mr. LEVER to go into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961 was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. HAMLIN in the chair.

Mr. LEVER. Mr. Chairman, I yield 10 minutes to the gentleman from Arkansas [Mr. CARAWAY].

Mr. CARAWAY. Mr. Chairman, this proposed measure is without precedent in our history. It is violative of our traditions. The authority for its enactment rests in those implied powers of the Constitution which are to be invoked only in times of war. National necessity alone can justify our support of this bill. But it seems to me untenable and absurd to contend that the Constitution, called into being by a people for their protection, should forbid the doing of acts necessary to be done that the Nation may live. To do so is to assert that the thing created is greater than its creator; that the Nation has delegated powers which render it powerless to protect itself. None of us will seriously assert this. Therefore the only questions demanding

answers of us are, whether legislation of this kind is demanded at this time; and if so, whether the provisions of this bill meet these requirements.

If we shall answer both of these in the affirmative, our duty is imperative to support this measure. If we should answer either in the negative, we should vote against it.

To determine, then, our course, let us examine the facts. All will agree that our duty demands of us to make provision to feed and care for the soldiers we have authorized to be called into the field to wage the war in which we are now engaged. And it is equally our duty to protect from want and exploitation those peoples remaining at home. In addition to this, we ought, so far as possible, help to feed the armies and peoples engaged with us in this war for human rights. No one should seek exorbitant profits while whole nations bleed. No good man will; no bad man should be permitted to do so.

Now, what are the facts? All food and food products are nearly, or quite, twice as high as they were before this war began, and coal for fuel is almost unattainable at all. An investigation by Government agencies disclosed the fact that these increases in prices were not warranted by the law of supply and demand; that they are artificial. Wheat, for instance, sold last year at harvest time for about $1.20 a bushel; flour this spring at $16 per barrel, or more than twice as high as justified by the price the farmer received for his wheat. All other things in proportion. Was this increase in prices warranted by the supply? To show it was not, I append here two tables. The first shows the actual supply of these necessities in 1916 and the estimates for 1917. The second table shows the prices prevalent in 1916 and those of 1917.

Production and price Dec. 1, 1916.

	Quantity.	Price.
Wheat.....bushels..	639,886,000	$1.60⅛
Oats.....do....	1,251,992,000	.52⅝
Hay.....tons..	109,786,000	10.59
Potatoes.....bushels..	285,437,000	1.46⅛

Estimated production of year of 1917.

Wheat.....bushels..		656,000,000
Oats.....do..		1,381,000,000
Hay.....tons..		102,000,000

Potatoes not complete, but larger than in 1916.

Prices prevalent in 1916 and 1917.

	1917	1916
Wheat.....per bushel..	$2.70	$1.07
Corn.....do....	1.79	.83
Oats.....do....	.82	.55
Potatoes.....do....	3.02	1.12
Hay.....per ton..	17.20	11.39

Last week potatoes were selling in Chicago at three times as much as the farmer received for them.

From which it is apparent that the tremendous advances were the result of speculation and came after the products had left the hands of the producer. They represent the profit of the gambler—not the farmer. Therefore in seeking means to reduce these unprecedented advances, we do not seek to diminish by one cent the price the farmer receives for his product, but rather to increase that. But we do seek to destroy those agencies which alike rob the farmer and despoil the consumer. [Applause.] We, in this legislation, aim to drive out the gamblers in food products. For all of us who know conditions know that the farmer was not the beneficiary of these greatly enhanced prices. That came to some one who dealt in these products between the times they left the hand of the producer and reached the retail dealer, because in most instances retail dealers have sold on closer margins of profit than in other years. This "taker," then, of unholy and unjustifiable profits is the middleman, the speculator, the gambler in the lifeblood of a people. He it is who has wrung gold from a people's bread and made Want sit at every workingman's table, and has clothed in rags the producers of a Nation's wealth. And it is he who now demands his pound of flesh from the young men who are going beyond the seas to offer their lives that this Nation may live. And it is this robber of a Nation's food that this bill proposes to strike down. [Applause.] No line in it, no penalty or provision is directed against the farmer or honest dealer.

There are 21 sections in the bill, but 4 only are important. These are sections 3, 6, 12, and 13.

Section 3 clothes with full power the President of these United States to deal with food, feed, and fuel, the indispensables of life. It does so in this language:

That there is hereby established a governmental control of necessaries, which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries, which shall be exercised and administered by the President for the purposes of this act; and all such necessaries, processes, methods, and activities are hereby declared to be affected with a public interest. And in carrying out the purposes of this section the President is authorized to enter into any voluntary arrangements or agreements, to use any agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person, to utilize any department or agency of the Government, and to coordinate their activities so as to avoid any preventable loss or duplication of effort or funds: *Provided,* That none of the penalties of this act shall apply to this section.

Section 6 provides penalties for willfully hoarding and keeping from the people these necessities, but exempts from its provisions those who actually produce them—the farmers, gardeners, and stock raisers. The section reads as follows:

That any person who willfully hoards any necessaries shall, upon conviction thereof, be fined not exceeding $5,000 or be imprisoned for not more than two years, or both. Necessaries shall be deemed to be hoarded within the meaning of this act when either (a) held, contracted for, or arranged for by any person in a quantity in excess of his reasonable requirements for use or consumption by himself and dependents for a reasonable time; (b) held, contracted for, or arranged for by any manufacturer, wholesaler, retailer, or other dealer in a quantity in excess of the reasonable requirements of his business for use or sale by him for a reasonable time, or reasonably required to furnish necessaries produced in surplus quantities seasonably throughout the period of scant or no production; or (c) withhold, whether by possession or under any contract or arrangement, from the market by any person for the purpose of unreasonably increasing or diminishing the price: *Provided, however,* That any accumulating or withholding by any farmer, gardener, or any other person of the products of any farm, garden, or other land owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

Section 12 does what never before has been attempted in this country. It authorizes the President, whenever he thinks it advisable and necessary, to guarantee to the farmers of this land that they shall receive a fair and equitable price for the products of their toil. It authorizes him to say to them, "Produce, that the nations may be fed, and if these products do not sell in the open markets of the world at a price high enough to compensate you for your labor the Government will pay you the difference." It does not compel him to sell at these figures guaranteed. It does not prevent him, the farmer, from selling at the highest price procurable, but merely guarantees that he shall not be compelled to sell at a less price. For the first time in our country has the farmer thus been recognized as of as great a necessity in times of war as the soldier at the front. It proclaims the hoe as much a weapon in winning battles as the musket. And this bill does more; by stimulating production it guarantees to those who dwell in cities and those who toil in factories and in mines that we may be clothed and warmed that they shall be fed. It guarantees to our boys who shall fight in France that they shall be fed, and it guarantees to them and to all those who fight with them that liberty may not perish from off the face of the earth; that those they love and have left behind shall eat and be clothed while they, the soldiers, shall keep watch in the trenches. [Applause.]

Section 13 gives to the President the power to say, while this war shall last, if he shall deem it wise so to direct, that no grain that would make either food or feed shall be manufactured into intoxicating liquors; that no child shall cry for bread that booze may be manufactured to corrupt men. It should have gone further. It should have declared by legislative enactment that as a war necessity no grain should be distilled into poison to damn men's souls. And, if no member of the committee which reported out this bill shall move to amend it so to do, I shall when that section shall be reached in reading this bill.

There should also be put back in this measure those provisions stricken out by the committee which authorized the President to deal with those other necessities, such as clothing, shoes, and the implements of industry, those the farmer and workingman must employ in his daily toil. Why the committee struck them out I do not know. I shall move to restore them to the bill.

Mr. Chairman, I know we shall be criticized for advocating this measure. We shall be accused of disregarding our oaths and striking down the Constitution. Constitutional lawyers will rail at us and greed will impugn our motives. It has been said, and will be again proclaimed, that this measure creates a dictator; that it grants absolute power to deal in all the things that support life. I grant it. Its terms are absolute and full. It grants more than will ever be exercised. The very granting

will relieve the necessity to exercise these powers. Nothing else would. Some one must control these conditions in times of war, and I would infinitely rather that it should be he whom more than eight millions of sovereign citizens by their vote made Commander in Chief of the Army in times of war than some gambler on a board of trade. I would rather risk him who, by my vote and yours, is President of the greatest Republic beneath the sun than some one who seeks to coin into gold the tears of starving babes and the withered hands of unrequited toil. I am more willing to trust him to deal justly with those who love and pray for the boys he leads in battle than they who would see dishonored that flag if from its tarnished folds they might wring gold. I shall without hesitancy and without misgiving follow in this matter the lead of him who under God's direction shall marshal our young men to go forth and die that justice, honor, and truth shall live among men, and that this Republic may lead the way to universal peace. I shall vote for the bill. [Applause.]

Mr. LEVER. Mr. Chairman, I yield 15 minutes to the gentleman from Ohio [Mr. WELTY].

Mr. WELTY. Mr. Chairman, the bill under consideration is another of the emergency war measures so vital to the success of this fight we have voted to undertake. It is sweeping in effect and aims to grant powers never before granted to any Chief Executive of this Government.

I do not believe that this phase of the prosecution of a war has ever been considered before the present conflict. But we might say that never before have so many of the great nations of the world been at war at one time.

In 1861 and 1862 Congress granted power to seize cotton, but that might have been considered a contraband of war. During that period, and prior to 1861, armies did commandeer food and food products in the war zones, not by virtue of legislation but because of the element of force. The Spanish-American War was fought without any thought of granting the Commander in Chief the power this bill will grant if enacted into law. Germany was perhaps the first nation to enact legislation of this nature. In fact, she did so within such a short period after the declaration of war that it might well be considered that the authorities knew this war must be fought out, not by the soldier in the trenches, but by the industrial and agricultural classes. And we now know that autocracy will never be subdued so long as the food supply holds out.

The powers proposed by the pending legislation cause some Members to question the wisdom on the grounds that we are a Republic; as though a democratic form of government has not the inherent power to defend its own existence.

We have been granted so many advantages and have enjoyed so long the blessings of liberty, life, and property that we are now prone to carry this to the extreme, and ready to declare that private property can not be taken by the Government when necessary for the Government's preservation. Some Members have gone so far as to consider property rights more sacred than individual rights.

They seem to forget that there are times when their Government has a right to call upon all, not only for the man power but for their property as well. This House voted without a dissenting voice to bond this country for $7,000,000,000. The Members did not question the authority to tax our posterity, but they now hesitate to make the necessary personal sacrifice, and why? Is it possible that the present mind has been so long engrossed in making money that we have become selfish and are now loath to part with our possessions? I hope the Members of this House did not vote for war on the same theory—that others would have to fight, and that it will not entail any personal sacrifices. The time has come when each must be willing to make his share of the necessary sacrifices to permit the speedy and successful prosecution of this war with the least possible loss of life and property.

Some argue the constitutionality of this proposed legislation. It is not so much a question of its constitutionality as a question of the preservation of the country for which that Constitution was written.

When the life of a country is at stake we can not question the constitutionality of an act if that act will preserve the Constitution. Did Andrew Jackson ask whether his acts were constitutional when he was forcibly taking the property of private citizens, necessary for the defense, not only of New Orleans, but of the Nation? I do not care to spend any time in arguing the constitutionality of the proposed legislation for gentlemen have ably handled that situation.

But I do note that the Constitution grants Congress the power "to declare war," "to raise and support armies," "to provide and maintain a Navy," and "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers." If these powers about to be granted to the Commander in Chief are not constitutional, then why was this question not raised during the debates on the resolution declaring a state of war? Why did we say in that resolution that "to bring the conflict to a successful termination all of the resources of the country are hereby pledged by the Congress of the United States"?

I say this solemn pledge was made to the Commander in Chief by this Congress, and not a single Member questioned its constitutionality then. And why? Because the very life of the Republic was at stake and no one took thought or counsel in the matter of raising the right of this Congress to pass the resolution. Why question now, when the President asks us to give him a free hand so that he might mobilize not only the man power of the Nation, but "all of its resources" as well?

It is said that "resources" can refer only to money, and they say, "We have already voted every dollar the President has asked." I am afraid that we are forgetting the plain and ordinary meaning of the word "resources" in our attempt to deny this power. The Standard Dictionary defines "resources" as—

> The aggregate of one's available property; funds or means of raising funds; pecuniary means; in business, opposed to liabilities, and including cash on hand, merchandise, bills receivable, etc: said also of natural advantages; as, a country of inexhaustible resources.

It seems that just because we are fighting the Germans we are now forgetting our English.

Mr. Chairman, we can not now cavil with words. This war must be won, and in order to win the Army must have, and has a right to, all the resources of the country, just as we pledged in our war resolution. But there are those who say they are willing to vote for this measure provided the same is necessary. In astonishment they declare that "we have been at war only a little over two months and not a single shot fired by the soldiers in battle." Do you suppose that the President will use the power if not necessary to prosecute the war? Are you afraid that he will use it to build up a strong central government which will fall because of its own weight? Then you have not read the bill with care. After the enacting clause it says:

> That by reason of the existence of a state of war it is essential to the national security and defense, for the successful prosecution of the war, and for the support and maintenance of the Army and Navy, to assure an adequate supply and equitable distribution, and to facilitate the movement of foods, fuel, and articles required for their production.

And then, to make the intent specific and certain, the last section provides—

> That the provisions of this act shall cease to be in effect when the national emergency resulting from the existing state of war shall have passed.

Mr. Chairman, it can only be a war measure "for the successful prosecution of the war and for the support of the Army and Navy." If that is the clear meaning and intent, will you dare to tie the hands of the Army and Navy? Who are the soldiers and sailors constituting this Army and Navy? Are they not our boys—flesh of our flesh and blood of our blood? And will you deny them success?

There is no doubt but that this proposed legislation is purely a war measure. If it were not I would never vote such large powers upon any living person. At the end of the war this bill, if passed, will fall of its own accord and cease with the conclusion of the conflict.

I am just as jealous as anyone of the rights of the States and will refuse to vote any power not clearly conferred by the Constitution. In times of peace local and State governments should be supreme in the matter of passing upon individual and property rights. But, Mr. Chairman, we are at war, and this Congress should demand, if necessary, that everyone should have a part in its prosecution. It is not only the soldier who should be called upon to make the sacrifice. Every patriot will be glad to be able to do his share and carry such burdens as are necessary to bring the struggle to a speedy conclusion. The patriot does not concern himself with making money during the war. He is content to make a sacrifice and knows that otherwise it will be impossible to comprehend and understand the meaning of the new luster to the flag when our liberties and rights are maintained while autocracy crumbles beneath it.

The gentleman from Texas [Mr. YOUNG] eloquently declared that he will never vote to give the President the same power the Kaiser has nor fall on his knees to socialism. It seems to me that a gentleman coming from the plains should know something about prairie fires, and realize that the only way to fight one is with fire.

Is it possible that the Republic is not strong enough to fight organized autocracy? Has the dictatorial power granted a President in time of war ever been abused? Are not the affairs of the country safe in the hands of the champion of democracy? Is it not safer for a republic to assume temporarily a dictatorial

aspect than to tie the hands of its leader and permit the enemy of democracy to destroy it? The gentleman from Texas said he had not "forgotten the blood shed by our ancestors." The blood which our ancestors shed was shed under the direction of George Washington, whose powers were absolute. The Continental Congress never questioned his power. No one asked whether his acts were constitutional, for the Constitution was not then in existence.

He also says that the bill in question proposes to fix prices of foods, feeds, and fuel. The only price it attempts to fix is found in the language of section 12, as follows:

That whenever the President shall find that an emergency exists requiring stimulation of production * * * he is authorized from time to time * * * to determine and fix and to give public notice of what * * * is a reasonable guaranteed price for any such products, in order to assure such producers a reasonable profit.

This is a guaranteed minimum and not an enforced limit of profit, and the same section further provides that—

Thereupon the Government of the United States hereby guarantees every producer of * * * agricultural products * * * that * * * he will receive for any such products produced * * * a price not less than the guaranteed price therefor as fixed pursuant to this section.

It does not hinder but encourages the farmer to produce the articles desired by the Government. It does not curb his profit.

Mr. Chairman, if this bill is passed it will satisfy at least two classes—the farmer and the consumer. It aims at only one class—the food gambler or speculator. We are told that this is class legislation. If you call this class legislation, make the best of it. Some gentlemen, who seem to be against the bill, glibly say, "Hang him!" The bill is more charitable—it provides only for a fine and imprisonment. Do they cry "Hang him!" because they know no jury will ever convict in view of the severe penalty? Do they thus attempt to provide an escape for the culprit?

Other critics of the measure find it useless on the ground that the antitrust laws are ample and sufficient to punish the food speculator and gambler. These critics object to taking the power away from the courts and placing it in the hands of one of the departments under the President. They take delight in criticizing the Department of Justice for failure to enforce the Sherman law. The gentleman from Pennsylvania [Mr. MOORE] has informed this House that there is already ample provision under the Sherman antitrust statute, and that nothing is necessary except the enforcement of the measures we now possess. I agree with him when he declares that there is ample provision and that nothing is needed but enforcement of existing statutes. But I fear that the gentleman is unfamiliar with the attitude of the courts in the matter of enforcement of the same Sherman law which he now invokes.

If you will pardon a personal reference, I will say that I had charge of the prosecution of the so-called Plumbers' Trust, and the evidence showed conclusively that this combination made a practice of pooling the prices on plumbing material furnished to the builder. Twenty per cent of the contract price was divided among the members of the group, and if a manufacturer had the courage to sell to anyone outside of the membership the associated members blacklisted the manufacturer. In many instances the latter was heavily fined for selling to nonmembers of the trust.

Eighty-seven of the members were indicted and convicted, in three different parts of the country—Pennsylvania, Iowa, and Utah. Thirty-six were convicted in Iowa. The circuit court of appeals affirmed the case, and when it came to sentence the district court informed the defendants that they were not guilty of the law in the ordinary sense, and that he would not impose any sentence which would bear heavily upon them. He imposed trivial fines ranging from $50 to $150, and asked the defendants whether or not they could pay these fines without inconvenience. The court in Pennsylvania, too, imposed small fines.

The Department of Justice, because of these inadequate sentences, was compelled to institute a fourth suit, and finally the trust came in and agreed to discontinue the practices. The builder and the manufacturer will know best how far this has been observed. The trusts and combinations, I tell you, do not fear the Federal courts. It is only necessary to cite the beneficent effects of the prosecution of the Standard Oil and Tobacco Trust cases, wherein the court handed down the now famous "rule-of-reason" decision.

The prosecutions against the coal barons, the Steel Trust, and the Harvester Trust have resulted equally disastrously to the Department of Justice. But there may be some hope, for I note that the Supreme Court last month, for some reason or other, restored the following cases to the docket:

United States against The United States Steel Corporation et al.
United States against The Shoe Machinery Co. et al.
United States against The International Harvester Co. et al.
United States against The Reading Railroad et al.
United States against The Lehigh Valley Railway Co. et al.

The last two cases involved combinations in coal.

Hope of relief may come from the courts if the people can only remain patient a little while longer. But I predict that unless Congress will by some legislation retire some of the reactionary judges and substitute others who will enforce the law, the people will sooner or later take the matter in hand. Look at the landmarks. Just a few days ago the press dispatches reported that the homes of the Danbury hatters would have to be sold to pay a judgment of $252,130, and that the sale of the homes of these workingmen would aggregate $200,000. I repeat, look at the landmarks. The only time the courts gave true expression and intent to the Sherman antitrust law was when the laboring man's rights were involved. This necessitated a law from Congress exempting the farmer and the laborer from the operation of the Sherman statute. And now some of these same men are opposing this legislation who were opposed to the Clayton antitrust law, and to an act passed by the Senate, during the last Congress, which made possible the retirement of some of the judges who are not in sympathy with the persons to be benefited by this proposed measure. The Attorney General has well said, in answer to criticism for failure to enforce the Sherman law, that—

The executive department alone can not enforce these laws. It must have the sympathetic cooperation of the Federal courts. I regret to say that a number of the Federal judges always have been, and are still, apparently reluctant to enforce the Sherman Act.

The food and coal gamblers have been reaping a new harvest during the last year. Indictments have been obtained by the Department of Justice, but, Mr. Chairman, does this Congress still hope for relief from a source not in sympathy with the enforcement of the law? Juries will readily indict and convict, but the verdicts are futile if a court will nullify them with an apology.

You can not kill this bill by crying "dictator!" so long as the shadow is cast by selfishness, avarice, greed, and the influence of the German autocracy. Your vote must be either for or against all these when it comes to voting on the bill.

If you are not going to profit by the mistakes of our allies during this war, I ask you to look back and visit again the camp at Chickamauga Park and other camps during the Spanish-American War. Look at that greenish, slimy meat. Who has furnished it but the food gambler? Look at Crawfish Spring, with its sweet and pure water, along the camp, bursting forth in ample quantity to quench the thirst of the weary soldiers and cool the brow of the sick in the hospital. Then ask why, O why, these soldiers are not permitted to drink of its refreshing water, and why they are compelled to haul their supply in barrels from sources 4 and 5 miles distant. Do not you see standing there the gambler and speculator shaking the dice for the life or death of the boys who volunteered that Cuba might be free? The gambler must have his share, and what is the result in the camp? Disease, sickness, and death among the bravest of the brave who were sent there to be hardened before they went to battle against Spain. Yes, Mr. Chairman, they were sent to the southern camp to be hardened, and at the end of four months' training two-thirds of the 60,000 were sick and unfit for duty, while not a few had made their last campaign on earth, and lost, because of the food gambler.

I ask you, Are you not going to profit by these mistakes because of fear of a "dictator"? Gentlemen, I want you to remember that we won during the Spanish-American War not because of our strength but because of the weakness of the enemy. The present war offers quite a different aspect. Germany is highly organized and in full control of all her resources, and we can not win this struggle unless we require every man, whether in the trenches, in the factory, or on the farm, to do his part. The temper of the American people will stand for nothing less. The man or woman who will refuse is not worthy longer to enjoy the blessings of a democratic government. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield one hour to the gentleman from New Jersey [Mr. HUTCHINSON].

Mr. HUTCHINSON. Mr. Chairman, I have the honor to be a member of the committee that prepared and has offered for your consideration the measure now under discussion, and while I do not approve of all the provisions, yet I favor its immediate passage in order that the security of the Nation, from the standpoint of food and fuel, may be assured and the present supply conserved and the future production greatly increased.

There will undoubtedly be some objections to the unlimited authority given to our President by the bill, but such authority is to be used only when the situation is such that conditions make it necessary for him to act, and at such times he should have power to use every possible resource for the control and regulation of the food and fuel supplies for the benefit of the country.

To those that make such objections I might add that the authority given to the President is more than overbalanced by the responsibility we are placing on his shoulders for carrying out the provisions of the bill. The question involves the production, conservation, storage, transportation, distribution, and finally the consumption of the food and fuel supply of the Nation, so that not only the millions of this country but the nations of the world, especially our allies, can depend on receiving sufficient food and fuel during this crisis.

On account of the size and location of our country the matter of production has concerned us but little in the past, but with increased population and export demands from nations not so favorably situated we have been brought to realize the necessity of some action that will increase and make available at reasonable prices the supply of both food and fuel.

It is for these reasons that the passage of this bill is desired, and to my mind never has a more important piece of legislation been considered, for it aims to regulate the necessaries of life on which depends the existence of the Nation.

In referring to the regulatory features of the bill your attention is directed first to section 5, which provides that, whenever the President shall find it essential, he may license the importation, exportation, manufacture, storage, or distribution of any necessaries, and he is further authorized to prescribe such regulations governing the conduct of the business of the licensees as may be essential to prevent uneconomical manufacture and inequitable distribution of such necessaries.

If it becomes necessary for the President to avail himself of this authority it will do at least two things, first, place the Government in control of every branch of the food and fuel business, and second, place that business on a scientific basis, the value of which would soon be appreciated by both the business man and consumer.

Section 6 prohibits the willful hoarding of necessaries for the purpose of unreasonably increasing or diminishing prices by persons other than the original producers of the products of any farms, gardens, or other lands owned, leased, or cultivated by him.

This provision is bound to release for consumption large quantities of food and fuel that now and for some time have been held for just what the section prohibits.

Section 9 authorizes the President to purchase, or provide for the production or manufacture of necessaries, to store and provide storage facilities for them, and to sell them; also to requisition necessaries and storage space therefor and to fix reasonable prices to be paid for the same by the Government, such prices to be subject to review by the courts. It is expressly provided that no natural person shall be required to furnish to the Government any necessaries held by him and reasonably required for consumption by himself and dependents for a reasonable time.

This section, in my judgment, covers the entire situation, for if it becomes necessary to take such a step, immediately all values will be based on the figure named by the President, and the fact that such authority is available, business will adjust itself, so that the use of such power may not be necessary.

Section 11 authorizes the President to prescribe regulations governing or either wholly or partly to prohibit operations, practices, and transactions on, or subject to the rules of, exchanges on which necessaries are dealt in, in order to prevent undue enhancement or fluctuation of prices, injurious speculation, unjust market manipulations, and unfair and misleading market quotations. He may also require records to be kept and reports to be made of all such transactions.

This section applies to the operation of exchanges trading in necessaries and will give the Government general supervision over these essential and indispensable agencies and compel them to render to the trade the service for which they were established.

Section 12 authorizes the President, when he finds that an emergency exists requiring stimulation of production, to fix from time to time a reasonable, guaranteed price for necessaries, in order to assure the producer a reasonable profit. The Government guarantees the receipt of the price by domestic producers who rely upon the guaranty and comply with the President's regulations. Whenever the President shall find that the importation of necessaries produced outside of the United States seriously interferes, or is likely seriously to interfere, with the practical operation of the guaranteed price plan, or materially enhances, or is likely materially to enhance, the liabilities of the United States under the price guaranty, there is levied a duty upon importations of such necessaries at a rate to be ascertained and proclaimed by the President, which, added to the value of the article at the time of entry, will be sufficient to bring its price up to the guaranteed price. In no case shall such rate be less than the rate fixed by existing tariffs. In order to make the guaranty effective, the President is authorized to purchase products covered thereby and to use or dispose of them.

This section means the establishing of minimum prices, a practice to which I am strongly opposed, as I do not think any farmer or producer, after seriously considering the situation, will desire it, nor do I think we ought to empower the President to fix duties on importations if we could. What the farmer wants is assistance from the Government to enable him to produce at a minimum expense a maximum crop from the soil under cultivation, and this can be done only by returning to the soil in the form of plant food the life and energy taken by the growing plant.

For years those interested in agriculture have been alarmed by the constantly increasing number of abandoned farms and reduced production, especially in the great Western States, and no permanent improvement in crops or reduction in prices can be looked for until every acre of land under cultivation is made to yield the maximum crop.

It has been the practice in some parts of our country for farmers to settle on virgin soil, plant and harvest the crops such soil would produce, and in a few years when the soil is worked out and of little value he would then move to another section and apply the same methods. Little attention was given to this practice, because at that time our population seemed limited and the supply of farm lands unlimited, but conditions have changed in the last 25 years, and now our population seems unlimited and the supply of land limited, and the result is that the crops are about one-half what the soil should produce, while the demand is constantly increasing.

Just what this means is hardly realized by the average person, as the Government has no statistics or estimates of the yearly depreciation in dollars per acre of farm land, but the several State experimental stations throughout the country, after a careful study, have estimated the loss or depreciation in land value to be from $3 to $4 per acre every time a crop is taken from the soil and no plant food returned. It is for this reason we have been compelled to increase our acreage in order to produce enough to supply our ever-increasing population, but instead of solving the problem the additional acreage has required more labor and burdened the farmer with other expenses until the business, especially that of raising wheat, has become unprofitable.

The following figures should convince you of the necessity of helping the farmer produce a greater yield, which would enable him to increase his profits and at the same time lower prices for the consumer.

	Population.	Acres.	Yield.	Bushels per acre.
			Bushels.	
1890	62,947,714	39,917,000	611,781,000	15.3
1916	102,017,310	52,785,000	639,886,000	12.1
1917	.....	46,692,000	[1] 656,000,000	14

[1] Estimated.

In the 1917 estimated yield there is included 283,000,000 bushels of spring wheat which has about two months more to go until harvest. At this time last year the same crop was estimated at 245,801,000, but unfavorable conditions prevailed after the figures were made up and the final yield was reduced to 158,142,000 bushels. Should the same happen this year our total wheat crop would be less than 500,000,000 bushels.

You will notice from the above figures that our population has increased about 40,000,000 during the past 25 years while the wheat production shows an increase of only 28,000,000 bushels. If the allowance of 6 bushels per person is required our increase should have been 240,000,000 bushels to keep pace with the growing population.

Unless our method of farming is changed, I predict that inside of 10 years it will be necessary for us to import wheat to feed our people.

The lack of fertilizer is largely responsible for the enormous wheat acreage plowed up this spring on account of winterkilling, which is estimated at 16,000,000 acres, and is chiefly caused

by the plant not having sufficient strength to stand the changeable winter weather.

That the grain situation is serious is evident from the official statement made public June 18 which shows that the supply of wheat during the previous week decreased 3,716,000 bushels, making the visible supply in the United States 20,142,000 bushels. This includes Canadian wheat now in store in the United States but has nothing to do with the visible supply in Canada.

Corn decreased 713,000 bushels, making the visible supply 3,437,000 bushels. Oats decreased 2,897,000 bushels, making the visible supply 13,793,000 bushels.

The foregoing figures compare with one year ago, as follows: Wheat at that time including Canadian within the borders of the United States and our own grown in the United States was 51,223,000 bushels. Corn was 10,127,000 bushels, and oats was 14,534,000 bushels.

Corn and oats are all United States grown grain.

It is interesting to note at this time that we have a visible supply of 20,142,000 bushels of wheat with a possible 20,000,000 bushels more in the farmers' hands, and still six weeks to go before new wheat will be available for use, while last year we had a carry over of about 170,000,000 bushels.

The movement of wheat at primary markets of the United States from July 1, 1916, to June 1, 1917, was about 365,000,000 bushels, compared with 487,000,000 bushels the corresponding time in 1915 and 1916. Exports of flour and wheat during the same time were about 173,000,000 bushels compared with 230,000,000 bushels for the same time the year previous, showing a decrease of 52,000,000 bushels, or about 22½ per cent less than the crop year of 1915 and 1916.

We can learn a great deal from the methods of farming employed by Germany, with a population of 70 per cent of the United States, and with only 25 per cent as much soil under cultivation, they grow 95 per cent of the food products required by their people. The reason for this is that the soil is forced to yield the maximum crop by the application of plant food necessary to bring this about, and the Government takes advantage of every opportunity to encourage the farmer by furnishing him with this material at the least possible cost.

They have absolute control of the potash situation, and that they fully realize and appreciate their position is evident from a statement made in the Reichstag on March 22 of this year by Vice Chancellor Helffrich, who said when predicting another bad harvest, that—

The bad international harvest is not accidental. It is due to the scarcity of saltpeter, and the world's next harvest will be bad owing to the same reason. Germany now has the lowest grain prices in the world. It is due to our firmly fixed policy since the beginning of the war. Present conditions wil lcontinue to prevail after the conclusion of peace, so that no progressive decrease in prices will occur in other countries. Furthermore, we shall all receive no grain from abroad and must take precautions that none be exported.

That our Nation is face to face with a crisis can not be denied, and the principal object of this bill is to remedy that condition.

The American farmer has been called upon as never before to produce maximum crops, and never before have factors that enter into production been so unfavorable. He will respond to the best of his ability, and by most careful economy of distribution and consumption the demands of the Nation and of our allies can be met. But under conditions with regards to labor, fertilizer supply, and unfavorable weather the demand can only be met by a great increase in the cost of production and consequent high prices for the product.

The tremendous desertion of farm labor for the city, due to the high wages paid by munition and manufacturing plants and the additional drain to be caused by the call to arms is a factor appreciated by many; but the critical condition of the fertilizer supply for the American farmer is understood by few. Yet the use of large amounts of fertilizer offers the quickest means of producing the supply of food needed, and at a reduced cost, by increasing the yield per acre without additional labor. While the war prices of food have intensified the situation and brought the food-control bill before this Congress, the high cost of all farm products was a problem of increasing seriousness to the American people before the war. The solution of the problem lies in an increase in the yield per acre without additional cost, and this result can be obtained by the application of cheap fertilizer on a scale that will replenish the soil with the elements which have been depleted by the wasteful agricultural system of the past.

Consideration was given to this problem more than a year ago, and those of you who were in the Sixty-fourth Congress will recall the passage of the military bill which was approved June 3, 1916, one of the provisions of which carried an appropriation of $20,000,000 for the purpose of determining and establishing the most available means for the production of nitrate.

We have been informed that two or three commissions have been appointed and, after investigation, reported to those having the matter in charge; but up to this time apparently nothing definite has been accomplished, and, so far as I know, absolutely nothing is being done in the way of producing nitrate, a material so essential in the manufacture of both munitions and fertilizer.

In advocating the necessity for a nitrate plant, from the standpoint of fertilizer alone, I quote from the hearing before the Committee on Military Affairs, February 11, 1916. Mr. Frank S. Washburn, of New York, whose authority on such matters has never been questioned, was asked by Mr. SHALLENBERGER:

Is it not a fact that the tremendous increase in the price of our fertilizer is going to add materially to the cost of food products if the shortage is not relieved?

Mr. WASHBURN. Unquestionably so.

Mr. SHALLENBERGER. Is it not the opinion of those who are studying the matter that inevitably the price is bound to be higher next year than it is this year, if the war goes on?

Mr. WASHBURN. Fertilizers are high in price, and will undoubtedly continue so during the war, and high-priced fertilizer, of necessity, means high-priced food

When you think of it, American agriculture needs fertilizer far more than Germany, because Germany has the intensive method of cultivation, with cheap labor—labor that costs only about a quarter or a fifth of what our labor costs here.

The fertilizer is essentially a labor-saving device. In every other industry when we have high-priced labor we turn to labor-saving devices. So that the low cost of an efficient fertilizer in unlimited quantities in this country will substantially help not only to reduce the cost of food but will help to maintain the wage or the returns to the man in the field.

The following comparative prices will confirm the above statement:

Retail prices.

	Before the war.	Now.
Raw bone.....per ton.	$35.00	$45.00
Farmer's special potato.....do....	35.00	103.00
4-8-3 Potato "Used this year".....do....	28.00	61.00
Corn mixture.....do....	25.00	49.00
Grain manure.....do....	25.00	49.00

Cost of materials, wholesale.

	Before the war.	Now.
Sulphuric acid.....per ton..	$8.00	$50.00-$60.00
Acid phosphate.....do....	7.50	16.00
Tankage.....per hundredweight..	$2.25-2.50	5.50- 6.00
Potash.....per ton..	35.00	[1] 350.00-400.00
Nitrate of soda.....do....	35.00	82.00

[1] And has been to $600.

The question of fuel is also covered by this bill and I would favor an amendment dealing with this subject separately and making it compulsory for the Government to take over and operate the coal mines during this crisis.

Conditions are such that it is almost impossible to buy coal at a price and of such quality that will allow the industries of our country to operate at a profit, and many plants will soon be compelled to shut down unless some relief is given.

This condition also applies to the private citizen who is unable to get any assurance that it will be possible for him to be supplied with coal for next winter.

The Federal Trade Commission have issued several statements claiming that the supply of coal is unlimited and that there is no reason for the present high prices charged for coal.

The advance including the increase in wages and freight rates will not exceed $1 per ton, but to-day it is almost impossible to buy either anthracite or bituminous coal unless a premium of from two to four dollars per ton is paid over the prices charged two years ago. Even at these prices there is no guarantee as to quality and it is claimed that operators are mixing with coal the accumulation of mine dirt and are shipping the same on contracts regardless of grade.

I know from my own experience that contracts made at $3.50 per ton are not being filled, yet orders will be accepted and shipments made at $6.50 per ton.

I have had several complaints regarding the coal situation and have taken the matter up with the Federal Trade Commission but have met with little success, the only reply I received stated that the matter was under consideration.

I would like to have the Clerk read for your information an editorial from the Trenton Evening Times, of Trenton, N. J., showing the need for Government supervision of coal mines.

COAL PRICES.

[Editorial from the Trenton Evening Times, Trenton, N. J., June 16, 1917.]

A committee of the Manufacturers' and Business Men's Association of Brooklyn investigated the coal situation and reported that there is no shortage of coal, but that the crisis was created by the juggling of prices by sales agents and speculators. The report is to be laid before the Federal Trade Commission, and Congress will be asked to pass a law giving to that commission power to fix prices at the mines.

The need of such a law is shown by the statement made by one of the silk companies of Paterson, which in 1914 bought a good grade of "smokeless" bituminous coal for $1.25 per gross ton, free on board at the mines. In 1915 the price was advanced to $1.35; in 1916 to $1.50, and during the present year it has been jumped to $5.50 per ton for the low grade. Another company that paid $3 per gross ton for buckwheat coal in 1914 and 1915, is now paying $5 for a "short" ton, and $8 for bituminous coal.

Transportation rates are fixed and have not been increased. If there have been changes in the prices of labor, they have been but a few cents per ton, not sufficient to justify increases of from 100 to 300 per cent in selling prices at the mines. The Federal Trade Commission has been investigating for several weeks and should be prodded into action that will give relief.

In trying to impress the public with the necessity of food control many misstatements have been made, and I call your attention to an article appearing in the Washington Star of June 14, 1917, referring to a conference at which Mr. Hoover was present:

Figures were quoted at the conference to show abnormal profits taken by the middlemen. The statement was made that while flour is selling for around $15 per barrel, it is being manufactured in the West at a cost of about $7 and could be sold at $8 or $9 and still give a good profit to the dealers. The middleman, it is declared, in flour alone is taking $120,000,000 profit monthly from the American people.

Statements of this character are absolutely wrong and are creating impressions that will be hard to overcome. At the present price of wheat flour can not be produced for the price it is selling for to-day.

Following is the cost of flour, based on the cost of wheat last week. The average mill figures on 5 bushels or 300 pounds of wheat:

Five bushels, $3.13¼ per bushel	$15.66¼
Cost of manufacture	.50
Package or barrel	.40
Commission for selling	.10
Total cost	16.66¼

This wheat will produce the following:

180 pounds patent flour, at $15 per barrel	$13.50
16 pounds low-grade flour, at $6 per barrel	.48
4 pounds loss in manufacturing	.00
30 pounds middlings, at $1.75 per hundredweight	.52
70 pounds bran, at $1.50 per hundredweight	1.05
	15.55

This shows an actual loss of $1.11¼ per barrel for flour made from wheat purchased on the open market.

I have endeavored to cover the bill with the idea of showing the importance of not only conserving our present small crops but the necessity of doing everything possible to bring about greater production. [Applause.]

Mr. AUSTIN. Has the gentleman any figures showing what the farmer gets for his wheat?

Mr. HUTCHINSON. He got $3.25 six weeks ago. That is what I paid.

Mr. AUSTIN. Did the gentleman buy the wheat directly from the farmer?

Mr. HUTCHINSON. Yes.

Mr. AUSTIN. Does the gentleman recall the statement made by the gentleman from South Carolina [Mr. LEVER] quoting the price of flour in Liverpool at $8 per barrel?

Mr. HUTCHINSON. I was not here at the time, but I think the gentleman is mistaken.

Mr. AUSTIN. He fixed it at $8 a barrel, and the gentleman from Pennsylvania calls my attention to the fact that Mr. Hoover stated that they are selling it at that price now. Now, if wheat costs $3 a bushel, how can they afford to sell flour in Liverpool at $8 a barrel?

Mr. HUTCHINSON. They can not; the freight costs 60 cents a bushel.

Mr. ROSE. I notice that Mr. Hoover is quoted in the Washington papers as saying that flour is now selling at $8 or $8 and a few cents a barrel in Liverpool.

Mr. HUTCHINSON. Perhaps the Government is paying the difference with the money that we are loaning them.

Mr. ALEXANDER. May it not be that England bought the wheat out of which this flour is made some time ago, and the farmer did not get more than $1 a bushel for his wheat?

Mr. HUTCHINSON. The wheat that was bought for $1 a bushel was soon ground up into flour, for no mill can hold more than two days' milling.

Mr. ALEXANDER. I want to disabuse the minds of gentlemen that the farmer is getting $3 for his wheat. Now and then you may find a farmer who gets that, but the quantity is negligible compared with the vast quantity of wheat grown in the West.

Mr. HAUGEN. The farmer who has wheat is getting $3 a bushel.

Mr. ALEXANDER. Oh, a very few farmers that held on to it.

Mr. HAUGEN. But there are some.

Mr. FESS. Will my colleague yield for one question?

Mr. HUTCHINSON. Yes.

Mr. FESS. The gentleman who is speaking is a manufacturer of flour and a purchaser of wheat and evidently knows whereof he speaks. I saw in the paper a statement that flour ought to be sold here at $9 a barrel, and when it is sold for so much more it is apt to produce a bad situation in the public opinion of the country. I would like to know from the gentleman's standpoint, from the standpoint of a manufacturer of flour, whether that is possible to-day.

Mr. HUTCHINSON. It is not. The figures that I gave are the actual cost of the wheat. It takes 5 bushels in the average mill to make 200 pounds, or a barrel of flour. If the miller buys wheat at $1.20 he can sell the flour for $6 a barrel. If he buys it at $2 a bushel he has got to sell at $10 a barrel. We know that wheat to-day is sold for over $3 a bushel.

Mr. DENISON. Where do the millers obtain their wheat now?

Mr. HUTCHINSON. They can hardly get it.

Mr. DENISON. Then how do they make the flour?

Mr. HUTCHINSON. A great many mills are shut down absolutely, waiting for the new harvest. About all of the available wheat supply of the country is 20,000,000 bushels, and there is supposed to be about the same amount in the farmers' hands.

Mr. HARDY. Do I understand the gentleman to say that it takes five bushels of wheat to make a barrel of flour of 196 pounds?

Mr. HUTCHINSON. The average mill takes that. Some take less and some more, according to the system used in the mill.

Mr. HARDY. What do they do with the other pounds of wheat?

Mr. HUTCHINSON. There are 30 pounds of middlings and 70 pounds of bran which goes for feed.

Mr. HARDY. Do not these by-products have a great value themselves?

Mr. HUTCHINSON. Middlings to-day are sold at $35 per ton and bran at $30 per ton.

Mr. HARDY. What would that make the total selling value? If you make flour enough to cover the cost of the wheat, how much profit would that leave to the middleman in these by-products?

Mr. HUTCHINSON. What does the gentleman mean?

Mr. HARDY. Wheat weighs 72 pounds to the bushel?

Mr. HUTCHINSON. Sixty.

Mr. HARDY. So that you would have 300 pounds of wheat out of which you get 196 pounds of flour, leaving 104 pounds for something else?

Mr. HUTCHINSON. We figure a loss of 4 pounds in manufacture.

Mr. HARDY. Then 100 pounds of by-products?

Mr. HUTCHINSON. Yes.

Mr. HARDY. And that is worth something?

Mr. HUTCHINSON. Yes; it is worth $1.57 to-day.

Mr. HARDY. So that upon 5 bushels of wheat, if the flour sold for as much as the wheat come to, there would be a profit of $1.57?

Mr. HUTCHINSON. Yes; if you sold it at the same price you paid for the 5 bushels of wheat.

Mr. BORLAND. Mr. Chairman, will the gentleman yield?

Mr. HUTCHINSON. Yes.

Mr. BORLAND. Mr. Chairman, I have always understood that one of the purposes of bleaching flour is to increase the amount of bread value that could be made out of the same amount of wheat. Is that true?

Mr. HUTCHINSON. No; the purpose of bleaching flour is to age it. We do not consider flour that is fresh milled good until it has a month's age. By the bleaching process you can use it right away. It ages it.

Mr. BORLAND. It is not for the purpose of increasing the amount of flour that can be made out of the wheat?
Mr. HUTCHINSON. Not at all.
Mr. BORLAND. Is it not true that you can increase the amount of flour that is made out of the wheat? Can you not increase the percentage of flour?
Mr. HUTCHINSON. You can put germ middlings into it or middlings, but that reduces the keeping quality in it.
Mr. BORLAND. That is what I wanted to ask the gentleman. What is the effect of increasing the amount of flour that is made from the kernel of wheat?
Mr. HUTCHINSON. It has several effects. In the first place, it has an effect upon the color. The average mill tries to make the flour as strong as possible. In other words, you take 50 per cent patent and it will give you from 325 to 350 loaves of bread per barrel, and if you make it 80 or 90 per cent patent you reduce the loaves of bread.
Mr. BORLAND. You mean that 90 per cent of the wheat has gone into the patent flour?
Mr. HUTCHINSON. Ninety per cent of all of the flour in the wheat.
Mr. BORLAND. Has gone into the so-called patent flour?
Mr. HUTCHINSON. Yes.
Mr. BORLAND. You say that makes a stronger flour?
Mr. HUTCHINSON. Yes.
Mr. BORLAND. Is the flour just as nutritive if you use a higher percentage of wheat?
Mr. HUTCHINSON. Some people claim it is, but I think it is an injury to health, provided you use too much. Statistics show that.
Mr. BORLAND. In a time when it is absolutely necessary to conserve all of the wheat supply, would it be practical to use a larger percentage of wheat in the manufacture of flour?
Mr. HUTCHINSON. You would reduce the quantity of bread. In other words, if you use a percentage of middling, or bran, you lower the grade, and the lower the grade the less bread you get out of it.
Mr. BORLAND. The gentleman does not think by increasing the percentage of wheat that is used in the so-called patent flour you could increase the bread supply?
Mr. HUTCHINSON. Oh, you would reduce it wonderfully.
Mr. LONDON. Does the gentleman believe that the control of food supply should have begun long ago?
Mr. HUTCHINSON. It might have been of benefit; yes.
Mr. LONDON. If it had begun months ago?
Mr. HUTCHINSON. Yes.
Mr. REED. Mr. Chairman, will the gentleman yield?
Mr. HUTCHINSON. Yes.
Mr. REED. In reply to my colleague's question the gentleman stated the mills were getting no wheat, that they were shutting down, not manufacturing. Where are the grocers that are furnishing flour getting their supply of flour? Where is it stored?
Mr. HUTCHINSON. A great many of them bought ahead. A great many grocers bought flour when it was up to $18 a barrel, and then there is something else of which I can personally speak. Six weeks ago the people in my town began to purchase flour. We were selling as high as fifty and sixty 98-pound bags a day. The consumers themselves were hoarding it, and lots of them have flour enough to last them for a year. At present prices to-day they are not buying any flour. They have all of the flour they want, on account of this agitation and talk, thinking they were never going to get any more.
Mr. SWITZER. Will the gentleman yield?
Mr. HUTCHINSON. I will.
Mr. SWITZER. Does the gentleman have any notion as to what the farmer figures the cost of producing a bushel of wheat this year, say, in North Dakota?
Mr. HUTCHINSON. We had a gentleman from North Dakota before our committee and he figured the cost of wheat at $1.95 a bushel.
Mr. SWITZER. To produce it?
Mr. HUTCHINSON. Yes; to produce it.
Mr. MEEKER. Will the gentleman yield?
Mr. HUTCHINSON. I will.
Mr. MEEKER. How much did the gentleman say?
Mr. HUTCHINSON. One dollar and ninety-five cents a bushel.
Mr. MEEKER. To produce the wheat?
Mr. HUTCHINSON. Yes. His idea was to get the committee to fix the minimum price.
Mr. MEEKER. At $1.95?
Mr. HUTCHINSON. Oh, no; more than that; that is the cost.
Mr. MEEKER. That is going some, even for economy.
Mr. YOUNG of North Dakota. It is the truth, however.
Mr. MEEKER. It costs $1.95 to produce in North Dakota?
Mr. YOUNG of North Dakota. Certainly.
Mr. MEEKER. And without any profit?
Mr. YOUNG of North Dakota. It costs more than that. If the gentleman will read my speech, he will see I am right about that.
Mr. MEEKER. I read it in the middle of the night.
Mr. HAUGEN. Will the gentleman yield?
Mr. HUTCHINSON. I do.
Mr. HAUGEN. The gentleman is a miller and has experience, and I would like to ask the gentleman, with the price of flour fixed at $9 a barrel, if that is settled upon, what price should be paid to the farmer for wheat?
Mr. HUTCHINSON. We figure $1.80. We generally figure the bran and middlings will pay all expenses of manufacture and sale.
Mr. HAUGEN. That is the cost of manufacturing?
Mr. HUTCHINSON. Yes.
Mr. HAUGEN. How much would it net the farmer per bushel at $9?
Mr. HUTCHINSON. One dollar and eighty cents. We figure the cost of manufacture, selling, the profits of the retailer, and all. We would get probably about $7.50 wholesale at $1.80 wheat.
Mr. SIMS. Will the gentleman permit another question?
Mr. HUTCHINSON. I will.
Mr. SIMS. Does that include transportation charges from the far West, such as North Dakota?
Mr. HUTCHINSON. The price I gave includes the cost.
Mr. SIMS. So that if the transportation were near by it would not really cost that much to the miller?
Mr. HUTCHINSON. The price we pay is generally fixed, for instance, if the farmer lives near a mill in New Jersey, he would get just about the price we pay for wheat on cars delivered at our station.
Mr. SIMS. Gets that much more?
Mr. HUTCHINSON. He would get the same.
Mr. AUSTIN. Has the gentleman any information as to what wheat is selling for in England?
Mr. HUTCHINSON. I have no such information.
Mr. LEVER. I will say to the gentleman, if I may be permitted, the information I have is that wheat is selling in England, April, $2.45 a bushel. I think Mr. Hoover repeated that statement to the Senate committee yesterday, although I have not had time to go carefully over his statement.
Mr. AUSTIN. What was wheat selling for here at that time?
Mr. LEVER. Something over $3.
Mr. HICKS. Will the gentleman yield for a question?
Mr. HUTCHINSON. Certainly.
Mr. HICKS. What is the price of flour in England; about $9.20 a barrel?
Mr. LEVER. I just glanced at Mr. Hoover's statement in the paper. I have not had time to read it carefully.
Mr. HICKS. That is where I got the statement from.
Mr. LEVER. I got the impression flour was selling at about $9 a barrel.
Mr. HICKS. Does the gentleman know whether that is correct of not?
Mr. LEVER. That is also an impression I got from figures furnished by the Department of Agriculture.
Mr. AUSTIN. Where do they get their figures?
Mr. LEVER. I presume they take them from the London papers.
Mr. HICKS. Why do we pay higher for it in this country than they do in England when it is all probably made from American-grown wheat?
Mr. LEVER. Because we have not got the control of the machinery of marketing, which is what we are tryng to set up now.
Mr. HICKS. The difference between the price in England and here then is probably due to unscientific methods of handling plus the lack of regulations as to distribution—the slack which this bill seeks to remedy.
Mr. LEVER and the hurley-burly chaotic condition of the market.
Mr. HITCHINSON. I want to answer Mr. HICKS. I want to say this: We are sending about 8,000,000 bushels of wheat, and they are paying the same price for it we do, and how they can sell flour for that price I do not know and I do not believe it.
Mr. HICKS. The gentleman doubts the truth of the statement as given in this morning's papers?
Mr. HUTCHINSON. Yes.
Mr. HAUGEN. In estimating wheat at $1.80 a bushel, that is at the mill?

Mr. HUTCHINSON. That is at the mill.

Mr. HICKS. And from that deduction must be made for freight and transportation to the mill and the commission of the elevator man?

Mr. HUTCHINSON. That is delivered at the mill.

Mr. HAUGEN. Which would probably reduce it how much to the farmer? For instance, you buy your wheat and ship it to your mill, what would be the expense of handling it?

Mr. HUTCHINSON. I think wheat which costs us $1.80 in New Jersey, spring wheat, would probably net the farmer of North Dakota $1.40.

Mr. MILLER of Washington. Speaking of your basis on the production of the pounds of flour to a bushel of wheat, what quality of wheat are you referring to—hard wheat, soft wheat, spring or winter wheat, or what grade?

Mr. HUTCHINSON. That is on hard wheat.

Mr. MILLER of Washington. Winter wheat?

Mr. HUTCHINSON. No. 1 hard spring wheat.

Mr. MEEKER. In a discussion here a moment ago it was suggested by one of the Members that about five bushels of wheat are necessary to make a barrel of flour.

Mr. HUTCHINSON. That is the ordinary run. It has been down as low as four and one-half bushels. It is according to the system of the mill.

Mr. MEEKER. Let us take the suggestion of the gentleman from North Dakota, of wheat at $1.95, it would make the cost of that flour $10. Does this bill hold out to the ultimate consumer the hope that he would get his flour less than $18 a barrel?

Mr. HUTCHINSON. I do not think he will do that, unless wheat is sold less than $3.25 per bushel.

Mr. HAUGEN. If the arbitrary price is fixed at $9, the farmer has got to take what he can get.

Mr. MOORE of Pennsylvania. The gentleman from Illinois [Mr. GRAHAM] made a speech yesterday and inserted in the RECORD this morning a statement from the British Embassy as to the cost of food supplies in England. In that statement the British ambassador fixed the price of flour on May 19 at $8.20 a barrel in England. Mr. GRAHAM said he made inquiry as to the price of flour in the United States at that time and found it quoted in Washington at $17.60 a barrel, making a difference of $9.40 as between the cost of flour in England and the cost of flour in the United States. In the papers this morning Mr. Hoover is quoted as saying that the allies' food supply will be 40 per cent deficient even with American food supplies assisting, and that the deficiency must be made up by sacrifice abroad and economy here. Now, I wanted to ask the gentleman whether, if the allies' food supply is 40 per cent deficient and they are paying one-half per barrel for flour what the people of the United States are paying, how we are going to reduce the cost of living in the United States if we continue to send our flour to England to be sold at one-half the price it is sold for here?

Mr. HUTCHINSON. I do not think it can be done; neither do I think it is done.

Mr. MOORE of Pennsylvania. The gentleman thinks the statement of Mr. Hoover is not correct?

Mr. HUTCHINSON. I do not think that he made the statement. However, if he did, I do not think it is right.

Mr. MOORE of Pennsylvania. I understand the gentleman's position. He is informed on this question. But the British ambassador states in his letter to Mr. GRAHAM of Illinois that the price of flour over there is $8.20 a barrel, and Mr. GRAHAM states that in the United States $17.60 per barrel is asked at the present time, and Mr. Hoover states that the allies' food supply is 40 per cent deficient. To me it is an anomalous condition. It is anomalous that the price should be so high in the United States to the people who are producing the food and so low to the people in England who are not at the front fighting the battles.

Mr. HARDY. Will the gentleman yield?

Mr. HUTCHINSON. I will.

Mr. HARDY. Will the gentleman tell the committee what, as a minimum, he paid for wheat last July and August when the new crop came in?

Mr. HUTCHINSON. I do not recall. I am not sure.

Mr. HARDY. Not over $1.50?

Mr. HUTCHINSON. No; we did not pay that much.

Mr. HARDY. Now, is it not a fact that over 90 per cent of the wheat bought by the millers of England was bought at about that figure?

Mr. HUTCHINSON. I think they have bought a good deal, and my judgment is they have bought a good deal of the next crop.

Mr. HARDY. Is it possible that the low price of the English crop is due to the fact that the great bulk of the wheat was not bought at the high prices for the little remnants that are being bought, but was bought at prices of $1.50 or $1.80 a bushel?

Mr. HUTCHINSON. The average miller generally follows the market.

Mr. HARDY. The gentleman thinks by a species of abuse the remnant now in the hands of the farmer can be run to $3 a bushel and the miller ought to take the profit and the people pay for the whole crop on the basis of the remnant? For that very reason it is very necessary that some control over the distribution and disposition of crops should be had somewhere in order to hold a reasonable average.

Mr. HUTCHINSON. I will ask you this question: Suppose Mr. Hoover is the dictator of food, and he fixes the minimum price, which he has got to do before the wheat is planted. We have two seasons, as we have spring wheat and winter wheat. He fixes the price on winter wheat, we will say, at $1.50, and by some unforeseen event the spring wheat is a failure. How will the farmer feel after his winter wheat is sold and the price goes up? How are you going to regulate it by this law?

Mr. MEEKER. Mr. Chairman, will the gentleman yield again?

Mr. HUTCHINSON. Yes.

Mr. MEEKER. A friend of mine, who is a commission man in St. Louis, told me that following the speech of the Secretary of Agriculture some weeks ago, when he sent out the scare words that we were going to be short on wheat, everybody was frightened and wheat went up. We are condemning the men in the Chicago Board of Trade—and I am not here particularly to defend them in any way—but here is what occurred: The Kansas millers, the Nebraska millers, purchased wheat from this St. Louis commission man at $3 a bushel to grind into flour to sell to the Kansas farmers to haul that flour home in 5 or 20 barrel lots to feed themselves. That is what put this price up. Is there anything in this bill that is calculated to get hold of that Kansas farmer after he has got his 15 barrels?

Mr. HUTCHINSON. No; this law exempts him.

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield?

Mr. HUTCHINSON. Yes.

Mr. LONGWORTH. What was the price of flour when wheat was $1.80 a bushel?

Mr. HUTCHINSON. Nine dollars.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

Mr. HUTCHINSON. Yes.

Mr. SWITZER. If it costs the English Government $1.50 a bushel here for wheat, it costs another 60 cents a bushel to get it to Liverpool, does it not?

Mr. HUTCHINSON. Yes; that is right.

Mr. SWITZER. That will make it cost $2.10 a bushel at Liverpool?

Mr. HUTCHINSON. Yes.

Mr. HAMILTON of Michigan. Mr. Chairman, may I ask the gentleman a question?

Mr. HUTCHINSON. Yes.

Mr. HAMILTON of Michigan. Before the loaves of bread began to shrink in size under normal conditions preceding the war, how many loaves of bread was it estimated that a bushel of wheat would make?

Mr. HUTCHINSON. Taking it on the barrel basis, the average loaves of bread made were according to the quality of the flour. For instance, low-grade flour will not make more than 200 loaves, while patent flour will run up to 325 or perhaps 350 loaves.

Mr. HAMILTON of Michigan. That makes how many to the bushel; about 60 on the average?

Mr. HUTCHINSON. Yes; about 60.

Mr. HARDY. Mr. Chairman, will the gentleman yield?

Mr. HUTCHINSON. Yes.

Mr. HARDY. It makes how many loaves did the gentleman say?

Mr. HUTCHINSON. It varies from 200 loaves up to 325, according to the quality of the flour?

Mr. RAGSDALE. Mr. Chairman, will the gentleman permit an interruption?

Mr. HUTCHINSON. Yes.

Mr. RAGSDALE. As I understand it, the United States Government itself has gone into the market and bought enormous quantities of supplies?

Mr. HUTCHINSON. So I understand.

Mr. RAGSDALE. The Government bought this at the tail end of the season, when the visible supply was lower than at any other time. This necessarily itself increases the price enormously, does it not?

Mr. HUTCHINSON. Undoubtedly.

Mr. RAGSDALE. And this legislation could not reach that purchasing department in any way, could it?

Mr. HUTCHINSON. No.

Mr. RAGSDALE. If this administration had waited until a new crop had come on and had gone directly into the field, could not much of this enormous increase of price have been avoided?

Mr. HUTCHINSON. I do not see how it could when you get a crop down to nearly nothing. That makes the price.

Mr. RAGSDALE. But while you have got nearly nothing, unless there is a demand and an offer of certain prices to bring this out from the places where it is, would it attain this new level except through some artificial pressure?

Mr. HUTCHINSON. Well, as I suggested awhile ago, the agitation about the scarcity scared everybody, and the prices went up.

Mr. REED. Mr. Chairman, will the gentleman yield?

Mr. HUTCHINSON. Yes.

Mr. REED. We are now interested in getting the greatest food value out of a bushel of wheat. Is it true that one miller will have his mill so adjusted that it will send the farmer back home with more flour out a bushel of wheat than another mill?

Mr. HUTCHINSON. Very few millers do that nowadays.

Mr. REED. One farmer goes to mill and is sent back home with a higher grade of flour than another, and another farmer is sent back home with more flour, but that larger quantity is made possible by more middlings that have gone into the process, and he gets more of the wheat, but less of the food value?

Mr. HUTCHINSON. Yes; he will have less food value and a less number of loaves of bread.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. HUTCHINSON. Yes.

Mr. FESS. I have had intimations from some sources that the allies had purchased largely in the American market when the price of wheat had not gone so high, and that we are now selling simply the remnants of the product. Have we any figures as to what purchases have already been made on the coming crop?

Mr. HUTCHINSON. We have no record, but it is rumored that about one-half of the anticipated crop has been bought. Whether there is any truth in it I can not say.

Mr. FESS. This legislation, which I am inclined to support, will not reach that situation?

Mr. HUTCHINSON. The situation, as I understand it, will be, after they get this law passed, that they will have a board where there will be only one purchasing agent for all the allies.

Mr. FESS. For all the allies?

Mr. HUTCHINSON. Yes.

Mr. FESS. And that will fix the price?

Mr. HUTCHINSON. Yes.

Mr. FESS. But suppose a contract has already been made. Would that be affected?

Mr. HUTCHINSON. You could not get away from it. That has been one of the causes of the high prices of wheat. They have been bidding against each other.

Mr. HARDY. Mr. Chairman, will the gentleman yield?

Mr. HUTCHINSON. Yes.

Mr. HARDY. Several gentlemen have been speaking of the prices of flour in England and the prices here. That is one of the essential things that renders section 12 necessary, in order to encourage the utilization of other products as substitutes for wheat largely and the encouragement of the production of other products under section 12.

Mr. HUTCHINSON. Yes; I think it is a very good idea.

Mr. SNYDER. Mr. Chairman, will the gentleman yield?

Mr. HUTCHINSON. Yes.

Mr. SNYDER. Referring again to the price of flour sold in England and the price here, is it possible that the English miller and the English food controller purchased his wheat at an advantageous price, at an advantageous time, and by reason of the control that the controller has over the production of flour in England he has had the wheat made into flour at the price it was purchased at, whereas in this country the miller takes advantage of every increase in price that may have been brought about by speculation and does not use up the wheat he has on hand, which may have been bought at an advantageous price, thereby making the barrel of flour in this country cost $17 as against the barrel of flour in England at $9?

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

Mr. MEEKER. I ask unanimous consent that the gentleman have five minutes more. I want to ask him a question.

The CHAIRMAN. The time is under the control of the gentleman from South Carolina [Mr. LEVER] and the gentleman from Iowa [Mr. HAUGEN].

Mr. HAUGEN. I regret exceedingly to have to say that if the general debate is to close to-night it is impossible for me to grant additional time.

Mr. MEEKER. Two minutes?

Mr. SNYDER. Just to let the gentleman answer my question.

Mr. HAUGEN. With the gentleman's experience in milling, I take it he is better informed and in a better position to enlighten the House than anybody else in it on this subject.

Mr. MEEKER. That is the reason I want him to have the two minutes.

Mr. HAUGEN. I yield to the gentleman two minutes.

Mr. SNYDER. Now, will the gentleman from New Jersey answer my question?

Mr. HUTCHINSON. In answer to the gentleman's question I will say that that might very easily be the case.

Mr. SNYDER. Is it not a probable proposition?

Mr. HUTCHINSON. It is.

Mr. MEEKER. Now, I would like to ask the gentleman this question: The farmer comes in and offers you his this year's crop, sells it to you at $1.50 or $2 a bushel. You advance the money on that. When he harvests this crop he brings it in. You grind it into flour and hold it. Under this law they could not reach the farmer if he should hold the wheat, but they will get you if you hold the flour, will they not?

Mr. HUTCHINSON. Yes.

I thank the committee for the patience with which they have listened to me. [Applause.]

Mr. LEVER. I yield 40 minutes to the gentleman from Missouri [Mr. RUBEY], a member of the committee. [Applause.]

The CHAIRMAN. The gentleman from Missouri is recognized for 40 minutes.

Mr. RUBEY. Mr. Chairman, the country is confronted with an extraordinary emergency. Not since the grave days which followed 1776, when a handful of gallant soldiers won our glorious independence and paved the way for the establishment of the Republic, has this country faced so great a crisis as that which is impending at this time. Wars we have had, long, hard-fought, and bloody wars, but they have been carried on for the most part within the borders of our own country. To-day we find that, against our own desires, in absolute self-defense, to protect the rights of our citizens, defend the lives of our people, and maintain the honor, the integrity, and the self-respect of our glorious Republic, we have joined in that awful conflict, which, for nearly three years, has been raging in the Old World. To-day we are fighting with the Imperial German Empire, a country far removed from our shores and a country whose whole history is one long story of militarism. No one doubts the military power of Germany, and no one for a moment doubts the seriousness of the conflict into which we have entered. The devoted, patriotic, liberty-loving citizens of this Republic are looking to the Congress of the United States to pass the necessary legislation which will enable the President, as Commander in Chief of the Army and Navy, to carry on the war and bring it to a speedy and successful termination. No Congress in all history has this Congress. Thus far it has done well. I feel sure that has had to face as many serious and extraordinary problems as the great mass of the people of the country will approve the legislation thus far accomplished. Let us review it for a moment, especially the work done in the House.

The Sixty-fifth Congress, called into extraordinary session by the President, met at noon on April 2. The House proceeded at once to its organization, and within the short space of a few hours elected its Speaker and other officers, adopted its rules, and announced to the President and the Senate that it was ready for business. At 8.30 p. m. on that same day President Wilson delivered his message in person to the joint session of the House and Senate, setting forth in a most remarkable address the causes which led to the calling together of the Congress. The gravity of the situation impressed itself upon us all; we went to work at once. After mature and serious consideration, at 3 o'clock on Friday morning, April 6, the declaration that a state of war existed with Germany, pledging all the resources of the country to its successful prosecution, passed the House with but 50 dissenting votes. On April 14, after full and free debate, we passed the bonding bill providing for the issuing of $5,000,000,000 of bonds and $2,000,000,000 of certificates of indebtedness—in all, $7,000,000,000—the largest bond issue ever authorized in one measure in any country in all the history of the world. That bill, coming from the Committee on Ways and Means with a unanimous report, passed the House without a dissenting vote. Shortly before midnight on April 28, after a week of earnest and ofttimes spirited debate, during which time the House held many night sessions, we passed the bill providing the method for the raising of an army with which

to prosecute the war. That bill passed the House with only 24 votes against it. On May 2 we passed the war appropriation bill, carrying an appropriation of two and three-quarter billion dollars, a sum which almost staggers human comprehension. That bill, the largest appropriation bill ever passed by any Congress, and which has since been increased to more than $3,000,000,000, went through the House with practically a unanimous vote, there being only one vote recorded against it. The war-revenue bill, after two weeks of debate and consideration, passed the House on May 23, the vote being 329 for and 76 against. The amount of revenue to be raised by that measure was variously estimated at from $1,800,000,000 to $2,000,000,000 annually. This is by far the largest revenue measure ever passed by any legislative body in the world.

Many other measures of great moment have been considered and passed. I have taken the time to mention only those of supreme importance which have thus far been considered by the House. I repeat, thus far the House has done well. It has been doing big things; precedent after precedent has been broken and measures of such great magnitude and of such vital importance to the Nation in this emergency have been passed with such unanimity of action on the part of the membership of this House that, when known to the countries of Europe, challenge the admiration of our friends and bring astonishment and consternation to our adversaries. No one can doubt, judging by our work thus far, that we propose to win this war.

We come to-day, Mr. Chairman, to the consideration of a measure which, in my humble judgment, at least equals in importance any of those we have heretofore passed. It is the bill to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel. In brief, it is known as the food-control bill. At the very outset, in the discussion of this bill I desire to call the attention of the membership of this House to the wording of the war declaration passed on April 6 last. Whether you voted for that declaration or whether you voted against it, I am sure you are ready now to do your utmost to carry its provisions into effect.

Whereas the Imperial German Government has committed repeated acts of war against the Government and the people of the United States of America: Therefore be it

Resolved, etc., That the state of war between the United States and the Imperial German Government which has thus been thrust upon the United States is hereby formally declared; and that the President be, and he is hereby authorized and directed to employ the entire naval and military forces of the United States and the resources of the Government to carry on war against the Imperial German Government; and to bring the conflict to a successful termination all of the resources of the country are hereby pledged by the Congress of the United States.

Mr. Chairman, in that declaration we authorized and directed the President to employ not only the entire naval and military forces but also the resources of the Government to carry on war against the Imperial German Government, and, further, to bring the conflict to a successful termination, the Congress of the United States pledged all the resources of the country. The greatest, the most important resource the United States has to-day and the one which will do more to help bring the war to a successful termination is its food supply. It is just as essential to give the President control over the foodstuffs of the country as it is to give him control over the Army and Navy. In the declaration of war we have pledged the President this important resource and the pending bill will enable him to take control of it. In the passing of this measure we are therefore but carrying into effect a solemn pledge already made. [Applause.]

In a time of peace such control would be out of the question, it would never be necessary. This great country could supply from year to year enough food for its own people to live in ease and comfort for generations yet to come. In a time of war, it is different, especially in such a war as this, the like of which has not been known since the beginning of time. There is not a European country to-day, whether neutral or in war, whose supply of food is not limited. The lives of men, women, and children in every country in Europe are depending upon the results of the planting, cultivating, and harvesting in America.

It is not my purpose at this time to go into detail and to give the facts and figures as to the shortage of foodstuff in Europe or to give the estimated needs of England, France, and other countries during the coming year. These facts and figures will, no doubt, be given during this debate. I take it for granted that the Members of this House are somewhat acquainted with that situation and know the seriousness of it. It is the solemn duty of the people of this country to encourage production to the utmost, to conserve our food products, and to furnish supplies to England, France, and Italy, as far as lies within our power, without denying the necessaries to our own Army and Navy and without deprivation to our own people. It goes without saying that we should also, as far as possible, supply foodstuff to the neutral nations. Already we have taken steps to encourage production; the farmers have been urged to increase their cultivation, and they have responded nobly. The increased cultivation will amount to millions of acres. Patriotic farmers, far and near, are toiling early and late, and if the sunshine and rain come in due season, greatly increased production will be the result of the harvests. With favorable weather conditions, increased production will be assured. Yet we should not be too optimistic; conditions all over the country have been more unfavorable than in many years. Cold weather has retarded growth and often necessitated replanting of crops. Excessive rains and storms have recently done much damage, while the floods from high water have inundated thousands upon thousands of acres and completely destroyed the crops. We must also bear in mind that the months of July, August, and early September, the period of drought in the Central West and the South, are yet to come. Excessive heat, dry weather, and hot winds may yet cut short, if not destroy, our crops.

The passage of this bill will come too late to stimulate production for the coming season; but what about the products after they have been raised, harvested, leave the farms, and go into the channels of commerce? Aye, Mr. Chairman, there is the rub; there is where all the trouble lies. The high cost of foodstuff does not lie with the farmer, but with the distributor. There are certain changes which should be brought about in the economic conditions of this country whether in peace or in war. The question of distribution is the unsolved problem in the United States. The farmer has at all times been the poorest-paid man in the country. I have heard men say that now the farmer was coming into his own, that now he was, for the first time, getting a reasonable and a fair price for his products. That would be true if the farmer had his products on hand and was awaiting a purchaser, but such is not the case. The farmer disposed of his crops long ago. Farmers, as a rule, are compelled by force of circumstances to sell their crops as soon as matured and harvested. They are compelled to sell at a time when, under present economic conditions, prices are at their very lowest ebb. The staple farm crops of the country go into the hands of the trade, and at once begins hoarding, manipulation, speculation, with the result that the ultimate consumer pays two, three, or four times as much for the product as the farmer got for it when it left the farm. Do not blame the farmer for the high price you are compelled to pay to-day; rather lay the blame on the present uneconomic policy of distribution which permits men to manipulate markets, hoard supplies, and work out all sorts of schemes whereby they may enrich themselves out of the products of the farm after those products go into the channels of commerce. The farmer ekes out a miserable existence, toiling early and late, disposing of his crops often for less than it costs him to produce them. He is frequently compelled to mortgage his farm in order that he may continue to have a home, and it frequently happens that the men who furnish him the money are the very men who have made that money by dealing in his products. That it is far more profitable to distribute than it is to produce, all will agree. More money is made in handling wheat than is made by raising wheat. More money is made off of corn after it leaves the farm than is realized by the farmer who raises it, and the same is true of other products.

The study word often becomes an interesting subject. Cattle, feeding in the pasture and fattening in the feed lot, when sent to slaughter become beef. The hog is the live animal; when butchered it becomes pork. Sheep, when placed in the packing house, become mutton. The cattle, the hogs, and the sheep belong to the farmers of the country and upon them they realize very little profit. In fact, it is claimed by the cattle feeders that they have lost money during the last few years. The beef, the pork, and the mutton become the property of the packers, and upon these products alone are builded vast fortunes. The trouble is not with the high cost of cattle, hogs, and sheep, but the thing that bothers the people of this country most, from one end of it to the other, is the high cost of beef, pork, and mutton.

In this food-control bill we are seeking to insure an adequate supply and equitable distribution, and to facilitate the movement of foods, feeds, and fuel. We are endeavoring to prevent, locally and generally, scarcity, monopolization, hoarding, injurious speculation, manipulation, and private control affecting such supply, distribution, and movement. By this act we propose to establish and maintain Government control over these things during the war. Members of the House seem to forget that we are in war when it comes to dealing with measures of this kind. They will pass a $7,000,000,000 bond bill without a dissenting vote; they will pass a new Army bill practically without opposition; they will appropriate more than $3,000,000,000 and enact a great revenue measure with practical

unanimity, but when it comes to a measure of this kind they begin at once to discuss theories of Government and say we are putting too much power in the hands of one man.

A few days ago, when we were considering the food-survey bill, a bill which gave the Secretary of Agriculture unequivocal power to ascertain the food supply of the country, a measure which enabled him, under certain conditions, to furnish the farmers of the country with seed at cost, a measure which appropriated a few millions of dollars to enable the Secretary of Agriculture to promote agriculture and to conserve the grain and live stock of the farm, Members said we were granting too much power to one man, that it was too autocratic, failing to realize that we have never won a war without one-man power and that we can not win this war without one-man power. We have been legislating along peaceful lines so long that it is hard to get down to the real thing of legislating along the lines of war. In times of peace we have in view high governmental ideals, we believe in a democracy, that the people shall rule. I believe in the fundamental principles of a free government, you believe in them, we all agree that the Government derives its just powers from the consent of the governed. Our fathers laid the foundations of this Republic and laid them secure and well. Their ideals of liberty and the freedom of the people have inspired those in other lands, and Republics have sprung up the world around. Those same fathers realized that in war times we would need a more centralized power to carry it forward to a successful issue. In that great document, the foundation of American liberty, the Constitution, it was provided that the President of the United States should be the Commander in Chief of the Army and Navy. In war times, I say to you, we must have a centralized function of government, we must have one-man power. We raise an army, we place our boys in the hands of one man, the President, we say to him: "Here they are, do with them as in your judgment they may best conserve the interests of the Republic in this great emergency." Already we have solemnly pledged the resources of our country. Why not then say to the President: "Here are our resources, here is our foodstuff, our feed, our fuel, take them, use them in the way which will most speedily bring this war to a successful conclusion." That is what we propose to do in this food-control bill.

Somebody is going to control the food products of the United States, you can be assured of that. Either they will be controlled by the speculator, the manipulator, and the food grafter, or they will be controlled by the President of the United States—Woodrow Wilson. Which do you prefer? It is up to you. Upon this question every Member of this body must take his stand. There is no middle ground. For years and years these speculators have been in complete control, they have fixed prices, raised and lowered them at their own sweet will, and they will continue to control and to fix prices as long as they are permitted to do so. I repeat there will be control. Shall we continue to permit speculators to have full sway or shall we give this great power to the President, the Commander in Chief of our Army and Navy, the responsible head of the Government in this great crisis when all Europe is crying for bread and when our success or failure in this war depends upon our being able to come to their relief?

Mr. Chairman, it is my purpose now to take this bill up and briefly direct the attention of the House to some of its most important provisions. It shall not be my purpose to discuss the bill at length, nor the provisions of each individual section. My purpose is to present to the House as briefly and concisely as I am able the things sought to be accomplished in this measure.

The first section of the bill bases the necessity of the legislation upon the existence of the war and sets forth in concise form the purposes of the measure, which are to prevent locally or generally scarcity, monopolization, hoarding, injurious speculations, manipulation, and private controls affecting the supply, distribution, and movement of foods, feed, fuel, and articles used in their production. It further declares that the purpose of this act is to establish and maintain Government control of those necessaries during the period of the war, and sets forth the fact that for these purposes the instrumentalities, means, methods, powers, authorities, duties, obligations, and prohibitions contained in the bill are created, established, conferred, and prescribed.

Some Members may contend that this section is unnecessary, that it is in the nature of a preamble. It is more than a preamble. It fixes the basis upon which this legislation is sought to be enacted and sets forth clearly and concisely the intended purposes of the Congress in the enactment of this important piece of legislation.

Section 2 is merely a defining section.

Section 3 is the very crux of the bill. This is the section which seeks to establish governmental control over the foodstuffs of the country. The first part of the section establishes that control and provides that it shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries, and that this control shall be exercised and administered by the President. It further provides that all such necessaries, processes, methods, and activities are declared to be affected with a public interest.

This section will doubtless meet with more opposition than any other part of the bill. Already some of those who are opposed to it are claiming that under its provisions the President or his agents can go into every household in the land and prescribe the amount of food that may or may not be daily consumed within that household. The language does not warrant such a construction, and I think I am safe in saying that there was not a member of the Committee on Agriculture who ever for a moment thought that this section conveyed such power. Some Members of Congress have seized upon the word "consumption" and have based their assumption upon that, that this bill provides for fixing the amount daily to be consumed by the citizens of the land. In this, however, they are mistaken. Such a construction was never intended, and neither the President nor anyone who may be called upon by him to administer it will ever so construe it.

The second part of this section provides the agencies by which the President may carry its provisions into effect.

Section 4 of the bill sets forth clearly the things which are made unlawful by this act, and in the succeeding sections penalties are prescribed for the committing of these unlawful acts. This section makes it unlawful for any person willfully to destroy necessaries for the purpose of enhancing the price or restricting the supply. It makes it unlawful knowingly to commit waste or willfully to permit preventable deterioration in connection with the production, manufacture, or distribution of necessaries. It makes it unlawful to hoard or to monopolize or to engage in any discriminatory, unfair, or deceptive practice in the handling or dealing in necessaries, or for persons to conspire, enter into combinations, agreements, or arrangements for purposes specifically set forth in the section.

Section 5 contains the licensing feature of the bill and authorizes the President, whenever he shall find it essential, to license the importation, exportation, manufacture, storage, or distribution of necessaries. After the President shall announce that any business engaged in these processes shall be licensed, no person shall engage in such business without first securing a license. This section authorizes the President to prescribe such regulations governing the conduct of the business of licensees as may be necessary in order to prevent uneconomical manufacture and inequitable distribution. Such other powers are conferred upon the President as are necessary to enable him or his agents to carry out the purposes of this act. These additional powers include requirements for systems of accounts, auditing of accounts, submission of reports, and things of that sort. This section also authorizes the President's duly authorized agents to enter and inspect licensed institutions. It gives the President the right to regulate rates, charges, and practices of the institutions so licensed and provides that whenever he finds their rates, charges, or practices are unjust, unreasonable, or discriminatory and unfair, he may order them to be discontinued, and his orders shall be obeyed or the license will be suspended or revoked. The President may, when he finds it necessary, determine and fix what are just, reasonable, and nondiscriminatory, fair, and enonomical rates and charges, and the licensed institution is compelled and required to comply with the President's findings. In a word, this section authorizes the President to license certain big business concerns which deal in food products and, through the license feature, enables him to have complete control over them. It does not apply to the farmer, and it does not apply to the small retailer nor to a common carrier.

Section 6 fixes the penaly for hoarding and defines specifically what constitutes hoarding within the meaning of this act. Certainly no one can object to the provisions of this section.

Section 7 prescribes the procedure under which necessaries which have been hoarded may be taken by the Government and disposed of by it, so that they may go without delay into the channels of commerce.

Section 8 provides the penalty against any person who shall willfully destroy any necessary for the purpose of enhancing the price or restricting the supply.

Section 9 authorizes the President to purchase necessaries or to provide for their production and manufacture. It further authorizes him to provide storage for such necessaries and to

sell them. It requires persons having in their possession or under their control necessaries to furnish them to the Government in such quantities, at such times, and at such prices as the President shall determine to be reasonable. If the price so determined upon is not satisfactory to the owner of the necessaries, he may sue for additional compensation in the United States court. Natural persons are not required to furnish to the Government necessaries held by them which are reasonably required for consumption by themselves or their dependents for a reasonable time.

Section 10 authorizes the President, under certain conditions, to requisition and take over, for the use and operation of the Government, any factory, mine, or other plant or any part thereof in which the necessaries are manufactured, produced, prepared, or mined. The President is given full control over the operation of such requisitioned institutions and the Government is required to make just compensation to the owners for use, occupation, operation, and so forth.

Section 11 gives the President the authority to regulate the exchanges of the country and authorizes him, in order to prevent injurious speculation, unjust market manipulation, unfair or misleading market quotations, to prescribe the rules and regulations governing transactions upon the exchanges. He may, in his discretion, either wholly or in part, prohibit operations, practices, transactions upon exchanges, boards of trade, and similar institutions.

Section 12 authorizes the President, whenever he finds that an emergency exists requiring the stimulation of production, to fix and establish a guaranteed minimum price to the producer of any nonperishable agricultural product produced in the United States. The guaranteed price must be determined and fixed in advance of seeding time and must be such a reasonable guaranteed price of any product as to insure to the producer a reasonable profit. This section also provides the means of carrying its provisions into execution, and authorizes the President to protect the Government as far as possible against loss by such guaranty. In order to do this, he may increase rates of duty should foreign products be imported at a price less than the guaranteed price. He may also protect the Government by purchasing, holding, storing, transporting, or selling agricultural products for which the guaranteed price has been fixed.

Section 13 authorizes the President to limit, regulate, or prohibit the use of foods, food material, feeds in the production of alcohol, or of alcoholic or nonalcoholic beverages. It prescribes the manner in which this can be done and establishes heavy penalties for violation.

Sections 14, 15, 16, and 17 relate to the administrative features of the bill.

Sections 18 and 19 carry appropriations for putting the act into effect.

Section 20 provides that should part of the act be declared invalid by the courts such judgment shall not repeal or invalidate the remainder of the act.

Section 21 provides in specific terms that the provisions of this act shall cease within one year after the termination of the war.

These, in brief, are the salient features of the food-control bill. May I be pardoned, Mr. Chairman, if I say just a few words relative to the work of the committee? I have seen in the press some criticism of the Committee on Agriculture for the delay in bringing in this bill. Let me say for the committee—and I am not saying it in any apologetic spirit, because the committee has done its full duty and no apology is necessary—that in this legislation the committee and the Congress are venturing into new and heretofore untried fields of effort. We had no precedents to follow; no one had blazed the way. The committee has labored long and diligently in the preparation of this bill. A few days ago, when the House was in recess in honor of the Confederate Reunion and for registration day, our committee continued to hold daily sessions. For days and days we have worked on this bill, held extensive hearings, have gone over the bill not once but many times, striking out some sections, amending others, and rewriting still other sections. In drafting, perfecting, and presenting this bill to the House I want to compliment the untiring efforts and the faithful and efficient work of our honored chairman, Mr. LEVER, of South Carolina [applause], and I may say, and I think I should say, that he has had the earnest and the sincere cooperation of every member of his committee. While the bill may not, of course, in every detail meet the approval of each individual member, yet I am sure that as a whole it meets the hearty and unequivocal indorsement of a very large majority of the committee.

Now, Mr. Chairman, I want to direct the attention of the House to the charge that is made in some quarters here and elsewhere that this bill discriminates against the farmer. Such is not the case. This bill does not discriminate against the farmer; on the contrary, if there is any discrimination at all, it is in favor of the farmer.

There is not a provision in this bill which relates to the farmer, except the requisition section, section 9, which affects him only in a very small way, and section 12, which authorizes the guaranteeing to him of a reasonable profit for his labor and his investment. Every other section of the bill has to do with the products of the farm after they leave the farm and get into the channels of trade. Even under section 9 I doubt if a bushel of grain or any other product would be purchased by the Government directly from the farmer. The purchases would be made in large quantities from the dealers who had it on hand, and in many cases in storage.

Mr. Chairman, there is not a single fine or penalty imposed in this bill which will ever be applied or can possibly be applied to the farmer. On the contrary, all the penalties are for the purpose of restraining those who handle the products after they leave the farm. In a number of sections it is specifically provided that the provisions of the section shall not apply to farmers.

I have heard it argued that we are seeking to interfere with the farmer's business; that we are going to tell him what to plant, and how much; that we are going to compel him to produce and then we are going to fix the price he shall take for his product. This bill seeks to encourage him by authorizing the President to fix a minimum guaranteed price, so that the real, true, patriotic farmer who obeys the injunction, "Go forth, till the soil, raise the foodstuff to feed the world and help win this war," will receive at least a reasonable return for his labor.

In some sections of the country, notably in the South, the farmers are consumers. They do not produce cattle, hogs, and grain; they must buy their meat and their flour and many other things. Only a few days ago I took occasion to make some investigations. I talked with Dr. Knapp, one of the best-informed men in the Department of Agriculture, on agricultural conditions, especially in the South. He showed me many letters he had but recently received recounting instances of high, exorbitant prices charged the farmers. With hogs selling at from 12 to 15 cents a pound, the farmers were compelled to pay 40 cents a pound for salt pork, the cheapest portion of the hog, 40 cents a pound for lard, and excessive prices for flour and corn meal, and so forth. Another thing, I found that in many instances when the farmer wanted to plant corn, something that he could depend upon for food, credit was denied him by the banker or merchant who carried him. He could only get credit when he planted cotton or tobacco. And still another hardship which confronted those farmers was that when they bought on credit, as in many cases they were compelled to do, they were required to pay an increased price, which amounted in interest, in many cases, to from 25 to 50 per cent.

In some sections of the country the crops will soon begin to move, and it is essential that this legislation be speedily enacted. Already the agents of speculators are out contracting with farmers for their crops, paying a portion of the purchase price in advance, and in other ways seeking to obtain their products at the lowest possible figures.

I have no fear, Mr. Chairman, but that this measure will meet with the approval of the farmer. Every farmers' organization which has ever existed has appealed to Congress to pass a law to get rid of the speculator. These appeals and petitions have been coming in for many, many years. Now is our opportunity. This bill will absolutely put the speculator out of business. [Applause.]

Mr. FESS. Mr. Chairman, will the gentleman yield for two questions?

Mr. RUBEY. Yes.

Mr. FESS. I should like to have the opinion of the gentleman, who is a member of the committee, on two queries that have been in my mind. One is, Will the minimum price likely become the maximum price?

Mr. RUBEY. I do not think so at all.

Mr. GORDON. That would depend on how high it was, I suppose.

Mr. RUBEY. The minimum price was made to take care of a situation which might come, in case of an unexpected and much desired immediate closing of the war, or something of that sort. The minimum price is made for the purpose of encouraging the farmer to look into the future; and if something unex-

pected should occur, and if an abundant crop should be raised and there should be an oversupply, if he has gone out and cultivated his fields and has done the work, we want to assure him that he will get a reasonable price, and that price is fixed before he ever puts the seed into the ground.

Mr. FESS. Now, the question with me, as an economic question, under the control of economic law, is whether that minimum price will not rule as the maximum price. I am asking for information.

Mr. RUBEY. I can not see that view of it at all.

Mr. FESS. Has that been gone into by the committee?

Mr. RUBEY. That has been gone into by the committee. I will say further that the bill as originally introduced contained a provision for a maximum price; and if the committee or the author of the bill had thought that the minimum price would be the maximum price, of course no maximum price would have been put into the original bill.

Mr. HARDY. Will the gentleman allow me to interpolate here?

Mr. RUBEY. Yes.

Mr. HARDY. I do not think there is a farmer who would not be glad to-day to have some responsible man guarantee him a reasonable minimum price. For instance, on cotton many of our people will sell their crop in advance, thereby fixing their maximum price. Now, if we could get somebody to guarantee us a minimum price, I would agree to-morrow to sell every bale of cotton I could produce.

Mr. FESS. I wanted to know whether the committee had gone into that proposition.

Mr. RUBEY. The committee has gone into it thoroughly, and has considered it time and again and from every possible angle.

This war into which we have entered and in which we are to do our part is not going to be won by troops alone, although those troops may be trained and drilled and furnished with ammunition piled mountain high; this war is not going to be won with vast sums of money and credit unlimited. At last it has come to be realized by every country engaged in this fearful conflict, with the possible exception of our own, that the most essential thing is going to be the food supply, both for the armies and for the people. The United States is the only great country in all the world at the present time that raises a surplus of food products. It is one of our greatest and at this time it is our most important resource. Already the Congress has pledged this resource to the prosecution of the war. Let us prepare without delay to conserve it and use it in a fair, just, and economical way.

Mr. Chairman, our people love peace; they hate war. They are patriotic; they love their country. They stand ready to make any sacrifice, to endure any hardship to win this war, and they want to win it just as speedily as possible. They are hoping that the day may not be far distant when peace will again be ours, and they are praying that when it does come it will be a world-wide, lasting peace. The people of the United States realize, too, that in times like these it is necessary to place the conduct of the war and everything pertaining to it into the hands of some one man. The Constitution has decreed for the people who that man shall be. It is the President of the United States. In this hour of our country's greatest crisis we are fortunate in having an Executive whose faithfulness and fidelity to the country is acknowledged on every hand, a great President, loved, honored, trusted by all, and into his hands I am willing to place the food control of this Republic. Faithful thus far to every trust imposed, I know that this additional responsibility will be administered by him to the satisfaction of the people. I am willing to trust Woodrow Wilson, your President and mine. [Applause.]

Mr. BORLAND. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by inserting a letter from the President of the United States, explaining the necessity for the proposed legislation.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri?

There was no objection.

The letter referred to is as follows:

JUNE 16, 1917.

Hon. WOODROW WILSON,
The President, White House.

MY DEAR MR. PRESIDENT: I believe Congress is thoroughly in accord with the proposals of the administration to provide adequate legislative machinery to deal promptly and effectively with the fuel problem. I join with you in feeling that the vital question of this hour is to provide means to marshal the full resources of this Nation in the way of food and forage, and make it count in our industrial and military preparedness and in the early triumph of ourselves and our allies in the cause of democracy. The evils of waste, extortion, and hoarding must be eliminated not only in the interest of our Army in the field and of our allies, but in the interest also of the great body of American wage earners who must be relied upon to provide the supplies and munitions of war. I am convinced that the effective way to do this is by the flexible method of executive control through men of recognized experience and ability rather than by the rigid method of legislative restrictions and penalties.

The business men of the Missouri Valley, even those whose business will be directly affected by such regulations, concede the necessity for such control. The wage earners are united in demanding it, and the farmers recognize that it can not result otherwise than as a spur to production. It can not have escaped your notice, however, that systematic efforts are being made to prejudice various classes of our people against the proposed legislation, ostensibly on the ground that it is despotic in character and is intended to be put to unjust and oppressive usage. I am inclined to think that below the surface some of the real objections are that it will curb the special interests and make the rights of the people paramount, and that it will not lend itself to the ordinary uses of politics.

I am quite satisfied that the people will understand that the whole system has been initiated and will be conducted in the white light of public opinion, and that it must and can justify itself by its results in this important national crisis. In view of the fact, however, that a special effort has been made in the Central West to forestall by attack and misrepresentation the benefits of any adequate method of food control, I should be very glad, if possible, to have a word from you to our people on the subject.

With kindest regards, I remain,

Yours, very truly

WM. P. BORLAND.

COPY OF THE PRESIDENT'S REPLY.

THE WHITE HOUSE, *June 18, 1917.*

Hon. WILLIAM P. BORLAND,
House of Representatives.

MY DEAR MR. BORLAND: You are quite right about the food-administration measure. In my opinion, it is one of the most important and most imperatively necessary of the measures which have been proposed in connection with the war.

A certain disservice has been done the measure by speaking of it as the food-control bill. The object of the measure is not to control the food of the country but to release it from the control of speculators and other persons who will seek to make inordinate profits out of it, and to protect the people against the extortions which would result. It seems to me that those who oppose the measure ought very seriously to consider whether they are not playing into the hands of such persons and whether they are not making themselves responsible, should they succeed, for the extraordinary and oppressive price of food in the United States. Foodstuffs will, of course, inevitably be high, but it is possible by perfectly legitimate means to keep them from being unreasonably and oppressively high.

I hope and believe that the Congress will see the measure in this light, and that it will come to an early passage, for time is of the essence. The legislation should be secured by the 1st of July to make the country safe against the dangers it is meant to guard against.

Cordially and sincerely yours,

WOODROW WILSON.

Mr. LEVER. Mr. Chairman, I yield 15 minutes to the gentleman from Ohio [Mr. GARD].

Mr. GARD. Mr. Chairman, it is the high duty of Members of Congress to afford every ounce of the power of this great Government for the winning of the war in which we are engaged, and to preserve for the citizens of the United States the rights guaranteed them by our Constitution. Sometimes we have heard discussed here on the floor the idea that the so-called "war powers" of Congress and the President are outside of the Constitution, exceeding its authority, and conferring broader powers than exists therein. Very fortunately for us that is not true, because we are governed by the same institutions in war as in peace. The fact that we are at war and devote every bit of power we have toward the successful and early conclusion thereof does not for one moment take away any right guaranteed by the Constitution to any citizen of the United States. So, in my discussion of this bill I will deal mostly with the legal side of it, calling attention to the ways in which I think possibly the bill may be remedied, my only purpose being to assist in the formulation of a law which will make effective its expressed high intent.

The bill provides for three different things, one for the production, one for the distribution, and one for the transportation of necessaries. With production there can be little or no combination save in the case of fuel. With regard to fuel the situation is one of the most important to the American people to-day, and the Government should be quick to act against monopoly therein; but with the products of the foodstuffs there can be little or no combination, because farmers are individual and their crops individually made. By their honest toil they furnish the food for millions, and their honesty and patriotism are established.

The transportation of foodstuffs is largely industrial, although combination may be made there; but in the distribution of foodstuffs, and of fuel, too, there comes a question where the idea embraced in this bill is essentially right and proper. Some may say that these are new proceedings, but if they are new proceedings they have an old basis, and that is the basis of constitutional authority.

The great good which this bill will do, in my opinion, is that it will remove artificial obstructions from the path of distribution. It is incomprehensible that this Nation, the greatest in resources in the world, can not furnish its people the necessities of life at fair and honest price. The big question, aside from unnecessary waste, is the question of removing obstructions

from the proper distribution, and by obstruction I mean the artificial creation of a condition which will prevent food and fuel being distributed to the people, as is their right. Therefore I say this bill has almost unlimited possibilities for good in that it removes these artificially created obstructions. It takes out the element of all speculation; it does away with the men who would speculate and hazard in foodstuffs, while their neighbors starve for want of food. In this land of plenty the wage earner should be enabled to buy food and fuel for his family unhampered by conscienceless greed and monopoly. Certainly as affecting the life of the people to-day, this bill is one that deserves our best consideration and our speedy enactment.

I desire to call the attention of the committee to certain new things which may be of interest. In the first place, I think the constitutionality of the bill, except as I shall call attention to it, is established. I think that the opinion of the court in the celebrated case of Ex parte Milligan is now recognized fully as the law of the land. I think that when the Constitution of the United States has provided that "the President shall be Commander in Chief of the Army and Navy," and that Congress upon its part "may make rules for the government and regulation of the land and naval forces," and "may make all laws which may be necessary and proper for carrying into execution the foregoing powers, and all powers vested by this Constitution in the Government of the United States or in any department or officer thereof," abundant authority has been created.

However, an interesting decision has been rendered in the last year in the courts of Australia, where provisions of law somewhat similar have been construed. In the Australian court the case was brought as to whether the legislative powers of the Commonwealth included the power during the present state of war to fix within the limits of a locality the highest price which, during the continuance of the war, may be charged for bread. (Farey *v.* Burrett, 21 C. L. R., 433.)

Now, I understand, of course, that this had to do with fixing the maximum price, and that there is no maximum-price provision in this particular bill. But the reasoning of the court has to do with many of the things we are here giving consideration to, and therefore, in that light, I think it is interesting.

The language of the Australian constitution concerning the provision is similar to the one I have just read in the American Constitution, namely, that the Parliament may "make laws for the peace, order, and good government of the Commonwealth with respect to the naval and military defense of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth."

I shall append to my remarks the reasoning of the judges of this high Australian court who have given their sanction to the proposition that in time of war in certain proclaimed areas, which, by the way, took in the largely inhabited areas in Australia, the Parliament had the right and power to pass a law which would preserve for the people a reasonable price for bread.

This is in recognition of the great principle that battles are now not fought alone by armies and navies; they are not fought alone by peoples, but they are fought by countries, and that the winning of a war is as much a match of resources of one country against another as is the matching in battle array of one man of one country against the one man of another country.

Another case to which I desire to call your attention is a very late case, the case of the First National Bank of Bay City against Grant Fellows, attorney general for the State of Michigan, decided by the Supreme Court of the United States on the 11th of June, 1917, just a few days ago. This case had to do with the construction of section 11 of the act of Congress establishing the Federal Reserve Board, "to grant by special permit to national banks applying therefor, when not in contravention of State or local law, the right to act as trustee, executor, administrator, or registrar of stocks and bonds under such rules and regulations as the said board may prescribe." This provision was attacked and was held by the Supreme Court of the United States to be constitutional, largely upon the authority of McCullough against Maryland, as appearing in Fourth Wheaton, page 416, in which the court quotes thereupon as follows:

> Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited but consistent with the letter and spirit of the Constitution, are constitutional.

The things which I particularly desire to call to the attention of the committee in respect to the bill now under consideration are two. In section 5 provision is made for "entry and inspection by the President's duly authorized agents of the places of business of licensees." The fourth amendment to the Constitution guarantees "the right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures," and that "no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched and the persons or things to be seized." I speak of that, because I think this is a matter which easily can be remedied to come within the constitutional purview. I refer particularly now to section 12, which provides in its latter part:

> There shall be levied, collected, and paid a rate of duty upon the products so imported the amount of which rate of duty shall be ascertained and proclaimed by the President—

And so forth.

I question whether authority is given in the Constitution of the United States to authorize the President to fix a rate of tariff imposts.

Mr. THOMPSON. Mr. Chairman, will the gentleman yield?

Mr. GARD. I have but a few moments.

Mr. THOMPSON. That does not authorize the President to fix the rates. It fixes them itself. The President simply finds the amount.

Mr. GARD. As I read it, the President fixes the rate.

Mr. GORDON. He fixes the rate.

Mr. GARD. He fixes the exact rate. The case of Field *v.* Clark (143 U. S., 649) was one, I think, the framers of this bill have sought to bring themselves within. This case had to do with the construction of the third section of the act of October 1, 1890, wherein a suspension of free introduction of certain products was held to be within the power of the President and during such suspension there might be assessed cerain rates of taxation which the Congress had already made. "That Congress can not delegate legislative power to the President is a principle universally recognized as vital to the integrity and maintenance of the system of Government ordained by the Constitution." The difference as I see it in this bill is that under the Grimaud case and under the Field case certain regulations were held rightfully to be given to the President, but I question if "regulation" extends to the extent of fixing a tariff rate. Judge Ranney, speaking for the Supreme Court of Ohio, says that "the true distinction is between the delegation of power to make the law which necessarily involves the discretion as to what it shall be and conferring authority or discretion as to its execution to be exercised under and in pursuance of the law." Applying that decision in this Field case, following the decision only lately rendered in the Michigan case, I take it that there is no question of legality now, but that certain regulations may and should be rightfully reposed in the President of the United States.

In the Field case—

> it became his (the President's) duty to issue a proclamation declaring the suspension as to that country which Congress had determined should occur. He had no discretion in the premises except in respect to the duration of the suspension so ordered, but that related only to the enforcement of the policy established by Congress. As the suspension was absolutely required when the President ascertained the existence of a particular fact, it can not be said that in ascertaining that fact and in issuing his proclamation in obedience to the legislative will he exercised the function of making laws. Legislative power was exercised when Congress declared that the suspension should take effect upon a named contingency. What the President was required to do was simply an execution of an act of Congress. It was not the making of law. * * * It was a part of the law itself as it left the hands of Congress, that the provisions full and complete in themselves permitting the free introduction of sugar, molasses, coffees, teas, and hides from a particular country should be suspended in a given contingency, and in case of such suspension certain duties should be imposed.

In Locke's Appeals, 72 Pennsylvania State, 491 to 498, the proper distinction, the court said, was this:

> The legislature can not delegate its power to make a law, but it can make a law to delegate a power to determine some fact or state of things upon which the law makes or tends to make its own action dependent.

Under this provision of the present bill it would seem that the "levying, collecting, and paying of a rate of duty, the amount of which rate of duty shall be ascertained and proclaimed by the President," is not a delegation of power by a legislative body and that this language is not in accord with section 7 of Article I of the Constitution of the United States, "all bills for raising revenue shall originate in the House of Representatives."

I am in full accord with the undoubted purpose of this bill, which is to assure the success of American arms in the field and the health and happiness of our people at home.

I append hereto certain citations and decisions.

WAR POWER OF THE PRESIDENT.

Constitution, Article II, section 2: "The President shall be Commander in Chief of the Army and Navy of the United States and of the militia of the several States when called into the actual service of the United States."

The power of the President under this clause is commonly called the "war power" of the President. It is an immense power to exercise and might be used in a most dangerous manner by an unwise Executive, as there does not seem to be any limitation prescribed by the

Constitution to the exercise of the power by the President in the field of military operations.

By this clause he is made commander of the military and naval forces of the United States for the whole time that he is President. No other department of the Government and no other officer of the Government can exercise this power or assume to command either the Army or the Navy unless designated by the President to do so. Congress can legislate relative to the number of the Army or the Navy, the compensation of the officers and men, and the term of their service, as well as many other matters, but the command of the Army and Navy is vested in the President, and Congress can neither command them nor take that power from the President.

The power is vested in the President to dispose of or arrange the component parts of the Army and Navy at his pleasure. In practice he does this through the military and naval departments of the Government, but their action is his action. While Congress can make rules for the Army and Navy, it can not interfere with the President's power as commander of such forces. The line between the exercise of his power as commander and that of Congress is plain, and neither can rightfully or legally invade the other.

This line of demarcation was well defined by Chief Justice Chase and the dissenting justices in the Milligan case, where it was said:

"Congress has the power not only to raise and support and govern armies, but to declare war. It has, therefore, the power to provide by law for carrying on war. This power necessarily extends to all legislation essential to the prosecution of war with vigor and success, except such as interferes with the command of the forces and the conduct of campaigns. That power and duty belong to the President as Commander in Chief. Both these powers are derived from the Constitution, but neither is defined by that instrument. Their extent must be determined by their nature and by the principles of our institutions. The power to make the necessary laws is in Congress; the power to execute in the President. Both powers imply many subordinate and auxiliary powers. Each includes all authorities essential to its due exercise. But neither can the President, in war more than in peace, intrude upon the proper authority of Congress, nor Congress upon the proper authority of the President. Both are servants of the people, whose will is expressed in the fundamental law. Congress can not direct the conduct of campaigns; nor can the President, or any commander under him, without the sanction of Congress, institute tribunals for the trial and punishment of offenses, either of soldiers or civilians, unless in cases of a controlling necessity which justifies what it compels, or at least insures acts of indemnity from the justice of the legislature." (Ex parte Milligan, 4 Wall., 2, 139, 140.)

"The Army regulations derive their force from the power of the President as Commander in Chief, and are binding upon all within the sphere of his legal and constitutional authority." (Kurtz *v.* Moffit, 115 U. S., 503.)

How far such orders and regulations in time of peace, and without the consent of Congress, would confer authority upon civil authorities does not seem to be settled by judicial construction. They do not authorize civilians to arrest or detain deserters from the Army, and neither a civilian nor a police officer can arrest a deserter without authority to do so. The authority of the President over the Army and Navy to command and control is only subject to the restrictions of Congress "to make rules for the government and regulation of the land and naval forces," and that the appointment "of officers should be by and with the advice and consent of the Senate." (Street *v.* United States, 24 C. Cls., 230, 247.) The power of Congress and that of the President over the Army and Navy are separate and distinct; neither can impair or invade the authority of the other. (Swain *v.* United States, 28 C. Cls., 173, 221.) The powers of the President under this clause are only those which may be called "military." He can direct the movements of the Army and Navy so as to injure the enemy in the most effective way, and to do this may order an invasion of the enemy's country, and, if possible, establish the authority of the United States over it; but such policy would not enlarge the boundaries of the United States nor extend our institutions outside the jurisdiction previously conferred upon them by Congress. (Fleming *v.* Page, 9 How., 603–615; Cross *v.* Harrison, 16 How., 190; Leitensdorfer *v.* Webb, 20 How., 176; The Grape Shot, 9 Wall., 129.)

The President, as Commander in Chief, has power to form a temporary government for a conquered country, and to impose duties on imports and tonnage for the support of the government and to aid in sustaining the burdens of the war.

So as such commander he has power to organize a provisional court in territory taken from the enemy during a foreign or a civil war. (Grapeshot, 9 Wall., 133; Mechanics' Bank *v.* Union Bank, 22 Wall., 276.) It was within his power as Commander in Chief to order the collection of duties on goods shipped from a domestic port to Porto Rico from the time of taking possession of that island until the establishment of business relations between the belligerent countries. (Dooley *v.* United States, 182 U. S., 222.)

The President, under his power as Commander in Chief, may employ secret agents to obtain information from the enemy concerning their position, resources, and general condition. (Totten *v.* United States, 92 U. S., 106.)

President Roosevelt in the exercise of this power dismissed three companies of United States troops for supposed unsoldierly conduct. The order of dismissal provided "that they will be discharged without honor from the Army by their respective commanding officers and forever debarred from reenlisting in the Army or Navy of the United States, as well as from employment in any civil capacity under the Government." (Special Order No. 266.) The power of the President to make an order preventing soldiers discharged without honor from being employed in any civil capacity under the Government was challenged as beyond his constitutional authority, and he thereupon revoked that part of the order and frankly admitted that it was beyond his authority to make. Whether he had the power to prevent the soldiers from reenlisting without their guilt being first determined according to law is unsettled and is questionable.

When William H. Seward was Secretary of State he sent a note to Lord Lyons in 1861, in which he set forth the power of the President as Commander in Chief, as follows:

"It seems necessary to state that Congress is by the Constitution invested with no executive power or responsibility whatever, but, on the contrary, the President of the United States is, by the Constitution and laws, invested with the whole executive power of the Government and charged with the supreme direction of all ministerial agents as well as of the whole land and naval forces of the United States, and that invested with these ample powers he is charged by the Constitution and laws with the absolute duty of suppressing insurrection, as well as of preventing and repelling invasion, and that for these purposes he constitutionally exercises the right of suspending the writ of habeas corpus whenever and wheresoever and in whatsoever extent the public safety, endangered by treason or invasion in arms, in his judgment requires.

"If it be said that these acts of the President in time of war are unconstitutional, the answer is that as Commander in Chief of the Army and Navy the President has the constitutional power to employ the means recognized by the laws of war as necessary to conquer the enemy.

"Congress can pass no law which can deprive the President of the power conferred in creating him Commander in Chief." (Woodburn's American Republic, 181; 14 Fed. Cases, No. 8006, p. 976.)

There are, however, certain limitations upon the power of the President as Commander in Chief. He has no authority to establish a court during a war in a conquered country and empower it to pass upon the rights of the Government or individuals in prize cases, nor to administer the laws common among nations, and the judgments of such courts would be a nullity. (In the Civil War President Lincoln issued an order establishing a "provisional court" in Louisiana.)

The President has no authority under his power as Commander in Chief to detain for trial before a court-martial or military tribunal or to restrain for an unreasonable period private citizens, while the civil courts are accessible, except in case of insurrection or actual war, when he can exercise such power and delegate it to his subordinate officers.

No President, under the authority conferred upon him by this clause, has ever assumed to take the active command of the military and naval forces of the Government in time of war, and while it is probable that he would have that power, it is by no means certain. There are other clauses of the Constitution which impose duties upon the President, and these become very onerous and numerous and important, especially in time of war. He is required to nominate and, with the advice and consent of the Senate, appoint ambassadors and other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not otherwise provided for. The Constitution also makes it his express duty to receive ambassadors and other public ministers, and "he shall take care," says the Constitution, "that the laws be faithfully executed, and shall commission all the officers of the United States." The question arises, how would the President be able to execute these duties, solemnly imposed upon him by the Constitution, should he assume the active command of the Army and Navy? The command of the active forces during war would necessarily require him to be on the march, in the camp, and on the battle field or on the high seas, and consequently cause his absence from the seat of government for a long period of time. He might be compelled to establish his military headquarters far from the seat of government and of national legislation. If he should undertake to command the military and naval forces of the Government in time of war, he would be exercising a power which would necessarily prevent him from executing important duties required of him by the Constitution.

How he could be restrained from the exercise of the command, if he should insist upon exercising it, would be difficult to determine, and it might be that he could not be prevented; but such a course would certainly impair his usefulness and effectiveness as the head of the Government in discharging many other duties directly imposed upon him. It was probably the fear that such a contingency might arise that induced Mr. Paterson, as we have already seen, to insert in his plan of a constitution that the "Executive should on no occasion take command of any troops or conduct personally any military enterprise, as general or in any other capacity." (Journal, 165. It was doubtless the same feeling which influenced the New York convention to suggest as a constitutional amendment "that the President of the United States should never command the Army, militia, or Navy of the United States, in person, without the consent of the Congress." (Elliot, vol. 2, 408.)

"The power of the President as Commander in Chief of the Army and Navy has in practice never been exercised by the President's taking immediate command of the Army or the Navy during the existence of actual hostilities; so that, in that sense, no President has ever been Commander in Chief when the Army immediately confronted an enemy. Such authority as the President has exercised under this constitutional provision has been almost exclusively through the Secretary of War and the Secretary of the Navy, offices created, among others, by an act of the first session of the Congress, which distributed the exercise of the executive functions among several departments, at the head of each of which was placed a minister, called usually a 'Secretary.' And so strong and prominent to the public eye has been the control of these secretaries in the operations of the Army and Navy in the few wars of an important character which we have had during the existence of the Government that the influence of the President in the actual movements of the Army and Navy has been hardly perceptible. Whether in case a war should occur during a period when the incumbent of the executive office is a man who has had experience in the command of armies, with a good military reputation, it would be judicious for him to place himself at the head of the Army, or to conduct its campaigns, or to be present and directing in battle, or whether public sentiment would tolerate such a course of action is extremely doubtful." Miller on the Constitution, 162.)

The command of the President over the militia is limited to the time during which it is called into the service of the United States; but as to the Army and Navy, he is Commander in Chief at all times. (Johnson *v.* Sayre, 158 U. S., 115.)

The President is forbidden to appoint the officers of the militia or to train the militia, these powers being reserved to the States exclusively (Art. 4, sec. 8, cls. 16); though he can call out the militia in case of invasion by a foreign enemy, or to suppress a domestic insurrection. (The brig *Amy Warwick*, 2 Black., 668.)

While this section makes the President commander of the militia of the several States when called into the service of the United States, it omits to confer in express terms upon him, or anyone else, the right to determine when the militia of the several States shall be so called. It became a serious question during the second war with England where this power resided, and the governor of Massachusetts asked the opinion of the supreme court of that State, first: "Whether the commanders in chief of the militia of the several States have a right to determine whether any of the exigencies contemplated by the Constitution of the United States exist, so as to require them to place the militia, or any part of it, in the service of the United States, at the request of the President, to be commanded by him, pursuant to the acts of Congress?" Second, "Whether when either of the exigencies exists authorizing the employing of the militia in the service of the United States, the militia thus employed can be lawfully commanded by any officers but of the militia, except by the President of the United States?"

On the first question three justices of the Supreme Court—being all that were accessible—decided that "the right was vested in the com-

manders in chief of the several States." On the other question they held "The Federal Constitution provides that when either of these exigencies exists the militia may be employed, pursuant to some act of Congress, in the service of the United States; but no power is given, either to the President or to the Congress, to determine that either of the said exigencies does in fact exist. As this power is not delegated to the United States by the Federal Constitution, nor prohibited by it to the States, it is reserved to the States respectively; and from the nature of the power it must be exercised by those with whom the States have respectively intrusted the chief command of the militia. It is the duty of these commanders to execute this important trust agreeably to the laws of their several States respectively, without reference to the laws or officers of the United States, in all cases, except those specially provided for in the Federal Constitution. They must, therefore, determine when either of the special cases exists, obliging them to relinquish the execution of this trust, and to render themselves and the militia subject to the command of the President." (8 Mass., 548–552.)

In some other States it was held the same. (This doctrine was subsequently abandoned by the States holding it. Story on the Constitution, vol. 2, p. 122.)

But the Supreme Court of the United States declared that it was in the power of the President exclusively to determine when the exigencies of calling out the militia should arise. (Houston *v.* Moore, 5 Wheat., 37; Martin *v.* Mott, 12 Wheat., 30 The New York convention in 1788 recommended as an amendment to the Constitution that, "The militia of any State should not be marched out of the State without the consent of the executive thereof, nor be continued in service out of the State without the consent of the legislature of the State, more than six weeks, and that the power to organize, arm, and discipline the militia shall not be construed to extend further than to prescribe the mode of arming and disciplining the same." 2 Elliot, 406.) The language of Mr. Justice Story in delivering the opinion of the court is: "Is the President the sole and exclusive judge whether the exigency has arisen, or is it to be considered an open question to every officer to whom the orders are addressed to decide for himself, and equally open to be contested by every militiaman who has refused to obey orders of the President? We are all of the opinion that the authority to decide whether the exigency has arisen belongs exclusively to the President and his decision is conclusive upon all other persons."

—

AUSTRALIA—WAR POWERS OF THE COMMONWEALTH PARLIAMENT—POWER TO FIX PRICE OF BREAD.

(Opinions of the justices of the high court of Australia in Farey *v.* Burvett (21 C. L. R., 433), June 8, 1916.)

Farey *v.* Burvett (21 C. L. R., 433) June 8, 1916.

Held, by Griffith, C. J., and Barton, Isaacs, Higgins, and Powers, J. J. (Gavan, Duffy, and Rich, J. J., dissenting), that the legislative powers of the Commonwealth Parliament conferred by section 51 (VI) and (XXXIX) of the constitution include a power during the present state of war to fix within limits of locality the highest price which during the continuance of the war may be charged for bread.

Griffith, C. J. The legislative act of which the validity is impeached in this appeal is the war precautions act No. 10 of 1914, as amended by the act No. 3 of 1916, so far as it purports to authorize the making of certain regulations and orders by the Governor General. That act, which is to continue in operation during the present state of war and no longer, purports to authorize the Governor General to make regulations for securing the public safety and the defense of the Commonwealth, and by order published in the Gazette to make provision for any matters which appear necessary or expedient with a view to the same objects.

The act No. 3 of 1916, which is retrospective in its effect, purports to authorize the Governor General to make, in particular, such regulations as he thinks desirable for the more effectual prosecution of the war or the more effectual defense of the Commonwealth or of the realm, "prescribing and regulating" (inter alia) "the conditions (including times, places, and prices) of the disposal or use of any property, goods, articles, or things of any kind."

By a regulation of 24th of March, 1916, certain areas, comprising the area within a radius of 10 miles from the general post offices at Sydney and Melbourne, within 7 miles of the general post office at Brisbane, within 6 miles of the general post office at Adelaide, within 4 miles of the general post office at Perth, and within 3½ miles from the general post office at Hobart, together with certain other populous districts in the Commonwealth were declared to be "proclaimed areas," and the Governor General was authorized on the recommendation of a board to be constituted under the regulations to determine the maximum prices which might be charged for flour and bread in any proclaimed area. By a regulation of 12th of April the Governor General was empowered to fix the prices without the recommendation of the board. The "proclaimed areas," in fact, include almost all the populous parts of Australia.

By an order of 10th of April, 1916, the Governor General determined the maximum prices which might be charged for flour and bread in the proclaimed areas. The appellant was convicted of selling bread in a proclaimed area at a greater price than that so determined.

All this legislative action purports to have been taken in execution of the power conferred by pl. XI of section 51 of the constitution, by which the Parliament is authorized to make laws with respect to "the naval and military defense of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth." The question is whether it is warranted by that power.

The general principle to be applied in determining whether an attempted exercise of a power is valid has been more than once enunciated by this court. In Jumbunna Coal Mine, no Liability, *v.* Victorian Coal Miners' Association (6 C. L. R., 309, at p. 344), Barton, J., quoted the well-known passage from the judgment of Marshall, C. J., in the celebrated case of McCulloch *v.* Maryland (4 Wheat., 316, at p. 421): "We admit, as all must admit, that the powers of the Government are limited, and that its limits are not to be transcended. But we think the sound construction of the Constitution must allow to the national legislature that discretion, with respect to the means by which the powers it confers are to be carried into execution, which will enable that body to perform the high duties assigned to it, in the manner most beneficial to the people. Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the Constitution, are constitutional."

The first question, then, is what is the nature and extent of the power conferred by pl. vi. It is contended by the appellant that the word "defense," as there used, must bear a single and uniform meaning at all times, in the sense that an act which is not authorized to be done in time of peace can not be authorized in time of war, and that any wider meaning of the word is excluded by the context. No one disputes that an attempt by the Commonwealth Parliament to fix the price of food in time of peace would be a trespass on the reserved powers of the States. It is contended that it is therefore equally a trespass in time of war.

As to the suggested limitation by the context, the words "naval" and "military" are not words of limitation, but rather of extension, showing that the subject matter includes all kinds of warlike operations. The concluding words can not have any restrictive effect, unless they are read as an exhaustive definition of all that may be done, which is an impossible construction. In my opinion the word "defense" of itself includes all acts of such a kind as may be done in the United Kingdom, either under the authority of parliament or under the royal prerogative, for the purpose of the defense of the realm, except so far as they are prohibited by other provisions of the Constitution.

This, then, is the subject matter with respect to which power to legislate is given. It includes preparation for war in time of peace, and any such action in time of war as may conduce to the successful prosecution of the war and defeat of the enemy. This is the constant and invariable meaning of the term. It is obvious, however, that the question whether a particular legislative act is within it may fail to be determined upon very different considerations in time of war and time of peace.

It is hardly necessary to say that the best security of Australia lies in the success of the British arms. Certainly any measure which may have the effect of tending to secure an adequate food supply to Great Britain during the war, and so increasing, or preventing the diminution of the resources of that part of the Empire, would be a measure tending also to the more efficient defense of the Commonwealth as a part of it.

I agree generally with Mr. Mann's argument that the power to legislate with respect to defense extends to any law which may tend to the conservation or development of the resources of the Commonwealth so far as they can be directed to success in war, or may tend to distress the enemy or diminish his resources, as, for instance, by the prohibition of trading with him or with persons associated with him. But this definition is not exhaustive. The control of finance or trade may be the most potent weapon of all. One test, however, must always be applied, namely: Can the measure in question conduce to the efficiency of the forces of the Empire, or is the connection of cause and effect between the measure and the desired efficiency so remote that the one can not reasonably be regarded as affecting the other?

History as well as common sense tells us how infinitely various the means may be of securing efficiency in war. Sumptuary laws have always been common war measures. No one would dispute that the regulation of the supply and price of food in a beleaguered city would be a proper and might be a necessary war measure. The legislative act now in question is in substance a sumptuary law.

The power to make laws with respect to defense is, of course, a paramount power, and if it comes into conflict with any reserved State rights the latter must give way.

It has often been pointed out by this court, following decisions of the judicial committee in Canadian cases, that in a Federal Constitution the ambits of Federal and State powers may often really or apparently overlap, and that in such cases it is the duty of the court to inquire whether the subject matter of the law in debate falls substantially within the one or the other ambit.

It is true that up to the present time no case has decided that in answering that inquiry regard may be had to extrinsic temporary circumstances of which the court takes judicial notice. But, in my judgment, the principle is the same in all cases. The inquiry in every case is whether the act impeached is or may be substantially an exercise of a power conferred on the Parliament. In making the inquiry the court cannot shut its eyes to the fact that what could not rationally be regarded as a measure of defense in time of peace may be obviously a measure of defense in time of war. I content myself with two illustrations. I take the first, the case of a commonwealth law enacting that any person plying for hire with a boat or launch in any harbor or river in the commonwealth shall obtain a license from a commonwealth officer. Such a law if passed in time of profound peace could not possibly be regarded as a law substantially dealing with defense. An identical law passed in time of war, and limited in its operation to the duration of the war, might obviously be a necessary war precaution. The second instance I will give is that of what was once regarded as a very heinous offense and called "forestalling." A law passed by the Commonwealth Parliament in time of profound peace prohibiting the accumulating of foodstuffs could not be regarded as substantially an exercise of the defense power. In time of war the same act might well be made a capital offense.

Applying this well established doctrine, the question is whether the act and regulation, the validity of which is now called in question, can be regarded as substantially laws relating to defense. In other words, whether the provisions of the regulation can conduce to the more effectual prosecution of the war. It is not necessary for the court to point out the particular way in which they can have that effect. But the court may, I think, take judicial notice of the fact that the past season's harvest was most abundant, and that vast quantities of wheat, far exceeding the possible consumption of the Commonwealth, are waiting export, while owing to the operations of war the supply of freight is deficient. It is obvious that for economical as well as other reasons the export of the surplus to the United Kingdom or the allied nations may be highly desirable for the more efficient prosecution of the war. It seems to follow that any law which may tend, with or without the aid of other measures, to encourage such export may be conducive to the more efficient conduct of the war.

It is then contended that the necessity and desirability of making the law are questions of fact to be adjudged by the court. In answer to that argument I refer to another well-known passage in the judgment of Marshall, C. J., in McCulloch *v.* Maryland (4 Wheat., 316, at p. 423), also quoted by my Brother Barton in the Jumbunna Case (6 C. L. R., 309, at p. 345): "Where the law is not prohibited, and is really calculated to effect any of the objects intrusted to the Government, to undertake here to inquire into the degree of its necessity would be to pass the line which circumscribes the judicial department and to tread on legislative ground."

So far as the attack is made upon the act as distinct from the regulation, the court is invited to assume the function of determining whether

the facts were at the time when the act was passed such as to warrant the Parliament in exercising the defense power by passing it. Whether it was or was not authorized to do so much, so far as the authority depends upon facts, depend upon the facts as they appeared to it, of which we have not, and can not have, any knowledge. In my opinion there is no principle, and there is certainly no precedent, which would justify a court in entering upon such an inquiry, if upon any state of facts the exercise of the legislative power in the particular way adopted could be warranted. If it appeared on the face of the act that it could not be substantially an exercise of the defense power, different questions would arise. I am not prepared to say that it may not have some, and some important, influence upon the successful conduct of the war.

If the attack is transferred, as it must be, to the regulation—that is, if it is treated as a denial of the desirability of making it at the time when it was made—the question, though not formally the same, is the same in substance. The act expressly designates the Governor General as the person to determine that question of fact. How can this court say that it will assume the function of revising his opinion? In this aspect of the case Lloyd *v.* Wallach (20 C. L. R., 299), decided by this court last year, is exactly in point and is conclusive.

For these reasons I am of opinion that, since the existence of a state of war might, under some circumstances, create an exigency justifying the exercise of the power to legislate with respect to defense in the way in which it has been exercised by the Parliament and by the Governor General, it is not competent for any court to entertain the question whether the circumstances were in fact of such a character.

In my judgment, therefore, the act and the regulation are valid.

—

Barton, J.: In the first instance, I wish to apply to the constitution of the Commonwealth the following words of Gray, J., delivering the opinion of the Supreme Court of the United States in the great Legal Tender case (Juillard *v.* Greenman, 110 U. S., 421, at p. 439): "A constitution establishing a frame of government, declaring fundamental principles, and creating a national sovereignty, and intended to endure for ages and to be adapted to the various crises of human affairs is not to be interpreted with the strictness of a private contract. The Constitution of the United States, by apt words of designation or general description, marks the outlines of the powers granted to the National Legislature; but it does not undertake, with the precision and detail of a code of laws, to enumerate the subdivision of these powers or to specify all the means by which they may be carried into execution."

The United States Constitution, after granting legislative power to Congress, including authority to declare and conduct a war, gives this further power: "To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof."

The last-mentioned provision was expounded by Marshall, C. J., in United States *v.* Fisher (2 Cranch, 358), as follows: "In construing this clause it would be incorrect and would produce endless difficulties if the opinion should be maintained that no law was authorized which was not indispensably necessary to give effect to a specified power. Where various system might be adopted for that purpose, it might be said with respect to each that it was not necessary, because the end might be obtained by other means. Congress must possess the choice of means and must be empowered to use any means which are in fact conducive to the exercise of a power granted by the Constitution."

The Australian constitution, by section 51, empowers the Parliament, subject to the constitution, "to make laws for the peace, order, and good government of the Commonwealth, with respect to" (inter alia) "(VI). The naval and military defense of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth"; "(XXXIX). Matters incidental to the execution of any power vested by this constitution in the Parliament * * * or in the government of the Commonwealth * * * or in any department or officer of the Commonwealth."

The power in subsection VI would be sufficient to include matters incidental to the exercise of that power without subsection XXXIX, but that section puts it at least beyond doubt. If the power in the United States Constitution "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers" bears the sense attributed to it by Marshall, C. J.—and that is settled law of the United States—it appears to me that subsection VI, probably without, but more certainly with the aid of subsection XXXIX, gives the Parliament of Australia at least as wide a choice of means in the exercise of the power, so far as they are conducive to such an exercise. The word "incidental" gives at least as ample scope as the expression "necessary and proper," and the Australian power is not complicated with any difficulty arising from necessity in fact. (See Jumbunna Coal Mine No Liability *v.* Victorian Coal Miners' Association, 5 C. L. R., 309, 344.) The end being once found to be legitimate—that is, authorized by the constitution—then whether it is "wise and expedient" to resort to the means proposed is, to adapt the words of Gray, J., "The political question to be determined by Parliament when the question of exigency arises, and not a judicial question to be afterwards passed upon by the courts." Quoting again from the judgment of Marshall, C. J., in McCulloch *v.* Maryland (4 Wheat., 316, 423): "To undertake here to inquire into the degree of its necessity would be to pass the line which circumscribes the judicial department and to tread on legislative ground."

The war precautions act (No. 10 of 1914), as amended by No. 3 of 1916, which is restrospective both as to the act and as to any regulations under it (sec. 3), provides in section 4 (1A), inter alia: "The Governor General may make such regulations as he thinks desirable for the more effectual prosecution of the war or the more effectual defense of the Commonwealth or of the realm, prescribing and regulating * * * (b) the conditions (including times, places, and prices) of the disposal or use of any property, goods, articles, or things of any kind."

It is under that section that the Commonwealth justifies Regulation No. 40 of 1916, paragraph 9 of which empowers the Governor General, on the recommendation of the board, to determine the maximum prices which may be charged for flour and bread sold in any proclaimed area; and under that paragraph the Governor General, with the advice of the Federal Executive Council and on the recommendation of the board, made Prices Adjustment Order No. 1, which came into force on the 12th of April last. It is to apply to the proclaimed area (c) in the Schedule to Regulations No. 40. Concurrently a similar order was applied to each of the other proclaimed areas. These included in each case the area within a specified number of miles from the principal post office in one of the large cities in the Commonwealth—Sydney, Newcastle, Melbourne, Adelaide, Brisbane, Perth, Hobart, and Launceston.

To determine whether the appellant was rightly convicted of a sale of bread at a higher price than the maximum allowed by the order, it is necessary, first, to determine the validity or otherwise, in relation to the defense power, of the fourth section of the war-precautions act as lately amended retrospectively, and also the validity of the regulation and the order quoted, which, if section 4 is valid, are admitted to be within its authority.

First, then, as to the ambit of section 51, subsection 6, of the Constitution: We can not, of course, say that any statute or provision is within it until we know how wide it is.

The armies of Australia are now engaged in her defense in several fields of the world, for the safety of Australia is notoriously involved in the success of the Empire in the present war. It is a common error to suppose that the defense of a country is limited to the protection of its shores when invasion is actually made or attempted. There is much more hope for the country which, at need, sends its armies or its ships, or both, abroad, to engage, to overcome if possible, or to cripple the enemy in whatever field he may be found. One is safer from a burglar if he can grapple with him at the gate without waiting until he has entered the house, and one's belongings are by this means infinitely safer. Success in a distant field is therefore often the surest means of saving one's own country from invasion.

Next, attack may be and often is the best defense. This needs no proof. Now, these principles do not apply to the operations of troops and warships alone. In these days the strategy of war is not so limited. It applies to war by many other methods devised to assist in the subjection of the enemy. The enemy uses every resource of his nation against us, and if we of the Empire leave any of our resources unused against him; that is, by the abstention, culpable or chivalrous, of people or Parliament, and not through the want of such resources or of the right to use them. Almost any resource of a nation can now be made an assistant to its success in war, whether the resource be mental or material, and whether in its application it be political, financial, economic, industrial, or of any other kind. Parliament may be limited only by its own wisdom or its own discrimination in the choice of the resources it will employ or the means by which it will employ them. The Parliament of one belligerent may think its country most wisely defended while refraining from methods which appeal to another as weapons to be used or avoided purely according to their effectiveness. But, in any case, if the enemy can be injured by curtailing his food supply, or our countrymen or allies can be best helped by supplying part of the food they need, the enforcement or encouragement of the one or the other, or both, is capable of giving substantial aid toward success in war. To aid in supplying the food needs of any part of the Empire outside Australia or of Australia herself may greatly assist that Empire's defense, especially, but not only when that supply may be used for the feeding of armies of which at this moment Australia forms an active part. To employ that resource may be one of the many methods of contributing to success, for the wars of to-day are wars of country against country and not only of army and navy against army and navy; the war in the fighting line is only part of the hostilities. And these hostilities, so far as we are concerned, must be carried on by the authorities constitutionally charged with defense. It is not to the purpose to say that they involve the exercise of powers which are the proper province of Governments which have no direct concern with that duty. If they are admittedly so in time of peace, it does not follow that they are so, or exclusively so, in time of war.

It is argued that the defense power has the same meaning at all times whether in peace or in war. I doubt that, but it may not be necessary to determine it, for the true question is whether many things that can not aid defense in peace, and when no enemy is in view, are not urgently necessary when an enemy has arisen who must be defeated if the nation, or family of nations, is to live.

If the object of this order and the regulation on which it depends, and, indeed, of the portions of section 4 in dispute, is of either of the two kinds, namely, the augmentation of the food supplies at the disposal of the mother country, or of any of our allies, or, on the other hand, the augmentation of the food supplies at the disposal of our Government and people; either object is, in my opinion, a legitimate means of defense in time of war; and whether these means, or either of them, be necessary must be a question for our Parliament, or the authority validly delegated by it for the purpose, to determine. What is necessary in the control and disposal of this country's resources, in food as well as in arms, ships, and men, is a matter that can only be known by those who, as Government and Parliament, have the best knowledge of the facts relating to the strategy of the war and the conditions under which the people can be victorious. Such facts are not lightly disclosed beyond the eyes and ears of those who alone can determine the degree of necessity or fitness. For us to determine it would be, to repeat a phrase already quoted, "to tread on legislative ground."

I have endeavored to show how widely section 51, subsection vi, extends in its ambit, but it is very difficult, even if it is possible, to express its ambit, as it exists in this time of war, by any proposition intended to define it. Many matters may—not because of enthusiasm or excitement but by compelling reason—be seen to come within it at a critical time, which at a time less critical were not realized as embraced in its scope as aids to defense. It may be only in a great emergency that it is demonstrated that they must be utilized to render defense successful. For instance, a great battle is fought on our land, or in our waters, or thousands of miles away. Suppose the result to be indecisive or even adverse. Subjects which before that battle seemed only indirectly or remotely connected with defense as the means of winning the war may after the battle be seen quite clearly to be within it. It may be, as Sir William Irvine urged, that the power does not change. If that is so, it is because of the perspective of affairs; because the power looks narrower in peace, when it is not in the foreground of our view than it does as a means of present war when war brings us into close contact with it—when its exercise becomes the most vital of our activities. It may be that the power does not become enlarged in war, but that when seen closely we know how large it is in relation to existing war. Then at least we are able to envisage the reach of its long arm. If the thing be capable, during war, of aiding our arms by land or sea, here or elsewhere, we are to say so, but we say no more. It may be wholly beside the mark in peace, and, if it be so, we are to say so upon due occasion. But the necessity is not for us, when facts of which we take judicial notice establish that the thing is capable of aiding directly the execution of the power. If it is thus capable, then the question

of the necessity, or the wisdom or expediency, of invoking such aid, is for Parliament or its duly delegated authority.

It has been urged that this exercise of power is a usurpation of State activities. The individual States can not always use such activities as this efficiently for the purposes of war, because they, like ourselves, can not gauge the necessity. They can not know all the facts which dictate or forbid action in time of war, and they can not individually deal with the case of the whole Commonwealth. The war-precautions act is limited to the duration of the war, and the regulations and orders that owe their life to it can not exist when it expires. If an activity belongs solely to a State in time of peace it does not follow that it is not a means of defense for Commonwealth hands in time of war.

Apart from that, if this action is only incidental to the defense of the country against an actual state of war, it is, of course, incidental to this power; and the Commonwealth may, incidentally to the legislative exercise of a power, make ancillary provision on a subject as to which substantive legislation on its part would be unconstitutional and invalid. As an instance see the Jumbunna case (6 C. L. R., 309).

I can not but think that as a mere war precaution, though in no other way or guise, and not in time of peace, this legislation and the derivative regulations and orders are, as far as they are impeached, authorized by the Constitution.

Isaacs, J.: The contention, and the only contention, on behalf of the appellant, is that even in time of war, whatever be the national exigency, it is wholly incompetent to the Commonwealth Parliament to make any provision with respect to the sale of the necessaries of life, except so far as relates directly to the armed forces or some actual military operation. The needs of the civil population, it is said, are altogether outside the limits of Commonwealth protection, because within the meaning of the Australian constitution no scheme of national defense can possibly comprehend them. Monopoly, according to the argument gravely presented, may lay the community under private contribution, may sap their energies, or unconscionably reduce their means of living, with the most direct consequences of impeding the nation in its struggle for existence, and yet the National Government, charged by the Constitution with the duty of universal defense, is by the same instrument forbidden to remove the impediment. The remedy suggested for such an evil is in the State powers. But though the States may, in directions not contravening express prohibitions, most advantageously act by means of their own constitutional powers in aid of the common object, yet this possibility does not insure a remedy at all, and certainly does not insure a remedy on broad national lines, with unity of purpose and action, even if the requisite knowledge were always possessed by the State authorities to enable them to appreciate the necessities of the entire situation.

It is manifest that to make defense adequate and successful full power must be within the grasp of one hand. And the question is whether the constitutional limitations as between Commonwealth and States are such that the Commonwealth has full power. Day by day we are reminded how potent a weapon both of attack and defense is the control of a nation's food supply. It is one of the most notorious facts of this war that the economic pressure brought about by the stoppage more or less successful of the enemy's food supplies reacts with direct influence upon his military operations. Time after time the further fact is proclaimed that men without munitions are helpless; but without an adequate supply of the prime necessities of life there can be no munitions; and yet we are solemnly told that the food supply is too indirectly connected with defense to come even incidentally within its ambit, unless there is virtually a state of siege. I must confess my inability to accept the suggestion, and must candidly say that, from the moment the view was presented, I have not been able to entertain the slightest doubt upon the subject.

The matter seems to me to rest upon the plainest possible foundation. The constitution, as I view it, is not so impotent a document as to fail at the very moment when the whole existence of the nation it is designed to serve is imperiled. Let us first consider its bare words. By section 51, subsection vi, the Imperial Parliament has committed to the hands of the General Government of Australia the power of legislating with respect to the naval and military defense of the Commonwealth, and it has added these words of great significance, "and of the several States." Not only has this legislative power been placed in the hands of the Commonwealth Parliament, but its effective exertion has been made exclusive, because by section 114 the States themselves are forbidden, unless they have the consent of the Commonwealth Parliament, to raise or maintain any naval or military force; by section 119 the Commonwealth is commanded to protect every State against invasion. Besides the legislative power, there is the executive authority of the Commonwealth. By section 61 of the constitution that is vested in the Sovereign and (subject to sec. 2) is exercisable by the Governor General as the royal representative; and, says section 61, this executive power extends to the execution and maintenance of this constitution and of the laws of the Commonwealth. These provisions carry with them the royal war perogative, and all that the common law of England includes in that prerogative so far as it is applicable to Australia. The creation of a state of war and the establishment of peace necessarily reside in the Sovereign himself as the head of the Empire, but apart from that the prerogative powers of the Crown are exercisable locally. The full extent of the prerogative it is not necessary now to define, but it is certainly great in relation to the national emergency which calls for its exercise, as may be seen by reference to Chitty on the Prerogatives of the Crown (pp. 49 and 50). The only importance of it now is the fact that it is included in the Commonwealth powers and indicates the completeness of authority vested. Superadded to all this, subsection xxxix of section 51 enables the Parliament to legislate as to all matters incidental to the execution of the legislative powers of the Parliament itself and of the executive power of the Crown. So that by the very words of the constitution there is vested, in the most ample and absolute terms, in the Commonwealth the full power and duty of taking every measure of defense which the circumstances may require as they present themselves to the proper organs of government to protect this continent from foreign aggression, for maintaining its freedom—always under the British Crown—and, in fact, for preserving its very existence as a unit of the imperial family of nations.

It is said that the measure of the power is the same in peace and in war, and as such a regulation as the one now under consideration would be invalid in times of peace, so it must be unlawful in the present circumstances. I have no hesitation in rejecting such an argument. It fails to grasp the all-essential fact that is comprehended in the power of defense. The constitution, it is true, provides for a distribution of powers, but in doing so contemplates in general the normal orderly, peaceful progress of the nation, working out its own destiny, free from hostile aggression. Its continued existence and development for all time and in all circumstances, as a free, self-governing community under the British Crown, is a postulate of the constitution. Primarily it contemplates conditions of amity with the world at large. But the interruption of its normally peaceful condition is foreseen and provided for both by the express terms quoted and by the common law, which, as a part of our heritage so far as it is not altered by competent authority, stands behind the written fabric of our constitution to aid and assist us in understanding and applying it. The defense power may be exerted in times of peace, but so far only by way of preparation. Actual defense, and all that it connotes, comes only when we are at war. War creates its own necessities, proportioned to the circumstances, and not measurable in advance of the occasion; and defense is only complete when it meets those necessities, whatever they may prove to be. While peace prevails the normal facts of national life take their respective places in the general alignment and are subject to the normal action of the constitutional powers. Precedence as to their regulation is governed by recognized usage or expressed enactment, but always with reference to normal conditions.

A war imperiling our very existence, involving not the internal development of progress but the array of the whole community in mortal combat with the common enemy, is a fact of such transcendent and dominating character as to take precedence of every other fact of life. it is the ultima ratio of the nation. The defense power then has gone beyond the stage of preparation, and passing into action becomes the pivot of the constitution, because it is the bulwark of the State. Its limits then are bounded only by the requirements of self-preservation. It is complete in itself, and there can be no implied reservation of any State power to abridge the express grant of a power to the Commonwealth. Even if there be a concurrent power in the State, it is necessarily subordinate. If it were possible to give special legal prominence to this principle among Commonwealth powers, that must of necessity be accorded to the defense power. All other powers and authorities—Commonwealth and State—are necessarily dependent upon its effective exercise. For of what avail is the State right to regulate the internal sale of commodities if the State itself disappears? Or of what value is the Commonwealth right to regulate interstate and foreign trade if the Commonwealth is shattered? The best protection all the rights and powers so jealously, and in ordinary times so justifiably, defended can have, so far as Australia is concerned, is the very Commonwealth power that is now sought to be limited. The constitution can not be so construed as to contemplate its own destruction or, what amounts to the same thing, to cripple by checks and balances the ultimate power which is created for the undeniable purpose of preserving at all hazards and by all available means the inviolability of the Commonwealth and of the several States. Let me advert as an instance to a section which has been referred to in argument and which admirably tests the situation, because it is so inherently clear. Section 92 in the most positive terms places beyond Commonwealth and State control alike the freedom of all interstate commerce and intercourse. But though in ordinary times of peace this can not be infringed, could it be asserted for a moment that it limits the war power? Can every citizen demand the right of passage from State to State, though military necessity is openly opposed to it? Is it the function of this court to declare the supremacy of that provision, literally construed, over the organic power of defense? But if not, is it not because the new element of war destroys the ordinary perspective of national life, and gives by the very nature of the circumstances a paramount authority to the defense power, without which the ninety-second clause would be a senseless inscription on the instrument of government? The essential fact is that Australians are belligerents as well as citizens, and for the moment their character as belligerents is preeminent and must receive the first consideration.

As I read the constitution, the Commonwealth, when charged with the duty of defending Commonwealth and States, is armed as a self-governing portion of the British Dominion with a legislative power to do in relation to national defense all that Parliament as the legislative organ of the nation may deem advisable to enact in relation to the defense of Australia as a component part of the Empire, a power which is commensurate with the peril it is designed to encounter, or as that peril may appear to the Parliament itself; and, if need be, it is a power to command, control, organize, and regulate, for the purpose of guarding against that peril, the whole resources of the continent, living and inert, and the activities of every inhabitant of the territory. The problem of national defense is not confined to operations on the battle field or the deck of a man-of-war: its factors enter into every phase of life, and embrace the cooperation of every individual with all that he possesses—his property, his energy, his life itself, and in this supreme crisis we can no more sever the requirements and efforts of the civil population, whose liberties and possessions are at stake, from the movements of our soldiers and sailors who are defending them than we can cut away the roots of a living tree and bid it still live and bear fruit, deprived of the sustenance it needs.

I do not hold that the legislature is at liberty wantonly and with manifest caprice to enter upon the domain ordinarily reserved to the States. In a certain sense and to a certain extent the position is examinable by a court. If there were no war and no sign of war, the position would be entirely different. But when we see before us a mighty and unexampled struggle, in which we as a people, as an indivisible people, are not spectators but actors, when we as a judicial tribunal can see beyond controversy that coordinated effort in every department of our life may be needed to insure success and maintain our freedom, the court has then reached the limit of its jurisdiction. If the measure questioned may conceivably in such circumstances even incidentally aid the effectuation of the power of defense, the court must hold its hand and leave the rest to the judgment and wisdom and discretion of the Parliament and the executive it controls, for they alone have the information, the knowledge, and the experience, and also, by the constitution, the authority to judge of the situation and lead the nation to the desired end. Certain facts are before the court by admission; others are notorious. I do not enter into the circumstances further than to perform my duty as I have stated it. As to the desirability or wisdom of the regulation complained of, it is not my province to speak, but as a matter of law I have no hesitation in holding that such a regulation is one which, as a defense regulation, is within the competency of the legislature in the condition of affairs that now exist.

I therefore agree that the appeal should be dismissed.

[NOTE.—Since this judgment was delivered I have observed the recent case of *The Zamora* (32 T. L. R., 436). Lord Parker, for the privy council, said (32 T. L. R., at p. 445): "Those who are responsible for

the national security must be the sole judges of what the national security requires. It would be obviously undesirable that such matters should be made the subject of evidence in a court of law or otherwise discussed in public."—I. A. I.]

—

Higgins, J.: I am of opinion that the objections taken to the act No. 3 of 1916 must fail. This act purports by section 2 (sec. 4 of the war precautions act, 1914–1916) to enable the Governor General to "make such regulations as he thinks desirable for the more effectual prosecution of the war, or of the more effectual defense of the Commonwealths or of the realms, prescribing (inter alia) the conditions (including times, places, and prices) of the disposal or use of any property, goods, articles, or things of any kind." On April 10, 1916, the maximum price of bread was fixed by regulation of the Governor General for the Melbourne district; on April 20 a sale of bread was made contrary to the regulations; and by section 3 of the act No. 3 of 1916, passed on May 30, 1916, the regulation was validated retrospectively. The question is, Can an act or a regulation under an act fixing the maximum price of bread be treated as authorized by section 51 (VI) and (XXXIX) of the constitution? The Parliament of the Commonwealth is empowered by section 51 to make laws for the peace, order, and good government of the Commonwealth with respect to "(VI) the naval and military defense of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth." By section 51 (XXXIX) Parliament can make laws with respect to matters incidental to the execution of any power vested by the constitution in the Parliament or in the Government of the Commonwealth. By section 61 the executive power of the Commonwealth is exercisable by the Governor General as the Queen's representative; by section 68 the command in chief of the naval and military forces is vested in the Governor General as the Queen's representative; and by section 119 the Commonwealth shall protect every State against invasion and, on the application of the executive government of the State, against domestic violence. The war precautions act, 1914, of which this act No. 3 of 1916 is an amendment, is to last only for the term of the war (sec. 2); but it is urged that a law fixing the maximum price of bread between one citizen and another is not a law with respect to the naval and military defens of the Commonwealth, or to matters incidental to the execution of any power of Parliament or of the Government. If there were a state of siege, it might be a defense measure; but how can it be a defense measure in the present happy security of Australia?

Now, I have taken the view which I have sometimes expressed in this court (see Baxter *v.* Commissioners of Taxation (N. S. W.), 4 C. L. R., 1087, at pp. 1165 et seq.) that in the famous decision of McCulloch *v.* Maryland (4 Wheat., 316), Marshall, C. J., pushed the doctrine of implied powers and implied prohibitions beyond legitimate bounds. But the present is not a case of implication; it is a question as to the interpretation of an express power. What is the ambit of the power, not merely to make laws for the control of the forces but to make laws (not for, but) "with respect to" naval and military defense, and to matters incidental to that power and the powers of the Government? All the subjects for legislation in section 51 are on the same logical level. There is no hierarchy in the powers with the power as to defense on the top. But from the nature of defense, the necessity for supreme national effort to preserve national existence, the power to legislate as to defense, although it shows itself on the same level as the other powers, has a deeper taproot, far greater height of growth, wider branches, and overshadows all the other powers. Defense—naval and military defense—is primarily a matter of force, actual or potential; the whole force of the Nation may be required; and for the purpose of bringing the whole force of the Nation to bear the policy of the States may have to be temporarily superseded, the law made under the Federal Constitution prevailing (sec. 109). The temporary suspension of the policy of a State may possibly help to prevent the total and permanent paralysis of the State's policy and functions, and of the State itself, under the foreign invasion and domination. In Great Britain there is no limit to the legislative powers, and therefore there is no line of demarcation between acts for defense and acts for other purposes. But if the British acts had to be classified and if in view of the importance of bunker coal for the warships and of munitions for the Army and the Navy, an act be passed to make strikes penal in South Wales for the period of the war and to forbid absences from work in Glasgow iron works during the same period (Cf. munitions of war act, 1915, and amendments 5 and 6, Geo. V, c. 99), might not such acts be fairly classed under acts for defense purposes? The Parliament of Australia has, so far as regards the subjects committed to it by section 51 of the Constitution, power as plenary and as ample as the Parliament of the United Kingdom (Hodge *v.* The Queen (9 App. Cas., 117, at p. 132)). The fact that such acts as I have mentioned are also industrial laws does not prevent them from being also acts with respect to the naval and military defense of the Empire.

But it may be urged, acts to secure the supply of bunker coal or munitions may be defense acts, but the act here in question is an act to fix the price of bread; and how is such an act a defense act? If, however, acts for industrial regulation may be defense acts, acts such as have been actually passed in Germany to regulate the prices of food in war time, in order to prevent extreme privation and riots and the dissipation of the national force in controlling internal turbulence when all the force is required to meet the enemy, may also be defense acts—acts "with respect to" naval and military defense. So may sumptuary acts, or acts forbidding or limiting the sale or use of alcohol, or the purchase of foreign goods. We have no evidence before us of the facts which, in the opinion of Parliament, rendered the present act expedient for the purpose of the war, and for the term of the war, but there may have been such facts

I am not entitled to use as facts in this case matters which I have learned aliunde; but I may refer to the following personal experiences as hypothetical illustrations of the possible. I was in Sicily in February of last year when Italy was still neutral. There were bread riots, bakers' shops were looted, and the outlook was serious. Wheat was scarce and bread was rising in price. At that very time, as now appears, the Government was engaged in critical negotiations with Austria, and nothing would have suited Austria better than that Italy should be so distracted by internal revolts as to be unable to undertake external operations. The Government of Italy took measures to allay the excitement as to bread and thereby became free to apply itself to preparations for external war. These measures were quite as important for the naval and military defense of the country as measures for the raising, maintaining, and using the army. Then early this year the waterside workers in Melbourne took it into their heads to refuse to handle wheat for export, saying that the export of wheat would raise the price of bread. Our Government was then engaged in a great scheme for exporting the wheat of an abundant harvest to feed the people of Great Britain and our allies. As president of the court of conciliation, I managed to get the waterside workers to see their mistake and to leave the whole subject to be handled by the Government and Parliament; and these regulations and the impugned act are, to all appearances, the response of Parliament. Whether the act will be effective or ineffective, useful or hurtful, it is not for this court to decide; it is enough that Parliament, for purposes of war, wants to export the Australian wheat, and probably wants to do so without inflicting privations on the working classes; and the fixing of the price of bread seems to be an expedient adopted. To secure peace and contentment and orderly industry among the people, from whom all our national force comes, may be as valuable a war measure as the equipment of an army division. To consolidate our own forces may be a necessary step toward disintegrating the forces of the enemy. I need hardly refer to the beneficial influence of large exports on money exchanges and on the prices which we pay for foreign commodities and on the rates which we pay for our war loans. Soldiers and sailors and munitions can not be supplied or maintained except from the country's resources, and there are no resources more valuable than a contented population having its necessary wants satisfied and freed from all temptations to riot or sedition.

Here Parliament has declared on the face of the act that it is for "the more effectual defense of the Commonwealth." It is not for this court to decide that the act does aid defense or how it aids defense; it is enough that it is capable of being an act to aid defense, enough that the statement of Parliament is not necessarily untrue. Appellant's counsel urge that it is for this court to decide whether the military necessities now existing are sufficient to justify the act, or, as finally stated, whether this act is capable of being a defensive act in the circumstances of the country. In my opinion this is not our function. As Chief Justice Marshall said in McCulloch *v.* Maryland (4 Wheat., 316), "The degree of necessity for any congressional enactment or the relative degree of its appropriateness, if it have any appropriateness, is for consideration in Congress, not here."

As was said in Knox *v.* Lee (12 Wall., 457, at p. 531), "The judiciary should presume until the contrary is clearly shown that there has been no transgression of power by Congress." As Holmes, J., said in Missouri, etc., Railway Co. *v.* May (194 U. S., 267, at p. 270), "It must be remembered that legislatures are ultimate guardians of the liberties and welfare of the people in quite as great a degree as the courts." As was said by the court in the Legal Tender Case, Juillard *v.* Greenman (110 U. S., 421, at p. 450), "The question whether at any particular time, in war or in peace, the exigency is such, by reason of unusual and pressing demands on the resources of the Government or of the inadequacy of the supply of gold and silver coin to furnish the currency needed for the uses of the Government and of the people, that it is, as a matter of fact, wise and expedient to resort to this means is a political question to be determined by Congress when the question of exigency arises, and not a judicial question to be afterwards passed upon by the courts." We have not in this court the evidence, we have not even the means of compelling the ministers to state the information on which they or Parliament acted. If we attempted the function of determining whether the circumstances of the country and the military necessities are such as to justify this act, we should be trespassing on the legislative power.

I assume—as the appellant's counsel assumes—that the regulation fixing the prices ceases to be operative at the termination of the war, when the acts ceases to be operative. Moreover, it has not been argued that the addition in the act of the words "or of the realm" to the words "the more effectual defense of the Commonwealth" renders the act invalid.

TEXT OF SECTIONS OF THE AUSTRALIAN CONSTITUTION CITED.

SEC. 51. The Parliament shall, subject to this constitution, have power to make laws for the peace, order, and good government of the Commonwealth with respect to—

(VI) The naval and military defense of the Commonwealth and of the several States and the control of the forces to execute and maintain the laws of the Commonwealth.

(XXXII) The control of railways with respect to transport for the naval and military purposes of the Commonwealth.

(XXXIX) Matters incidental to the execution of any power vested by this constitution in the Parliament or in either house thereof, or in the government of the Commonwealth, or in the Federal judicature, or in any department or officer of the Commonwealth.

SEC. 61. The executive power of the Commonwealth is vested in the Queen and is exerciseable by the Governor General as the Queen's representative and extends to the execution and maintenance of this constitution and of the laws of the Commonwealth.

SEC. 68. The command in chief of the naval and military forces of the Commonwealth is vested in the Governor General as the Queen's representative.

SEC. 92. On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free.

SEC. 109. When a law of a State is inconsistent with a law of the Commonwealth the latter shall prevail and the former shall, to the extent of the inconsistency, be invalid.

SEC. 114. A State shall not, without the consent of the Parliament of the Commonwealth, raise or maintain any naval or military force or impose any tax on property of any kind belonging to the Commonwealth, nor shall the Commonwealth impose any tax on property of any kind belonging to a State.

SEC. 119. The Commonwealth shall protect every State against invasion and, on the application of the executive government of the State, against domestic violence.

Mr. HAUGEN. Mr. Chairman, I yield 10 minutes to the gentleman from Michigan [Mr. SMITH].

Mr. SMITH of Michigan. Mr. Chairman and gentlemen of the committee, I think this is a good bill, and, like old friendship, it grows better the more we get acquainted with it. At first I thought it was drastic, intricate, and difficult of solution, and that possibly it would not conserve the best interest of the public. There is no doubt but that it is broad enough to correct many of the evil practices which now exist in relation to speculation and gambling in commerce and trade. We would not have time to pass a bill correcting all of the evils of trade or possibly to make laws that would regulate them. That would require too much time and cover too large a scope. They are

too numerous. I think, however, that there ought to be read into the title of this bill something about the penalty and punishment of the guilty, and the bill should contain specific provisions in relation to the mining, the output, and transportation of coal.

Now, the title of the bill says that it is one—

To provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

In reading the bill, however, we do not see the same care for or the specific provisions in relation to the regulation of coal or fuel, concerning which there is as much complaint as we find for the production, transportation, and control of food products. It seems to me that here is a chance and an opportunity to correct a great injury, which amounts almost to an outrage on the public. That part of section 12 which provides for the production and control of nonperishable food products and the provision of the bill receiving the greatest attention at the hands of Congress reads as follows:

SEC. 12. That whenever the President shall find that an emergency exists requiring stimulation of production and that it is essential that the producers of any nonperishable agricultural products produced within the United States shall have the benefits of the guaranty provided for in this section in order to stimulate production of such products, he is authorized, from time to time, seasonably, and as far in advance of seeding time as practicable, to determine and fix and to give public notice of what under specified conditions is a reasonable guaranteed price for any such products, in order to assure such producers a reasonable profit. Thereupon the Government of the United States hereby guarantees every producer of any merchantable nonperishable agricultural products produced within the United States for which a guaranteed price shall be fixed by notice in accordance with this section that, upon compliance by him with the regulations prescribed by the President, he will receive for any such products produced in reliance upon this guaranty within the period, not exceeding three years, prescribed in the notice, a price not less than the guaranteed price therefor as fixed pursuant to this section. In such regulations the President shall prescribe the terms and conditions upon which any such producer shall be entitled to the benefits of such guaranty.

Mr. MORGAN. Will the gentleman yield?

Mr. SMITH of Michigan. Certainly, to the gentleman from Oklahoma.

Mr. MORGAN. The gentleman, I understand, is a farmer, and also he is a business man, and his judgment ought to be pretty good on this proposition. I would like for him to tell the committee whether he thinks this provision in section 12, which provides for a reasonable guaranty of profits to be fixed by the President, is sufficient in itself properly to stimulate production of foodstuffs in order to insure an adequate supply for ourselves and our allies during this existing war. I would like to have the gentleman's judgment on that question.

Mr. SMITH of Michigan. Well, during the debate on the tariff in the Sixty-second Congress I know that there was great criticism against the protective tariff upon the ground that it guaranteed profits to the American manufacturer. The gentleman well remembers that and that claim was discussed here for days by our Democratic brethren as a great iniquity and in favor of the passage of a free-trade bill. It looks a little inconsistent now to see the Democrats on that side of the aisle introducing and supporting a bill to guarantee profits which they formerly so strongly condemned. I do not believe that the farmer is asking for any special privileges or favors he would not concede to others. Nature has more to do with the production of crops and the ordinary law of supply and demand with the question of price than anything that is in this bill. I do not believe that it is possible for us to legislate values and say what we will about fixing a minimum or a maximum price. If a farmer puts out 10 acres of wheat, I would like to know what profit he will be guaranteed if that crop is an absolute failure. That would be possible only upon the production of a crop, and he needs the guaranty against failure as much as he does when he produces a crop. In our State sugar-beet factories, of which I will have more to say as I proceed, have agents who go around and make contracts with the farmers for a certain number of acres of sugar beets each year. They will furnish the seed to seed the ground and care for the crop. If you furnish the farmer short-time credit at a low rate of interest and aid him in planting, caring for, and harvesting his crop, it will do more, in my estimation, to stimulate production than it will if you undertake to fix or guarantee a profit upon a crop that is problematical or an absolute failure.

Mr. MORGAN. Will the gentleman yield further?

Mr. SMITH of Michigan. The gentleman is always so kind and generous in yielding himself that I yield to him again.

Mr. MORGAN. I would like to ask the gentleman's opinion whether or not in order to stimulate our food production or assure a production of an adequate supply of food if the Government ought not to do just like the beet-sugar manufacturers. They contract with the farmers to produce so many acres of beets, and I would like to know whether it is not practical if we need to increase our wheat supply or corn supply or other supplies next year for the Government through these thousands of agents in the various counties of the United States actually to contract with the farmers to produce that, and if it is not a better way than simply to put in this so-called guaranteed price?

Mr. SMITH of Michigan. Let me say to the gentleman that if we have a good season this year there will be more farm products raised in Michigan than there possibly can be under the stimulation of this bill, if the season is a bad one. It sometimes happens that potatoes are so cheap they are given away, but it does not look as if that condition would exist soon again. I will say another thing, that the banks in many towns in Michigan, to stimulate the annual food supply and the acreage of crops, did what might be expected to be accomplished by this bill. They have advertised to loan the young men and farmers, and under a special arrangement have undertaken to furnish them enough money to get started in the live-stock business with young stock and to purchase seed with which to plant their crops. They have supplied the money for the purpose of stimulating that kind of production. I look at this bill, gentlemen, not simply as a mere matter of aid in the production of food products but to curb and prohibit evil practices which we all know from our own experience exist. If it does not do that I shall be disappointed, but thinking it will I intend to support this bill. Some of its provisions ought to have become the law of the land years ago. Great profits by speculators out of the food supply of the people necessary to sustain life should have been curbed and eliminated and reduced to a fair trade on a legitimate basis. Gambling on stock exchange and in fictitious values ought to be prohibited. If price fixing grows out of the proceedings regulating the supply and control of food, it ought to be standardized in every branch of trade from the producer through the warehouseman, the commission merchant, broker, stock exchange, speculator, and manufacturer to the ultimate consumer. If the farmers' prices or the price to the farmer is a factor and the basis of food control, why not the prices of each and every person, corporation, or organization handling or dealing in food be subjugated to the same control? I think it will be and that is the purpose of the bill largely.

But I do not base this sort of control solely on the emergency of the war. Many of the States have drastic laws against gambling on the race course and by games of chance of all kind. Why should the law not step in and regulate, if not prohibit, gambling in food supply the same as in other wagers of chance? This bill is a blow at the food gambler and that provision I predict will remain the law after the regulatory provisions of this bill cease to exist.

That, however, is not my only reason for supporting the bill. My greatest solicitude is the welfare of our Republic, to abundantly feed and clothe and properly equip our Army and Navy, and to do everything in our power as a Nation to successfully prosecute the war is my chief concern. I have no fear that the patriotic American farmer or laboring man will not do his part without stint or hindrance. The farmers' is the greatest and most important industry of all. The farmers constitute one-third of our population. They feed the other two-thirds. They should be encouraged and nothing done to discourage them. Their annual production in 1916 was valued at $13,000,000,000. This production cost the consumer $27,000,000,000. That both producer and consumer can be made to profit greatly by eliminating the speculator and food gambler looks self-evident. I think this bill will have such an effect and embodies that purpose. This purpose appeals to me. The farmer is no slacker. He is truly patriotic. He gives his sons; he gives his toil and the fruit of his labor to his country willingly whenever called upon. He will not be found wanting in his country's hour of peril. He is entitled to fair treatment; that is all he asks. This bill permits the Government to take over and operate munition plants, factories, and highly prosperous business. And if farming is to be controlled by the Government because of excess profits let us go further and regulate profits generally. If farming is considered profitable, why does not the Government engage in it? The Government has 250,000,000 acres remaining idle of as fine agricultural land as any now in cultivation. It would seem that if farming is so lucrative, why does not the Government under the food-survey bill, with its $4,000,000 appropriation, advertise for 3,000 hoes and permit its agents appointed to take the inventory to each take a hoe? They could help some. The farmers of the great States of Ohio, Indiana, Illinois, and Iowa make an annual return of 3½ per cent on their investment, as shown by statistics. If the Government or anyone else thinks that profit is too large, they ought to take a hand. But they will not go forth to reap or to sow. The gentleman from Missouri [Mr. BORLAND] thinks they would rather furnish wind.

I do not believe we can legislate values. Much is said about the high price of sugar, and the price of this commodity is used to illustrate the necessity of this bill. Since I have been in Congress this product was put on the free list. This was in 1913, before the war, but the price of sugar has continually soared. We consume in the United States 4,500,000 tons of sugar annually. Of that amount about one-half, or 50 per cent, is produced in this country and our insular possessions, and 50 per cent we get from Cuba. One-third of our home production is produced from the cane sugar and about two-thirds produced in the United States is beet sugar. We have two hundred and seventy-four times as much land in the United States adapted to the production of sugar beets as all Germany, and Germany with 70,000,000 people produces all its own sugar. It is stated by the Secretary of Agriculture, in Senate Document No. 22—Sixty-first Congress, first session—that we have 274,000,000 acres of land in the United States suitable for raising sugar beets. At 10 tons of sugar beets to the acre we could raise 2,740,000,000 tons of sugar beets, which would produce 250 pounds of sugar to the ton, or 342,500,000 tons of sugar should the land all be devoted to sugar-beet culture. It is estimated that we consume 4,500,000 tons of sugar annually in the United States. Sugar-beet culture is a profitable crop. It is raised profitably in six States—California, Colorado, Idaho, Michigan, Ohio, Utah—with five or more factories in each State, and one or more in other States—78 sugar factories in all. Here is an opportunity and free field to increase production of sugar and stabilize the prices. We can arraign the high price of sugar if we wish, but it is our own fault.

A large factor in our food supply is also that of the animal industry. Complaint is made of the high cost of meat. I am pleased to note that the causes of the high price of meat is not laid at the farmer's door. It is stated that a bushel of corn will not put more than 5 pounds of meat on a grade steer. If the farmer would sell his corn on the market he would receive $1.50 per bushel for it. If he feeds it to his steers and gets 5 pounds gain out of each bushel and sells his steers at 15 cents a pound, live weight, he gets 75 cents per bushel for it, or one-half the market price; so to get a profit he must sell his steers off the pasture. What is true of feeding cattle is relatively true of other corn-fed live stock. This is not a new statement of mine here on the floor of the House.

The climate, soil, season, and proper cultivation is the big factor in the production of farm products. Last season in Michigan the spring was rainy, cold, and backward for putting out crops. Then the dry weather and long droughts dried up many of the crops and the fall was again wet and many of the crops were a failure. Farming is not a bonanza. It is real work. Those engaged in it are convinced. Why not the Government take a hand?

I am also for this bill because we are at war. If we do not now comprehend the enormity of our task to win the war we will later on. In the common parlance of the street we are in one, "that is right." I think, we are too prone to think this is the war of England, France, Italy, Russia, and our allies. It is now our war, and the great task in hand is to bring it to a successful, speedy, and victorious conclusion. We have given the flower of our land. We have opened our Treasury. We now give our products of farm, factory, and mine. Secretary McAdoo frequently stated unless we backed up and financed the war we would lose. Unless we fight we will lose sure. Unless we devote and contribute our resources and feed, clothe, and provide for our Army and Navy with sufficient munitions we lose. It now looks as if the war must be won with the resources of the United States. The President can not win the war alone. Gen. Pershing can not win the war alone. Every man and woman must devote his best energy to the task, and this bill is a factor. Let us everyone feel the importance of the task, do his duty, and contribute his mite without stint or complaint. In the administration of this bill the questions of the products of the mine and transportation must not be overlooked. If we can not get coal and iron for domestic uses, how can we supply our ships with fuel or our Army with arms and ammunition? If the season is good crops will be left to rot in the field unless we have ample transportation. Some of the evils aimed at in this bill might very properly devolve upon the Department of Justice. The Government might as properly use the courts as the farmer the plow. Of what use is production if it is destroyed to maintain prices or not shipped to market or transported to our armies or our allies?

I give you a few specific cases carried in the press which are proper for judicial action.

I am not vouching for the facts, but I believe such conditions exist, and that there are many of them of the same nature, even more flagrant.

The following clipping is taken from the Detroit Free Press, issue of June 5, 1917:

FIFTEEN CARS OF "SPUDS" ROT; PRICES SOAR—PROBERS SEE PLAN TO MAINTAIN HIGH CHARGES.

CHICAGO, *June 4.*

Government investigators inquiring into the reasons for high-priced coal in Illinois recently discovered 15 cars loaded with potatoes on a siding near Seatonville, Ill.

The potatoes, from the shipping directions on the cars, had originally been sent to Chicago. From their condition the investigators concluded they had been left on the siding to spoil, while high prices were being maintained in the Chicago market.

Oliver E. Pagan, Government indictment expert, who drew the indictments returned Saturday against alleged egg speculators, will return here next week. The investigation of the food situation will continue before the June grand jury.

Our neighbor Canada appoints a dictator of fuel; why not we?

CANADA APPOINTS DICTATOR OF FUEL—C. A. MAGRATH GIVEN AUTHORITY TO CONTROL SUPPLY AND PRICE.

OTTAWA, ONTARIO, *June 11.*

The Government has appointed C. A. Magrath, chairman of the Canadian section of the International Joint Commission, to take charge of the fuel supply of the Dominion.

Mr. Magrath is clothed by order in council with authority to control coal distribution and prices throughout Canada.

The coal situation and the outlook for next winter is so critical the Government has decided there must be a central authority having drastic powers of regulation of supply and demand.

Mr. Magrath will enter upon his duties immediately, and will work in conjunction with the railway commission in equalizing distribution.

UNITED STATES BOARD TAKES HAND IN INDIANA COAL PRICES.

INDIANAPOLIS, *June 6.*

On the heels of a report condemning Indiana coal operators for "outrageous" coal prices which the public-service commission has submitted to Gov. Goodrich, a conference will be held here at which a member of the Federal Trade Commission is expected to be present. Gov. Goodrich, members of the public-service commission, and coal operators will attend the conference. An effort will be made to solve the coal problem.

The public-service commission suggested that the governor name a State fuel agent who would direct all his energies to a study of the fuel problem.

Persons familiar with the situation believe that the operators will agree to a maximum price, lower than the present rate, for Indiana coal.

The following clippings are sent to me from unknown sources:

BIG RAPIDS, MICH.

Eighteen cars of coal are sidetracked at Byers, six miles south of here, on the G. R. & I., while Big Rapids and many other cities are without fuel. Byers is merely a sidetrack. It is not even a hamlet, and passenger trains do not usually stop there. Nobody around here knows who owns the coal.

The people and the court officers should have investigated this case.

A MERE SUGGESTION.

A suggestion to Congressman SMITH: If he wishes to fill the dual position of doing the right thing and at same time receive credit for it in good measure, let him add to his bill introduced on coal transportation the energy necessary for its immediate passage, and if necessary on the floor of the House fight out the fuel question generally. With no pronounced increase in the cost of producing coal, why is soft coal $7 or $8 a ton now? And why are not next winter's supplies of hard coal being distributed through the North now? If not to come during the summer months, what can the people in winter latitudes expect in three months from now? It is not a question of unnecessary complaint but of imperative need.

Then, how about the Department of Justice which has found several men guilty through a grand jury of unlawfully absorbing $30,000,000 from the people last winter on coal, and their trial put off until October? There is no duty of Government more plainly visible now than an ample distribution of fuel during the summer months to provide for winter necessities. People may live upon very scant supplies of food, but not so with fuel in winter.

This bill will remedy these evils and provide the machinery for imposing the penalty.

I am for this bill to remedy these outrages against the people. I am for this bill because I believe it will be a factor in winning the war. I favor it because I believe it is a war measure. It will tend to stabilize prices and in this the greatest of all wars in which we are now engaged and which we must win, I am for practicing economy, curbing needless expenditures, eliminating extravagances, prohibiting excessive speculation, all gambling, and applying all our energy and skill and resources to bring victory. Everything now for victory. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield 30 minutes to the gentleman from Wisconsin [Mr. LENROOT]. [Applause.]

Mr. LENROOT. Mr. Chairman, this is undoubtedly the most important and the most far-reaching bill that has ever been considered by any Congress in the history of America, but we are also in the greatest crisis that America has ever known. And to my mind most of the great powers that are conferred upon the Executive by this bill are necessary powers. I think the bill does go further than is necessary at this time, or does in some respects go further than Congress has authority to go, and when I come to discuss the details of the bill I shall refer to those things.

I had expected, very naturally, that the constitutionality of this bill would be attacked by its opponents. It is very fortunate indeed that we have not been compelled to meet that question

as a serious matter of debate. And I am not going to spend any time upon the discussion of that question except to say just one word, that I believe that practically all of the powers that are conferred in this bill, with two or three exceptions, can be and are founded upon the Constitution itself. The reason we are powerless to enact legislation of this sort in time of peace is not because of any prohibition in the Constitution against it, but because no power can be found in the Constitution in time of peace that permits us to enact this sort of legislation. As we all know, the Constitution of the United States is a grant of power, and we can do nothing beyond that which is there expressly granted or fairly implied from the expressed grants. That is why, when we come to deal with questions like child labor, for instance, we must deal with it from the standpoint of regulation of interstate commerce, because that is the only power that Congress has over that subject.

But now we are in war. The Congress is empowered to declare war, to raise and support armies, and the various other enumerated war powers in connection with it. As the courts have many times said, that means there is implied in that power all necessary means to successfully prosecute that war, and that means that in time of war we have that grant of power for the purpose of carrying on the war that is lacking in time of peace. That means we are not restricted in legislation to the interstate commerce clause of the Constitution and other like provisions which are grants of power.

And so in legislation of this character, as a war measure we need not consider State lines, because they have nothing to do with it. Our power is as wide as the Nation itself in that regard. And so under the war power we can, if we so legislate, put our hand upon the cold-storage man in Chicago, which we could not do in time of peace, and say to that man, "You shall conduct your business so and so." So much for the general power.

But there is one limitation that does exist in time of war as well as in time of peace, and that is the separate powers of this Government—the three, the legislative, the executive, and the judicial—must be preserved. In time of war we have no more power to delegate to the Executive of the United States legislative authority than we have in time of peace. If there is anything in this bill that does delegate to the executive authority such power the bill to that extent is invalid and unconstitutional. And I want to point out one section where I believe this limit has been transcended, and that is in section 5, known as the license section. It reads as follows:

That from time to time, whenever the President shall find it essential to license the importation, exportation, manufacture, storage, or distribution of any necessaries, in order to carry into effect any of the purposes of this act.

No business shall be conducted unless the President grants a license. Now, the words here are "that whenever the President finds it essential in order to carry out the purposes of this act." To my mind if that language remains in the bill in that form it is delegating to the President of the United States legislative power, a power that we only can exercise. It empowers the President to determine whether it is essential to carry out the purposes of this act that something else shall be done. Instead of Congress determining the choice of means to carry out its powers—and the courts have many times said the sole power to so determine rests with the Congress—this section delegates to the President of the United States the choice of determining the means.

Now, would it be said for a moment that if in enacting a criminal statute we should impose a penalty of imprisonment for the commission of a certain crime, we could provide that if the President should determine that that is not sufficient to deter crime that upon his order there should be capital punishment for the punishment of that crime? I do not think anyone would make any such contention as that.

Mr. MADDEN. Will the gentleman yield for a question?

Mr. LENROOT. Yes.

Mr. MADDEN. Does the gentleman think it would be wise to say to the citizens of the United States that they would not be allowed to conduct a legitimate business except on a license issued by the Government?

Mr. LENROOT. That is another question. I shall discuss that in a moment. I am speaking now solely of the constitutional question involved in the delegation of power.

Mr. HELVERING. Does not this bill provide the exact means of carrying out this act and leave only to the President the announcement of the existence of a condition?

Mr. LENROOT. The condition is if the President shall determine that the means we have provided are not effectual, in other words, that when a law that we provide is not effectual, we provide another which he may employ, and the Congress delegates to the President the question not of determining a fact but determining the question of public policy, which we alone, in my judgment, must determine.

Mr. TOWNER. Does it not go further than that? Because in the next sentence it prescribes:

The President is authorized to prescribe such regulations governing the conduct of the business of licensees as may be essential to prevent uneconomical manufacture and inequitable distribution of necessaries and otherwise to carry out the purposes of this act.

Is that not, peradventure, sumptuary legislation?

Mr. LENROOT. I was coming to that.

In the case of issuing licenses, you are giving, or trying to give, to the President a control that is nowhere else mentioned in the bill. Now, it is familiar doctrine that we can not delegate to the executive branch of the Government the power to make the law. We can delegate to the President or to any other administrative body the power to ascertain the facts upon which the law will operate, and under the doctrine in the case of the United States against Grimaud, we can lay down ourselves the framework of the law, declare the policy, and then delegate to the administrative side of the Government the power to make regulations to fill in the details. But the act of Congress must be complete in itself concerning that. And I want to call attention to the fact that while in these regulations the President is authorized to control uneconomical manufacture, nowhere in this bill is uneconomical manufacture prohibited. Nowhere in this bill is it either made a crime uneconomically to manufacture anything, but it does not even come within the provision of any civil remedy provided anywhere covering the question of uneconomical manufacture.

Mr. LEVER. Does the gentleman differentiate between the licensing section and section 11, where the President finds it essential, in order to prevent undue enhancement or fluctuation of prices or injurious speculation in necessaries, and so on, and section 12, where the President shall find that an emergency exists requiring stimulation, and section 13, in reference to the use of foodstuffs? What distinction does the gentleman draw between section 5 and these other sections?

Mr. LENROOT. I shall be glad to answer that. In reference to section 11, it does not seem to be open to the serious objection I have made to section 5, although I still think it is subject to that criticism. But I want to call attention to this distinction: In section 11 the President is not given the power to call into operation the provisions of the bill for the purpose of carrying out the act, but he is only, in section 11, authorized to do those things upon a finding by him of certain specific facts, namely, to prevent undue enhancement or fluctuation of prices, to prevent injurious speculation, to prevent unjust market manipulation, and so forth. I think it is too broad, and I shall, at the proper time, when we reach that stage of it, offer an amendment providing that whenever the President finds it essential to prevent undue enhancement of prices, he may do so and so, which will limit him to the ascertainment of the facts, and upon the ascertainment of the facts he may exercise these powers.

Now, as to section 12, whenever the President shall find an emergency exists, he may do so-and-so. That rests upon an entirely different basis. Section 12, to my mind, does not rest upon the war power of Congress at all. Section 12 relates wholly to paying out money from the Treasury. The gist of it is not restricting the rights or liberties of any citizen, but paying money out of the Treasury of the United States, an appropriation; and any appropriation rests upon the general-welfare clause of the Constitution, where, by the Constitution, we are authorized to levy taxes, borrow money, and so forth, to pay the debts, provide for the common defense, and to promote the general welfare of the Nation; and when we come to make an appropriation of money, it is not a delegation of power at all to say that the President may call into operation this appropriation section upon any emergency that he may determine necessary.

Mr. LEVER. I wonder if the gentleman has prepared the amendments that he proposes to offer to section 5, so that he might put them in the RECORD?

Mr. LENROOT. I have not.

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield for a question?

Mr. LENROOT. Yes.

Mr. LONGWORTH. Before the gentleman leaves section 5, I would like to know how he interprets the meaning or definition of a word that appears several times in that section. I mean the word "charge," as it appears in line 2 of page 5.

Mr. LENROOT. I think it is open to some question, but my interpretation of the word "charge" in that connection is that

it means not the price of the article, but a charge for any service of any character rendered in connection with that article.

Mr. LONGWORTH. Let me call the gentleman's attention to the beginning of section 5:

Wherever the President shall find it essential to license the importation, exportation, manufacture, storage, or distribution of any necessaries, in order to carry into effect any of the purposes of this act, and shall publicly so announce, no person shall, after a date fixed in the announcement, engage in or carry on any such business specified in the announcement of importation, exportation, manufacture, storage——

Mr. LEVER. That is a storage charge.

Mr. LONGWORTH. I know, but the word "manufacture" is used there. The word "charge" applies to the manufacture. Whenever the President shall determine that the charge for manufacture is too high, he may then proceed to regulate.

Mr. LENROOT. I will say to the gentleman that whatever construction is given to the word "charge" in that connection, there is no doubt whatever that under section 5 as it now stands the President, while he might not be able to directly fix the price of the article manufactured, would unquestionably have the right to fix the profits of the manufacturer on the commodity manufactured and sold by him, which would be an indirect method of fixing the price.

Mr. LONGWORTH. Does not the gentleman then think that the word "charge" is very much too broad a term to use in that case? The charge, so far as it relates to the storage or distribution, might not perhaps be open to that criticism, but a charge applied to the manufacture, it seems to me, might be construed to cover the question of price or profit.

Mr. LENROOT. The gentleman will perceive that if the language remains in the bill as it now is, giving the broadest powers to the President to control in every possible degree every class of manufacture and production within the purview of this bill, then it is not of much importance what the word "charge" may mean, because you have given him powers that not only include the charge but everything else conceivable in connection with the manufacture and production of these things.

Mr. LONGWORTH. Under those circumstances would not the charge refer, for example, to the price of coal? Could not that be held to be the price of coal?

Mr. LENROOT. It is possible that is so; but whether it is so or not with this power that is granted, gentlemen talk about the maximum-price section being stricken out of the bill. It is here, because if you limit the profit of a miller, we will say, to 7 per cent on his business after buying his wheat and manufacturing his wheat into flour, when you limit his profit to 7 per cent, that says to the miller, "You must sell your product at such a price as will limit your profit to 7 per cent," does it not?

Mr. MADDEN. The gentleman does not contend that the President would have the right to say what a manufacturer's cost was to be while he was fixing the rate of profit that the manufacturer would have a right to make?

Mr. LENROOT. That would be included.

Mr. MADDEN. But the President would not have the right to say what the cost of the manufacturer in the ordinary sense of the term would be, whether it was too high or too low.

Mr. LENROOT. I do not know as to that. That would be for the determination of the court. But under this section there is granted an absolutely unnecessary power to the President. I wonder if you gentlemen realize the power that is granted under this section? It grants to the President of the United States the power to say to every man in the United States, other than farmers and retailers, who is engaged in any connection with the production of foods or fuels or the production of any article that enters into the manufacture of foods or fuels, "You shall not do business at all unless you do it the way I tell you to do it."

And it makes a man guilty of a crime, a man who has violated no prohibitions of this bill, a man who has worked no injustice to his fellow men. It makes him guilty of a crime punishable by a fine of $5,000 if he tries to do business without a license from the President of the United States. Do you realize the extent to which that goes? Do you realize that that means that the agents of this Government can go into every creamery in the United States and say, "You must manufacture thus and so or you can not manufacture at all"? It means that the agents of this Government can go into every cheese factory, into every canning factory, into every flour mill, into every factory that produces foodstuffs. But it does not stop there. It permits him to go into any manufacturing establishment which makes machinery for flour mills, for canning factories, or agricultural implements, and say to that manufacturer, "You shall not do business at all unless you do it the way that I tell you to do it."

Mr. FESS. The gentleman was discussing section 12.

Mr. LENROOT. Yes.

Mr. FESS. I very much desire the opinion of the gentleman upon the right conferred at the bottom of page 13, where it says:

There shall be levied, collected, and paid a rate of duty upon the products so imported, the amount of which rate of duty shall be ascertained and proclaimed by the President, which amount shall, when added to the value of the product at the time it is offered for entry, be sufficient to bring the price thereof at which imported up to the price which shall have been fixed therefor pursuant to this section.

There is authority to do a thing, but leaving the fixing of the definite tariff duty to the President. I should like to have the gentleman's opinion upon the constitutionality of that provision.

Mr. LENROOT. I am very glad to answer the gentleman. I think it is entirely constitutional. I think it comes clearly within the doctrine of the decision of Field against Clark, which involved certain sugar duties, and the rule is this: That we can not delegate to any administrative body, the President or other, the power to levy tariff duties at such point as he thinks is just. We can make the law defining what the tariff duties shall be and then delegate to the President the duty of determining the facts upon which the law will operate. And what this bill does is this: Here is a minimum price fixed upon wheat. Wheat can be imported into this country so that the price at the border would be less than the minimum price that has been fixed by the President; and this bill delegates the power to the President to find out the difference between that price of wheat as it enters at the border and the minimum price and to add to the existing tariff duties the difference between the price at the border and this minimum rate; and I think that is entirely constitutional.

Mr. HARDY. That is what the bill does.

Mr. LENROOT. That is just exactly what the bill does. It lays down the rule and the standard by which the President must be governed in making these tariff rates. He can not use his discretion or judgment as to what the tariff rates shall be. He must find the facts and then apply the facts to the law.

But I want to say this in passing: I did not intend to discuss this section, but I do want most heartily to congratulate our Democratic friends upon adopting to the fullest degree and to the fullest extent the doctrine of protection to American industries. [Applause.] For this provision covers to the fullest extent everything that the Republican Party has ever fought for in the way of tariff duties.

Mr. GORDON. Including a reasonable profit.

Mr. TOWNER. Will the gentleman yield?

Mr. LEVER. Will the gentleman yield?

Mr. LENROOT. I yield to my Democratic friend first.

Mr. LEVER. I was about to suggest to my friend from Wisconsin that the difference is this: The contention of the Republican Party and its President has been that it levied a duty in order to protect some individual. This is an attempt to protect the American public. [Applause on the Democratic side.]

Mr. LENROOT. The theory of this bill is exactly the Republican theory, that when your President fixes a minimum price for wheat, he presumably fixes it upon such a basis as will encourage the production of wheat and enable the American farmer to make a reasonable profit out of his industry, does he not?

Mr. LONGWORTH. The gentleman from South Carolina himself said so in explaining the bill.

Mr. LENROOT. Now, when it does that, you are protecting not only the Government, but when you protect the Government—what is the Government of the United States? It is not the Members of Congress. It is 110,000,000 people. That is what the United States is. And when you say that there shall be a tariff duty equal to the difference between the price of foreign importations and the price that we ourselves have fixed, you have exactly come to the position of the Republican Party, that tariff duties should equal the difference in cost of production at home and abroad in order to encourage American industry and to enable the American people to live according to American standards and for American wages, and my only objection is that you are limiting it here to the farmer. If you will be consistent, you will apply the same doctrine to all the American people.

Mr. BORLAND. I understand the gentleman is now ready to concede that the Republican Party has lost all excuse for existence. [Laughter.]

Mr. LENROOT. The Republican Party, unlike the gentleman's party, has been fighting for certain principles to serve the American people, and the Republican Party is very much more interested in serving the American people than it is in being in power itself; and if the time should ever come, which none of us can possibly foresee from things that are going on, when the gentleman's party will come to correct economic positions concerning great American questions, then the Republican

Party would be content to let you gentlemen have a majority upon that side of the aisle, but it will not be in your day nor in my day that your party will ever be wise enough to take a position of that kind. [Applause on the Republican side.]

Mr. BORLAND. The gentleman is wrong. The American people are trusting the Democratic Party to-day.

Mr. HARDY. Will the gentleman yield?

Mr. LENROOT. I can not yield any further; I do not want to get drawn off into a tariff discussion.

Mr. MADDEN. The gentleman did not quite answer the question that I asked him, whether the private individual could continue to do business without a license from the Government of the United States?

Mr. LENROOT. He could not, if he comes within any of the provisions of the bill, if the President says that he can not.

Mr. MADDEN. Does the gentleman think that is wise?

Mr. LENROOT. Of course I do not; I thought I made that very plain. Now, I will yield to the gentleman from Iowa.

Mr. TOWNER. I want to call attention to the fact that not only does it prohibit a man from doing business, but a violation of any of the regulations that are contained in section 6 is a crime, because it says that unless they do business in accordance with the requirement issued under the section regulating and controlling the manner of doing business they are liable to the provisions of the act.

Mr. WINGO. Will the gentleman from Wisconsin yield for a question?

Mr. LENROOT. Yes.

Mr. WINGO. In regard to section 5, I understood the gentleman a little while ago to suggest that this provision did not cover retailers. Does not the gentleman think that the words "license the importation, exportation, manufacture, storage, or distribution of any necessaries" will apply to the retailer in the last analysis?

Mr. LENROOT. He is expressly exempted in this proviso of section 5 in the bill.

Now I want to devote what remaining time I have to a brief consideration of section 3, the section which the chairman of the committee said in opening the debate was the hub around which this entire bill revolved. Members will observe that the construction given by the chairman of the committee of this section was radically different from that given by the gentleman from Minnesota [Mr. ANDERSON] in his very able speech, and also different from the construction given by the gentleman from Michigan [Mr. MCLAUGHLIN].

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAUGEN. I yield to the gentleman five minutes more.

Mr. LENROOT. Under the construction given by the chairman of the committee, section 3 is complete in itself, and with that construction all we would need in this bill besides that would be a penalty clause and an appropriation clause, because it gives to the President all of the power that possibly could be given by Congress. Now, I want to say, in the first place, that if that be the correct construction it goes entirely beyond the power of Congress. Congress could not if it would, and should not if it could, delegate a blanket power to anybody upon this very important subject. To say to the President of the United States you may take under your control all of the food in this country and all of the fuel in this country and all of the articles that enter into the production and do with them as you see fit is certainly a power that even in time of war ought not to be granted by this or any other Congress. If we were to attempt to grant it, it would be absolutely unconstitutional, because, as I said in my opening, Congress must make the law, it can not delegate to anybody the power to make the law. We can no more delegate to the President of the United States the power and general control over food production in this country than we could delegate to the Interstate Commerce Commission general power over the railroads in this country and say they can make such orders as they think best, and the railroads of this country shall be compelled to obey them.

If the construction given by the chairman of the committee is correct, then all the remaining sections of the bill other than the appropriating section are absolutely unnecessary and valueless, except merely in the way of suggestions to the President as to the method in which he should exercise his power.

Mr. HARDY. Will the gentleman yield for a suggestion?

Mr. LENROOT. Yes.

Mr. HARDY. Section 3 says: "There is hereby established." It does not mean by section 3, but by the bill, it refers to the whole bill.

Mr. LENROOT. "That there is hereby established a governmental control of necessaries."

Mr. HARDY. What does "hereby" mean?

Mr. LENROOT. It means by this section we do this thing. Now, I gather that the gentleman's construction is the same as the construction I think ought to be given to it; but surely when there are such differences of opinion concerning the construction of this section we all ought to agree that it should not go out of this House subject to these different constructions. I am perfectly willing to see section 3 remain in the bill as a declaratory section, and giving authority to the President to enter into voluntary arrangements, but it should be made clear that section 3 of itself does not give to the President of the United States any independent power over and beyond the specific authority granted in the remaining sections of the bill. I very much hope that when we come to a consideration of this bill under the five-minute rule the chairman of the committee himself will agree to an amendment that will clearly make it only declaratory.

One thing more, the last section of the bill, which permits the operation of this act to continue for one year after the war is closed. I am sure it could not have occurred to the committee that, as a war measure, the powers conferred in this bill can only be exercised constitutionally when the United States is engaged in war, and the moment this war is concluded the operation of this act must cease, and that the act itself is being endangered by a possible construction of the court that it is not a war measure if any provision remains in it that it should exist for any length of time after the war has closed.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. CANNON. Mr. Chairman, I have some time and I hope the gentleman from Iowa will yield such time out of mine as the gentleman from Wisconsin may desire.

Mr. LENROOT. I do not desire to take up the time of the gentleman from Illinois.

Mr. CANNON. I think I am more interested in the gentleman's remarks than I would be in my own.

Mr. LENROOT. I would take such time as is necessary, if anyone wanted to ask a question.

Mr. LEVER. Mr. Chairman, I recognize that there is much merit in the criticism of the gentleman from Wisconsin as to section 21. The constitutionality of that section did not occur, at least to the chairman, and I do not think to the lawyers on the committee. The committee, of course, had in mind that there would be a period of readjustment after the war, and that there would be certain contracts into which the Government had entered that could not mature immediately with the conclusion of the war, and therefore we undertook to limit it for that period. But I was wondering if we could by some amendment here make the one-year period apply to the contracts only into which the Government had entered.

Mr. LENROOT. There is no doubt about that and no question that the liability of the Government may continue beyond the period, because, as I said before, in my judgment section 12 does not depend upon the war power at all, and so there will be no difficulty along that line.

Mr. LEVER. That is all we intended to do as a matter of fact, so far as I was myself concerned.

Mr. BARKLEY. Mr. Chairman, aside from the suggestion of the chairman of the committee, does the gentleman from Wisconsin not recognize that there might be such an abnormal situation as the result of this war, especially if it runs for two or three years, as would make the continuation of this act advisable for a certain period after the treaty of peace is signed?

Mr. LENROOT. If we had the power to do it.

Mr. BARKLEY. Would it not follow if this emergency existed after the war——

Mr. LENROOT. Let me interrupt the gentleman. We get no power to enact this legislation by reason of an emergency existing in the United States growing out of the war. Our only power in the enactment of this legislation is for the carrying on of the war itself.

Mr. BARKLEY. I understand, but the courts would undoubtedly construe in connection with the war power any necessary legislation or provision that followed as a result of it.

Mr. LENROOT. I am frank to say that I intend to look the matter up further.

Mr. HARDY. Mr. Chairman, does not the gentleman's idea of implied power apply here, that what is absolutely necessary to be implied, that is, the winding up of the war matters would authorize the holding on of necessary legislation?

Mr. LENROOT. No; not so far as this legislation is concerned, because the gentleman will readily see that from the moment peace is declared any further exercise of these powers can not be for the purpose of carrying on the war, but neces-

sarily must be for the welfare of the country in getting it upon a peace basis thereafter.

Mr. HARDY. As to implied powers, peace might be declared while our armies are on foreign soil and our navies on the seas. Does the gentleman hold that all powers essential to bringing back the navy or caring for the army until they get home embodied in this bill would die?

Mr. LENROOT. There is nothing of that kind in this bill, and the distinction, if I may make it, is this, that in this bill outside of our appropriations and section 12, we are restricting the rights and liberties of the citizen, a power which we have not and can not exercise except when the United States is actually engaged in war, and the only purpose for which we can exercise it is for a successful prosecution of the war. However desirable it might be for the speedy rehabiliment of our country after this war is over, I do not see how it could be contended that for this purpose this could be continued as a war power.

Mr. HARDY. I have instanced two or three items with reference to calling our armies back——

Mr. LENROOT. Oh, the gentleman has not instanced one. So far as calling our armies back, the gentleman knows that our right to raise and support armies and the right of the President as Commander in Chief to control them is not limited to a time of war. He has that right in time of peace, and of course he may recall them when the war is over. We may raise and support armies in time of war as well as in time of peace, but when the war is over, when you come to restricting the rights and liberties of the citizen completely outside the military power of the Government, a different principle prevails.

Mr. HARDY. Can not the gentleman's ingenious mind think of any emergency that might be left over after the war absolutely essential to be cared for by this bill?

Mr. LENROOT. Mr. Chairman, the gentleman pays me the compliment of saying I have an ingenious mind. I want to say to the gentleman that I am more interested in sustaining the constitutionality of this act by the courts—and the gentleman knows that it is not a certainty—than I am in caring for some possible emergency when this war is over. I desire to remind the gentleman that, in so far as we have any power, Congress is going to be in existence when this war is over, and in so far as it has power it may exercise it then.

Mr. LEVER. Mr. Chairman, will the gentleman yield?

Mr. LENROOT. Yes.

Mr. LEVER. Let me suggest this to the gentleman, not upon the constitutionality of this proposition but to get the viewpoint of the commitee clearly in the gentleman's mind——

Mr. LENROOT. If I may interrupt the gentleman, I desire to say that, so far as the emergency is concerned, I take it for granted that the committee has followed the rule we have in other bills, and I would be thoroughly in sympathy with it. I appreciate there may be an emergency when the war is over, but we ought not to sacrifice the possible validity of this bill by having anything incorporated in it that is not strictly a war measure and under our war powers.

Mr. LEVER. In other words, the gentleman does not criticize the purpose here, but possibly the constitutionality of it?

Mr. LENROOT. Yes.

Mr. CANNON. If the gentleman will permit, I think he made it plain a moment ago when he stated that we would have Congress if the Government lasts when this war closes, which will be perfectly competent to deal with situations, and that this power ought not to be conferred upon the Executive for one moment beyond the limit of the Constitution.

Mr. GORDON. I understood the gentleman to say that this power to authorize the President to order the imposition of duties upon imports rested upon the rule that the discretion of enacting the legislation was not vested in the President but was exercised by Congress when we pass this bill. Let me call the gentleman's attention to this language, and I quote section 12, page 13:

> When the President finds that the importation into the United States of any such products produced outside of the United States seriously interferes or is likely seriously to interfere with the practical operation of any guaranteed price therefor fixed pursuant to this section, or materially enhances or is likely materially to enhance the liabilities of the United States under guaranties of prices therefor made pursuant to this section, and shall so proclaim, there shall be levied, collected, and paid a rate of duty upon the products so imported, the amount of which rate of duty shall be ascertained and proclaimed by the President.

Is it the contention of the gentleman that that does not give to the President the discretion to determine the amount of those import duties and levy them?

Mr. LENROOT. No; it is not a matter of discretion.

Mr. GORDON. Who else has anything to do about it?

Mr. LENROOT. The President is to ascertain what: First, the price of these importations at the boundary.

Mr. GORDON. At which boundary?

Mr. LENROOT. Wherever it enters the United States.

Mr. GORDON. The price might differ at different boundaries.

Mr. LENROOT. I understand. That is the first thing he determines. The next thing he would determine would be what is the minimum guaranteed price by the United States at the same point of entry. Then he subtracts one from the other and finds the difference between the two and that determines the tariff rate if the imported price is less than the guaranteed price. He has to find a fact and a fact alone.

Mr. BARKLEY. Mr. Chairman, will the gentleman yield?

Mr. LENROOT. I will.

Mr. BARKLEY. Is not that somewhat similar in principle to language of the Payne-Aldrich bill, where it authorized the President from time to time to fix a sliding scale of import duties upon certain imports into the United States? I mean, is it not based upon the same principle?

Mr. LENROOT. I think ever since the decision of Field against Clark, wherever this authority has been attempted to be delegated it has always been framed upon the proposition that Congress lays down the rule, establishes the standard, and the President is given power to find certain facts upon which he acts.

Mr. BARKLEY. Applies the law to those facts?

Mr. GORDON. But Congress fixes the maximum and minimum in those cases to which the gentleman refers?

Mr. LENROOT. Yes.

Mr. GORDON. It does not do it in this case.

Mr. HAUGEN. I yield one minute to the gentleman from New York [Mr. HICKS].

Mr. HICKS. Mr. Chairman, I simply rise to ask permission to extend my remarks in the RECORD by printing an editorial entitled "Give us airships and aeroplanes and airmen."

The CHAIRMAN. The gentleman from New York asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. RUBEY. Mr. Chairman, I yield 20 minutes to the gentleman from Texas [Mr. BLACK].

Mr. BLACK. Mr. Chairman, necessarily in discussing a bill of this kind and one which contains so many important and far-reaching provisions one would wish more time than can be granted him under the limitations of this debate. The subject is one of many angles and of large importance. There are some sections of this food-control bill which I think are very meritorious and to which I unhesitatingly give my support. These features have been ably discussed by Members who have preceded me, and I will not consume the time allotted to me in a repetition of the arguments which have been made in their favor.

But while I am in entire sympathy with a part of the bill, there are certain other sections to which I am opposed, and I would not feel that I had discharged my duty to the people whom I have the honor to represent did I not voice my opposition to these sections on the floor of the House and do what I can to have them modified or eliminated altogether from the bill.

It seems to me that this is the time of all other times when Members should refrain from extravagant and exaggerated statements on the floor of the House, and should appeal to the reason and judgment of men, rather than to their passions and prejudices. And so, bearing this in mind, whatever I shall say by way of criticism of certain sections of the bill will be as fairly stated as I know how to put it, and without any desire whatever to criticize merely for criticism's sake.

I have heard many gentlemen state during the course of this debate that there are certain sections of the bill which they would not begin to support in time of peace, but that they are supporting them now, because they believe that such grants of power are necessary in order that we win the war.

Now, if it be conceded that their premise is correct, then I would not hesitate to say that their reason for favoring these sections is all sufficient, but I can not and do not grant the correctness of their premise.

Quite to the contrary, it is my belief that instead of stimulating production of foodstuffs, which is such a vital necessity to the United States and to the world at the present time, these sections of the bill are quite capable of producing the very opposite effect. And it is that belief which compels me to advocate their modification or elimination from the bill.

But before entering upon a discussion of these sections I want to pause long enough to say that I have without hesitation been willing to vote for and support those measures which I thought were essential to enable the President to successfully conduct the war as Commander in Chief of the Army and Navy.

I voted without hesitation to authorize an increase in the enlisted force of the Navy to 150,000 men during the period of the war; I voted for the selective-draft bill to enable the President to raise an army of 1,000,000 men and to bring the Regular Army and the National Guard up to their full authorized strength, making about 2,000,000 men in all; I voted for the bond issue of $7,000,000,000, three billion of which is to be loaned to our allies; I voted for the war-revenue bill, which recently passed this House and is now in the Senate, and which provided for the raising of the largest amount of revenue ever carried in any one single bill; I voted for the espionage bill, which contained a provision empowering the President to limit and control exports during the period of the war. I did it because I thought such power would probably become absolutely necessary in the safe conduct of the war in dealing with our allies and neutral nations, and for the protection of our own people.

The President has wisely announced that the policy of the Government shall be, first, to see that our own people are fed; second, our allies; and then our surplus may go to neutral nations. But while I voted for these measures which I have just enumerated, I do not now believe that it is necessary to go further and confer upon the President virtually the powers of a dictator in matters which are purely of domestic concern. I do not believe that the President himself wants a grant of powers as extensive as is attempted to be given in some sections of this measure. In fact, I saw recently a statement from the chairman of the Committee on Agriculture in the Senate to the effect that President Wilson had expressed some surprise at certain sweeping features of some of the provisions of the bill.

But some gentlemen of the House have said in their speeches during this debate that we must be willing to lay aside our "little" theories of government and give our support to the powers granted in these certain sections. Yes, indeed, I am quite sure that in the minds of some gentlemen that the theory of a Government under the Constitution, that the principle of delegated powers to the Federal Government and reserved powers to the States is quite some small theory, but I pause long enough to say that when that view shall find general acceptance throughout the United States then the Government which our fathers established and which we have been foolish enough to think is the greatest in the world will become but a memory and our proudest heritage as a free people will have departed.

But gentlemen say that Germany exercises these powers and that therefore we must confer them upon the President of the United States. To my mind the idea that because Germany is an autocratic power makes it necessary that all other nations in this war should autocratize their Governments is not at all tenable.

I have read in Æsop's Book of Fables of the fox who lost his tail and therefore straightaway called all the other foxes together and advised them to cut off their tails, saying, "that they would not only look much better without them, but that they would get rid of the brush, which was a very great inconvenience, and besides, it was a useless appendage anyhow."

Nothing would please Germany more than for us to embrace such a philosophy. I regret to say that we already have people in this country proclaiming that Congress is a useless appendage and ought to adjourn and go home.

Such folks as these would have us pass a law about like this: "Whenever the President finds that it is advisable he is hereby authorized to suspend any existing law and enact any new one that he sees fit."

In the face of such ill-advised criticism of Congress, it is refreshing to to read such editorial expressions as recently appeared in the Washington Star, and which I will take the liberty of inserting here as part of my remarks:

CONGRESS.

Speaker CLARK'S defense of Congress in his stirring Valley Forge address was natural, justified, and admirable. He knew his subject. He spoke in season. He exposed and denounced a sort of policy which has been growing for some years.

It was Mr. Cleveland who, when President, wrote of having Congress on his hands. The expression at first simply amused. As the author had never been a member of any legislative body and had not as Chief Executive been getting along any too well with Congress, there was something droll in his tone toward that body.

But since that day attacks on Congress have been frequent and undisguisedly contemptuous. Abuse, ridicule, and misrepresentation have been employed, until it has become quite the fashion in certain quarters to hold Congress up to gaze as a nuisance.

In fact, the matter has been carried so far Congress itself shows in a measure the influence. It has been in some things surrendering its individuality and initiative. Even so worthy a Member as Mr. KITCHIN, speaking last winter about the probable entrance of this country into the war, said that in such an event the President would not want Congress in session. The remark, of course, was hasty and probably not intended to convey what it really carried to the public.

It was Congress that declared war. The power was lodged solely in that body. Without the declaration the President could not have turned a wheel. And Congress alone has the power to provide the means for fighting the war. It controls absolutely both the sword and the purse.

Congress responded to the President's recommendation by declaring war and has since been busy providing means for conducting it. Toward that end it has done a great deal. Much more remains to be done and steady progress is being made.

Much of the current abuse of Congress is stupid. Some of it is transparently malicious. All of it should go for nothing, and is going for nothing with those who are properly informed about the situation here, with its thousand and one difficulties and its many new and puzzling features.

SECTION 5, THE LICENSING MACHINERY.

And now after having made these general statements, I want to discuss one of the important sections which I think should either be modified or else entirely eliminated from the bill. In my opinion this section confers upon the President sufficient power, which in the hands of the food administrator will enable him to fix maximum prices on farm products. Oh, I know that gentlemen have said in this debate that the power to fix maximum prices on farm products has been eliminated from the bill, but I think that I will be able to show that such contention is not a fair and correct statement.

Now, let us see what the machinery is. Section 5 provides that from time to time whenever the President finds its essential he may issue a proclamation requiring importers, exporters, manufacturers, storers, and distributors of these necessaries to secure a license in order that they may carry on their business. This includes everybody who deals in such commodities except the retail dealer and the individual producer. It would include them except for the fact that they are excluded by a special proviso of the bill.

Now, that provision within itself, at first glance, might appear reasonable looking enough, but further on it is provided that these licensees may be required to submit reports, with or without oath or affirmation, and that their places of business shall be open to the entry and inspection of the Federal agencies provided for in the bill, and what else? Here it is:

Whenever the President—

Acting, of course, through the food administrator—

shall find that any rate, charge, or practice of any licensee is unjust or unreasonable or discriminatory and unfair—

And so forth—

he shall order such licensee, within a reasonable time fixed in the order, to discontinue any such unjust, unreasonable, discriminatory, and unfair or wasteful rate, charge, or practice. The President—

Acting again, of course, through the agency of the food administrator—

may find what is a just, reasonable, fair, or economical rate, charge, or practice—

And so forth.

And Members should bear in mind that this finding of what would be a fair, just, and reasonable price is not that of a judicial tribunal with judicial procedure, but is to be the ex parte conclusion of an executive officer.

Thereafter the dealer in these products must observe the rates and charges so fixed in this manner or else subject himself to a penalty of a fine not exceeding $5,000 or by imprisonment for not more than two years, or by both such fine and imprisonment. Now, what could easily be the practical workings of such machinery? Let us take, for instance, a dealer or distributor of wheat.

Suppose that his reports to the food administrator should show that he is selling wheat at $2.25 per bushel, and such food administrator should find that such price is unjust and unreasonable and should judicially determine—if that would be a correct term to apply to an ex parte conclusion—that $1.75 would be a fair and reasonable price, what would be the effect? Thereafter the wheat dealer or distributor would have to sell his wheat at $1.75 per bushel or else subject himself to the penalty of a fine of not more than $5,000 or by imprisonment for not more than two years, or by both such fine and imprisonment. Of course, down would then go the price of wheat to the farmer, because necessarily when you fix a maximum price to his dealer or distributor you also fix a maximum price to him, because he does not sell to himself and can only sell to his dealer or distributor.

The same illustration might just as pertinently be used as to the dealer or distributor of potatoes, corn, oats, cotton seed, and other necessaries which are covered by the definition of this bill.

Oh, no, gentlemen say, the bill does not fix maximum prices; but their contention reminds me of the story that Senator

TILLMAN used to tell of reconstruction days in South Carolina. A distinguished southern colonel was visiting in some of the New England States and he was asked if the negro voter was intimidated in any way on election day. "Certainly not," said the colonel. "When election day comes around some of us station ourselves at convenient places near the polling places, with rifles across our laps, and when the negro voter comes to the polls, he of course sees us sitting there, but," said the colonel, "there is no intimidation, I assure you, suh."

Now, of course this bill does not authorize the fixing of any maximum prices to the producer himself, but it provides machinery that can be used in the fixing of maximum prices in the hands of the only agency to whom he can market his products, viz, the wholesaler and the distributor, which in its final and practical results amounts to about the same thing.

PRICE FIXING BY LAW.

The difficulties attendant upon Government control of prices are very much greater than are commonly assumed by those who advocate the policy.

The purpose is to keep prices down, and officials charged with administration are likely to think that their duty, but it may be unwise to keep prices down.

Prices have a direct influence upon the rate of consumption and the volume of production, and unless the Government undertakes to put the entire population on fixed rations and to assume a military control of production, reliance must be placed upon prices to bring supply and demand into proper relations with each other.

If the consumption of wheat is too high in the early part of the year, the supply may be exhausted, and there may be none in the latter part. If the supply is short this year, it is doubly important that the yield shall be increased for next year. What is a normal and proper price for wheat which will spread the supply throughout the year and accomplish such a degree of economy and substitution as will bring these other foods into use, such as corn and rice, and thereby enable us to meet, at least to a good extent, the pressing needs of our allies? A proposal to fix prices in the interest of the consumer immediately raises the question of the attitude of the farmer, who is now being urged to exert himself to the utmost and who is responding with a splendid spirit of patriotism and loyalty.

The farmer has been assured by the leaders in this debate that nothing will be done about controlling the price of farm products while they are in his hands, but that the charges and prices of the middleman will be controlled. Under this procedure the middleman is to have the same chance to lose his money that he has had heretofore, but his chance to make a profit will be curtailed.

Of course the effect will be to diminish competition in the business and lower the price paid the farmer.

Some gentlemen who have expressed such solicitude for the farmer in discussing some of these sections are going to have their eyes opened as to some of the results which will follow if the full power granted is put into operation.

THE MIDDLEMAN.

Now, some gentlemen in both Houses of Congress have taken a particular delight in jumping on the middleman and referring to him as a scoundrel and a pirate and a fit subject for the penitentiary and the gallows, and other complimentary terms of that sort.

Such statements are easy to make.

Anybody can do it.

I might make some of them myself if I wanted to indulge in verbal exercise, but in a discussion of this kind our object should be to get down to facts.

Mr. OVERMYER. Will the gentleman yield?

Mr. BLACK. I do.

Mr. OVERMYER. I do not recall of anyone having charged the middlemen as a class with any crime or misdemeanor or wanting them shot. The expressions I have heard and read in that connection were directed toward the food speculator.

Mr. BLACK. Well, who is he?

Mr. OVERMYER. Whoever it happens to be that is guilty of that practice.

Mr. BLACK. Well, that is very vague and indefinite, and, of course, I realize that the word "speculator" makes a good talking point, and many gentlemen during this debate have made of him a fine target, and no doubt by now he is shot full of holes.

But let us get back to a serious discussion of the subject. Now, who is this middleman for the most part? He is your wholesale grocer, your wholesale hardware merchant, your wholesale druggist, your wholesale dry-goods merchant, and so forth.

This is the class of men against whom orators have fervently declaimed and newspaper and magazine writers have glibly written.

Whom have they been bidding against during the last 12 months? Why, our allies, England, France, Italy, Russia, and so forth, and when gentlemen talk so wildly on the floor of this House about hanging speculators in foodstuffs or putting them up against the wall and shooting them they should comprehend that among the first that would have to be taken would be the buying agents of our allies, whose large competitive purchases have made advances in prices inevitable.

Recently the purchasing agencies of the allies have been centralized and coordinated, and it is to be hoped that there will be no more of such unrestrained speculation in their buying. But getting back to the talk about the middleman. No reasonable man will dispute that there are some irresponsible and dishonest commission men, speculators, and even jobbers and wholesalers, in our channels of trade, and they should undoubtedly be cleaned out, but I do not approve the wholesale indictments that are rashly and recklessly made daily against the business men of the Nation.

In 1914, when the European war broke out, right at the time of our cotton-marketing season in the South, and prices were smashed to pieces and bankruptcy stared us in the face, did the Federal Government come to our assistance and give us a minimum price or even fix a minimum loan figure on cotton? No; it did not, and the proposition was treated as paternalistic and socialistic by some of the very gentlemen who are loudest in the advocacy of some of the sections of this bill. But what did the middlemen of the South do—the wholesale grocer, the wholesale dry-goods merchant, the wholesale druggist, the wholesale hardware dealer, and so forth? They strained every nerve and resource to stand between their customers and financial disaster, and not even the interest on most of their notes was collected, and it is a matter of common knowledge that many of our largest business concerns, by reason of their policy of liberality in credit accommodations, had great difficulty in finding sufficient finances to keep their businesses going. Had it not been for this liberal policy, many retail merchants and farmers would have been forced to the wall.

I have digressed long enough to say these things in reference to the business men, not because I think they need any defense at my hands, but because I think they ought to be said, and especially so at this time when so many extreme and ill-considered statements have been made during the course of this debate.

HIGH PRICES.

The gentleman from South Carolina, Mr. LEVER, in his opening speech on this bill referred at considerable length to the increase in prices on foodstuffs during the last several years and to the very high prices which are now prevailing on some of these commodities.

Indeed, he could just as truly have referred to the advances of prices in nearly everything else entering into American commerce and could have easily quoted figures which would have been much more startling, relating to articles of trade, not connected at all with food production and distribution.

As an illustration of this fact I desire to insert a clipping from the American Cooperative Journal, the quotation of prices being presumably correct:

Steel sold at $30 before the war; now sells at $130.
Coal has advanced from 100 to 200 per cent.
Wire has advanced 100 per cent.
Wagons have advanced 30 per cent.
Prepared feeds have advanced 100 per cent.
Tankage costs 100 per cent more now.
All fertilizer has advanced 50 per cent. Potash 600 per cent.
Binder twine has advanced from 8 cents to 18 cents.
Plow shovels that were bought for $2.50 now cost $7.
Cultivators sold at $28 before; now, $50.

I have here a statement recently issued by Mr. Amos Pinchot, of New York City, and this list shows the net profits of 42 corporations for the year 1916, these profits aggregating the sum of $729,983,235. An analysis of this statement will show that of these 42 corporations only 7 were corporations dealing in any way with articles of food, and the aggregate profits of these 7 corporations were $71,934,539.

When we compare this with the $729,983,235 earned by the whole group of 42 corporations we will be struck with the thought that if we are going to launch out into the field of fixing prices by law we might well devote ourselves to larger fields, without first jumping onto the products of the farm. For instance, the following comparison in the iron and steel industry is interesting and instructive.

Comparison of prices.

	July, 1914.	May, 1917.
Connellsville coke f. o. b. oven	$1.75	$8.00
Bessemer iron f. o. b. Pittsburgh	14.90	44.95
Basic iron f. o. b. Valley furnaces	13.00	42.00
Ferromanganese	[1]37.70	[2]425.00

[1] Baltimore. [2] Pittsburgh.

Mr. KEATING. Has the gentleman any suggestion to make which would reduce the cost of living, because that is the object of this bill? If the bill is deficient, has the gentleman any remedy that will produce the result we want to produce?

Mr. BLACK. I will say to the gentleman from Colorado that I wish I had the time to elaborate my views upon that question, but my time is about exhausted. The cost of living, of course, has abnormally increased by reason of the present war, destruction by the submarine, bad crops, and perhaps other causes of a more or less temporary nature, but a fundamental condition underlies it all. During the debate when we had up the Borland resolution for a food investigation by the Federal Trade Commission I gave my views on this subject, and I will briefly restate some of the things that I said at that time. An examination of the statistical abstract of the census of 1890 will reveal that 36.1 per cent of the people in the United States lived in the cities at that time. In 1900 this percentage had gone up to 40.5 per cent. In 1910 it had gone to nearly 47 per cent, and I dare say that the 1920 census will show the population of the cities to constitute 65 per cent of the entire population of this country, and you will never get low cost of living as long as that condition continues. Undoubtedly some of the blame for the present high cost of living can be definitely traced to artificial means, such as speculation, manipulation, and monopolizing food products, and these things should unquestionably encounter the strong arm of the law, and no one favors that kind of a policy any more than I. It is for that reason that I am heartily in favor of some of the sections of this bill. But while this is true, it would be folly for us to close our eyes to the fact that all the present high cost of living is not due to artificial causes. No; not by any means. Much of it arises from fundamental causes, and these causes can never be corrected by speech making and legislation. We might stay here until Christmas and resolute and pass laws and make speeches, but that would not produce a single additional bushel of wheat, bale of cotton, peck of potatoes, gallon of molasses, hoof of hog, or head of cattle.

Gentlemen can orate until they turn blue in the face, and hang the speculator to a dozen "apple trees," and resurrect him and hang him again, but it takes the great wheels of production to turn out the stuff that feeds folks' stomachs. And I know of no means that will make these great wheels of production go round and round and start the people back from the city to the farm any better than high prices for farm products.

You gentlemen of the Congress who represent city constituencies might as well understand that it is impossible for the farmers and the producers of this country to produce their crops under the present high prices for everything which enters into their cost of production and then sell this production at old prices.

We have no reason to expect butter and eggs, meat and lard, flour and meal, corn and cotton to be sold at the prices which used to prevail when everything which the farmer bought was correspondingly low. It can not be done, and it is foolish to try and make consumers believe that it can be done.

The whole pendulum of cost and production would have to swing back in an opposite direction from the way it is now going before it could be done.

Any policy of government which would try to bring about such a result by arbitrary and artificial rules and regulations would be suicidal in the long run and would weaken the Nation at the very vital spot where it is absolutely necessary that it be strong. So I would emphasize, in conclusion, that the one big domestic task which confronts us as a Nation to-day is to induce those who are on the farm to stay there and others who are not there to go there.

There are but two ways that I know how it can be done. One is to make farming one of our most pleasant and remunerative occupations, and thereby induce men to follow it, and the other is by some system of governmental compulsion to conscript men for the farm, whether they want to go there or not. Of course, every sensible and patriotic American favors the first method in preference to the second, and so let us be very careful that we, the lawmaking body of the American people, do not embark upon a system of price tinkering with the farmer's product which might result in pulling down the walls of the temple upon our own heads. There has never been a time in the history of the American Republic when the words of the great Webster were more vitally true than at the present period of crisis in our national history. He said:

Let us not forget that the cultivation of the earth is the most important labor of man.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I yield to the gentleman from Kansas [Mr. CAMPBELL] 30 minutes.

The CHAIRMAN. The gentleman from Kansas is recognized for 30 minutes.

Mr. CAMPBELL of Kansas. Mr. Chairman, there are many provisions in this bill that ought to be the law now and ought to have been the law long ago, and which I hope will become the law when this bill is finally enacted.

I, however, disagree with the policy set out in section 3, and I think that section should be stricken from the bill. I agree with the gentleman from Wisconsin [Mr. LENROOT] as to the unconstitutionality of section 5, and I think that section should be stricken from the bill. I do not agree as to the policy of section 9, and I think that section should be stricken from the bill. I do not agree with the policy of section 12, and I think that section should be stricken from the bill.

Aside from that, I believe the bill with slight amendments should become a law. With the sections to which I have referred stricken out, we would have a law that would prevent speculation and monopolization in food products and the necessaries of life. We would have a law that would prevent the use, by the exercise of the discretion of the President, of grains in the manufacture of alcoholic liquors. We would then have upon the statute books a bill under which every exercise of power which should be exercised in a Republic could be exercised for the protection of the citizen against the rapacity of food speculators and gamblers, and we would have upon the statute books at the same time a bill that would not diminish production, but that would encourage production.

I believe that section 3, section 5, section 9, and section 12 would have the very opposite effect from that which is designed for them. You can not in a great Republic, with an area of three and one-half million of square miles and 110,000,000 of people, with resources as varied as is the climate, a country that is vaster than any of the ancient empires—you can not inaugurate over night an autocracy such as would be inaugurated in the Republic of the United States under the operations of sections 3, 5, 9, and 12 of this bill.

Why, this is a Republic. It is not a democracy. It is not an autocracy yet, thank God. I do not believe we should admit that there are limitations upon a republican form of government that make it necessary in the exigency or in the emergency of war to change from a Republic, from the policies of a Republic, to those of the greatest autocracy in the world. I do not believe that we should admit to the Kaiser that his form of government is the only form of government that can exist in a stress and storm such as that through which we are now going.

Mr. HELVERING. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. CAMPBELL of Kansas. Not just now.

The CHAIRMAN. The gentleman declines to yield.

Mr. CAMPBELL of Kansas. I believe the virility and power of this Republic will enable it without changing to an autocracy to go through this war as it has gone through the other wars that it has waged in its history. Oh, there was a war that engaged the whole Republic, almost every male in it, for a period of four years. There was necessity then for food, but we did not then have a food autocrat or dictator such as is provided for in sections 3, 5, 9, and 12 of this bill. On either side of Mason and Dixon's line the people were left to their own resources, to their own aspirations; they were left to supply the demand for food in their own way. They did not have to take out a license to provide the necessary food and the necessary fuel for the people in those days in either the North or the South; food was provided.

Oh, let us have something left for the people of this Republic to go back to after this war is over that resembles a government of the people, for the people, and by the people, and not surrender to a dictator or an autocrat in any form such as is provided for in sections 3, 5, 9, and 12 of this bill.

The people of this country are now suffering more or less from autocratic power in the Department of Agriculture. Did you ever have one of those inspectors go on a farm in your district, lock a gate, close a feed lot full of cattle, and say to the

man who owned them, "You can not move a hoof out of this feed lot until I unlock that gate"? That has been done. I know of small weazen-brained representatives of the Agricultural Department, who have not brains enough to make a living feeding cattle, who go to the man who has the brains and brawn and the energy to acquire a feed lot and fill it full of cattle and tell him just what he may or may not do. I know of feed lots that have been put and kept under lock and key by one of these whippersnappers for three months, bankrupting the man that owned the feed lot.

Mr. McKENZIE. Mr. Chairman, will the gentleman yield?

Mr. CAMPBELL of Kansas. Yes.

Mr. McKENZIE. Were those cattle sick?

Mr. CAMPBELL of Kansas. They were not; but an old brindle cow 18 miles away in that county died, according to what this little whippersnapper said, of the foot-and-mouth disease. The county has a large area where this occurred, and this little fellow or somebody else in the Department of Agriculture said that the county line should be the line within which the autocratic jurisdiction of this little representative of the department should be exercised when a cow died within the county of such a disease.

Mr. OVERMYER. Mr. Chairman, will the gentleman yield?

Mr. CAMPBELL of Kansas. Yes.

Mr. OVERMYER. Was the foot-and-mouth disease stamped out?

Mr. CAMPBELL of Kansas. There was no foot-and-mouth disease in that section of the country.

Mr. OVERMYER. Is there any in the country to-day?

Mr. CAMPBELL of Kansas. Not there, and there was none; and the autocratic power that is exercised there was such as ought not to have been tolerated in any country.

Such diseases come and go, like the measles; and these little fellows had no more to do with stamping out of that disease than had the gentleman from Ohio, or as much.

I know of another exercise of autocratic power by representatives of the Department of Agriculture. In the same county in which this brindle cow died and the gates of every feed lot were locked, another representative of the department closed up a packing house simply because he had a difference of opinion with the proprietor of the packing house. This representative of the department was in the packing house, wearing a boiled shirt, standing around in the way, and, of course, the man who had built the packing house and who owned it was nettled every time he saw that little harebrained thing standing around, and, I think, he said something that indicated his righteous wrath. The fellow locked up the packing house that night because the blood was not washed out of one of the bins in which some animals had been slaughtered within 30 minutes after the slaughtering, and the packing house remained locked up for six weeks. That is the autocratic power that is now being exercised at times in our country, and that is enough.

Now it is proposed to give that power to other minions, and send them out throughout the country to say to one, "You shall do your business in your mill in this way or you can not do it at all. I will close your mill." It is proposed to say to another man, who is refining oil, "You refine oil in this way or you shall not refine it at all." It is proposed to say to the man who makes butter, "You make your butter in this way or you can not make it at all." That is direct action. But it will limit production and not increase production; diminish food production and not increase it.

Now, I believe, if you will strike out those sections of this bill that give that autocratic power, that will diminish the production of foodstuffs in the United States rather than increase it, you will have rendered a great service by enacting the remaining portions of this bill into law.

I am not a new convert to the idea of prohibiting gambling in the price of food products. I urged that upon the Congress nine years ago in this House. To be specific, on the 14th and 15th days of December, 1908, I urged the necessity of preventing gambling and speculating in the price of foodstuffs in the United States. Among other things, I said in the course of my argument:

> Gambling in food commodities has been a subject of discussion in many of the countries of the world. Within the past 10 years the subject has been under consideration in some form or other by the Argentine Republic, Austria, Belgium, Bulgaria, Denmark, France, Germany, Greece, Hungary, Italy, the Netherlands, Norway, Portugal, Roumania, Russia, Servia, Spain, Sweden, and Switzerland.
>
> The Canadian Government has passed an effective law upon the subject. Throughout European countries a popular protest has arisen against gambling on the prices of farm products, the necessities of life.
>
> It is wise to prohibit this species of gambling that is widely indulged in and most injurious in its consequences. * * *
>
> The French and German Governments treat stock gambling somewhat as race-track gambling is now treated in this country. But these continental Governments go further. They even decide in what stocks and bonds they will allow gambling, many of them forbidding gambling in the price of farm products.

I could not then get Congress to agree to an amendment to a bill prohibiting gambling in the price of foodstuffs in the United States at that time. I hope it will be done now, even as a war measure.

Mr. SLAYDEN. Will the gentleman permit me?

Mr. CAMPBELL of Kansas. I yield to the gentleman from Texas.

Mr. SLAYDEN. Does the gentleman hold that the dealing in grain, wheat, oats, rye, or barley in exchanges, for example, like that in Chicago, is necessarily gambling, and that it ought to be forbidden by law?

Mr. CAMPBELL of Kansas. Gambling is done purely in the price of the product, a product that the man who sells does not own and that the man who buys does not intend to secure delivery of. That is gambling, and it ought to be prohibited.

Mr. SLAYDEN. Does not every contract for the sale of grain, or articles of that kind, contemplate the delivery and provide for it?

Mr. CAMPBELL of Kansas. That is a mere subterfuge. That is done in order to comply with the local laws of the State.

Mr. SLAYDEN. Are not millions of bushels of grain delivered, as millions of bales of cotton are delivered, on these contracts?

Mr. CAMPBELL of Kansas. Oh, there is a percentage of delivery, but it was shown 10 years ago in a committee of this House that had the matter under consideration, in the bill that I was then discussing, that less than 10 per cent of the transactions on these exchanges resulted in a bona fide delivery of the products sold and bought. I believed then, and I believe now, that gambling in the price of the necessities of life ought not to be permitted. There ought to be places where the price of every article or commodity is fixed. The market that buys your cattle and hogs buys them from you when you reach the market, at the market price, and the same should be true of your grain.

Mr. SLAYDEN. I do not like to trespass on the gentleman's time.

Mr. CAMPBELL of Kansas. I yield to the gentleman.

Mr. SLAYDEN. In the gentleman's State, which is a cattle-raising State, like mine, many men contract to deliver cattle. They sell cattle to dealers and sometimes they do not have the cattle. They expect to buy them.

Mr. CAMPBELL of Kansas. They sell short.

Mr. SLAYDEN. They sell short. Would you deprive them of that privilege?

Mr. CAMPBELL of Kansas. That is a matter that takes place out in the country between men. A man goes to a buyer and says, "I will gather up 150 steers, 2-year-olds, and sell them to you for so much."

Mr. SLAYDEN. The locus does not make any difference in the nature of the offense, does it?

Mr. CAMPBELL of Kansas. No; but that man sells to a bona fide purchaser, and he is a bona fide seller.

Mr. SLAYDEN. We could settle that without delivery, you and I, if you sold the cattle to me and we neither of us insisted upon a delivery.

Mr. CAMPBELL of Kansas. But if we fixed the price for the country in our transactions it would be unfair to the men who were selling steers in a bona fide way.

Mr. FESS. Will the gentleman yield for a question?

Mr. CAMPBELL of Kansas. I should like to get on, but I yield for the gentleman's question.

Mr. FESS. A little earlier we were discussing the purchase of the wheat of the country by the allies.

Mr. CAMPBELL of Kansas. Yes.

Mr. FESS. They are making flour out of that wheat now and selling it, they claim, at $9 a barrel, and we are making flour out of wheat and paying three times that much for it. What should we do about that?

Mr. CAMPBELL of Kansas. I will be glad to take that up now.

Mr. FESS. I wish you would.

Mr. CAMPBELL of Kansas. I think, as I said upon this floor four months ago, that we should prohibit the exportation of food necessities from the United States when our own people are hungry. Now, in support of the statement I have just made let me read something from a letter from home, one of the many letters I have received, and I have no doubt that many of you have received them. It is from a laboring man in Chanute, Kans.:

> While my labor does not increase the world's supply of wheat, coal, or cattle, it does contribute to the welfare of hundreds, and is considered so necessary that I have been in the employ of one firm for more than seven years, at wages which, while not princely, were sufficient

in normal times, by careful economy, to enable me to provide many of life's comforts for my family and keep out of the pauper class.

Ten years ago, with a wife and two children, a carefully worked-out plan of domestic economy, and wages never above $10 per week, I provided them with all necessities, many comforts, and bought and almost paid for a home. To-day, with that same wife and economic system, three children, home paid for, and a $50 salary, I find it impossible to provide many actual necessities without going into debt.

I have practiced reduction, substitution, and elimination until I am in the state of mind, and almost of body, that Bridget was when she served tomatoes undressed. Potatoes left our table three months ago and have not returned. Butter gave way to oleo a month later. Beans, formerly an every-other-day visitor, now come but once a week. Meat is under the ban; flour will soon be exiled, and if sugar was as rare as radium or as dangerous as nitroglycerine it could not be handled more carefully. Weeks ago my dinner pail was discarded and my wife's noon lunch given up, in order that the children might have something for their lunch boxes at school.

If the foregoing was true only in my case, Mr. CAMPBELL, nothing could tempt me to inform you of it; but I know of hundreds who are in a far worse condition than I am.

I am aware of the fact that legislation purporting to deal with this subject is being considered in Congress, and I am also aware of the fact that one Congressman has already given out the information that, if passed, it was not to be enforced, except in the most aggravated cases, but was being enacted simply for its moral effect. This confession places it in the class with that celebrated slogan, "He kept us out of war."

Mr. PLATT. Does the gentleman mean to say that he has received hundreds of letters like that? I have not received one, and I come from a country where there are many laboring men.

Mr. CAMPBELL of Kansas. The gentleman heard what I said.

Mr. PLATT. I say that I have not received one.

Mr. CAMPBELL of Kansas. I have received a great many. If the gentleman has not men in his district who are compelled to pay more than people similarly situated have to pay in London, Paris, and Berlin for the same things, his district is a little different from almost any district in the United States. It has been clearly shown here that farm products in the United States are made into food products in foreign countries and sold at lesser prices than in the United States. What can be the excuse for this condition?

Mr. SWITZER. Will the gentleman yield?

Mr. CAMPBELL of Kansas. Yes.

Mr. SWITZER. Do these people in the foreign countries get all of the food and bread that they want?

Mr. CAMPBELL of Kansas. No; I assume not. The thing I want to urge on the House is, first of all, that we must not do a thing in this emergency, by the exercise of the war powers that we have, that will absolutely overthrow or set aside the fundamental principles of our own Government, and acknowledge that we must go to Prussianism and kaiserism in order that we may maintain our place among the nations of the earth in the stress of a storm like this.

We can enact into law sections 1, 2, 4, 6, 7, 8, 10, 11, 13, 14, 15, and the remaining sections of this bill and have a law that will prevent gambling, prevent the use of food products in the manufacture of alcoholic liquors, that will prevent hoarding and monopoly, prevent the destruction of food, and prevent everything preventable that has contributed to excessive prices.

Mr. McLAUGHLIN of Michigan. Will the gentleman yield?

Mr. CAMPBELL of Kansas. Yes.

Mr. McLAUGHLIN of Michigan. I would like to have the gentleman explain his objection to section 9, which I understand simply authorizes the Government to buy such necessaries as perhaps it may itself need and store them.

Mr. CAMPBELL of Kansas. If it was limited to that, I would have no objection to it, and if the gentleman will amend it in that way I would have no objection, but it goes much further.

Mr. McLAUGHLIN of Michigan. It does not limit the purchases, but I think one would have difficulty in presuming that the Government was going to start out just for the fun of possessing it and spend its money when it did not need it.

Mr. CAMPBELL of Kansas. If you do not want power exercised, do not grant it. That is a good rule. I would not grant power to any person that is granted in sections 3, 5, 9, and 12 of this bill. This Government must not surrender the principles upon which it was founded. It must not admit that it can not cope with autocracy and maintain a republican form of government. If so, the best argument in the world in Prussianized Germany at the close of the war will be that the Republic of the United States had to Prussianize itself during the war in order to maintain its existence, and why, therefore, should the German Government imitate the Government of the United States that could not exist in stress of storm in competition with the greatest powers of the world?

Mr. HELVERING. Will the gentleman yield?

Mr. CAMPBELL of Kansas. Yes.

Mr. HELVERING. The gentleman's complaint is against the establishment of an autocracy. Is not there a difference between a self-constituted autocracy and one created for the rights of the people, if this bill does create it?

Mr. CAMPBELL of Kansas. No difference whatever when it gets down into the Handberry packing house and Bill Brown's feed lot. There is absolutely no difference when that autocratic power is exercised against you as a miller, against you as a refiner, against you as a bread maker, you as a butter maker, or any other citizen in the exercise of his constitutional rights to life, liberty, and the pursuit of happiness as he sees fit to exercise his just rights.

Mr. HARDY. Will the gentleman yield for a question?

Mr. CAMPBELL of Kansas. Yes.

Mr. HARDY. Does the gentleman think that the armies of the Republic can be controlled by less autocratic measures?

Mr. CAMPBELL of Kansas. The armies are under the control of one man and the commander in the field.

Mr. HARDY. May it not be necessary in a stress to marshal the resources?

Mr. CAMPBELL of Kansas. I think not; they are not marshaling them in Germany to the extent that is proposed in this bill.

Mr. HARDY. I think there is a difference of opinion about that.

Mr. CAMPBELL of Kansas. I am taking the testimony as it was given before the Committee on Agriculture, that the autocratic powers given under sections 3, 5, 9, and 12 have failed wherever they have been undertaken, notably in France and Germany.

Mr. LONGWORTH. Will the gentleman yield?

Mr. CAMPBELL of Kansas. I will.

Mr. LONGWORTH. I do not know whether I understood the gentleman or not. Did he say that he favored the entire prohibition of the export of food products to the allied powers?

Mr. CAMPBELL of Kansas. Oh, no; I did not say that. I did say that I stated on this floor four months ago that I would prohibit the export of food products from the United States while our own people were hungry.

Mr. LONGWORTH. That is not much of a qualification. The gentleman does not maintain that attitude now, does he?

Mr. CAMPBELL of Kansas. I would not send abroad a pound of food products that was essential to satisfy the hunger of the citizens of the United States to-day.

Mr. LONGWORTH. Leaving out all question of our obligations to the allies, how would the gentleman feed the American Army?

Mr. CAMPBELL of Kansas. I would keep sections 3, 5, 9, and 12 out of the bill. I would export as long as we had enough for our own people, but I would not export as long as we had not enough to satisfy the hunger of our own people.

Mr. LONGWORTH. I certainly would see to it that our Army abroad would be fed.

Mr. CAMPBELL of Kansas. I would see to that certainly; but that would not be export, that would be feeding our own Army.

Mr. LONGWORTH. But I am referring to our Army when it goes abroad. I would see to that.

Mr. CAMPBELL of Kansas. So would I see to that. That is a different proposition.

Mr. LONGWORTH. No; it is not.

Mr. CAMPBELL of Kansas. We are not exporting when we send food to our Army, wherever it is engaged.

The CHAIRMAN. The time of the gentleman from Kansas has expired.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I yield 30 minutes to the gentleman from Missouri [Mr. MEEKER].

Mr. MEEKER. Mr. Chairman and gentlemen of the committee, I think the best thing about this bill is its purpose. It is my candid opinion that the people, especially of the cities, are in for the greatest disappointment as to the practical working out of this thing as proposed in this bill of anything that has been done this year. I believe that we all know full well what the workingmen of the great industrial centers desire, and not only what they desire but what they are demanding, and that is that the price of foodstuffs shall be held down to the minimum to them; that is, that there shall not be too narrow a margin between their incomes and what it is necessary for them to pay to feed their families. They have got a sort of an impression that this bill that is now being offered is going to turn the trick. I do not believe it will. I believe one of the sections that has been discussed here and attacked most frequently, because it is considered it is granting too much to the President, is an absolutely harmless and worthless section. I refer to

section 3. Now, when we read the first half of that section we discover—

That there is hereby established a governmental control of necessaries which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries.

That goes all the way from the producer down to the table of the consumer in its scope. It sounds big. We are told, on the one hand, that this grants such power over human life as was never granted before. Possibly that is true. We are warned that we are not to fight the Kaiser by substituting kaiserism. That may be true. We go on to the second part of that section, which provides for agreements voluntarily to be entered into, and that is a very high-sounding way to put it, and after we have said all of these dreadful things that we intend to do we put in the proviso, and the proviso is—

That none of the penalties of this act shall apply to this section.

We not only knock out all of the teeth, roots and snags of teeth, from that section, but we very carefully pad its gums with eiderdown in order to see that nobody will be injured.

When you are talking about food control in the terms of the first part of that section, going to the extremes that are provided in that section, and then stipulate that no penalties whatever shall be attached thereto for a violation of it, you make your President a laughing stock and your bill a subject of ridicule.

Now, do one of two things. Either put teeth into that section or eliminate the section. The consuming public believes, and it is only for that reason that they are urging the passage of this bill, that by some means or other you are providing a bill here whereby you are going to get hold of these food speculators and other individuals as mentioned in this section in such a way as to really do something with them. But all that has been said about section 3 comes to naught, so far as its worth is concerned, if you leave that proviso in the bill. Why? Anybody operating under section 3, it would matter not how much Mr. Hoover or how much Mr. Anybody Else, or the President of the United States would scold and threaten, he is left absolutely helpless, by the wording of the proviso of that section, toward making the man do the thing he wants to have him do. My private opinion of this whole thing is that as Commander in Chief of the Army the President has now all the power necessary to handle this whole food question, so far as the feeding of the Army and the Nation is concerned, and when you go to tinkering with a bill, which to a large degree is simply a set of good resolutions or well-wishes to the President, when you go to putting in a bill like that and saying to the public that is your food-control proposition, I say that the consuming public of this country will look at section 3 and turn to you and say, "We thought we were getting bread, but we only got a stone."

You are providing no protection whatever under section 3 to the people who are demanding protection.

Now, here is another peculiar thing about this discussion. I *must* hurry along, for there are two or three matters that I want to point out particularly as to the dangers in this bill. We have been asking the question here for two or three days as to whether this bill would permit the control as to the maximum price of food, and it has been denied, and then it is asserted, and then it is denied. It depends upon the particular corner you drive a man into as to whether he says yes or no to that question.

Now, the consuming public in the United States wants a maximum limit. That is their only concern. They are only objecting to all this condition at present because the food price is now too high, and they are wanting to get some sort of a system whereby they can force that price down to make it come in line with their income.

Mr. SLAYDEN. Mr. Chairman, will the gentleman yield?

Mr. MEEKER. Yes.

Mr. SLAYDEN. How is the gentleman going to reconcile the desire of the consuming public for a maximum price with the desire of the producing public for a minimum price except by leaving it to the operation of the law of supply and demand?

Mr. MEEKER. Well, Mr. Hoover is greater than that law. [Laughter.]

Mr. SIMS. What about Germany? They fix it.

Mr. MEEKER. Well, of course, if the gentleman is in for the German system, that is all right. But the truth is, Germany has not fixed it.

The disappointment on the part of the consuming public is going to come when we say to that consuming public that section 3 has no teeth in it, when we hand them this bill and let them see that it has no teeth in it. I sent out to some of my friends in St. Louis, who urged me to support the bill, copies of the bill, and I said, "Read this over carefully, and let me hear from you in regard to it." I have not heard from them yet. [Laughter.] When you hand them section 3, with all that grandiloquent talk in the first part of it, and then they turn over the pages and find that even this first line is not as formidable as an ordinary kitten, and its teeth are gone at that, they say, "We did not get what we were looking for." Section 3 of this bill is to fool the people of this country who imagine they are going to get relief here in the way of a reduction in the cost of living. When you come to vote on this bill and to amend it I want the members of this committee to either stand up before the American people and put the teeth into that section so that when you grant this power you can enforce that law or else take it out and not let the people believe that they are getting some authority granted to the President, when in reality he gets none whatever that he can enforce.

Here is another thing: The men—the committee—who drafted this bill did so evidently because of the representations of the talkative Mr. Hoover. And by the way, the more he talks the less evidence he gives of being qualified for the office to which he aspires. There is a vast difference between running an institution where somebody else sends you the stuff and where all you have to do is to give it away and organizing things to produce that stuff. That is the difference between running a church and running a bank. [Laughter.] As yet we have seen him only at the church end of the game; that is, at the charitable end, where we gave him the stuff and he gave it away; but now he is going to manage the whole thing, from onion seed to soup. I say the men who drafted this bill because of what Mr. Hoover has been saying through the press and elsewhere are all the time having in mind the threatened shortage of grain. So, in section 12 it is provided to guarantee a minimum price, which would run for three years after that guarantee is entered into between the farmer and the Government; the guarantee of minimum price on any articles nonperishable, the production of which the Government believes should be stimulated.

I noticed in Monday's RECORD some letters and telegrams sent to Senator SMITH of Michigan, encouraging the minimum-price feature of this bill. One gentleman suggested that $6 a bushel for beans, a dollar a bushel for corn, and a dollar a bushel for potatoes would be a fair price. Gentlemen, I was born and brought up on an Indiana farm. I just wish I owned now all the hogs I have fattened. In that case I would never have to come to Congress or do anything else. [Laughter.] The man who wrote the provision in that bill as to a minimum price never stopped to realize what the effect of the guaranteeing of the minimum price on corn would be, in driving hogs into the market and absolutely driving the hog business out of the corn-raising centers. If you will guarantee me a dollar a bushel for corn for three years, and if I have five hundred 100-pound shoats on my farm, I will sell those shoats and grow corn at a dollar a bushel and take the remainder of the year for rest. [Laughter.]

Your guaranteeing of the minimum price, as provided here, will mean the driving out not only of your feeding stuff from the corn centers of this country, but it will drive out the breeding stuff as well.

Mr. McKENZIE. Mr. Chairman, will the gentleman yield?

Mr. MEEKER. Yes.

Mr. McKENZIE. If the gentleman's contention is correct, would not the driving of all these hogs and cattle to market bring the price of hogs and cattle up so that you could afford to feed the corn?

Mr. MEEKER. Not yet. If you guarantee me 18 cents per pound for hogs I can feed them dollar corn. You gentlemen from the hog-raising centers of Illinois and Indiana, including the Representative from Danville, will remember when the farmers of Illinois and Indiana fed thousands of cattle every winter that they bought down in Texas and out in the western ranges; you will remember that where you used to find herds of 500 beef cattle you will find 10 head now on those farms, because corn has gone up faster than beef, and corn feeding will not pay, because it is more profitable to sell the corn from the crib than it is to put it into beef and pork.

Mr. HARDY. Mr. Chairman, will the gentleman yield?

Mr. MEEKER. Yes.

Mr. HARDY. Does the gentleman think there is any possibility of the Government undertaking to guarantee a minimum price for such a product as corn?

Mr. MEEKER. You can not tell what Mr. Hoover will do. If you could, I would feel much safer about this bill.

Mr. SUMNERS. Mr. Chairman, will the gentleman yield?

Mr. MEEKER. Yes.

Mr. SUMNERS. Is not corn about a dollar now?

Mr. MEEKER. Yes.

Mr. SUMNERS. And the hogs have all gone?

Mr. MEEKER. Yes. The trouble is you can not produce a pig in 90 days. You may be able to do it in Texas, but it can not be done in Indiana. [Laughter.] We men of that section know that during the last 25 years, with land having gone from $50 an acre up to $200, with the slight margin that there has been on producing beef and pork, we have seen those great feed lots empty, because when corn has gone to 40 and 50 and 60 cents a bushel during these past few years the farmer everywhere said, "I will raise the corn, and not take any chances on carrying these brood cows and sows on these fields; I will increase my corn."

Now, what has been the result—the perfectly natural result? When we got rid of the cattle from the farms we no longer produced our home manure, and our producing ability in that line has gone down instead of up. The great Illinois and Indiana and Iowa section and all that district is suffering to-day from a decline in the producing ability of its soil because of the fact that the farmer went mad a few years ago over the question of growing corn and not feeding stock. Commercial fertilizer has not yet taken the place of home-produced manure. Alfalfa and all these other commodities have not yet come in to build back that soil, and I can show you land that has sold for $150 and $200 in the last 10 years that has not paid its taxes and its interest in the last 5 years. It is all right for a man to sit in a swivel chair and talk about these beautiful theories, but I want to tell you that just as sure as you put into practice the guaranty of a minimum on corn that will be sufficiently high to persuade Mr. Farmer to agree that that is a good proposition for him, you will knock the meat business out of the corn belt of this country, for the farmer can take his choice.

Mr. MORGAN. When a minimum price is fixed on corn, is it not proposed also to fix a minimum price on meat?

Mr. MEEKER. Begging the gentleman's pardon, there is no provision about meat.

Mr. SIMS. Corn products.

Mr. MEEKER. You can not find anywhere any provision about fixing a minimum price on meat.

Mr. MORGAN. In section 1.

Mr. MEEKER. Section 12 applies the guaranties.

Mr. MORGAN. In section 1 it says:

Foods, feeds, fuel, and articles required for their production, hereafter in this act called necessaries.

Mr. MEEKER. Section 12 says:

He is authorized, from time to time, seasonably and as far in advance of seeding time as practicable, to determine and fix and give public notice.

That is talking about grain. It does not refer to meat at all.

Mr. OVERMYER. Section 1 defines what are necessaries—foods, feeds, and fuel.

Mr. MEEKER. In section 12 is there any provision, or is there any provision in this bill, guaranteeing a minimum price on hogs?

Mr. OVERMYER. It says:

Hereafter called necessaries.

Mr. MEEKER. There is not a thing in section 12 about it.

Mr. HARDY. In section 12 it uses the word "nonperishable."

Mr. MEEKER. It says that this shall be done—

Seasonably and as far in advance of seeding time as practicable.

Do you suppose that even Hoover is silly enough to guarantee you 20 cents on hogs three years from now? It will take 18 months after breeding time to develop hogs. It is childish to talk about it. That simply shows how much the gentleman from Ohio [Mr. OVERMYER] knows about the meat business, or how much he does not know.

Now, let us go into another feature of this question. We men who have been studying the decline of the meat business in this country have seen going on for years something that Hoover can not overcome, and, with deference to his all but infinite wisdom, President Wilson can not do it. That is, he can not change the trend of the cattle industry from beef production into the dairy herds. Now, that is just as natural in this Nation as it is in all European countries. As land increases in value and as labor increases, so the cow brute on the farm must produce more money, and a good dairy cow can outproduce a beef cow in income about six to one. You are never going to see your beef cattle back as they once were, war or no war. That is not a war emergency. It is in the transition from the utilization of beef to dairy and poultry products. Look here, when you go down to purchase the food for the family, before you cut out milk and butter and eggs, you generally do with about one less pound of steak or bacon. The dairy cow takes the place of the beef cow, because she produces month in and month out, while the beef cow just produces once a year, and must be carried over for that year, and the calf is now worth about $35 or $40, while the calf of the thoroughbred dairy cow at the same age will bring more than the beef calf, and you have got your dairy cow producing all the time.

Now, gentlemen, it is positively childish for Members of the American Congress to come in here and expect through the fiat of a man named Hoover or of a man named Woodrow Wilson to change this whole meat and dairy problem in America because we have got a war with Germany. You can not do it. You could not strike a harder blow at the meat-producing centers of this country than to put a minimum guaranty on the feed that must be used in order to raise meat, while you do not put a minimum on the meat produced. Everybody who has been in the farming business knows in a minute that if you guarantee the price of corn, suppose you put the minimum at 60 cents, what does Mr. Farmer say? He says, "I will not plant corn." Is there anything to compel him to do so? No; he exercises his free will. That is about all he has left, as far as that is concerned, just to plant or not to plant. You say, "Will you plant for 90 cents?" He says, "I don't know whether I will or not," and the Government has got to bid up to the point where corn looks better to that farmer than meat does, and when it does, he says, "Yes; I will plant for your dollar a bushel guaranty, and I will sell my hogs, old sows and all," and he goes out of the hog business, as thousands of farmers have done and thousands more are going to do. He also sells not only the calf on foot but he sells the brood cow. Now, Hoover himself can not build up a beef herd in 90 days.

Mr. McKENZIE. Will the gentleman yield?

Mr. MEEKER. I yield to the gentleman from Illinois.

Mr. McKENZIE. Is it not a fact that the increase in the dairy business of the country has also increased the hog products of the country, and do they not go together?

Mr. MEEKER. Yes; to a degree; but we all know who have handled both dairy herds and beef herds that the profit in the beef business to a large extent is in the hogs following the herd. If you will study your Department of Agriculture reports you will discover that with the breaking up of the great Texas ranches and all those Western breeding grounds for cattle, where for so many years the long horns from Texas came up into Indiana, Illinois, and Iowa, where they were fattened up and the herds were improved—when the great cattle ranches of the Southwest were broken up, when they no longer could produce on such a scale as to make it profitable for the producer, and when we began to depend upon breeding or feeding on $200 an acre land, beef disappeared from the country.

Now, that is a plain, everyday fact, and neither Mr. Hoover nor the President nor this Congress can overcome that situation. When we come in here and hold up the idea that we by guaranteeing the minimum price on grain products that are to be used for producing meat, and we do not put any guaranty on the minimum price on the meat product, you are only starting a campaign to drive every little calf, shoat, lamb, and everything else out of the feeding pens of the grain belt in this country. What man in this House, intelligent enough to get in here, would take that proposition for a minute if the Government should say we guarantee a dollar on corn but will not guarantee anything on hogs. You say, all right, I will take the grain deal, but cut out the hog business.

Mr. RUBEY. Will the gentleman yield?

Mr. MEEKER. Yes.

Mr. RUBEY. I do not want to interrupt the trend of the gentleman's argument, but I would like to have the gentleman's opinion on section 13 and some of the other sections. I see that the gentleman is opposed to the bill.

Mr. MEEKER. I think there have been sufficient opinions expressed on that. I am not opposed to the bill. I am pointing out the weaknesses in it. I will vote for the bill, but I want to know in advance, and I want my people to know that section 3 is a flimflam game.

Mr. RUBEY. How about it if we put teeth into it?

Mr. MEEKER. If you put teeth into it you will not pass it. You put into this bill the provision that the housewife can be punished because she does not cut steak to suit Hoover, and you will not expect to pass it.

Mr. RUBEY. We do not expect to pass that sort of legislation, but we must do something.

Mr. SIMS. Will the gentleman yield?

Mr. MEEKER. Yes.

Mr. SIMS. Does the gentleman want Mr. Hoover to have any more teeth than this bill gives him?

Mr. MEEKER. Well, I do not think he has any teeth. I think I would rather have a man put on a salary to handle this matter than some well-meaning volunteer. If this bill is worth

anything it can pay its way. I am not falling for the proposition that because a man has good intentions he is an expert on a question. There is a great difference between a man's good intentions and his ability to do a thing. This talk about what Mr. Hoover wants to do for nothing does not appeal to me at all.

Mr. MOORE of Pennsylvania. Why does it necessarily mean Mr. Hoover; why not somebody else?

Mr. MEEKER. Because of this supplemental government that is going to take care of things that the department heads are unable to do themselves. That is all I know. We have now a fourth wheel to the Government for the first time in all our history. Whether it is because the department heads can not manage the job I do not know.

Mr. HEFLIN rose.

Mr. MEEKER. Oh, the gentleman from Alabama will keep cool; they are all great men, and I think he leads them all. [Laughter.]

Mr. HEFLIN. I want to ask the gentleman one question.

Mr. MEEKER. Very well.

Mr. HEFLIN. Does not the gentleman think that Mr. Hoover has been selected because of his great experience, the wide experience, which he has had in matters of this character?

Mr. MEEKER. I think so; no question about that. He has had very wide experience as a cattle breeder, wide experience as a corn grower, great experience as a chicken developer, an expert as a grower of poultry, fine in the swine business, knows all about the farming game, understands cotton and cotton seed in all its developments. He is a thorough expert in all these questions. We all know that just as well as does the gentleman from Alabama himself.

Mr. HEFLIN. That is not what I am talking about. He has had a large experience in this matter in other countries.

Mr. MEEKER. The gentleman was not in the House when I stated that there was a big difference between running a church and a bank. It is nothing to give it away when another furnishes it. It is another thing when you come to deal with questions that produce the food.

Mr. HEFLIN. Does not the gentleman think that while he was dealing with these questions he might be able to learn enough to run the bank himself?

Mr. MEEKER. He only had one end of it there, and now you are going to put him at the other end here. But all this talk is unnecessary; it makes no difference. Mr. Hoover has got the place now; he has got it and gone with it. He does not need the bill. Mr. Hoover is a fine fellow.

Mr. PLATT. Will the gentleman yield?

Mr. MEEKER. Yes.

Mr. PLATT. Does the gentleman think it would be proper to call this supplementary cabinet that he alluded to a kitchen cabinet?

Mr. MEEKER. I do not know how KITCHIN is with the Cabinet [laughter]; it is a sort of a supplemental affair.

Mr. MADDEN. I do not think it is supplemental; I think it is the whole thing.

Mr. MEEKER. It is called advisory, but it is doing the whole thing. It is really at the wrong end. I think the heads of the departments ought to do the advising. It is an easy thing to sit back and give advice.

Mr. OVERMYER. Will the gentleman yield for a question?

Mr. MEEKER. Yes.

Mr. OVERMYER. Does the gentleman think that Mr. Hoover will think it takes 18 months to produce a marketable hog?

Mr. MEEKER. Yes. Does the gentleman think it can be done in less time?

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEVER. I yield 15 minutes to the gentleman from Texas [Mr. HARDY].

Mr. HARDY. Mr. Chairman and gentlemen of the committee, I might begin by saying that I agree with the gentleman who preceded me [Mr. MEEKER], at least in his first remarks to the effect that the bill would not accomplish all that is desired. My one fear about this bill is that in its operation it may prove largely futile and a great disappointment to many. An analysis will show, in my opinion, that the real objection to it is the mildness of it, and I believe that a thorough analysis of it will answer every criticism of those who condemn it because it goes too far. I want to try briefly to make such an analysis of the bill.

Section 1 of it says that the bill's purpose is, first, "to assure an adequate supply and equitable distribution, and to facilitate the movement of foods, feeds, fuel, and articles required for their production, hereafter in this act called necessaries"; and, second, "to prevent, locally or generally, scarcity, monopolization, hoarding, injurious speculation, manipulations, and private controls affecting such supply, distribution, and movement; and to establish and maintain governmental control of such necessaries during the war."

Is there any objection to these purposes? The remainder of section 1 declares that—

> For such purposes the instrumentalities, means, methods, powers, authorities, duties, obligations, and prohibitions hereinafter set forth are created, established, conferred, and prescribed.

Section 1 ought not to be objected to by anyone. Section 2 I shall not discuss, because it simply defines terms. Section 3, so much abused by some who denounce it as worthless and by others who call it an engine of tyranny, is in its first clause simply a preamble and declaration of what is done by the bill. It does, however, extend the definition of necessaries given in section 1. The clause reads:

> SEC. 3. That there is hereby in this bill established a governmental control of necessaries which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage distribution, sale, marketing, pledging, financing, and consumption of necessaries, which control shall be exercised and administered by the President for the purposes of this act.

It is neither good nor bad, save as the other parts of the bill are good or bad. It is nothing if not taken in connection with the other parts of the bill. In brief, it declares for Government control of the necessaries covered by the bill, and that such control shall be exercised and administered by the President for the purposes of this act, and only to the extent authorized by subsequent section. I quote the remainder of this section 3 in order that what I say about it may be understood. It reads:

> And in carrying out the purposes of this section the President is authorized to enter into any voluntary arrangements or agreements, to use any agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person, to utilize any department or agency of the Government, and to coordinate their activities so as to avoid any preventable loss or duplication of effort or funds: *Provided*, That none of the penalties of this act shall apply to this section.

I would leave out all of section 3 that follows the clause first quoted, because I think it neither adds to or takes from the bill as a whole or any part of it.

The proviso—

> That none of the penalties of this act shall apply to this section—

seems to me especially useless, because there is nothing in the section to which to attach a penalty. The gentleman from Missouri [Mr. MEEKER] says that that proviso takes the teeth out of the section. There were no teeth in this section anyway. But that proviso does not affect penalties that are attached to the other sections of the bill, and does not take out any teeth that are in the bill. I have said a great deal more about this section than I would have said if some gentlemen had not seemed so excited about it.

Mr. MEEKER. Mr. Chairman, will the gentleman yield?

Mr. HARDY. Yes.

Mr. MEEKER. Then the gentleman's idea is that the second portion of this section and the proviso should be stricken out?

Mr. HARDY. The voluntary service portion is unnecessary. It may be, however, that it will disarm critics if the President should desire to avail himself of the volunteer services of patriotic men who wish to help their country without pay, and, begging the pardon of the gentleman who framed the measure, the proviso in my opinion is useless and senseless. It does not take the teeth out of any section in the bill where a penalty is fixed, and those are the important sections; but I must hasten on. I want to analyze the bill. I wish to find the hobgoblins that haunt the fears of some Members of the House.

We come now to section 4, and now we begin to find the vital and specific provisions and parts of the bill. Section 4 defines what shall be unlawful. It provides, first, that it shall be unlawful for any person "willfully to destroy any necessaries for the purpose of enhancing the price or restricting the supply thereof." Has any gentleman any objection to that? Second, "to knowingly commit waste or willfully to permit preventable deterioration of any necessaries in or in connection with their production, manufacture, or distribution."

Has anyone any objection to that? Third, it provides that it shall be unlawful to hoard, as defined in section 6 of the act—and we will come to section 6 after a time—any necessaries. Is there any objection to that? You will not have any, if you have any now, when you come to read section 6. Fourth, it is made unlawful "to monopolize or attempt to monopolize any necessaries," or, fifth, "to engage in any discriminatory and unfair or any deceptive or wasteful practice or device, or to make any unjust or unreasonable rate or charge in handling or dealing with any necessaries." Is there any objection to that? More power to the Government's arm, if they can stop these things declared by this bill unlawful. My only fear is that the bill is not strong enough to enable the Government to put an end to these evils and evil practices with regard to these neces-

saries. You must bear in mind that "necessaries" have been defined in a former part of the bill. Is there any man here who objects so far? Next, it is unlawful to conspire, combine, agree, or arrange with any other person (a) to limit the facilities for transporting, producing, manufacturing, supplying, storing, or dealing in any necessaries, (b) to restrict the supply of any necessaries, or (c) to restrict the distribution of any necessaries, or (d) to prevent, limit, or lessen the manufacture or production of any necessaries, or (e) to enhance the price thereof, or to exact excessive prices for any necessaries, or (f) to aid or abet the doing of any act made unlawful by the section.

There is your great prohibitive clause, and what Member of this House desires not to prohibit everything prohibited in that section?

Section 5 provides that from time to time, whenever the President finds it essential to license the importation, exportation, manufacture, storage, or distribution of any necessaries in order to carry into effect any of the purposes of the act, and shall publicly so announce, no person shall, after a date fixed in the announcement, engage in or carry on any such business specified in the announcement unless he shall procure and hold a license issued pursuant thereto.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. HARDY. I have only 15 minutes, and I know the gentleman will pardon me if I do not yield. That section, I take it, is the most rational, the most necessary instrumentality created by the bill, to enable the Government or the President to enforce the purposes of the bill. It is part of what was referred to in section 3, to establish Government control and prevent private speculative or monopolistic control. It is given to enable the President, if he sees that a combination is being formed to control the great necessaries of food, feeds, and fuel, to assume control himself, and he will himself then appoint the agencies that control and direct this kind of industry and will establish the regulations under which they must do business, and if his licensees begin to be guilty of practices that are inimical to the welfare of this country and in opposition to the provisions of this law, he is given power to call them to account. He may have his agents to enter and inspect their places of business. He may order them to discontinue their unlawful practices and prescribe rules for right conduct, and the licensees may be prosecuted for violations of this law. Persons violating section 5 are to be punished by fine and imprisonment. But I look for good from it, because it is built more upon the line of preventing than of punishing violations of its terms. It resorts to administrative control rather than court prosecutions.

Section 6 defines hoarding, which is included in section 4 in general terms, and provides that any person who willfully hoards any necessaries shall, upon conviction thereof, be fined not exceeding $5,000 or imprisoned for not more than two years, or both. There are your teeth, Brother MEEKER; and without those teeth I will say the bill would not be worth much, I fear, and, as it would take time to conduct legal proceedings, it would not effect its purpose even with the teeth there if you did not have sections 5 and 7, giving the President administrative power over the law itself. Section 6 proceeds:

> Necessaries shall be deemed to be hoarded within the meaning of this act when (a) held, contracted for, or arranged for by any person in a quantity in excess of his reasonable requirements for use or consumption by himself and dependents for a reasonable time; (b) held, contracted for, or arranged for by any manufacturer, wholesaler, retailer, or other dealer in a quantity in excess of the reasonable requirements of his business—

And so forth. At the end of the section there is this proviso:

> *Provided, however,* That any accumulating or withholding by any farmer, gardener, or any other person of the products of any farm, garden, or other land owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

Mind you, if the farmer goes outside of his own products to speculate and hoard, then he is just as subject as anybody else, and should be.

Section 7 provides for the seizure and disposal of hoarded property, and this is how this law will enforce itself, or can be enforced, not by the prosecution of a man violating section 6 but by giving authority to the President when hoarding is done to seize the hoarded property.

Now, some gentlemen are in a panic and suppose that the President is going to do wonderfully unreasonable things and that section 7 gives him the power to seize the crops and supplies of farmers, while in fact it only gives him the carefully guarded power to seize necessaries hoarded in violation of section 6, and was intended to meet the case of those who to-day are foisting unreasonable prices upon the consuming public. Then it goes at some length into details about proceedings in libel cases; to give every man a day in court and full justice.

Section 8 penalizes willful destruction of necessaries, done to restrict supply or enhance prices.

Section 9 provides that the President is authorized to purchase and provide for the production or manufacture of necessaries, and to requisition such necessaries and provide for their storage and resale to meet the purposes of the act. Suppose he finds there is a great combination undertaking to dominate the market, undertaking to corner certain necessary productions. He has the right to seize that product, to take it over and dispose of it at a reasonable rate to the consumer, and this great power is given because to-day the land we love is in dire distress and must be protected. He has a right to requisition or take at a price fixed by him, and if he does not fix the right price the owner of the goods has a right to sue for a righteous and just price. The Government can not requisition property in the hands of a man who has it for his own consumption and those dependent upon him, but this section does authorize the Government to take from the farmer or anyone else every product which is not necessary for his own consumption if that product is needed to meet the dire necessities of the Government or the people, and that is right and the farmer should be subjected to it. I would not have the farmer exempted from a law intended to feed the hungry from his superabundance.

Now comes section 10. Nobody complains about that section, but it authorizes the President to take over factories and manufacturing plants. Well, the manufacturer has not got as many friends here as the farmer. I believe we ought to take as well from one as the other when it is necessary for the Government, but nobody objects to section 10, and so I will not discuss it.

I will not discuss section 11, which deals with exchanges.

As to section 12, my friend from Missouri, it seems to me, becomes unreasonable and unreasoning when he contends that that section will be taken advantage of by Mr. Hoover, who will have general charge of this law, in order to stimulate the production of cotton, wheat, and corn, or any of our largely produced staples. There may be hundreds of things of which we need to have the production encouraged. Take soy beans, for instance. We might need to stimulate the production of that article where it is unknown. I think the purpose is to enable the Government in special particular instances to take steps to encourage certain items in agricultural production and say to the farmer, "If you produce this stuff we will guarantee you will get a certain minimum price," and then the farmer, having the guaranty of the Government, makes the experiment and goes into this new field. This section, in my judgment, is one of the minor features of the bill. Germany has during this war produced many new things, and we may desire very greatly to do likewise.

Now, nobody would dream that during this war at least the Government would find it necessary to guarantee a minimum price for wheat and corn. The trouble with wheat is that the minimum price now is higher than the maximum price ever was before in the history of farming, and it is going to be higher all during this war. The fears of the gentleman from Missouri [Mr. MEEKER] that the Government is going to guarantee such a high minimum price for corn that it will stop the feeding of hogs are groundless, because there will be no attempt to guarantee a minimum price on wheat or cotton or corn or rye or barley or oats. But I think there will be many special products and crops encouraged by a Government-guaranteed price. I do not want our farmers to get the idea that this is a paternal scheme passed to aid them at the expense of the Public Treasury. I want them to know it is a great measure whose purpose is expressed in its first section, which I have quoted. In order to judge section 12 more intelligently let me quote its substance:

> SEC. 12. That whenever the President shall find that an emergency exists requiring stimulation of production of any nonperishable agricultural products produced within the United States he is authorized, from time to time, seasonably and as far in advance of seeding time as practicable, to determine and fix and to give public notice of what, under specified conditions, is a reasonable guaranteed price for any such products, in order to assure such producers a reasonable profit. Thereupon the Government of the United States hereby guarantees every producer of any merchantable nonperishable agricultural products produced within the United States, for which a guaranteed price shall be so fixed, that upon compliance by him with the regulations prescribed by the President he will receive for any such products produced in reliance upon this guaranty within the period, not exceeding three years, prescribed in the notice a price not less than the guaranteed price therefor as fixed. In such regulations the President shall prescribe the terms and conditions upon which any such producer shall be entitled to the benefits of such guaranty.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HARDY. Can the gentleman give me, say, five minutes longer?

Mr. RUBEY. I would like to yield to the gentleman, and I do yield him five minutes.

Mr. HARDY. Why any farmer should fear section 12 I utterly fail to see. He is not compelled to produce or to sell any products under it. Only the other day I thought of making a contract to sell 100 bales of cotton at a fixed price, which would be both my minimum and maximum. I did not do it, because I thought there was a chance for it to go above that price; but if a responsible party would guarantee me any fixed, even moderate, price, and leave me at liberty to get as much more as I could when I got ready to sell, I would have been very glad to have had his guaranty. It would make me that much more willing to produce and work harder to produce the cotton.

Now, I do not believe that any man is going to cease producing anything because he has a guaranteed minimum price for it. And that is all there is in this bill about fixing prices of the farmers' products. And yet this section is the section my friend from Texas [Mr. YOUNG] referred me to when he was charging that the bill fixed the price of the farmer's product.

Mr. MEEKER. Will the gentleman yield there?

Mr. HARDY. Yes.

Mr. MEEKER. He will not cease producing corn on that guaranty as a minimum, but he will quit producing meats and go to the guaranty.

Mr. HARDY. If the gentleman was correct in his idea that the Government might fix the minimum price of corn so high it would not pay to feed it to hogs his conclusion might be correct, but that will never be done; when corn goes up meat goes up with it. Corn is now $1.70 per bushel and meat is even higher in proportion, and with a prospect for the highest corn price to the farmer in history. My people are now investing in hog raising more than ever before. We expect to feed them all sorts of things. Besides, had the gentleman thought of it, if the Government went into the general business of guaranteeing prices it would certainly not fail to guarantee meat prices. What wonderfully diverse criticisms we hear of section 12. As I said, Mr. YOUNG makes his whole fight on the bill because it fixes the maximum price for farmers, and when I asked him to point out the provision that did it he named section 12. And yet the gentleman from Texas to-morrow would be glad to have somebody agree to pay him 20 cents for his cotton, provided they would let him sell it for more if he could get it. That is all that section 12 is. Brother MEEKER fears the Government is going to price corn so high we can not feed hogs. I wish I could get Brother YOUNG and Brother MEEKER to bump their heads together; possibly they might reach a sober-thought equation.

The gentleman from Wisconsin [Mr. LENROOT] said that the Democrats had turned protectionist in this section of the bill, because they are willing for the Government in case of exceptional guaranteed prices to put a tariff on imports of the guaranteed product and thus prevent the Government from losing money on their guaranty. Yes; there is a provision of that kind in the bill, and if there was any idea of guaranteeing the price of products generally that would be protection; I might tell him also that if everybody was guaranteed an equal profit everybody would favor protection. The trouble with Republican protection is it guarantees profits to the favored, who, by the way, have never been farmers, who must raise the money to make the guaranty good. Protection to stimulate some new industry and to stimulate it while it was in its infancy in order to enable it to get on its feet would not be objected to so much to-day if the industry seemed one likely to be able later to stand alone. But the trouble with the protectionism of the gentleman from Wisconsin and others is that the bigger the infant grows the more feeding and protection he wants, and the stronger he is the more he swears he must have protection. Whatever excuses may be made for protection in some instances in theory it is, when established for the benefit of individuals, in practice rotten. When men get their hands in the pockets of other men, they are never satisfied. The Good Books says, "Hell and destruction are never full; so the eyes of man are never satisfied." This alleged protection is not to provide a profit for any man or set of men, but to prevent a loss to the Government, which is all the people. The truth of the business is that this bill has one defect possibly, and that is that it is so mild it may not accomplish its purpose, the purpose being to prevent the man between the producer and consumer reaping enormous profits and robbing both the producer and consumer. And if it accomplishes that purpose—God grant I may live to see it—I hope that it may remain in force after the war is ended as well as while the war proceeds. [Applause.]

The remaining sections of the bill do not, I think, directly affect the producer or consumer of foods, feeds, or fuels; and I, therefore, do not discuss them.

Mr. Chairman, there are some concluding thoughts I wish to express. Men concern themselves here with fears as to the future effects of this legislation. This is not a time to look to the future. In normal times legislators should look, perhaps, even more to the future than the present; time servers are the weakest and poorest of mortals. In normal times eternal vigilance is the price of liberty, and careful scrutiny of every law ought to be had, weighing its future as well as present effects, but now philosophy and patriotism reverse their dictates and provide for the present, now; let no obstacle prevent that providence, and then let us take care of the future later. When my house is afire I do not stop to see whose bucket I use to carry water, I put out the fire. To-day our house is afire, we are going to put out the fire. To-day we must protect our people from the cormorants and vultures that have heretofore in all wars fattened on the rich pickings afforded them by the calamities and hardships of war. We must guard and safeguard our resources and our people against the enemy abroad and the plunderer at home. If we do this in war we will not lose our liberty or our love of liberty in peace. When the war is ended we will bury all that was evil in its practices and will preserve all that is good of its teachings, and America will rise in newness of life to walk in nobler paths.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I yield to the gentleman from California [Mr. KAHN] 20 minutes.

Mr. KAHN. Mr. Chairman, it seems strange that it has become necessary in these so-called progressive days to pass legislation of this kind. We hear so many altruistic utterances to the effect that the world has grown so much better under modern conditions of advancing civilization that one would think our citizens had become so patriotic, so fond of their fellow men, that no pronounced or determined effort could be made to raise the price of food products. That therefore it would become unnecessary to pass legislation of the character contemplated by this food-control bill. But the trouble is that the greed and rapacity of man makes legislation of this character very necessary.

Goldsmith said in his day:

> Ill fares the land, to hastening ills a prey,
> Where wealth accumulates and men decay.

And I am afraid we are rapidly sowing the seeds that lead to decay. The accumulation of wealth seems to be the sole desire of too many of the citizens of the Republic. And in the desire to accumulate that wealth they do not hesitate to trample upon the sacred rights of their less fortunate fellow citizens. To my mind the early history of most of the world's republics is the best part of their history. I think the glorious days of Rome were those in which the citizens went to the farmer, Cincinnatus, found him at the plow, and called him to lead the forces of the Republic against its enemies. They even clothed him with the powers of dictator, but after he had accomplished his work he quietly went back to the farm and resumed his duties as an humble citizen. It was an exhibition of patriotism and devotion to the people that well may be emulated in our day.

Mr. SIMS. And he went without salary.

Mr. KAHN. Yes; he went without salary.

And that other day, when Brutus gave the life of his son who had been one of the plotters against the state in order that the Republic might be spared from the intrigues of its enemies.

Then, take our own history. What a glorious day it was when Washington left his beautiful home at Mount Vernon to take command of the American forces for all the years of the Revolution. Unselfishly he gave the best years of his life to fight for the liberty and the welfare of the people of the Colonies. He, too, charged nothing for his great services. He was the richest man in all the Colonies, but every American schoolboy knows of his unselfish devotion to the cause of his countrymen.

In those days to be rich was not considered a sign of lack of patriotism. There are many rich men in this country to-day who are true patriots. It would be pitiful if it were not so. But there are too many men in the Republic to whom the exaltation of wealth and the desire to accumulate great sums of money is the crowning object of existence. We have come upon peculiar days in the Republic. This is a time when every patriotic American citizen should be willing to give all that he has, if need be, for the welfare of the Republic.

Unfortunately there are too few who realize fully the conflict that is before us, the sacrifices that will have to be made. Young men will be called upon by thousands to sacrifice their lives and their limbs for the Republic's welfare. I have no doubt they will gladly go to the front in order that they may protect American honor and uphold American prestige. After all, in this war, we have been speaking a great deal about humanitarianism and democracy. To me those factors are only incidents. To my mind this war will be fought for the safeguarding of American rights [applause], for the maintenance of American honor, and the protection of American lives and property in every part of the world. [Applause.] That is why I voted for this war, and I am ready to vote for war at any time

when the lives or the sacred rights of American citizens are denied or trampled upon or ruthlessly destroyed by any nation or combination of nations on the face of the earth. It is only when we protect Americans that our country's greatness will be recognized by the outside world. And when we fight for these things, we fight, incidentally, for humanity and democracy. And as the young men will be called to make these great sacrifices, the men of large means will be called upon to make their great sacrifices of wealth and property.

I am reminded of an incident that happened in Roman history about the time when that Republic was going to pieces.

Atticus wrote to Cicero at that time, and said, in effect:

I trust that in the troubles threatening in Rome you will see to it that my property is saved.

There are a good many men like that in this country to-day. All that they hope for is that their property should be saved. Cicero, that last grand old man of ancient republican Rome, wrote to Atticus, substantially:

Unless something is done to relieve the public tension, there will be first a tumult and then a revolution. We must first save the Republic. Then your property will be safe.

[Applause.]

And the legislation that is pending here to-day is simply an effort, in my humble opinion, to save the Republic, and, incidentally, to save the manipulators, the hoarders of, and the speculators in food products against themselves. [Applause.]

Reference was made here this morning to the fact that a barrel of flour sells in the United States for $17 and that in England, a country that has been at war for practically three years, a barrel of flour is sold for $8; and the question was asked, "Why this difference?" It is the greed, the rapaciousness of manipulators of and speculators in food products that is responsible for the difference.

Many years ago a railroad president out in my section of the country said:

We are going to charge all that the traffic will bear.

That is what these food speculators are doing to-day. They are charging "all that the traffic will bear." And there will come a time, unless they are curbed, when in the great cities of the country the people will take the law into their own hands, just as they did in the time of the French Revolution. People must eat, and they are going to get the necessary food to keep body and soul together. They will buy it if they can; but when the prices go so high that they can not buy the food, and when they see their starving children about them, they will act just as mobs always have acted in the history of the world; they will take the law into their own hands, and the food speculator will not only risk his property but possibly his life. And I feel, therefore, that this legislation is protecting him against himself, for the Government by putting this legislation into effect will try to avoid or prevent the coming of that fateful day.

Mr. ROSE. Mr. Chairman, will the gentleman yield?

Mr. KAHN. Yes.

Mr. ROSE. I would like to know if the gentleman's solution is the correct one of the mystery as to why the price of flour is so high here and so reasonable in England. Why would not the food speculators then sell it all in this country rather than in foreign countries?

Mr. KAHN. Well, I have not studied carefully the export of food products, but I know that many kinds of commodities that are used and needed in this country are sent abroad and are frequently sold abroad more cheaply than they are sold here. It is competition for the world's markets that causes that. A nation that seeks foreign trade and seeks to build up that trade must meet the competition of all its rivals in those foreign markets.

I have no fear that there is such an appalling shortage of foodstuffs in this country as the papers have intimated. I think that there is plenty for everybody in the United States to-day. But I believe that the speculator has secured control of many of the food products of the land and is holding them for the high prices which prevail in our markets to-day.

Mr. FARR. Mr. Chairman, will the gentleman yield?

Mr. KAHN. Yes.

Mr. FARR. Is the gentleman willing to say where he gets his information to the effect that flour is selling in England for $8 a barrel and selling here for $17?

Mr. KAHN. The statement was made by the gentleman's colleague [Mr. MOORE of Pennsylvania] this morning, quoting from a statement that Mr. Hoover made yesterday, as I understand.

Mr. FARR. And the flour was made from wheat grown in this country.

Mr. KAHN. Yes; possibly—in fact, very probably.

Mr. MOORE of Pennsylvania. I will state to the gentleman, if he will permit, that on May 19 the British ambassador wrote to the gentleman from Illinois [Mr. GRAHAM] that flour was selling in England at $8.20. Mr. GRAHAM in his speech yesterday, commenting upon that, said that on the same day that he received the letter from the British ambassador he inquired as to the price of flour in the city of Washington, in the market here, and found that flour was selling here at $17.60. In other words, flour was selling at twice as much in the markets of Washington as it was selling for in England on that day.

Mr. KAHN. Those figures, I am reliably informed, are quite accurate. Other commodities and other food products are sold in the same way in this country and abroad—more cheaply abroad, in the countries actually at war, than they are sold for in this country to-day at a time when we have not become actively engaged in the war—before we have sent our soldiers to the front. There is no deprivation here as yet, and yet these prices prevail in this country. They are only possible because the speculator takes advantage of the situation and runs up the price of food to that point which he thinks the American public will tolerate. Eggs, for instance, are usually about 20 cents per dozen at this season of the year. To-day they are selling at 40 cents. Butter has likewise advanced out of all proportion. Sugar is selling way above its real value. Potatoes and onions have almost grown to be luxuries. There is no excuse for it. And I as one Member of this House am for curbing at once and effectively the greed of the food speculator.

Now, I want to say a few words before I close about the gentleman who has been mentioned on this floor frequently during this debate. I refer to Mr. Hoover. He is a Californian. He became a Californian many years ago. He worked his way through Stanford University, and is a graduate of that institution. He went to Belgium when the war broke out, to begin the distribution of food to the starving Belgians.

Mr. MADDEN. Where did he go from?

Mr. KAHN. From California.

Mr. MADDEN. I understood he lived for years in London before the war broke out.

Mr. KAHN. Oh, pshaw. That is one of those stories without foundation that fly around about a successful man. Mr. Hoover had been out in California shortly before the war began. He is a member of the board of regents of Leland Stanford University. He happened to have been in London when hostilities began. He sent for a number of Californians to come and assist him in the work in Belgium at the very beginning of the European conflict. His very first work was the returning to this country of many stranded Americans. He did his work so well that he received the commendation of the English and the Belgian and the French commanders and officials. He is a high-minded, patriotic American.

I have no fear of giving him every power that this bill places in his hands. I know that the work will be well and patriotically performed; that he will reflect honor upon the American name, and that when he lays down his work his countrymen will accord to him a full measure of thanks for his public services. [Applause.]

Mr. MEEKER. Will the gentleman yield?

Mr. KAHN. Yes.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. KAHN. I should like to have time enough to answer the question of the gentleman from Missouri.

Mr. McLAUGHLIN of Michigan. I understood that the gentleman had 30 minutes, and he only asked for 20. I yield to him 5 minutes more.

Mr. MEEKER. The gentleman in his general discussion of the desires of the framers of this bill has made a wonderful address. We are all agreed on that. I want to ask the gentleman a straight question: What can Mr. Hoover do under section 3? Will the gentleman get down to particulars?

Mr. HARDY. Section 3 is only the preamble.

Mr. MEEKER. Not on the statement of the chairman of the committee [Mr. LEVER], it is not a preamble. It is the hub.

Mr. KAHN. I have not studied every section of the bill carefully. I have only studied the bill in a general way. I am a pretty busy man these days. I have read the bill, and I have no fear but that section 3, as I understand it, will give Mr. Hoover and his assistants ample power to protect the interests of the common people of this country.

Mr. MEEKER. My contention is that the proviso to that section absolutely emasculates the section and that it does not amount to the paper it is written on. That is the thing about it, as you will see if you will read the proviso.

Mr. KAHN. I have no such fear as that. And I am quite satisfied that in the final analysis, if there be lurking in the bill some "bug" that will destroy its purpose, before the bill goes to the President that "bug" will be killed in conference

and the bill will be perfected so that it will perform the functions we intend it shall perform.

Mr. SLOAN. Will the gentleman yield?

Mr. KAHN. I yield to the gentleman from Nebraska.

Mr. SLOAN. I have listened to the gentleman's statement relative to Mr. Hoover, and the experience he had in Belgium in the matter of the distribution of food. Is that the sum total of his experience in that particular line?

Mr. KAHN. I am not certain, but I have an idea that when we had our earthquake troubles in California, when the food situation became a very important one, he did excellent work there.

Mr. SLOAN. Was he at the head of the food control and distribution at that time?

Mr. KAHN. No. I am quite sure he was not. There was nobody at the head of any one thing. The entire matter was being considered by a citizens' committee, and each individual was given a certain amount of work to do. I am not even certain that Mr. Hoover was there. It is only an impression.

Mr. SLOAN. Mr. Hoover's name has been mentioned very frequently in this debate. Following the California earthquake what was his line of work when he lived in California?

Mr. KAHN. He was an engineer. He has visited many parts of the world in the exercise of his profession. He was one of the Americans besieged by the Boxers in Peking in 1899. As I have stated, he is a graduate of Leland Stanford, Junior, University. He worked his way through that university by acting as a waiter. He got experience in the hard but practical school of life.

Mr. SLOAN. That is true of 10,000 young men in this country.

Mr. KAHN. Very true, and I dare say that there are many young men in this country who, if called upon, could do this very kind of work; but he has had the experience very recently, and therefore it has been deemed by the Chief Executive advisable to call him to do for the American people what he has been successfully doing for the European people during this great struggle. [Applause.]

Mr. SIMS. Does the gentleman know of any other man in the United States who has had an experience that would so well qualify him for this work as Mr. Hoover?

Mr. KAHN. I do not.

Mr. SIMS. Why fight the whole bill then because we propose to put the best man we know of at the head of this work?

Mr. KAHN. I think his recent experiences have been of such a character, and have fitted him so peculiarly to do this work, that it would be a mistake to try to take up any other man at this time for this particular effort. Mr. Page, our ambassador at London, and Brand Whitlock, formerly minister to Belgium, commend him in the highest terms.

Mr. HARDY. Did not his work in Belgium call for the highest type of executive and administrative ability?

Mr. KAHN. There is no doubt about that, and he has the confidence of the leaders in England, in France, and in Belgium. Only to-day Baron Moncheur, the head of the Belgium mission, made these remarks to the newspaper correspondents about Mr. Hoover.

In voicing my country's gratitude I am happy to be able to pay a tribute of admiration and affection to Mr Hoover, under whose able and untiring direction the great work of feeding Belgium was carried on. The great work done by the Commission for Relief in Belgium was made possible by its wonderful efficiency which marks it as a monument to the ability and organizing power of its chief. * * * We now rejoice for you that a man so eminently fitted by ability and experience should be at your service in handling the great food problems that confront you and that will play so large a part in the future conduct of the war, perhaps turning the balance between victory and defeat, between the triumph of democracy and the crushing of civilization under the weight of German autocracy. [Applause.]

The CHAIRMAN. The time of the gentleman from California has again expired.

Mr. MADDEN. Mr. Chairman, I hope the gentleman in charge of the bill will ask that the committee rise and give the Members of the House a chance to recess until 8 o'clock. Besides that, I think the debate has been very hard on the reporters of the House. It seems to me that they ought to be given a chance to rest up.

Mr. RUBEY. We have one more speaker on this side for a short speech; then we will move to rise.

Mr. MADDEN. How long?

Mr. RUBEY. Fifteen or 20 minutes.

Mr. MADDEN. I think we ought to rise now.

Mr. RUBEY. I will yield 20 minutes to the gentleman from Texas.

Mr. MADDEN. I am going to make the point of no quorum unless the gentleman moves that the committee rise.

Mr. MONDELL. Will the gentleman withhold that for a moment? I understand the chairman of the committee is expected to be here in a few moments.

Mr. MADDEN. I will make the point of no quorum.

Mr. HAUGEN. I trust the gentleman will withhold that.

Mr. RUBEY. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 4961, for the control and distribution of food products, and had come to no resolution thereon.

ENROLLED BILL AND JOINT RESOLUTION PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. LAZARO, from the Committee on Enrolled Bills, reported that this day they had presented to the President of the United States for his approval the following bill and joint resolution:

H. R. 3673. An act to amend the act approved December 23, 1913, known as the Federal reserve act, as amended by the acts of August 4, 1914, August 15, 1914, March 3, 1915, and September 7, 1916; and

H. J. Res. 105. Joint resolution to correct an error in the sundry civil appropriation act for the fiscal year 1918.

LEAVE OF ABSENCE.

Mr. MCARTHUR, by unanimous consent, was given leave of absence for two weeks, on account of important business.

RECESS.

Mr. RUBEY. Mr. Speaker, I ask unanimous consent that the House stand in recess until 8 o'clock p. m., for the sole purpose of continuing the discussion on the food-control bill.

The SPEAKER. Until what time?

Mr. RUBEY. Until 10.30 o'clock p. m.

The SPEAKER. The gentleman from Missouri asks unanimous consent that the House stand in recess until 8 o'clock p. m. for the sole purpose of general debate on this bill, not to sit later than 10.30 o'clock.

Mr. SIMS. Reserving the right to object, I want to ask the gentleman a question. Is it the purpose to fix the time for closing general debate?

Mr. RUBEY. I understand it is the purpose of the chairman of the committee to conclude general debate this evening, and I think that it is possible that we may be able to accommodate all.

Mr. GILLETT. I do not think that can be done without a quorum.

Mr. SIMS. That is just what I have been saying. We have had pussy-footed management enough on this matter. We ought to close general debate if it takes all night, and we have all night to do it in. There is no use in going along and having this academic debate when the whole thing will be gone over again under the five-minute rule.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

The SPEAKER. The Chair appoints the gentleman from Tennessee [Mr. SIMS] to act as Speaker pro tempore this evening.

Accordingly (at 5 o'clock and 5 minutes p. m.) the House stood in recess until 8 o'clock p. m.

AFTER THE RECESS.

The recess having expired, the House was called to order at 8 o'clock p. m. by Mr. SIMS as Speaker pro tempore.

FOOD CONTROL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 4961) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 4961), with Mr. HAMLIN in the chair.

The Clerk reported the bill by title.

Mr. LEVER. Mr. Chairman, there seems to be no disposition on the part of anyone to continue the debate.

Mr. SLOAN. Mr. Chairman, there is some slight disposition on my part.

Mr. LEVER. Mr. Chairman, I do not have the time to yield to the gentleman, and gentlemen in charge of the time on the other side are not here at this time, but I assume that the gentleman has the time and I have no objection to his proceeding.

Mr. CLARK of Pennsylvania. Mr. Chairman, I shall be very glad to proceed.

Mr. LEVER. For how long a time?

Mr. CLARK of Pennsylvania. Not over 10 minutes.

The CHAIRMAN. The Chair will recognize the gentleman.

Mr. CLARK of Pennsylvania. Mr. Chairman, barring two other measures, this is the most important legislation that has been brought before this House for discussion at this session, in my opinion. It touches every man, woman, and child in the United States and millions beyond her borders. This bill is not the product of one mind, but it is the outgrowth of many minds, and it appears from an inspection of it that in some sections there was a compromise, as is customary and inevitable, as bills are framed in committee. The RECORD has already been overburdened with tabulated statistics showing the increased price of foods, feeds, and fuel, and likewise the increased prices of farming utensils used in the production of those foods. It is not necessary to lumber the RECORD further with statistics of that sort, because the fact is admitted.

It evidently was the intent of this committee to formulate a bill for a certain purpose, but it does not make any difference what the intent of the various members of the committee was. We are confined to the words, phrases, and sentences of the bill itself in judging of what its judicial interpretation may be, and its administrative application will be. In transporting goods from the hands of the producer to the consumer business necessities produced a system, and that system has been severely condemned because it was operated, manipulated, and controlled for the immediate and direct advantage of those engaged therein. It is contended that this system is defective in its operation both for the producer and consumer, that it holds the former down to low prices and the latter up to high prices. This bill in part attempts to remedy this—briefly, to transfer the necessities of life at a fair figure from the hands of the producer to the mouth of the consumer as inexpensively as possible, and if it does that, it is a system which should be put into effect and tried out.

The legal mechanism created by this bill may not be perfect, but there is nothing that is struck off by the hand of man or conceived by the mind of man that is perfect. Much depends upon the intelligent operation of any act. The necessities of the hour, the conditions of the country, demand action. Shall we pass this bill? I have listened to a great many condemnations of persons engaged in transferring the farmer's product to the consumer. I have listened to a great many things which have instructed me and some which have surprised me. I read in the paper last night that the President of the United States had expressed great surprise at some of the features contained in the bill, but there was nothing of disapproval in the remark. We heard this afternoon just before the recess an analysis of the bill. Let us continue along that line.

Section 1 states the purposes of the bill in reference to the supply, distribution, and movement of foods, fuel, and feeds, and I have heard a criticism because it did not include farm utensils; but read the phrase in line 8, "articles required for their production," and a liberal interpretation of it will include fertilizers and farm utensils. Section 2 is declaratory of a principle that is older than the Government itself. It has come down to us from Roman law, qui facit per alium facit per se—he who acts through another acts himself. It is but a declaration of the well-known principle of agency.

Section 3 has been called the most important section in the bill. It does not seem to me to be such. It is, however, the establishment of a governmental agency to control, among other things, the consumption of necessaries. How is the consumption of necessaries controlled?

That one phrase brings this section very close to our tables. There is no penalty attached to this, none whatever, and therefore some have condemned it because it did not have a penalty clause. I am satisfied to let the section stand as it is.

Section 4 defines very many acts as unlawful. It is not necessary to repeat them. They are, in my opinion, very commendable.

Section 5 relates to licenses, but the farmer is exempt, and therefore he is not harmed.

Section 6 relates to hoarding, but the farmer is not hurt thereby, because he is exempt from the provisions of the section. Section 7 relates merely to procedure, and we need not follow that any further. Section 8 relates to a penalty for the willful destruction of the necessities of life, a praiseworthy provision and one that should be enforced. Section 9 touches the nerves of the farmer, in that authority is conferred to take his product at a reasonable rate, to be established by another than himself. But that reasonable rate must be satisfactory, because if it is not a reasonable rate the very sources of strength are strangled, and that which is sought to be accomplished by the bill absolutely fails. [Applause.]

There is one other matter in that provision that I do not like. If a small farmer has a small output of a few bushels of vegetables or fruits or grain, he can not afford to go into a court and be put to unnecessary expense in the conduct of a suit. It does not pay to go into a court unless some fair-sized amount of money is involved. I do not believe that when this bill is asked for for the purpose of strengthening the hand of the Government, for the purpose of upholding the arm of the Government, that that hand and that arm are going to be utilized for the purpose of injuring the very sources from which strength is sought. [Applause.]

The whole matter turns, in my opinion, upon a matter of confidence. Have we confidence in the administrative application of the measures provided in this bill? If we have not we ought not to pass it; if we have we ought to vote for it. We have voted here for almost unlimited authority, and it is necessary for the upholding of the national administration in these hours of grave importance that that arm be strengthened as much as possible. This confidence we can afford to give. If we give this confidence, that is all we can do. The responsibilities and the burdens rest with others, and they must exercise that responsibility and bear that burden faithfully, patriotically, and intelligently. If they do not, the very purposes that are sought by the measure fail and are of no use. I think that it is preposterous for any man, for any Member, for any set of men, to say that the Government in this hour of its need is going to try to injure a great class of citizens, namely the farmers of our country, when upon their successful efforts depends the success of the great war in which we are engaged. [Applause.] I sincerely hope that the practical operation of the bill will fully meet the expectations of its sponsors and the purposes intended with a resultant benefit to producer and consumer.

The CHAIRMAN. The time of the gentleman has expired.

Mr. KINKAID. Mr. Chairman, I favor the purpose of this bill. I shall vote for it, amended or not amended, as I may seek to have done. I do not forget that no Member can have his way about every provision in a bill—at any rate, it is most unlikely that such a case will occur with a bill of so much importance as the one now pending.

As has been well pointed out by one Member, there is no need of legislation in a detailed way for Government control of any or all industries or business enterprises, because the Commander in Chief of the Army and Navy might by reason of military necessity, and without special legislation, exercise the rights conferred on him by this act, an act which in reality merely anticipates what is inevitable in time of war.

I did not help to initiate this legislation, nor do I wish to be regarded as an uncompromising advocate of its merits, but, as it is urged by the Commander in Chief of the Army and Navy, who, I must concede, is much better advised than I am, I deem it my official duty to give it my unqualified support. This is not a time to let any consideration, personal or political, stand in the way of our fullest and heartiest cooperation with the President.

Now, what is the purpose of the bill? It is to win the war. The object should be paramount to everything else, every other interest, and every other consideration. It is war—war, defensive and aggressive—that is to be waged to a triumphant victory. No selfish or individual interest should be permitted to stand in the way of the great public interest which is at stake, which, indeed, involves as well the interests of every inhabitant of the United States.

I grant that the provisions of the bill are extraordinary, that the bill contains what in peace times would be regarded as drastic exactions—unwarranted encroachments on individual rights. But we are in the war. This stern fact must constitute the justification of the act.

Rather than to regard the provisions of the bill as a relinquishment of our inalienable or constitutional rights, we should recognize that it is intended to perpetuate these very rights by furnishing means for the preservation of the Republic in which we live and under which we enjoy democratic privileges and institutions. However, not all the restrictions may be regarded as extraordinary. A few of them codified into law would prove very salutary in times of peace; in fact, have been long agitated and sought by a large percentage of our people.

The title of the bill itself constitutes a promise of what is sought to be accomplished. It states:

A bill to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

It can not be gainsaid that the purpose is both laudable and patriotic, and I hope it may prove economic. The reason given by section 1 of the bill is "the existence of a state of war," and it declares that on this account "it is essential to the national

security and defense, for the successful prosecution of the war," and so on.

No patriotic citizen will deny that these purposes are justifiable. This same section further declares the purposes to be "to establish and maintain governmental control of such necessaries during the war," meaning "foods, feeds, fuel, and articles required for their production."

The purpose, therefore, is the mobilization of the essentials required to constitute efficient preparation for the war and to assure its successful prosecution. I admit that a great deal of authority concerning processes, methods, and activities of business and industries is to be transferred from individuals to our Chief Executive, and that this is exceptional and unprecedented in our country. But the provisions of the bill constitute a solemn pledge that the authority thus conferred is to be used for the preservation and perpetuation of our free institutions. And is not this sufficient justification?

The provision contained in section 4, to prevent the destruction and willful waste or deterioration on the one hand and on the other hand the hoarding of necessaries, may become expedient and essential as a war measure, considering that we must provide foods not only for our own country but for the allied nations in the war. This is not only warranted as a war measure, but it would be very helpful in times of peace. It is just the same as to prevent the monopolizing of necessaries and the conspiring or combining to buy of the producer at unreasonably low rates and to sell to the consumer at extortionate prices. These are evils with which both producers and consumers have had to contend in peace times.

The bill does not provide for a maximum price at which the producer must sell. The bill does authorize the President to fix a minimum price on products constituting necessaries, but for what purpose? The purpose of encouraging production and securing an adequate supply for both the Army and the civilian population. It merely constitutes a guaranty that if so much wheat, corn, or other products shall be grown a certain rate is the lowest at which the product shall be sold, and if the sale can not be made in the regular markets at such prices the Government will step in, pay the price, and hold the products until they can be disposed of at the set price, with expenses added. Manifestly, this will be a protection to producers and to the public.

But, let it be remembered, all the time the producer is permitted to sell at as high a price as he can procure—higher than the Government will pay if obtainable. The bill does authorize the President to limit the selling price; in other words, fix a maximum price when exigent; but this is only to prevent prices that result from what might be denominated corrupt-trade practices, by means of which wolfish manipulators conspire to juggle prices for their own profit.

It is to prevent, in times of national exigencies, evils, some of which might be wisely prohibited in times of peace; in fact, have been legislated against in different forms. The bill seeks to meet these evils in a direct way. The purpose is not to interfere in any manner with the selling of necessaries at legitimate prices or the prosecution of business of any kind by legitimate methods. It is on this interpretation that I am supporting the bill.

To make this conclusive section 5 of the bill, which provides for the licensing by the President of different businesses, with the ultimate purpose of controlling rates, charges, and practices of the licensees, so that the licensees may be just and reasonable and not unfair or discriminating, closes with the proviso—

That this section shall not apply to any farmer, gardener, or other person with respect to the products of any farm, garden, or other land owned, leased, or cultivated by him, nor to any retailer with respect to the retail business actually conducted by him, nor to any common carrier.

Again, section 6, which provides against hoarding necessaries and imposes a penalty therefor, closes with the proviso—

That any accumulating or withholding by any farmer, gardener, or any other person of the products of any farm, garden, or other land owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of the act.

Again section 9, which authorizes the President to purchase or provide for the production or manufacture of necessaries and to store or otherwise conserve them, closes with the proviso:

That nothing in this section shall be construed to require any natural person to furnish to the Government any necessaries held by him and reasonably required for consumption by himself and dependents for a reasonable time.

Mr. Chairman, I grant that the exercise of some of the authority conferred on the President constitutes a sacrifice of the rights enjoyed in the management of our own affairs ordinarily, but I am bound to admit that if the exigencies of war require it, if the success of our arms will be hastened thereby, and if victory be so much better assured, then the end justifies the means.

The communications we are receiving from our constituent producers contain suggestions that they will yield cheerfully to Government control if other businesses are likewise made to submit to restrictions—a very reasonable proposition—and I have already voted for an amendment to include under such control what the farmer must buy, but it failed. This would be so just that I hope it may yet be incorporated in the act, say, perhaps, by an amendment made in the Senate, which I should be more than glad to vote for when the bill shall come back to the House for the ratification of the Senate amendments, many of which are likely to be made.

However, other businesses, and especially big businesses, are being placed under either complete or partial control of the Government. Conspicuous among these are the great steel plants with their different branches and subdivisions. The textile industries, also, have been placed under Government control; likewise transportation, one of the chief factors in our commercial life and of first importance in all that pertains to the war, is nearly under complete control.

The bill puts mines, including coal mines, at the command of the Government, and it is very likely that the production of oil and copper soon will be under Government control. In all probability, the limit of this exigency legislation will be measured only by what is necessary.

In the discussion of this bill it has been suggested that the extraordinary authority it confers may be used unfairly and not in a beneficial or provident manner, but with equal force this might be said of any law. Unless sound principles of trade are followed, the fixing of the minimum price to be paid to the producer and the limit of the high price to be paid by the consumer will become as precarious a proceeding as navigating between the rocks of Scylla and the whirlpool of Charybdis.

We must all realize that everything depends on the manner of the administration of the act. I earnestly maintain that the power conferred should be exercised to promote the legitimate operation of natural trade laws, rather than to hamper them, and thus normal conditions can be safeguarded, which is what the public is entitled to.

I hold that all favorable presumptions must be accorded as to the end to be attained by the application of the provisions of the act and further that we are to assume that the use made of the law will be prompted by the highest and most patriotic purpose and such favorable presumptions, I, myself, most cheerfully accord without any mental reservations.

This is not a time for hesitation. Immediate action is required. It is as if a fire, miles and miles wide, were enveloping the prairie on which I live, every moment threatening life and devastating harvest fields, and I stopped to argue whether to trust the captain of a band of citizen rescuers, while property and life might be consumed meanwhile.

So now, without hesitation, we are to make every sacrifice that is necessary to victory and in this case victory means, as it has meant in all the wars of our country, liberty. The compensation for the great sacrifices we are to make I hope may be a permanent peace established after all wronged nations have been given back the territory that belongs to them, after Belgium has been restored and has received all possible reparation, after the world has come into a realization of the ideals of democracy and the meaning of liberty which accords equal rights to all and is everlasting and all embracing, since it means that the universal brotherhood is recognized in the highest and holiest sense. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield 20 minutes to the gentleman from California [Mr. NOLAN].

Mr. NOLAN. Mr. Chairman, it was not my intention to take up any of the time of the committee in a discussion of this very important measure. I realize the necessity for the immediate passage of this bill in its present form if we are to expect any relief from the present high prices prevailing and the higher prices that we can expect to prevail during the coming winter unless the people who will administer this legislation under the direction of the President shall have an opportunity to put their machinery into motion and get to work at once. I feel I would not be representing my constituents, however, who are almost wholly consumers, were I not to at this time voice their protest at the conditions existing in this country regarding the prices of commodities, and to voice their hope that Congress will immediately pass this measure, which will undoubtedly afford considerable relief before the present year is over. I believe that this bill contains all the necessary machinery which under proper direction will again bring prices to a normal level. There should be no misunderstanding between the producer or the farmer and his best customer, the consumer, regarding the purpose of this bill. This bill is intended to reach the man or men in this country who perform no useful function in the matter of food distribution between the producer and the consumer, but who through the warehouses and cold-storage plants have been able to hoard the necessaries of life and keep them off the

market long enough as well as to destroy food in sufficient quantities to make the price to the consumer double and treble what the producer received for his products. The bill primarily is intended to stimulate production and to insure the producer a fair price for his product. It goes further than that; it empowers the President to guarantee him a fixed price for a period of at least three years, so that he will at least know when planting his crop for three successive seasons the price he will receive for it when it is ready for the market. At this point I desire to read a letter I have received on food control from Dr. A. E. Taylor, Assistant to the Secretary of Agriculture. Dr. Taylor is also working with Mr. Hoover.

WASHINGTON, *June 20, 1917.*

MY DEAR MR. NOLAN: In accordance with our understanding of yesterday, I herewith present a statement bearing on the crucial feature of food control as illustrated in the experience of every country at war.

Our situation is succinctly stated as follows: We are short on wheat and will be short on wheat, including Canada. We are long on other cereals and probably will be still longer on other cereals, including Canada. The United Kingdom, France, and Italy are short on all cereals, especially on wheat, and will be short on all cereals, especially on wheat, when their new crop comes in. We have enough, if it is pooled with theirs, to feed us and them, providing the distribution is under control and the demand expresses the need and is not influenced by manipulation and extortion, and hoarding is prevented. There are three courses in general open to us in order to combat the present high cost of foodstuffs:

(1) We may place an arbitrary embargo on exports, and the allies will promptly collapse—certainly France and Italy will collapse.

(2) We may continue to do as we are doing now. The allies want the foodstuffs. They don't care what the price is, and their disregard of the price furnishes the foundation upon which the American speculator operates to maintain the present prices, and which, if unchecked, will result in still greater increases in retail prices.

(3) We may control the entire food situation, including export, to the end that we supply our allies what is required, or as nearly as we have it to supply, feed ourselves adequately, eliminate hoarding, check speculation, exterminate extortion, and reduce the cost of living to a plane normal for war prices.

There is in peace times a certain average price each year that the producer receives for a food community. There is also a price that the consumer pays for the same. The difference represents the costs of distribution and the profits of the middleman, using this term in the broadest sense. Let us, for the purpose of illustration, use the figure 100 to represent the price to the producer. The price to the consumer will then vary in accordance with the commodity. It may be 125, 150, 175, or 200, as the case may be. Now, in war time, the tendency is to increase the differential between the price paid to the producer and that paid by the consumer. It is the purpose of control to maintain this differential to a reasonable basis. Let us take flour as an illustration. With $1 wheat paid to the farmer, the cost of flour should be somewhere in the neighborhood of $6.75 per barrel, it being understood that this is a mere approximate term. Viewing the wheat cost as 100, this represents the retail price at 140. The costs of milling flour have increased somewhat with increase in labor. The cost of transportation has remained practically stationary. Now, during the high wheat prices of the past year it is, according to competent authority, safe to assert that the farmer did not receive on an average of $1.50 a bushel. Let us accept this figure. This would correspond to flour at not to exceed $9.25 a barrel, if the ordinary differential between 100 and 140 had been maintained. The actual price was not $9 or $10; it was $14, $16, $17. In other words, instead of a relationship of 100 to 140, we had a relationship of 100 to 200 or 225. This was not done by the miller. It occurred in the channels of trade after the manufacture of the flour. Now, equitable control would have held the differential between the wheat cost to the farmer and the flour cost to the consumer to a normal plane, plus any demonstrable increase in the cost of manufacture of the flour. That this is possible is shown by the fact that the prices of bread are lower in England, France, and Germany than in the United States.

Germany paid her farmers $1.77 per bushel for wheat and $1.39 a bushel for rye for the crop of last year. Out of these two grains she produced a mixed flour composed of about 70 per cent rye and 30 per cent wheat flour, the bread of which was sold to her people for a fraction under 5 cents per pound. This was an increase of only about 20 per cent in the retail cost of bread. In other words, the cost of distributing and purveying flour was held to but slightly over the peace-time figure.

The same consideration can be shown to apply to a perishable commodity like potato, just as well as to an exportable commodity like flour, the price of which tends to equalize itself throughout the entire world. The price of potatoes in the United States in May ranged from $4.50 to $5.50 per bushel at retail. The price in England was $1.54 the first week in May. The price in Germany was $1.75 per hundredweight, equal to about $1.05 per bushel. Of this $1.75 per hundredweight, $1.30 went to the farmer, the balance was the cost of distribution and the profits of the trade. Germany had a short potato crop, the shortest in a decade, and with the extreme scarcity of food and the ability of people earning high wages to pay for food had high prices been extorted from them, there is not the slightest doubt that without control the price of potatoes in Germany would have jumped to $10 a bushel, just as it did here.

A reasonable control holds, firstly, a stable and increased price to the farmer, because the scope of manipulation not only increases the differential upward in the direction of the consumer but reduces the price of the producer below the hypothetical 100 that we have set. A reasonable control protects the legitimate middleman. A proper and reasonable control keeps down the price to the consumer and results, in addition, in equitable distribution since, with abnormal prices, equitable distribution is impossible. A reasonable control enables us also to handle our entire export business from the standpoint not only of our military and political duties but also from the standpoint of protection of our own people.

Experience in Germany has made it absolutely clear that it is not possible to check extortion, hoarding, and manipulation in the channels of trade except through a control of food upon a proper and comprehensive basis, because the methods of manipulation are so numerous and devious that the problem is not tangible. We have never succeeded in times of peace, under the operation of the Sherman Act, in materially repressing speculation. We certainly will not succeed in times of war.

I want to digress right here. We have not succeeded during peace times or up to the present time in repressing speculation in food products with any prosecution we have undertaken under the Sherman antitrust law since that law was enacted in 1890.

Food control in Germany did not pretend to cover everything, and with the commodities that were not covered speculation occurred in the wildest manner and the police were absolutely powerless against it. Certainly, if Germany with her control of the inward affairs of her citizens was unable to check speculation through the operation of laws designed for that purpose as criminal, we will be unable to do so in this country. We must remove the possibility of speculation through adequate and reasonable food control. It is impossible to check it through criminal procedure.

Very truly, yours,

A. E. TAYLOR,
Assistant to the Secretary.

There is no question but what there is merit in the contention that prices of other commodities, as well as manufactured articles, should be regulated, but if we are to get quick action, and action absolutely necessary at this time, let us pass the food-control bill, which deals with the food and fuel question, and take up the question of the regulation of other commodities and manufactured articles in a separate measure, the power to deal with these articles and to regulate their price should be vested in the Federal Trade Commission. Do not make this structure top-heavy and have it fall of its own weight and fail of its purpose. If we are to have national efficiency our industrial army must receive as great consideration as our Army in the field, and this efficiency can only be secured through a contented, well-fed army of men and women in mine, mill, factory, and workshop. Unless the workers can be guaranteed a wage sufficient to purchase the necessaries of life so as to properly feed and clothe their families they are going to be sullen and discontented, and instead of producing in a patriotic way the arms and munitions and other paraphernalia necessary to keep our Army occupied in the field there will be trouble, strife, and discontent all around.

Under present-day wages it is impossible for a man to properly feed, not alone clothe, his family, with sugar at 10 cents per pound, flour at $16 per barrel, beans at 20 cents per pound, round steak 32 cents per pound, potatoes $1 per peck, and cabbage 15 cents per pound. These are the prices quoted by one of the markets in the District of Columbia for May, 1917, that supplies probably more workers than any other similar institution in the District—the Old Dutch Market.

This is a condition that is general throughout the country, and it is high time that this Government should step in and give some consideration to its own people when we find that in the warring countries they are paying considerably less for foodstuffs imported from America than we are paying in this country to-day.

I call your attention to the following table prepared by Mr. J. W. Sullivan, now connected with the Council of National Defense. These are approximate retail prices of bread in the countries at war and in Washington, D. C.:

Approximate retail prices of bread in entente countries and in Washington.
(Allowances made for exchange of money.)

Country.	Date.	Quantity.	Price.	Increase.	Authority.	Composition.
		Ounces.				
Great Britain	May 1, 1917	32	11 cents (11d., 4-pound loaf).	97 per cent since July, 1914	Board of Trade "Labor Gazette."	"War bread."
France:						
Southern Provinces	Apr. 1, 1917	35	8 cents (47.5 centimes, 1 kilogram).		J. W. Sullivan, personal observation.	80 per cent wheat; 20 per cent rye, barley, corn.
City of Lyons	Apr.-May, 1917	35	9 cents (52 centimes, 1 kilogram).	20 per cent since July, 1915	"Le Semeur," Lyons	
Belgium	1917	35	11 cents (55 centimes, 1 kilogram).		Herbert C. Hoover	
Italy	May 1, 1917	35	8 cents (48 centimes, 1 kilogram).		"Bollettino dell 'Ufficio del Lavoro."	"War bread."
Washington	June, 1917	14	10 cents		Retail bakers' agreement	White wheat.

When we find people in the warring countries using our own wheat and buying 35 ounces of bread for from 8 to 10 cents, and then find our own people in the Nation's Capital paying 10 cents for a 14-ounce loaf, it is time to sit up and take notice. If we do not, they, the people, will. I insert at this point an article by Mr. Basil Manly, entitled "How they gamble in farm produce in pits"; also a newspaper article regarding speculation in canned goods:

HOW THEY GAMBLE IN FARM PRODUCE IN "PITS"—MANY PEOPLE THINK THE FARMER IS GETTING RICH OUT OF HIS PRODUCE, BUT READ THIS ABOUT THE "PARASITE."

[By Basil M. Manly.]

"Futures," or as they are more often called on the floor of the Minneapolis Chamber of Commerce and Chicago Board of Trade, "options," are verbal or written contracts to buy or sell at some future time.

For instance, July wheat: One man on the floor near the July wheat pit, or acting through his commission man, buys 1,000 bushels of July wheat at, say, $2.41 per bushel. He pays a small portion of the purchase price, called a "margin." The seller contracts to deliver to him 1,000 bushels of wheat in July. He can deliver on the first day or any time to and including the last day of July. The buyers must take when delivered and pay the balance of the price over the margin he laid down at the beginning.

Or a man may sell 1,000 bushels of July wheat. That doesn't necessarily mean that he have even a single bushel to sell. This man is literally betting that wheat in July will be selling for less than the "future" price quoted to-day. If he guesses rightly he can buy 1,000 bushels then at a lower price and sell at the higher price than he contracted at. If wheat goes up by that time he, of course, loses the difference.

September wheat is that contracted for delivery in that month. At this time of the year speculators are dealing in May, July, and September wheat. After July 1 May wheat is dropped and December wheat added.

Dealing in futures, commission men say, is necessary to protect terminal elevator owners and flour millers; that it gives these men a chance to hedge on the market which is constantly fluctuating.

But this much of grain speculation, while it may or may not be necessary, is only a minute part of the speculation in futures. To every legitimate future trade there are 999 that are nothing but gambling or prearranged efforts to affect the market price of cash grain.

The average bushel of wheat is sold at least 100 times on the Minneapolis Chamber of Commerce. Every morning there were, up to May 16, more bushels of wheat sold in future trading on the Chicago Board of Trade than there are bushels received during the whole year.

That is grain gambling—betting on the rise or fall of the wheat.

One man sells hundreds of thousands of bushels of wheat he hasn't got and which he never expects to have, to another man who doesn't want that wheat and never expects to get it. The same mythical wheat is sold again and again, forcing the price up or down.

Look at September wheat to-day. It closed at $1 a bushel lower than May wheat. Why? Because in September the farmer will have wheat to sell.

To-day only millers and big warehousemen have any. Along toward the time when wheat is being thrashed the Milling Trust and big grain buyers will begin selling September wheat, when they don't buy. Continued selling of any commodity naturally brings down the price. Just how many of these sales are "wash" affairs no one but the "bears" (sellers pulling down the price) know. A wash sale is no sale at all. It is made openly on the floor between certain members of a bear crowd, and after the exchange closes is washed off the slate. But wash sales have a large effect upon the price. To outward signs they are real sales.

After the price is down and most farmers have marketed their wheat the flour millers and grain cornerers, who have stored away millions of bushels in elevators, begin boosting the price upward. They have something to sell which they bought cheap and want to sell as dear as possible for a profit. They then become "bulls," and buy December and May wheat.

Again wash sales are used, this time to help increase the price. Rumors of crop failures are spread; dire predictions are made, to give the impression of a decreased supply, and the continual buying from one another goes on.

Slowly the price is boosted.

Then the terminal elevator owner, who holds the actual wheat, lifts the price to the flour miller and the miller can point to the high price of December wheat and raise the price of flour. And they do the very thing.

Raising or lowering the price of future wheat affects the price of cash wheat, and flour prices are based upon the price of cash wheat—that is, wheat actually sold.

Nor is it alone in wheat that future deliveries are gambled in. There is May pork and July pork; May lard and July lard; May ribs and July ribs; July corn and September corn; July oats and September oats; May flax and July flax.

By future trading, one man can get millions of bushels by putting up a small portion of the price. With only cash sales no grain gambler could sell "short"; every sale of wheat would mean the transfer of that much grain. No one could increase the price by buying what he won't take, nor decrease it to the producer by selling what he hasn't got.

—

100 PER CENT PROFIT ON CANNED STAPLES—FOOD SPECULATORS ROB PUBLIC, WHOLESALE DEALER CHARGES.

CHICAGO, *June 12.*

Speculation in canned goods must be stopped by the Government if the public is not to be robbed, an official of a Chicago wholesale grocery house declared to-day. He said that speculators are making 100 per cent profit on the corn, peas, and tomatoes for which the public is now paying virtually double prices.

Peas retail for 25 cents a can, and tomatoes and corn, which formerly sold at 12½ to 15 cents a can, now bring 20 to 25 cents. This wholesaler says the speculators buy canned corn at 62½ cents a dozen, tomatoes at 90 cents, and peas at 75 cents, which they sell at $1.50 to $2.10.

"Allowing," he said, "for the high cost of tin cans and cases, No. 3 tomatoes cost the canner 80 cents, peas 62½ cents, and corn 67 cents a dozen."

Again I say there should be no quarrel between the farmer and the consumer. It is all right enough to talk about regulating the price of clothing and shoes at this time, and I am in favor of such regulations, but the ordinary man in this country can have his shoes cobbled or repaired and have his clothes mended and can go along for a fairly reasonable length of time without buying new shoes or new clothing, but he can not live and can not do his bit during this great emergency unless he gets edible food in sufficient quantities to nourish himself and his family, and under present-day conditions in the matter of wages and prices this is impossible. There is an economic side to the question of wages in industry. We will take the building trades, for instance, where the mechanics and artisans have been paid the highest wages on an average paid in American industries, the carpenter receiving in the neighborhood of $5 per day for his labor, the bricklayer, plasterer, and plumber $6 per day, and other mechanics in proportion. These men have had to stand these tremendously high prices, it being estimated that within the last four or five years prices have almost doubled. That being the case, the natural thing for them to expect is that their wages should be increased in proportion to the increase in the cost of living. But who would think about building a home or building of any kind if the wages of carpenters were $10 per day, and the bricklayer, plumber, and plasterer $12 per day? To substantiate the statement regarding increase in prices I incorporate a statement of retail prices prepared by the Old Dutch Market showing an average increase in 79 items of 54 per cent between October, 1916, and May, 1917, less than eight months:

Comparison of retail prices of foods October, 1916, and May, 1917.

Articles.	October, 1916.	May, 1917.	Increase.

Average net increase, 54 per cent.

There is an economic side to this recognized by the worker and those who speak for him. They are not asking that their wages be doubled, as they should be if present prices continue, but they are looking to the Congress of the United States to give them relief from the food pirate and speculator, and if that is done the price of commodities will go back to a normal level and we will have in all branches of American industry a patriotic, contented, and self-satisfied army of workers who will do their utmost in this great national emergency; these men, both skilled and unskilled, comprise the industrial army necessary in modern warfare, and they have to stay at home to provide the sinews and munitions of war for the men that must do the fighting in the trenches on European battle fields. Even with the passage of this measure, unless relief is immediate, we are facing the most serious internal problem that this country has ever been called upon to face in its history. [Applause.] There is going to be industrial unrest, strife, and food rebellion. People are not going to work unless they can secure enough of the necessaries of life to live decently and comfortably. They will not be able to understand why we are allowing them to starve in their own country and at the same time allowing tremendous quantities of foodstuffs to go abroad to feed the people of the warring and neutral nations at a price less than we are paying in America. They are going to be taxed and the tax burden will be heavy, for after all it is the ordinary, every-day citizen that will have to shoulder all of the burden of the war-revenue bill, and unless we give some heed to their needs and comfort they are going to turn and refuse the patriotic support absolutely essential to the success of our armies in this great struggle. We met with a ready response from the American people in floating the first $2,000,000,000 of bonds of the liberty loan; we have had very little trouble in enrolling our citizens for the national Army under the selective-draft bill, but we will have plenty of trouble if the people of this country are to go hungry, and particularly so during the time that we are shipping out of the country great quantities of foodstuffs that they are harvesting and preparing in our packing houses, flour mills, and canneries. [Applause.]

It has been estimated that 70 per cent of the wheat that went to the millers of this country during the past year brought to the producer an average of $1.36 per bushel, which should have meant to the consumer flour at not more than $8.50 per barrel. What the American people want to know is what became of the difference between this $8.50 that they should have paid and the $15 and $16 that they actually paid. It is the gentlemen that took this money from the American consumer that this bill is intended to reach, and under this measure the farmer will not have to part with his wheat or other crop for such a low price, but will be treated fairly in the matter of prices for commodities of all kinds.

During a recent visit home I was informed that the rice crop of California, amounting to several million bags of rice, had been disposed of by the producer at an average price of 3 cents per pound. Within 60 days the price of rice on the California market was between 6 and 7 cents. An investigation disclosed the fact that the warehouses at San Francisco and the surrounding vicinity were stocked with rice held by men who never had anything to do with the producing of it nor who had ever dealt in any way in foodstuffs before. They had been given a tip that rice was going to advance, providing it was held from the market, and some of them bought as high as 10,000 bags of rice and stored it, waiting for a rise in price, just as they would buy real estate in a speculative way. A local newspaper published a list of names of men who had stored thousands of bags of rice in the warehouses. There were bankers, professional men, and men in all walks of life speculating on the poor.

It is conditions of this sort that the Lever bill intends to correct. It will also take care of the speculator who buys and stores even though he may be a dealer in foodstuffs. The licensing clause will give the Government absolute control over the food pirate or food hoarder. I insert an editorial from the Washington Post of June 12, which reviews the Lever bill and gives in a short article all the reasons why this bill should pass without delay:

THE CONTROL OF FOOD.

[From the Washington Post June 12, 1917.]

After what seems to have been unnecessary delay the House Committee on Agriculture has reported the food-control bill. It is fully as sweeping as was predicted. In substance it empowers the President to establish a license system regulating the importation, exportation, manufacture, storage, or distribution of any food, feeds, or fuel; to limit or prohibit the use of food or feeds in the manufacture of liquors; to guarantee minimum prices for foodstuffs; to operate factories, mines, and other plants; to regulate all exchanges dealing in foodstuffs; and to create an agency for the control of food production and distribution. The bill also makes it unlawful to hoard, destroy, or limit the production of food, or to combine to exact excessive prices, or to limit the facilities for transporting food.

This is a war measure, as distinctly aimed at the defeat of Germany as is the creation of the new army. It is made necessary by the situation in which the allies find themselves and by the method in which modern war is fought. The United States is not merely fighting the German army and navy; it is fighting an organized nation, incredibly systematized and self-denying to the point of death. The war revolves around the food supply of the world. If the United States will manage its food strategy with foresight and skill it can deliver a staggering if not fatal blow to the enemy that is waiting its opportunity to strike a death blow at this Nation.

Food control comes as a complete novelty to Americans. It is a sample of Government supervision that was not dreamed of a year ago. Much tact and discretion must be exercised by the Government in inaugurating and enforcing a law that touches the people so closely, and even with the best of administration there will probably be opposition from ignorant and interested persons. Speculators and extortionists will not readily abandon a field in which they have fattened at the expense of the people. Criminals, however, need not be treated with patience. As for the ignorant objectors, they are likely to fall in line when two facts are clearly understood: First, that the food-control system is a temporary measure, to end when the war ends; and, second, that this control will eliminate price boosters and monopolists.

The country is confronted with the alternative of submitting to private control of food by conspirators, with the risk of crippling the allies and thus losing the war, or asserting control of all food by the Government. Talk of "paternalism" and "centralization" and "Government usurpation" becomes idle when the dire alternative is thoroughly understood. The Government must act for all the people in the food question, just as it acts for the people in military and naval operations. Bread and bullets are weapons of war which must be controlled exclusively by the Government.

Mr. Chairman, the man that will have charge of the administration of this important measure—Mr. Hoover—needs no defense at my hands. There has been an attempt through innuendo and insinuation, both in the press and otherwise, to make the people of this country believe that Mr. Hoover intends to regulate not alone the distribution and the price of commodities but also to regulate the way in which food should be consumed as well. Mr. Hoover has, to my notion, demonstrated to the satisfaction of every reasonable man in both Houses as well as to the country at large the falsity of these statements, at the same time demonstrating his capacity and ability to undertake this tremendous task. [Applause.]

Mr. Hoover is essentially a Californian, having worked his way through Stanford University and secured his degree as a mining engineer. He made his mark in the engineering world long before the terrible European war broke out. When a man was needed to handle the food situation in Belgium and to supervise the expenditure of half a billion dollars Mr. Hoover was chosen for this great task. Having laid the foundation and built his structure, it was easy for him to leave the administrative end of it in the hands of his assistants in Europe and respond to the call of the President of the United States in this great national emergency. Mr. Hoover is here. He has already begun his work and has surrounded himself with some of the biggest men in America, who have volunteered their services and who are now doing their bit in working out not alone our own food problem but the problem of conserving our resources so that our allies in this great war may receive enough of our surplus of food products to sustain them and bring success to their colors. [Applause.]

There has been some criticism regarding the great power conferred in this measure upon the President of the United States. Criticism of this kind might have been justified a few years back, when we were at peace with the rest of the world, but we are now engaged in the most titanic struggle of the ages, and as we go along we will become more and more involved, needing men, munitions, and foodstuffs, as well as all of the accessories that go to make up, feed, and equip a great army in the field. The President of the United States has been intrusted by the American Congress, as Commander in Chief of our Army and

Navy, with the expenditure of billions of dollars. He has also been intrusted with the care and responsibility for the lives of millions of our population, at home and abroad, and there should be no quibbling at this time over the question of whether in this great fight for democracy the President of the United States will abuse the power placed in his hands. Let us pass this bill in both branches of Congress immediately, so that the organization that will be created will have an opportunity to set in motion all of their machinery that will immediately grant relief to the producers and consumers in this country and eventually bring success to our standard. [Applause.]

Mr. RUBEY. Mr. Chairman, I yield 20 minutes to the gentleman from New York [Mr. LONDON].

Mr. LONDON. Mr. Chairman and gentlemen of the committee, the small attendance during the three days' general discussion of the food-control bill is rather discouraging. The attendance is small, notwithstanding the fact that the proposed measure represents a departure from all the traditions, from all the prevailing theories of jurisprudence, from all the heretofore accepted notions as to lawmaking.

But there is a reason for it. Most of the Members are satisfied when somebody supplies to them a slogan, and the slogan has been supplied in this case. The cause of all causes has been discovered. The criminal of all criminals has been detected. It is the food speculator. "That lies at the bottom of all trouble—the food speculator," says one speaker after another. "The food speculator is the cause of the high cost of living. Get rid of the food speculator! Then you will bring about lower prices."

Do you remember the Democratic slogan of "Busting the trusts"? Well, in its time "Busting the trusts" was held to be as good a slogan as "The food speculator."

They have not busted the trusts, and unless the people awake the cost of living will not be materially reduced.

I hold no brief for the food speculator. Of course he is a pirate. But the difficulty lies not with the speculator but in the control of social necessities by organized capital. The real reason for the difficulty in which you find yourselves to-day lies in the fact that a small number, a small proportion of the people, have it within their power to dictate what the prices for the necessaries of life shall be, and as long as that continues all legislation which is directed at some of the effects instead of the cause will bring no permanent relief. We have been sowing the wind, and we are now reaping the whirlwind. We have allowed individualism to run mad. We have anarchy and chaos in industry. We have permitted a state of affairs where hundreds of millions of bushels of grain were exported without anybody knowing how much, without anybody caring how much, without anybody inquiring what effect it would have, solely because it paid those interests that controlled and now control the supply and distribution of food to export those food supplies.

The people have nothing to say. The great masses of the consumers are not organized. The housewife does not know what organization means. The women have learned to unite to fight for the right to vote. Nobody teaches them how to organize to get bread. If you had millions of housewives storming your legislatures and demanding action and demanding relief, relief would have been granted. But the housewives are not organized. Their voices are never heard.

I brought the problem to your attention after the so-called food riots in New York last December. I introduced a bill in which I demanded that the food supply of the country should be regulated and controlled by the people, for the people, and through the people instead of being controlled by private capital through capitalist lackeys, and for private profit.

Both the tiller of the soil and the industrial worker were and are the victims of the unchecked greed of the financial interests.

Here is a copy of the bill:

A bill (H. R. 19295) to create a commission which is to recommend legislation for the taking over by the Federal Government of the control of food, and to authorize the President to prohibit under certain conditions the exportation of food.

Be it enacted, etc., That a commission is hereby created, to be known as the Federal food commission, to consist of the Secretary of Agriculture, the Secretary of Commerce, and the Secretary of Labor.

SEC. 2. That the said commission shall proceed immediately to ascertain all facts relating to the supply of food and food products in the United States. Should it appear that the supply of food is insufficient for the needs of the country it shall be the duty of the commission to so certify to the President, who shall thereupon, by proclamation, prohibit the export from the United States of any farm products and of any article of food. Upon the issuance of the said proclamation, and until the order prohibiting exportation shall be revoked, it shall be unlawful to export any article of food or any farm products from any part of the United States.

SEC. 3. That it shall be the duty of the commission to recommend such additional and further legislation as may be necessary to make the embargo effective.

SEC. 4. That the prohibition shall remain in effect until the commission shall certify that the supply of food and food products permits of the resumption of the export of food and food products, and thereupon the President shall suspend the embargo.

SEC. 5. That the commission shall prepare and recommend legislation to enable the Government of the United States, or some governmental agency to be created by law, to regulate the transportation, marketing, preservation, and distribution of food, and to acquire and maintain, build and construct, equip, manage, own, and control all such buildings, plants, structures, warehouses, granaries, abattoirs and each and every thing or things incidental to, connected with, or necessary to the exercise by the Government of complete control over the supply and distribution of food.

SEC. 6. That the commission shall prepare and recommend plans for cooperation with States, municipalities, and with cooperative societies and with now existing governmental agencies. It shall be the duty of the commission to report its recommendation to Congress through the President on or before February 1, 1917.

SEC. 7. That the commission is authorized, as a whole or by subcommittees of the commission duly appointed, to hold sittings and public hearings anywhere in the United States; to send for persons and papers; to administer oaths; to summon and compel the attendance of witnesses and to compel testimony; to employ such secretaries, experts, stenographers, and other assistants as shall be necessary to carry out the purposes for which said commission is created; and to rent such offices, to purchase such stationery and other supplies, and to have such printing and binding done as may be necessary to carry out the purposes for which the commission is created.

SEC. 8. That the sum of $50,000 is hereby authorized to be appropriated, out of any money in the Treasury of the United States not otherwise appropriated, for the use of the commission.

SEC. 9. That this act is to take effect at once and continue for a period of two years from and after its passage.

When I brought up the bill man after man got up here and said:

Yes; perhaps there is a food problem, but we do not know just exactly what to do about it.

And one of the most distinguished Members of this House, one of the most brilliant and wittiest speakers on the Democratic side said:

I have a remedy to offer to the men and women in whose behalf the gentleman from New York speaks. Let them go to the farm. Let them hear the cackle of the hens, and the grunt of the hogs, and the lowing of the cows, and the neighing of the horses down in our State.

He wanted them to go to his State and become farmers. But he is what is called a Jeffersonian Democrat. Why the Jeffersonian Democrat assumes that Jefferson would not have learned anything from a century's experience I do not know. At any rate this sort of Democrat takes his wisdom from the grave. He opposed my proposition because he saw in it the menace of socialism. The standpatter on the Republican side, of course, opposes any new idea and any new thought. The distinguished gentleman from Wisconsin [Mr. LENROOT] said:

Of course, we will admit that there is a serious evil confronting us, and nobody has suggested a remedy except Mr. LONDON, and nobody agrees with Mr. LONDON.

[Laughter.]

That was in December, 1916, six months ago, when I introduced the bill that a commission be appointed to prepare legislation to enable the Government of the United States or some governmental agency to be created by law to regulate the transporation, marketing, preservation, and distribution of food, and to acquire and maintain, build and construct, equip, manage, own, and control all such buildings, plants, structures, warehouses, granaries, abattoirs, and each and every thing or things incidental to, connected therewith, or necessary to the exercise by the Government of complete control over the supply and distribution of food; then to proceed to provide plans for cooperation with States, municipalities, and with cooperative societies, and with now existing governmental agencies. That was six months ago. While we were not nominally at war, we were in effect suffering from all the evil effects of the war. It takes a formal declaration of war, it takes war, famine, and pestilence before the Democrats or the Republicans get any sense in their heads. [Applause on the floor and in the galleries.]

The CHAIRMAN. The Chair will admonish the occupants of the galleries that they are here by the indulgence of the House, and that it is against the rules to show manifestations of approval or disapproval of anything that is said. Therefore the occupants of the galleries will kindly refrain from giving any demonstrations whatever. The gentleman from New York will proceed.

Mr. LONDON. Now, the situation is this: The Democrats report a food-control bill and the Members now realize that there is a universal demand for some action, and the most of them take it for granted that, since the newspapers have begun to talk about the food-control bill and since the President has asked for it, some sort of a Federal control bill will be adopted anyway, and they have yielded to necessity; not that they understand it any better now than they understood it before, but a slogan has been proclaimed. That slogan is "food control." Food control has to be adopted. The President says

so, and then the second great authority—the newspaper—says so, and, behold, the thing is settled. We must have a food-control bill.

Will it be of any value, this food-control bill? That is the question. First of all, this bill deals entirely too tenderly with the farmer. Of course, agriculture is the foundation of all civilized society, and the farmer should be cared for. In this case the farmer is particularly well taken care of. He is to have a guaranteed price for three years.

How about the consumer? How are you to secure him? The hoarding clause or the antihoarding clause does not apply to the farmer. The farmer may hoard as much as he pleases—as much as before. The retailer, also, may hoard as much as he pleases. You should endeavor to grant relief which will secure the people, the masses of the consumers, against exploitation. The farmer who ekes out a living by the sweat of his brow and who sells his crop in advance will not hoard. The well-to-do farmer will. You still proceed upon the theory that some form of exploitation of the many by the few is inevitable, and you do not care to tackle the big proposition, how to protect the masses against the exploitation by the few. Not even the psychology of war can change your established mode of thought.

Mr. ROSE. Will the gentleman permit me?

Mr. LONDON. Yes.

Mr. ROSE. I notice that the gentleman has now said that the farmer is permitted to hoard all the grain he pleases, and that there is no way of reaching the retailer. Is that true under the terms of this bill as it is now drawn?

Mr. LONDON. The bill permits the farmer to keep the product as long as he pleases.

Mr. FARR. But not the retailer.

Mr. SIMS. If he produces it himself.

Mr. LONDON. If he produces it himself.

Mr. FARR. But it does not permit the retailer to do that.

Mr. LONDON. The retailer is permitted to hoard also.

Mr. FARR. In a reasonable quantity.

Mr. LONDON. In a reasonable quantity; but the farmer is permitted to keep his entire product as long as he pleases. There is no question about that.

Mr. SIMS. With a guaranteed price behind it.

Mr. LONDON. With a guaranteed price behind it. Still I am compelled to support the bill, because I expect that some of this legislation and the principles which it carries will become a permanent part of the law of this country.

In times of war we call upon the rich man and the poor man not only in a spiritual sense, but in a physical sense, to fuse their blood and sacrifice themselves in a joint endeavor; but while we call upon the poor man and the rich man to sacrifice themselves in the joint enterprise of their country we permit the rich man's family to exploit the poor man's family under the protection of the flag and under the protection of such wise laws as you Republicans and Democrats are filling our statute books with. You can not separate yourselves from the philosophy which is based upon the exploitation of the many by the few.

I am compelled to support this bill, little as I expect from it, because it places the responsibility somewhere, and because for the first time the National Legislature says to the people, "We are going to try to solve this problem for you." And woe to you if you do not solve it. You will have to deal with this problem again and again. Some of this legislation has come to stay.

If the food gambler and speculator are an evil thing during war, why are the food gambler and speculator a good thing in peace time? If we are legislating out of existence, or attempting to legislate out of existence, the food speculator during the war, why should we after the war is over revert to the previous system, which permitted them to blackmail the people? So there is evidently some reason for the faint hope I entertain that some of the legislation, some of the principles contained in this bill, will prove to be of a lasting character.

For the great masses of the people even peace means war. The battle of life is a very serious and earnest affair with the most. For the great masses of the people to-day life is always filled with fear. The worker fears unemployment, old age, and occupational diseases. The small business man always feels the fear of being crushed by a stronger competitor, by the corporation, by the syndicate, by the trust. Theoretically free, the poor man whose wages are determined by the employer, whose rent is fixed by the landlord, and the price of whose food and clothing is decided by the financial interests, finds himself nobody's slave and still not a free man. That is as true of the agricultural worker as of the toiler in industry.

It was estimated before the war that at least eleven hundred dollars annually was required for the support of a family of five. With present prices, eleven hundred dollars are not worth much more than seven hundred dollars a few years ago. How millions of workers manage to live under these conditions is a mystery to me.

It is in the hope that this bill opens a new road upon which the American National Legislature will be compelled to travel; it is because I believe that you will have to take up seriously the question of the preservation and utilization of the national riches that I am supporting this bill. We in this country have been wasting our natural resources. This land could easily have supported 500,000,000 people in comfort. You have frittered away opportunities, you have frittered away the natural resources, you have not utilized all the arable land the country possesses; the farmers, mostly poor and helpless, still use comparatively antiquated implements. We are permitting the waste of human resources in factories, shops, and mines; we are permitting children to grow up in illiteracy; we are wasting the physical and human resources of the world. My hope is that this assertion of a collective conscience, this assertion of the principle that the necessities of life must no longer be left to anarchy and general chaos, but must be taken under the collective control of the people, contains a promise of more intelligent and more thoroughgoing legislation in the near future. We will be compelled to widen the conception of necessities of life. This assertion of the fundamental principle so vital to the normal life of the people compels me to support this bill. [Applause.]

Mr. LEVER. Mr. Chairman, I yield to the gentleman from Illinois [Mr. SABATH] 15 minutes.

Mr. SABATH. Mr. Chairman and gentlemen, I do not know whether I shall take up the time granted me. I have no set or prepared speech. All I desire at this time is to make a few observations on the bill. The gentleman who preceded me has stated that notwithstanding the fact that he does not approve of the bill in its entirety, he shall vote for it and support it. That is the position I take.

For many months I have endeavored to secure the passage of legislation that would tend to eliminate the unjustifiable and, I may say, the criminal conditions that prevail in this country as regards the high cost of necessaries of life. I tried to reach and put an end to this evil by first introducing in the last session, and again in this session, a bill providing that all warehouses, cold storage warehouses, and elevators storing food products shall file every month a sworn statement of all the kinds and quantities of food products stored, and that such information then be given to the public.

I endeavored to secure consideration of that bill, but due to other important measures that were being pressed I did not succeed in having the bill reported. Therefore I started out again this session, reintroduced the bill, and endeavored to secure its consideration. In place of my bill the committee has finally reported a bill on that subject which we passed a few weeks ago, and with some Senate amendments is again pending in the House and, if finally enacted, will secure some day the information that I have tried to secure. I sought immediate consideration of this legislation for the reason that the reports now made to the Department of Agriculture and sent broadcast throughout the country are not reliable and the people of this country are misled. I am satisfied that there are larger quantities of foodstuffs and necessaries of life hoarded and stored than the reports of the department indicate.

These misrepresentations are made to mislead the public—that there is a shortage in all of the necessities of life—and done with the deliberate intent to create an artificial price for all these commodities. If my bill had been adopted, by this time the Government as well as the public would have been in possession of information that would have made it impossible for the food gamblers to indulge further in issuing their false statements and reports.

Believing that the prevailing prices have been artificially created, and not being able to secure action on the storage bill just mentioned, I introduced on the 15th of May a measure which I believed might secure immediate attention on the part of this committee. This bill is known as House bill 4451 and seeks to prohibit the dealing of gambling in futures. For the benefit of the Members who are present, I will read it. It provides:

That any and all sales or purchases of foodstuffs or products that are not for immediate or prompt delivery or are not intended to be actually delivered by the seller or received by the buyer are hereby prohibited and made unlawful.

SEC. 2. That any person buying or selling in violation of this act any foodstuffs or products shall upon conviction thereof be imprisoned for not less than 1 and not more than 10 years.

SEC. 3. That the word "person" shall mean any person, partnership, association, or corporation, their managers and officers and agents who in any way participate in the forbidden acts.

I believe that if we prohibit gambling in foodstuffs we will create a normal market. That I am correct was demonstrated, because on the day I introduced this bill the Chicago Board of Trade, of its own accord, of course, stopped all dealing in futures, and what was the result? That very day the prices of wheat and corn went down from 20 to 25 cents a bushel, and since that time the prices have gone down from 40 to 45 cents a bushel. I assert that the gamblers of this country are in a great measure responsible for these unjustifiable prices of foodstuffs. [Applause.] And why should we hesitate to legislate against them? Whom do they benefit? Do they benefit you or you? Do they benefit the country? You know as well as I do that they do not.

Let us legislate now and abolish for all time the nefarious systems of the food gamblers and speculators that brought about this serious condition. Include the provision of my bill that provides for imprisonment of the manipulators—a fine of five or ten thousand dollars is but a pittance and a small part of their ill-gotten profits. Strike at them personally, not at a small part of their profits, and you will then put an end to their outrageous practices.

Mr. Chairman, why should a hundred million people in this country be robbed by a few thousand individuals who do not sow, but reap the harvest? There is no excuse for the delay of this legislation, and I hope when the time comes I shall have the opportunity to offer that portion of my bill, which I have read, as an amendment to the bill, and that I shall have your aid and cooperation in securing its adoption.

I also introduced a bill on April 30 giving a commission the power and authority to regulate the price of all of the necessaries of life. There is just as much harm done to the American people by artificially increasing the price for cotton and wool as of corn, wheat, potatoes, or anything else. If we are going to legislate and give power to the President to regulate the price of foodstuffs, I say it is our duty to go further and legislate to regulate the prices of other commodities. We should regulate the price of every commodity controlled by trusts and combinations where the prices have been unjustifiably increased and manipulated. I believe that we should take these industries over and operate them in the interest of the American people until the war is ended.

I wish that you gentlemen living in the country could hear the complaints from the people as I do. I tell you the people will not permit these conditions to remain much longer. They will not stand by and permit a few men to rob them and deprive them of their needs. They will not permit their children to go hungry in order that others may live in luxury. [Applause.]

Mr. Chairman, I am greatly interested in enacting food-control legislation, but this bill can be more properly designated as the farmers' guarantee-profit bill than the food-control bill.

I do not believe in class legislation, and therefore will try to strike out the proviso in section 5:

> That this section shall not apply to any farmer, gardener, or other person with respect to the products of any farm, garden, or other land owned, leased, or cultivated by him.

Also the provision in section 6 which provides—

> That any accumulating or withholding by any farmer, gardener, or any other person of the products of any farm, garden, or other land owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

These two provisions give the farmers special privileges. Why exempt them? All of us know that there are hundreds and thousands of farmers who operate on a large scale, whose wealth permits them to carry their products for a year, or even two years, and a great many are doing this now. Will not this provision enable the gamblers and manipulators to lease thousands of acres of lands and by a combination among themselves operate to control a fourth or a half of the products grown? I believe the census statistics will bear me out in this, and I therefore take my stand in favor of equal treatment for all and special legislation to none.

I am also opposed to section 12 of the bill, which proposes to guarantee prices and profits to the farmer. To me it appears that the farmer needs no protection at our hands.

I believe the bill I introduced April 30 is a better bill and would work far better to the interests of both the farmer and consumer, but it happens that the bill under consideration has the indorsement of the farmers' associations and mine has not. Time will not permit the reading of my bill now, but I will make it a part of my remarks and ask leave to insert it.

The difference in my bill and the one before us is simply this: My bill aims to bring about immediate relief to the people of this country from the high manipulated prevailing prices and applies not only to foodstuffs, but to all commodities and necessaries of life. It provides that if the commission named in the bill should find, upon investigation of conditions, that the high price of any commodity or article has been brought about due to manipulation and is controlled by any trust, combination, or manipulators then in that case authority is given the commission to seize such necessaries, commodities, plants, or industries in behalf of the Government and handle or dispose of such necessaries or commodities or operate such plants and industries at a fair and reasonable price in the interest of the Government and the people under such rules and regulations as may be provided for by the commission. My bill does not provide for confiscation, but for fair compensation and will prevent the present wholesale robbery of the people and the Government.

This measure will not interfere with any legitimate enterprise or industry that is not guilty of violations of the antitrust laws, manipulation, or extortion. Nor does my bill make exceptions in behalf of the farmers, farmers' organizations, or any other organizations by guaranteeing to them for a period of three years a profit on whatever they may produce. Nor does my bill prohibit the importation of foodstuffs, which will be the means of keeping the prices of the necessaries of life up even after the cessation of the war.

I regret exceedingly that the committee has not seen fit to incorporate these provisions of my bill in the pending measure. What we should be mostly interested in is the enactment of legislation that will bring about immediate relief from unbearable conditions that are and have been imposed upon the masses for the past two years and especially this year. It should be our object to eliminate gambling, hoarding, and manipulations by the greedy food operators, and thereby permit the honest producers and distributors to dispose of their products without hindrance, and thus create legitimate and fair competition, which has always proven wholesome and beneficial. I regret that this bill is taking care only of the farmer and will not help the consumer. Surely the farmers of this country have no complaint and can not have any in view of the tremendous prices they have been receiving for their products. I appreciate that the net price that the consumer is obliged to pay does not go to the farmer, but by the adoption of the provisions in my bill which provide for the elimination of the hoarders, gamblers, and price fixers the farmers would receive a fair price for their products and the consumer would purchase his necessaries at a reasonable price. That is, and has been, my aim, namely, to alleviate the unbearable conditions that have been imposed on the masses. Mr. Chairman, the people in my city are just as patriotic as are the people of any farming community in the United States. They are willing to pay a fair price for everything they purchase, but they protest against being the victims of the manipulators and gamblers. I feel that the honest farmer of this country, with his sense of fair play, is too manly to ask or request this special legislation. What they desire is a "square deal," and I am more than anxious that they shall have it; but I again repeat that they have no greater rights or privileges than are granted to any other class of citizens of the United States; and to some of you gentlemen who will continue and persist in forcing through special legislation in the interest of one class I say that you will find that those who will continue to suffer, due to the special legislation, will some day rise up and force you to grant them a relief.

Therefore I appeal to you not to abuse the temporary power which you possess, but weigh carefully and act judiciously, equitably, and fairly.

Mr. Chairman, it would be useless for me to call your attention to the high prices that prevail. You have heard that argument over and over again, that the prices that prevail to-day are unjustifiable. All I wish to say to you in conclusion is this: The greedy speculators and manipulators are disregarding and ignoring the hardships to which the masses are being subjected. The lust to increase their immense and, in most cases, ill-gotten wealth will and must soon be arrested. The people will not much longer tolerate the present extortions. My advice to these money kings is not to ignore the complaints of the people and to cease their infamous conspiracy to extract every dollar possible. I fully appreciate the motive of some of them, and understand the underlying reasons and methods of others. Not only are they unwilling to bear their part of the additional taxation, but they are taking advantage of the unfortunate war conditions by doubling and trebling their profits so that the income tax and the excess-profit tax which we have levied will still leave them, not only a larger profit as before, but one greater than ever, and they thereby accomplish their purpose of forcing the masses to stand and pay the cost of this war. The game is visible and bound to react. Within a short space of time the people of Europe, for centuries subjected to oppression, threw off their oppressor and that at a time when it was least expected, and what has been accomplished there will be reen-

acted even by the more tolerant and indulgent and more intelligent and enlightened American people unless they are relieved from this, by us, tolerated robbery.

A bill (H. R. 3978) to regulate the prices of the necessaries of life.

Be it enacted, etc., That whenever the board hereinafter created shall find that any article required by the Government of the United States or ordinarily in use as a necessary of life has been enhanced in price since July 1, 1915, and the board finds that such enhanced price is due to agreements made by producers or growers or traders or manufacturers or manipulators, said board is hereby authorized, empowered, and directed to determine what shall be a reasonable price for such commodity. Said board shall have the power to fix and determine, modify, and reestablish maximum and minimum prices.

SEC. 2. That if, after investigation, it shall appear to the board that prices of any such necessaries of life have been manipulated and, by reason of such manipulation, have become unusually high to the ultimate consumer, and that the results of such manipulation continue, authority is hereby given to the board to seize the sources of supply, whether original or secondary, and take an inventory of the stock on hand, a description of the lands employed, and facilities and instrumentalities used on, in, or under or about said sources of supply, and to operate it or them in the name of the United States without profit.

SEC. 3. That if, after investigation, it shall appear to the board that the prices of the necessaries of life have been manipulated in the distribution rather than in the production of the necessaries, authority is hereby granted to the said board, on behalf of the United States, to seize the offices, documentary evidence as hereinafter defined, and plants of any such distributors, and, after making an inventory, to enlist the services of such distributing forces and operate, without profit, such means of distribution so taken over.

SEC. 4. That if, after investigation, it shall appear to the board that the prices of the necessaries of life have been unreasonably enhanced by the owners of any instrumentality of storage or handling of such necessaries of life, then said board is hereby authorized and directed to seize on behalf of the United States any storage house, elevator, press, granary, pipe line, manufactory, or any other plants used in distributing necessaries of life, with all appurtenances and necessary appliances in, on, or under or about such places commonly used in connection therewith, and, after making an inventory thereof, to operate without profit such plants so taken over.

SEC. 5. That authority is hereby given to the said board to certify to the Secretary of the Treasury the reasonable value of any such plant taken over, provided that the reasonable value to be paid be not more than the cost of reproduction or the value as a going concern at the close of the fiscal year ended July 31, 1915.

SEC. 6. That the Secretary of the Treasury is hereby authorized to tender payment of any such sum so certified by said board to the owners of any such plant so seized.

SEC. 7. That all plants, enterprises, operations, or works so taken over on behalf of the United States by said board shall be operated for the purpose of rendering the utmost social use and not for profit, and shall not be restored to the former owners nor sold for operation to private persons for the period of one year after the conclusion of the present European war. The date of the conclusion of the war shall be declared by proclamation of the President.

SEC. 8. That authority is given to the board to obtain, from any executive department, independent bureau, or office, information, papers, records, and the cooperation of officials, clerks, and other employees, both civilian and of those in the Military and Naval Establishments, for the purpose of executing this act.

SEC. 9. That authority is hereby conferred on said board to regulate the conditions of employment for its employees in establishments taken over by the United States.

SEC. 10. That a board is hereby created to be known as the necessaries of life regulation board and herein referred to as the board. The board shall be composed of the membership of the Council of National Defense and of the advisory commission as commissioners, to be appointed by the President, by and with the advice and consent of the Senate. Said board shall continue in office until two years after the end of the European war, and any successor shall be appointed only for the unexpired term of the commissioner whom he succeeds. Any commissioner may be removed by the President for inefficiency, neglect of duty, or malfeasance in office. A vacancy on the board shall not impair the right of the remaining members of the board to exercise all its powers. The board shall have an official seal, which shall be judicially noticed.

The board may adopt rules and regulations in regard to its procedure and the conduct of its business.

SEC. 11. That each member of the board, except the ex-officio members, shall receive a salary of $10,000 per annum. The board shall appoint a secretary, at a salary of $5,000 per annum, and employ and fix the compensation of such attorneys, officers, special experts, examiners, clerks, and other employees as it may find necessary for the proper performance of its duties and as may be appropriated for by the Congress. The President, upon the request of the board, may authorize the detail of officers of the military, naval, or other services of the United States for such duties as the board may deem necessary in connection with its business.

With the exception of the secretary, a clerk to each commissioner, the attorneys, and such special experts and examiners as the board may from time to time find necessary to employ for the conduct of its office work, such employees of the board shall be appointed from lists of eligibles to be supplied by the Civil Service Commission and in accordance with the civil-service law, supplemented by regulations to be made by the President, generally applicable to all other employees, to be taken into the service of the United States in operating any plants operated by the board.

The expenses of the board, including necessary expenses for transportation, incurred by the members of the board or by its employees under its orders in making any investigation, or upon official business in any other place than in the city of Washington, shall be allowed and paid on the presentation of itemized vouchers therefor approved by the chairman of the board.

Until otherwise provided by law, the board may rent suitable offices for its use.

The Auditor for the State and Other Departments shall receive and examine all accounts of expenditures of the board.

SEC. 12. That the President, on recommendation of the board, upon giving to the person interested such reasonable notice in writing as in his judgment the circumstances permit, may take possession, absolutely or temporarily, for the purposes of this act of the matter and things set forth in the preceding sections hereof: *Provided,* That if, in the judgment of the President, any emergency exists requiring such action he may take possession of any such matter or thing without notice.

Thereafter, upon ascertainment by agreement or otherwise, the United States shall pay the person interested the fair actual value based upon normal conditions at the time of taking of the interest of such person in every matter or thing taken absolutely, or, if taken for a limited period, the fair rental value under normal conditions for such period. In case of disagreement as to such fair value it shall be determined by appraisers, one to be appointed by the board, one by the person interested, and a third by the two so appointed. The finding of such appraisers shall be final and binding upon both parties.

SEC. 13. That the board shall investigate the methods used by other nations to reduce the cost of the necessaries of life and make such recommendations to the Congress as it deems proper for the amendment, improvement, and revision of such laws and for the betterment of the social conditions depending on the cost of living. It shall, on or before the 1st day of December in each year, make a report to the Congress, which shall include its recommendations and the results of its investigations, a summary of its transactions, and a statement of all expenditures and receipts under this act and the names and compensation of all persons employed by the board or taken over under its authority, classifying said employees by geographical divisions and by occupational groupings.

SEC. 14. That for the purpose of carrying out the provisions of this act no liability shall be incurred exceeding a total of ———, and the Secretary of the Treasury, upon the request of the board, approved by the President, shall from time to time issue and sell or use any of the bonds of the United States available in the Treasury.

SEC. 15. That every person subject to this act shall file immediately with the board a true copy, or, if oral, a true and complete memorandum of every agreement with such other person subject to this act, or modification or cancellation thereof, to which he may be a party or conform in whole or in part, fixing or regulating production, or sale or distribution or transportation rates; giving or receiving special rates, accommodations, or other special privileges or advantages; controlling, regulating, preventing, or destroying competition; pooling or apportioning earnings, losses, or traffic; allotting territory or restricting or otherwise regulating the number and character of shipments of produce; limiting or regulating in any way the volume or character of traffic to be carried; or in any manner providing for an exclusive, preferential, or cooperative working arrangement. The term "agreement" in this section includes understandings, conferences, and other arrangements by any means or device whatsoever established.

SEC. 16. That the board may by order disapprove, cancel, or modify any agreement or any modification or cancellation thereof, whether or not previously approved by it, that it finds to be in violation of this act.

SEC. 17. That the board may require any person subject to this act, or any officer, receiver, trustee, lessee, agent, or employee thereof, to file with it any periodical or special report, or any account, record, rate, or charge, or any memorandum of any facts and transactions appertaining to the business of such person subject to this act. Such report, account, record, rate, charge, or memorandum shall be under oath whenever the board so requires, and shall be furnished in the form and within the time prescribed by the board. Whoever fails to file any report, account, record, rate, charge, or memorandum as required by this section shall forfeit to the United States the sum of $1,000 for each day of such default.

Whoever willfully falsifies, destroys, mutilates, or alters any such report, account, record, rate, charge, letter, or memorandum, or willfully files a false report, account, record, rate, charge, letter, or memorandum shall be guilty of a misdemeanor, and subject upon conviction to a fine of not more than $5,000 or imprisonment for not more than two years, or to both such fine and imprisonment.

SEC. 18. That any person may file with the board a sworn complaint setting forth any violation of this act by any person subject to this act, and asking reparation for the injury, if any, caused thereby. The board shall furnish a copy of the complaint to such person, who shall, within a reasonable time, specified by the board, satisfy the complaint or answer it in writing. If the complaint is not satisfied, the board shall, except as otherwise provided in this act, investigate it in such manner and by such means and make such order as it deems proper. The board, if the complaint is filed within two years after the cause of action accrued, may direct the payment, on or before a day named, of full reparation to the complainant for the injury caused by such violation.

The board, upon its own motion, may in like manner and, except as to orders for the payment of money, with the same powers investigate any violation of this act.

SEC. 19. That orders of the board relating to any violation of this act shall be made only after full hearing, and upon a sworn complaint or in proceedings instituted of its own motion.

All orders of the board other than for the payment of money made under this act shall continue in force for such time, not exceeding two years, as shall be prescribed therein by the board, unless suspended, modified, or set aside by the board or any court of competent jurisdiction.

SEC. 20. That the board shall enter of record a written report of every investigation made under this act in which a hearing has been held, stating its conclusions, decision, and order, and, if reparation is awarded, the findings of fact on which the award is made, and shall furnish a copy of such report to all parties to the investigation.

The board may publish such reports in the form best adapted for public information and use, and such authorized publications shall, without further proof or authentication, be competent evidence of such reports in all courts of the United States and of the States, Territories, Districts, and possessions thereof.

SEC. 21. That the board may reverse, suspend, or modify, upon such notice and in such manner as it deems proper, any order made by it. Upon application of any party to a decision or order it may grant a rehearing of the same or any matter determined therein.

SEC. 22. That for the purpose of investigating alleged violations of this act, the board may by subpœna compel the attendance of witnesses and the production of books, letters, papers, documents, and other evidence from any place in the United States at any designated place of hearing. Subpœnas may be signed by any commissioner, and oaths or affirmations may be administered, witnesses examined, and evidence received by any commissioner or examiner, or, under the direction of the board, by any person authorized under the laws of the United States or of any State, Territory, District, or possession thereof to administer oaths. Persons so acting under the direction of the board and witnesses shall, unless employees of the board, be entitled to the same fees and mileage as in the courts of the United States. Obedience

to any such subpœna shall, on application by the board, be enforced as are orders of the board other than for the payment of money.

SEC. 23. That no person shall be excused, on the ground that it may tend to incriminate him or subject him to a penalty or forfeiture, from attending and testifying, or producing books, papers, documents, and other evidence, in obedience to the subpœna of the board or of any court in any proceeding based upon or growing out of any alleged violation of this act; but no natural person shall be prosecuted or subject to any penalty or forfeiture for or on account of any transaction, matter, or thing as to which, in obedience to a subpœna and under oath, he may so testify or produce evidence, except that no person shall be exempt from prosecution and punishment for perjury committed in so testifying.

SEC. 24. That in case of violation of any order of the board, other than an order for the payment of money, the board, or any party injured by such violation, or the Attorney General, may apply to a district court having jurisdiction of the parties; and if, after hearing, the court determines that the order was regularly made and duly issued, it shall enforce obedience thereto by a writ of injunction or other proper process, mandatory or otherwise.

SEC. 25. That the venue and procedure in the courts of the United States in suits brought to enforce, suspend, or set aside, in whole or in part, any order of the board shall, except as herein otherwise provided, be the same as in similar suits in regard to orders of the Interstate Commerce Commission, but such suits may also be maintained in any district court having jurisdiction of the parties.

SEC. 26. That whoever violates any provision of this act, except where a different penalty has been provided, shall be guilty of a felony, punishable by a fine of not less than $1,000 and not exceeding $25,000; and in the case of corporations, each and every director, agent, manager, trustee, or officer thereof who shall knowingly have voted for and directed or carried out the act contributing to such violation or who shall have aided or abetted in such violation shall be guilty of a felony and shall be fined not exceeding $10,000 or confined in the penitentiary for not exceeding three years, or both, in the discretion of the court.

SEC. 27. That this act shall not be construed to affect the power or jurisdiction of any other board or commission nor to confer upon the board concurrent power or jurisdiction over any matter within the power or jurisdiction of such board or commission, nor shall this act be construed to apply to intrastate commerce.

SEC. 28. That if any provision of this act, or the application of such provision to certain circumstances, is held unconstitutional the remainder of the act and the application of such provision to circumstances other than those as to which it is held unconstitutional shall not be affected thereby.

SEC. 29. That for the fiscal year ending June 30, 1918, the sum of $50,000,000 is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, for the purposes of defraying the expenses of the establishment and maintenance of the board, including the payment of salaries herein authorized, and to carry out the purposes of this act.

SEC. 30. That in this act, unless the contrary intention appears, words denoting and importing the masculine gender shall include the feminine, and words in the singular shall include the plural, and words in the plural shall include the singular.

"Commerce," as used herein, means trade or commerce among the several States and with foreign nations, or between the District of Columbia or any Territory of the United States and any State, Territory, or foreign nation, or between any insular possessions or other places under the jurisdiction of the United States, or between any such possession or place and any State or Territory of the United States or the District of Columbia or any foreign nation, or within the District of Columbia or any Territory or any insular possession or other place under the jurisdiction of the United States.

The word "person" wherever used in this act shall be deemed to include corporations, partnerships, and associations existing under or authorized by the laws of the United States, the laws of any of the Territories, the laws of any State or District, or the laws of any foreign country.

SEC. 31. That this act shall take effect from and after its passage, and may be cited as the regulation of prices commission act of 1917.

Mr. HAUGEN. Mr. Chairman, I yield 30 minutes to the gentleman from Nebraska [Mr. SLOAN].

Mr. SLOAN. Mr. Chairman and gentlemen of the committee, I may not use all the time so generously accorded to me. I am pleased to meet this multitude of Representatives. I shall endeavor to present something, if not more wise, somewhat different from what has been the burden of this debate. In three speeches delivered to-day, and two on the first day of the debate, the dominant note was that if this legislation is not carried through there will be an unlawful uprising which will force legislation upon this House, or the effect upon the country if the legislation does not pass will be fearful to contemplate. I have no covert suggestion that the people, a large number of whom I represent, will rise or riot if this legislation is not passed, as was so significantly suggested in the speech of the chairman of the committee, by the gentleman from Minnesota [Mr. ANDERSON], a member of the Agriculture Committee, and by Messrs. KAHN, SABATH, and NOLAN.

This ought to be a deliberative body. No man should come here and suggest that there is such resentment, encouraged from his place in the House, that should proposed legislation not be passed the people they represent, or others, would take the law into their own hands. This is an important piece of legislation. I was astounded to hear it defended by the gentleman from California [Mr. KAHN] in the earlier part of the afternoon on a basis that if it were not carried through a fearful fate would occur to the Republic. Then he commenced to talk about Rome, about the end of republics, and the succession of empires. I wonder if any of you gentlemen know of any republic that ceased existence and was succeeded by some form of monarchy, unless it was when the legislative bodies of those republics commenced to freely yield their legislative functions to the executive? That is the large feature of this legislation. It is a grant of extraordinary power to the Executive. Perhaps it should be granted. The Executive who now presides over the destinies of this country feels that he can not control affairs during this war through the ordinary processes of legislation. I desire to aid him to make it a success, and I shall for that reason, more than any other, vote for this bill on final passage. I hope to aid in its material amendment. In addition to operating the laws that have been passed heretofore for the purpose of controlling these crises and these emergencies, he demands special grants of power. Such grants of power are the pavements leading to the end of republics instead of giving them perfection and strength.

But to-night I want to talk a while about the bill and then about a subject a little nearer my heart. It will illustrate what our Commonwealth can do and what its people can accomplish by resting upon their own efforts and not depending wholly on legislation. Moreover, they never through their Representatives suggest on the floor of this, the greatest legislative assembly on earth, that if they do not obtain just what they wish they will rise in riot and violence to obtain what they consider their rights. [Applause.]

Section 3 is a kind of legislative orphan in this legislation. It is formed to create Officer Hoover and at the same time conceal him. I read and reread—and I have practiced law for 30 years—the present bill. I read the newspapers and listened to the debate and to facts stated in relation to Hoover and food, with relative emphasis being given in the order named. I tried to find out from the bill, after I heard his name mentioned so often, where he came in. I finally appealed to the chairman of the Committee on Agriculture, who said that the origin of the species was in section 3. He was there concealed, as it were, so that the initiate and elect knew, but the wayfaring man, whether he were foolish or otherwise, might guess but never know. The best that might be said would be that "there is a Hoover in the wood pile somewhere." [Laughter.]

Section 3 could well be spared from this proposed measure. The bill is based upon the things that Hoover advises. I have not the pleasure of his acquaintance. I understand, however, he is highly recommended and is a very good man. My criticism is not of the man. But there has been frequent connection of his name with this measure, involving so much. We know little of the man who is to have charge of the food production of America. He was never introduced to us or canvassed in the searching light of investigation which the American people usually give their public officials. And yet he is given power never given an American before. From the comments of the press in connection with the diligent work he has been performing, he seems to be intensely interested in feeding the non-enemy world in general and the allied nations in particular. If we are to have food control, the prevailing, intensive, primary consideration should be feeding the American people and our gallant armies here and abroad. [Applause.]

In all these matters, even in war, I think we ought to consider America's interests first. America first, and let that apply to food. Whatever is left to the bill after we get through with it, I hope that feature will be dominant. After that let food be furnished those who are fighting with us. Following that, the claims of the friendly neutrals should be considered.

For the offense of undue hoarding it seems to me the laws now on our National and State statute books under proper administration should be ample if all were vigorously enforced. The bill which is presented, sugar coat it as you will, is aimed at the farmer. I know of no farmer who is asking for this legislation if he be a food producer. It is in the interest of those who buy from him.

The one great line of products in America discriminated against in the tariff legislation of this administration four years ago was farm products. No interference at the ports were allowed on farm products then. Now that war has come, farm products are selected as the first line to be controlled in the interest of lowering prices. You lower them in peace. Now you are lowering them in war by preventing their full and free passage along the lines of commerce. In time of peace you were determined that they should have no advantage in our own markets against foreign products. Now, you insist they shall not have even the advantage of free transfer in our own country along the lines of commerce.

It is taken for granted by the sponsors of this legislation that notwithstanding their discriminations, which get the farmer coming and going, he will submit to them and be law-abiding and intensely patriotic. To those who are forcing this legislation, the advocates of the legislation do not pay such a tribute for law-abiding patriotism. They expect the farmer to be law-abiding; no riots there, whether the law is operated in their

interest or against them. [Applause.] Coming from the State in the Union which produces the greatest available surplus of meats and cereals to feed our armies and those who fight along with us, I am glad to say that whatever measure of injustice has heretofore been or may be in this measure inflicted upon the farmers of that State, you will find them abiding by every constitutional law which may be enacted, whether it is in their interest or against them. [Applause.] I submit that proposition against the proposition of the gentleman from California [Mr. NOLAN], who suggests what may happen if this or similar legislation is not passed. I submit that proposition also against the statement of my friend Judge SABATH, who said that there would be some important amendment presented that would greatly change this law. I do not know what he had reference to. It may be national prohibition that he has to propose.

Mr. GALLAGHER. Mr. Chairman, will the gentleman yield?

Mr. SLOAN. Yes.

Mr. GALLAGHER. I will disabuse the gentleman's mind of that fact.

Mr. SLOAN. I think so. I think along that line my genial Celtic friend from Chicago and Judge SABATH act in harmony and travel in couples. They are Damon and Pythias when it comes to a question of Chicago in any legislation of that character. [Laughter.]

Mr. GALLAGHER. Mr. Chairman, will the gentleman again yield?

Mr. SLOAN. I should be delighted to yield to the gentleman, as I would to any similar temptation. [Laughter.]

Mr. GALLAGHER. You do not mean by that that he would be afraid to have a man ask him to take a drink when he is dry?

Mr. SLOAN. Oh, no. I did not mean that.

Mr. GALLAGHER. I have done so many times. [Laughter.]

Mr. SLOAN. Yes; I think the gentleman would be like history; he would take one, and then history would repeat itself. [Laughter.]

Mr. GALLAGHER. Thank you.

Mr. SLOAN. And with that we will "let 'er go, GALLAGHER." [Laughter.]

Now, then, Judge SABATH told how valiantly he fought, bled, and died—and was resurrected, I suppose—to come here and tell how he reduced 25 per cent—I think he said—of the extortionate prices in Chicago. If it comes to a question of electing Herbert Hoover as food controller or my genial friend, the judge, Judge SABATH should perhaps have my support, because if merely drafting a bill and filing it here in Congress by him will remedy 25 per cent of the trouble, he can perhaps be prevailed upon to introduce four bills and thus remove it all. [Laughter.]

Now, gentlemen, I said I would speak about something a little nearer my heart. I have said something about the attitude of the farmers whom this bill seeks to protect. They say that the farmer is guaranteed. Well, the farmer is not asking for any particular favor along this line. He has been compelled to tread the wine press alone; he is willing to keep on right now. He would be willing to call it quits right now and say, "Give us free opportunity." But you do not want to do that. The farmers do not work only eight hours a day—they work nearer 16 hours a day. They work in sunshine and in storm, in the night season as well as in the day, and nobody stands behind them to say, "Don't strike more than six times a minute." [Laughter.] But they are driven to their utmost limit of capacity every hour between the suns, and then some. They struggle against wind and storm, pestilence and drought. What for? To feed the people. The gentlemen from California and the gentlemen from New York and Chicago think they might not abide by the law as it may be passed or not passed by this great body. The farmers are content to take the short crop and the long crop. They are content to take the average. But they would be glad to be let alone now. You saw fit to turn them over to the merciless competition of the world when you passed the Underwood tariff law.

I want to call your attention not to what has been accomplished by farmers as compared with these men who gather in the great industrial centers in the "dominion of LONDON" over in New York. Did you ever think what a combination that is—a fusion of the two greatest cities in the world, London, which was named for our distinguished colleague, and New York, the city he in part represents? No wonder he introduced the bill he so modestly mentioned, and found that the few were oppressing the many. I thought how he exemplified his own words when he, the great minority of this House, began to oppress the majority of this House. [Laughter.] What an aristocracy he establishes for himself here when he takes to task the weak and supine Republican and Democratic parties, grasps them in his teeth, and with that iron jaw of his shakes them before the approving eyes of the world. [Laughter.]

But I said I was going to talk about the State that is the most distinctively agricultural State in all this Union, the State that for the last two years has produced a greater surplus of the things the armies of the world need than any other State in the Union; food, that which is more important to the armies of the United States and the allies than ballots or great guns. We are the fourth State in the Union in the production of agricultural products. There exceed us in the value of these products only three States—Iowa, Illinois, and Texas. Texas is one of the first in agricultural products, but her great cotton crop is only in a small part a food product. As a food-producing State and a surplus-producing State, considering our limited population and considering the population of Illinois and Iowa, we produce more surplus than any other State in the Union.

Mr. YOUNG of North Dakota. Excepting North Dakota.

Mr. SLOAN. No exceptions. The idea of suggesting North Dakota, a fringe along the border of Canada, as superior to the imperial productive State known as Nebraska. [Laughter.] I am surprised at the gentleman's suggestion; but when I consider that he made that remark from his seat, that he did not stand up before this House to submit the exception, it explains the form of his remark. [Laughter.] However, North Dakota will have much of which to boast at its semicentennial, and a great deal of it may properly be credited to the gentleman from North Dakota and his eminent colleague.

Nebraska has just celebrated her fiftieth anniversary of statehood. That is the reason I address you to-night. The name "Nebraska" is an unqualified substantive. Let North Dakota take that into account—unqualified and unmodified by "new" or "old," "North" or "South." It sprang from its place and condition in the heart of the American continent. It was borrowed from no European city or shire. It has not the mouth-filling verbal volume of Massachusetts or Michigan, nor is it attuned with voweled sweetness like Ohio, Iowa, or Illinois; but following its syllabication—Ne-bras-ka—energy, power, compelling force; it is oral dynamite under proper control. [Laughter.] The child——

Mr. LOBECK. Is the gentleman talking about my State?

Mr. SLOAN. Yes; I am talking about the gentleman's State, which is one of sobriety, as well as Nebraska, at this time.

The child who lisps, the schoolboy who says, and the man who speaks "Nebraska" as its syllables deserve to be pronounced, with power of vocal organs and concerted maxillary movement, will develop a jaw formed to either say "no" in a way to close an incident or yield a mild-mannered affirmative which throughout the ages has ever charmed. [Applause.]

The origin of this name, in the language of the primitive owners, meant "Water Valley." It suggests that which they had, but which lacked just enough in abundance to make it valuable.

LOCATION.

For Nebraska's location I draw no map; but there it lies, north of parallel 40, north latitude, where the Mexicans directed Coronado to the seven cities of Cibola; south of the sable hills, where gold in abundance lies; west of America's longest river, it stretches half a thousand miles near unto the foothills of the continental range.

There is no navigable river within its borders, no mineral under its soil. There was no forest to temper its climate, no mountains to vary its view. Its plain was one vast pasture when watered by dews and rains, but when withered by drought or swept by fire there was little opportunity for either the savage or his game. People called it the American desert. Daniel Webster pronounced it unfit for the habitation of white men.

HISTORY.

The habitation of the Indians stretches back to the shadow land of memory, legend, tradition, and even unto myth. There were tales of chase, love and battle, differing somewhat as to refinement and culture, but primarily similar to those which have been told by all peoples since the stars of dawn sang in chorus.

Nebraska's history of the white man is likewise old. Back of Lincoln and Douglas, who contended for Nebraska to be free or slave; back of Webster, who condemned it; back of Jefferson, who bought it of France; back of the day of our country's Father; 67 years back of the first Cavalier's landing at Jamestown; 80 years back of the Puritan landing at Plymouth, the exploring Spaniards, whose thirst for adventure and greed for gold were unsatisfied with Montezuma's capture, the loot and pillage of the treasury of the Aztecans, and the desecration of the temples, followed the north star across the fortieth parallel and pressed their feet on Nebraska soil in 1540.

Why celebrate the passage of 50 years? It is not founded alone on the decimal system, a half a century. It relates to a year mentioned in Leviticus—the year of jubilee, the year after seven times seven, or the seven Sabbath years. That was Israel's year of jubilee; this can well be ours. [Applause.] I am glad so many of my friends from different parts of the Union approve.

SUCCESS.

That Nebraska scores a success is established in the fact that we celebrate. No derelict craft driven by unfavorable winds upon a barren shore would celebrate the anniversary of its putting out to sea. No bankrupt business concern ever asked or invited its friends to celebrate the day it challenged the competition of the world. I have attended many golden weddings in my lifetime, but never was I present at a feast to celebrate the anniversary of a divorce.

So we celebrate a success; we are not here to register a failure. Just as we celebrate a birth and observe the date of a death. Nebraska concealed its possibilities from the superficial and the indolent. It became the land of opportunities to the diligent investigator. Fifty years is the span of a human's productive activity. England's greatest laureate sang, "Better 50 years of Europe than a cycle of Cathay." In view of the barbarism into which Europe has relapsed, we might paraphrase it by saying, "Better 50 years of Nebraska than a cycle of anywhere else on earth." [Applause.]

IMPORTANT FACTS OF PROGRESS.

To tell the story of Nebraska from its humble origin to its present achievement has taken the broad genius of Morton to plan and many others to gather and present in three great volumes the story of Nebraska's marvelous course and recount the leading facts of its men and women.

Nebraska—a child of the War for the Union—did more than its full share. As a Territory one out of every three citizens served in the Union Army. In the Spanish-American War it contributed 50 per cent more than its quota. In the Mexican expedition Nebraska met in full the Government's demands. And in the great world war in which we are now engaged every appeal of the Nation is met with that promptness for which Nebraska has always been noted in meeting her obligations for money and men.

Fifty years ago nine-tenths of Nebraska's people lived in the eastern one-fifth of the State. To-day 1,271,000 souls fairly distributed from west to east in general comfort and happiness reside. Fifty years ago Omaha, Nebraska's metropolis, then as now, had 16,083 people, while now that great American gateway to the Northwest numbers 200,000 souls.

Fifty years ago there was no completed railway in Nebraska. Now five great continental systems traverse Nebraska, carrying in comfort and safety passengers through, in, and out of Nebraska. Then there were under cultivation in Nebraska not more than 650,000 acres, now there are in meadow and annually turned by the plow more than 24,382,000 acres.

Fifty years ago the money in Nebraska banks was negligible, now $342,592,529. It had more buffalo then than cattle. At that time there were few churches. To-day, from humble chapels of the west to the great cathedrals of the metropolis and capitol, every Sabbath 350,000 men and women of God lift their voices in prayer and song to the Great Father of us all. There were then no colleges and few schools. To-day Nebraska has three great universities, wherein are taught the science of the ages, the culture of France and Italy, the law of Britain, and the language of the ancient Greek and Roman. Moreover, young men and women are prepared for the learned professions and practical vocations. There are numerous colleges where competent instructors train young men and women for learned professions, practical vocations, the art of war, and the making of homes. In every city and village are high schools advanced as far as the academy and colleges of 50 years ago. These render the youth liberal education. But more important still is the country school where neighbors' children are being gathered under the care of some good young Nebraskan to conduct them through the basic elements of learning to either fit them to meet the ordinary problems of life or lay the foundation for broader learning, wider usefulness, and greater capacity for enjoyment of the mental substantials and luxuries which the diligent and the genius of all the ages have created and gathered. [Applause.]

The success of this system counts for our grade among the States in percentage of illiteracy. In 1870 it was 5.5 per cent and in 1910, 3 per cent. From a very modest rank at admission we reached the rank of first at the end of the century. To sustain our educational system we have 1,886,363 acres of Nebraska land. Cash or gilt-edged bonds in our strong box $9,060,580. A Massachusetts Member of Congress in a speech referred to the old Commonwealth which looks back upon three centuries of history as a great educational center and a great creditor State. I was able to state in return, for his enlightenment, that for four decades Nebraska has had a lower percentage of illiteracy than Massachusetts. More than that, our literacy had been raised to some extent upon the interest paid by Massachusetts to our Nebraska school fund for the money she borrowed. At that time the Old Bay State owed Nebraska $850,000, payment of which was secured by a lien upon all the old Commonwealth, including the Berkshire Hills, Fanuell Hall, Bunker Hill Monument, and Plymouth Rock. [Applause.]

Upon assuming our place among the States our per capita wealth was small indeed; now our wealth for every Nebraskan equals $3,110.

SOURCES OF OUR WEALTH.

If by reason of our soil, climate, rainfall, together with our lack of minerals, power, and forest wealth, we are given the rôle of exclusive agriculture, our present station shows us living up to our high opportunity and calling. Corn is our cereal king. It is the one great cereal planted and grown upon the square. It is a sustaining food for man and beast. When wheat failed, barley was scarce, and rye did not crop, it furnished food for the Nation and was the source of "meal and meat." It is the one important grain grown by the original owners of America. Its silver plume waved here before the helmet of the Florentine glistened on the Western Continent. Its breastplate of gold preceded the discovery of California nuggets. It has contributed more to northwestern thrift and southern hospitality than any other product of American soil. [Applause.]

Wheat, the most universal of all our cereals, time tried, century tested, it has followed and sustained the course of empire from the cradle of the race through peace and war, the rise and fall of dynasties, and the supercession of kingdoms by republics, until the globe has been girdled. But never has this source of life's staff reached that perfection of nourishment and that satisfaction of palate that is yearly attained under our June rains and early July sun in the fields of Nebraska. [Applause.]

Then, too, is that miracle of the modern world—alfalfa—fair to the vision and susceptible to growth, so surcharged with nutriment for man and beast, so resistant to heat and cold, flood and drought, such a marvelous complement for corn, that from them come the Ruby ham, the Marble beef, and Rainbow bacon by which Nebraska, on the well-supplied farmer's board, in the metropolitan cafés of the world's capitals, and even in the trenches of European warriors, has become truly famous. Moreover, out of it has come the butter and cream, rich, palatable, and wholesome. These come in ever-increasing and converging streams from every farm to the great manufacturing centers until they reach Omaha, our metropolis, the greatest butter-producing market of the world.

In Nebraska the cow and the hen produce much of our wealth, but their greatest value lies largely in the fact that they have reduced our farmers' dealings to a cash basis and effaced the credit system of the early days, which wrecked many a merchant and kept in poverty many a farmer.

In western Nebraska, where limited rainfall reduced the rewards of husbandry, Nebraska genius, foresight, and industry have chained the waters of the flood season. These under control become currents of life and growth, and when combined with summer's sun bring about generous harvests.

Nebraska upon admission had no great market except far-off Chicago. To-day her metropolis is a market for live stock and grain rivaling all the markets of the country. It stands third among them all, and therefore third in the world. Not content with that, it is challenging its rival for second place.

On admission our capital city had 2,441 inhabitants. To-day there live within its bounds 55,000 Nebraskans. It has a busy commerce in the midst of many institutions of higher learning which furnish means of culture and refinement unsurpassed in any capital of this Republic.

Thriving, prosperous cities and beautiful villages intersected by railways or standing on our river banks dot Nebraska's plains. But the best of life, with all its changes and comforts, lies in the farm home. Here the young man strong and maiden fair have the best opportunity for attaining reasonable wealth, the best for living clean lives, and the best for doing for their neighbors and mankind the best service. They live in that part of the earth which God hath made, while their urban brethern reside in man-made city. [Applause.]

More than perhaps any other State in the Union wa Nebraska treeless. A few trees there were near the rivers. Forest seeds, driven by the winds or conveyed by chance, fell on Nebraska soil, pressed for the light and reached for the sun. Most of these fell victims to the autumn fires of the plains. It was the spirit of Nebraskans not to complain of conditions but to better

them. There arose a man who saw Nebraska's need. With a vision looking beyond the immediate future, he appealed to the healthy sentiment of Nebraskans to plant trees. So he dedicated a day for that work. So his State dedicated a day for that great purpose. So, later, nearly every State in the Union dedicated a day to the planting of trees. This dedication, begun by a great man for a great purpose, has had boundless beneficial results. [Applause.]

One of Nebraska's legislative measures which finally became a law was naming it "Tree Planters' State." In the authorship of this law I take a modest pride. It is as follows:

Whereas the State of Nebraska has heretofore, in a popular sense, been designated by names not in harmony with its history, industry, or ambition; and
Whereas the State is preeminently a tree-planting State; and
Whereas numerous and honorable State organizations have by resolution designated Nebraska as the Tree Planters' State: Therefore be it
Resolved by the Legislature of the State of Nebraska, That Nebraska shall hereafter, in a popular sense, be known and referred to as the Tree Planters' State.

The half has not been told. It was said that the first electric message transmitted over the wire was "What hath God wrought." Considering what Nebraska was and contemplating what Nebraska is, let me suggest the sentiment, "What man hath wrought through opportunity God hath made." [Applause.]

Were I to attempt to distribute credit for Nebraska's achievements I should call up the shades of early Nebraskans—preachers, teachers, lawyers, physicians, journalists, men of commerce, and men of the farm—and by telling their names at this time suggest to living Nebraskans their glorious deeds. But time would not permit me to name all, and were I to name some it would be an injustice to omit many others. So I may say, as the ancient writers would, "Behold, are not their names and deeds written in the books of Morton!" [Applause.]

For those Nebraskans who live and toil and strive to gain much in wealth or fame for self or State I am constrained to say they are carrying forward the work as worthy successors to those who made Nebraska what it is. They will add to all that we have now, not alone in sordid gold or rich merchandise, but in their manhood and womanhood's creditable deeds and virtuous lives strengthen and exalt the State. [Applause.]

After all, Nebraska's qualities, parts, and strength lie not in broad acres with abundant harvest, nor yet in flocks and herds, still less in sordid wealth, nor yet in monuments to the great who have passed beyond, not in the brave, generous deeds of the past, but in the men of courage and wisdom, women of grace, beauty, and intelligence who live to-day. Then, too, the children of clear, clean-lived men and women, richly endowed with ancestral Americanism, bright, strong, and good, they in their time will do their part to keep Nebraska sound and great. [Applause.]

With the new phases of the world's commerce, the multiplied inventions which must perfect our future with the progress now daily being wrought in the world, it is impossible to forecast character or extent of what our century's celebration may show. The prophecy of yesterday in the light of to-day's achievements often appears grotesque.

Mr. GALLAGHER. Will the gentleman yield?

Mr. SLOAN. I shall be delighted to yield briefly.

Mr. GALLAGHER. I have not heard the gentleman mention anything about the first citizen of Nebraska.

Mr. SLOAN. Logan Fontanelle was one of the first citizens of Nebraska. [Laughter.] But we have and have had a great many first citizens. Nebraska, not impoverished like some other States of the Union, has a multitude of first citizens.

Mr. LOBECK. Will the gentleman yield?

Mr. SLOAN. I yield to my colleague. He is one of the most genial men on earth, and I know he has a message in his question.

Mr. LOBECK. We had the first real United States homesteader in Nebraska.

Mr. SLOAN. And his name was Freeman. A citizen of the fourth district.

Mr. LOBECK. You are right.

Mr. SLOAN. I know that the gentleman from Illinois and my genial friend on the other side from Hoosierdom both want to hear about their devoted friend the old-time political leader.

The CHAIRMAN. The gentleman's time has expired.

Mr. HAUGEN. How much time does the gentleman want?

Mr. SLOAN. Well, give me as much as you can spare, and I want an exhibition of Iowa generosity.

Mr. HAUGEN. The gentleman can have five minutes.

Mr. SLOAN. I thank you very much, and I will impose on you to that extent. My friend HAUGEN is a citizen and Representative of the great State of Iowa. As far as I am personally concerned, I think Philadelphia is the greatest place on earth for parents to be married. Iowa is one of the best States on earth to be born in, but when you want to come to Congress and represent a State that you can talk about in the presence of a magnificent audience like this and never blush, Nebraska is the State. [Applause and laughter.] Can the gentleman make that 10 minutes instead of 5?

Mr. HAUGEN. I would be glad to, but the gentleman is drifting away from Iowa.

Mr. SLOAN. Then I will go back to Iowa and take 10 minutes. [Laughter.]

Mr. HAUGEN. I yield to the gentleman 10 minutes.

Mr. SLOAN. I can wish my State no greater growth, no more relative advancement among the States of the Union than was wrought by Nebraskans under God's opportunity the first 50 years of our marvelous statehood.

At the recent semicentennial celebration held at our State capital a well conceived and ably executed pageant was presented, reproducing the great historical events of Nebraska's history. The imperial facts of the Louisiana Purchase were set forth in stately phrase and superb diction. I liberally quote from it with credit to the author, Hartley B. Alexander, as follows:

NAPOLEON.

Monroe, the purchase you were sent to make
Is made. I take your price. 'Tis new to me,
Soldier and emperor, to turn bargains man
And chaffer in the market place; but here
Is merchandise that's worth such as I,
An empire put to sale, which who should sell
If not an emperor!

MONROE.

Imperial acts befit imperial men.
This deed which now you give America
Means more to France and more to all the world;
And to Napoleon's glory it means more
Than many martial victories. Receive
My thanks and Jefferson's; and know, henceforth
The arms of our United States shall be
Entwined with France in lasting amity!

NAPOLEON.

So be it. Men, upon the acts of men
Mean values set, and on Napoleon's acts
Green tongues will spit their scorn. I am content,
For from this deed shall rise a shining power
To slay their slander and lift up for France
The hand of friendship in her hour of need.

The pageant was presented at a time deeply significant. France, a Republic, in its extremity was sending its prayer across the seas for men. Britain, against whom the great Corsican was fencing, has been sending pleading messages for food. Strange that Providence or the decree of destiny on which Napoleon relied should have dissolved the sentiments of rivalry and hate between France and Britain, and in their place found bonds of amity and alliance. Perhaps stranger still that the large surplus of food comes from Nebraska, the once most unpromising part of that so-called desert, for Britain's relief. And equally strange it is that from that same State should go to succor France the first soldier of the Republic, Gen. Pershing. [Applause.]

And now for Iowa. Greatness and progress of men and States are always relative. Iowa and Nebraska, the States of my nativity and my choice, lie side by side, and a comparison is alike complimentary to each. [Applause.]

I remember when a boy I was at a public gathering and heard an extravagant though exceedingly eloquent tribute paid to the State of Iowa. I will read it to you. I have given it before, but you are bearing with me. This is what the Iowa orator said:

"The Lord made the heavens and the earth."

You know that is quite a concession for an Iowa man who still lives there to make. [Laughter.]

"At His mandate there was the separation of the land and the sea. He made man, and He caused there to be established States, principalities, kingdoms. Then having looked upon it and called it good, and profiting by His experience, made Iowa, adorned with beauty, filled with fatness, and naught lacking for the comfort and happiness of man."

[Applause.]

Mr. RANDALL. Will the gentleman yield?

Mr. SLOAN. I will yield to my friend from the Golden Gate.

Mr. RANDALL. Would it embarrass the gentleman if I informed him that we have in southern California a larger colony of Iowa and Nebraska men than from any other States in the Union?

Mr. SLOAN. That is true; in the early days of Iowa and Nebraska there were a great many undesirable citizens [laughter], and they went away as far as they could without trying to wade the Pacific Ocean. [Laughter.] There were, however, many excellent Iowa and Nebraska citizens, including my friend from California, who, lured by the husks of climate and scenery, journed to that far-off country; but when sub-

stantials are lacking they will return for the welcome we are ready to tender them. But under present conditions do not expect any general slaughter of calves.

Let not my Iowa friends too soon congratulate themselves upon this unanswered encomium.

Friends, the Lord seems to have profited further by His experience. He long since learned that for the happiness of His people He could do too much. His enterprise at Eden was not a complete success. He had done too much for the early children of his creation. We all know that "a smooth sea never makes a skillful sailor." We know that success uninterrupted without serious obstacles to overcome never qualify men for the highest happiness. And the Creative Genius, recognizing and following these principles, looked upon a desert waste unadorned, unproductive, and uninviting, and He said, "Here in this part of My dominion, apparently marred by My manifest neglect, I place a few of the choice children of My creation. And if in the years to come they shall through diligence and enterprise make these apparently barren plains yield their abundance, cause beauty to stand where unsightliness stood, raise cities where solitude once sat, establish thousands of homes where children and happiness are; if the wheels of industry shall roll unceasing; if great colleges and universities shall be established; if happiness shall be in humble cot and marble mansion; if pæans of praise and voices of prayer shall rise to My name and glory from humble chapel and vast cathedral, then will I visit My children, look upon the works of their creation, call it "good" and make My dwelling place with them forever. [Applause.]

It is finished. He has looked upon the work of the children of His creation in our fair State. He has blessed it. He has called it "good"; and He is making His home with us forever. Men call this place Nebraska. [Applause.]

Mr. LEVER. Mr. Chairman, I yield 10 minutes to the gentleman from Mississippi [Mr. VENABLE].

Mr. VENABLE. Mr. Chairman, I had not intended to say anything on this bill, for the reason that I felt that after so much debate I could not contribute anything to its wise consideration. But, in listening to the debate to-night, it occurred to me that possibly we might be in danger of determining the question whether we should oppose or vote for this bill on purely collateral matter.

Of course this is a military measure. Of course this measure is not such a one as would be adopted in normal times. It is just as much a military expedient as raising the Army, as building up the Navy. In fact, we are told, and we recognize it to be true, that food is just as important as ammunition, and the victualing of our allies is just as important, from a military standpoint, as victualing ourselves, for if they are defeated because of lack of food we will have the Empire of Germany on our hands to fight alone.

Now, the whole problem, as I understand it, of the economic activities of the people is to raise enough of the usable things from the earth to supply the masses of the people with a sufficient amount of food and clothing, and so forth. In this country we must raise enough of those things to supply ourselves and give an overplus for distribution among our allies. The second question is the distribution of this wealth after we have created it. We are attacking to-day the problem of prices in money, a mere medium of exchange, because by artificial means the prices have been so fixed that the medium of exchange will not operate so that these food products which have been raised can be distributed among those who need them. The first thing, then, is to stimulate production in order that we may have the things. Now, that can only be done, as I understand it, by appealing, under our system—because we can not force men to labor—to the motive of self-interest.

In other words, if you want the farmers of this country to raise an increased amount of food products, you must make it to the interest of the farmers to do it. You must supply the necessary stimuli to arouse them to increased activity. And that is the reason, as I understand it, why the guaranteed-price provision is put into this bill, to be invoked if necessary. Under the terms of the bill the situation of the consumer is also considered.

In short, the purpose of the bill is to eliminate all unnecessary charges between the producer and the consumer in order that the consumer may be able to obtain a sufficient amount of food. It is not to be presumed that the men who have in charge the operation of this measure are going to abuse the power. If we proceed on that theory, we can pass no law of any character at all. You could have no courts; you could have no judges; you could have no departments; you could have no Congressmen, because all are clothed with power to do certain things, and if you withhold the power because of the fear that if conferred it will be abused, government would cease.

Now, as I understand it, the whole purpose and object of this bill is to eliminate unnecessary charges, to stimulate production, and then to see to it that the distribution is not interfered with by unreasonable and exorbitant charges, making it impossible for certain members of the body of citizenship to obtain these essential things.

The idea is not to institute a state of socialism, but to use drastic measures, it is true, to do the things we have been trying to do for some time is to get rid of the unlawful charges of speculators. In other words, as I conceive this measure, it is designed and devised for the purpose of giving the freest possible scope to the operation of the law of supply and demand, so far as the price is concerned, limited only by the provision that if found necessary, in order to supply all necessary stimulation, a minimum price will be fixed for a short length of time.

It lays no unnecessary burden. It simply says that the law of supply and demand will operate without interference, so that the consumer, if no price-fixing minimum basis is adopted, shall obtain food at a price dictated by the law of supply and demand. We fix no maximum prices, and if a minimum guaranteed price is fixed for the producer, it is done in order that the consumer shall receive the food products at that price, plus the reasonable charges for essential services which men render in conveying the food products from the producer to the consumer, which is the only legitimate charge.

Now, as I conceive it, that is the scheme of the bill. Can there be any objection to that? Does that work an injustice? It does an essential thing, if found to be necessary, in supplying an extra inducement to the producer to produce more foodstuffs, because we must have more, and that is the only way to bring it about. And then, so far as the consumer is concerned, it sees that the consumer pays no unnecessary and no unlawful charges to men who have not earned them by some legitimate service.

I have tried to study the bill to a certain extent, not as exhaustively, really, as I should like. There may be—I do not know—some amendments which might be offered that would further the accomplishments of these objects. As to that I am not prepared to say. But I do not see how there can be any fundamental objection to the purposes sought to be accomplished or to the means or the methods which are being used. Of course, this is not such a bill as we would pass in ordinary times of peace. We would not have declared war without occasion. We would not have passed a $7,000,000,000 appropriation bill under normal circumstances. But we can never measure an abnormal situation by normal rules. No man would make a constant friend and confidant of a jackass simply because one on one occasion spoke words of wisdom to Balaam. [Laughter and applause.]

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. LEVER. Mr. Chairman, I yield 10 minutes to the gentleman from California [Mr. LEA].

The CHAIRMAN. The gentleman from California is recognized for 10 minutes.

Mr. LEA of California. The evils of juggling and manipulating the prices of foodstuffs have been demonstrated in times of peace during recent years. Such products have been hoarded for the purpose of limiting the supply and enhancing prices. Foodstuffs have been dumped in the ocean, some burned, and some deliberately sidetracked in shipment for the same purpose. So-called boards of trade have "fixed" and manipulated market quotations for the purpose of fleecing both the producer and the consumer of various staple products of the country. The patience of a busy people has tolerated these conditions in times of peace. The evils of such methods have been emphasized by the conditions of war. Methods tolerable in peace have become intolerable in war.

Under present conditions the price of food is mounting higher and higher, not only for our allies but for our own people. These high prices apply not only to food but to practically all necessities of life. This is true notwithstanding our great producing capacity, the universal employment of labor, and the activity of practically all lines of industry. The complaint comes not from the jobless man but from the man with a job.

America is the greatest producing country in the world. The limit of our production has not been reached. Suddenly, due to the war in Europe, greatly increased demands have been made upon our supply. Submarines have restricted the commerce of the world, and our allies in western Europe have become increasingly dependent upon us. Upon our entry into the war their cause became our cause. At every hazard and at every price Germany must be defeated. Every pound of food

supplied to our allies and every one of their soldiers in the field fighting Germany lessens the burden that now rests upon the United States. The necessity of furnishing all possible food and supplies to our allies is so apparent that there can not be a difference of opinion among intelligent, patriotic people as to our duty in that respect.

To-day we must recognize the fact that many of our own staple products are being sold at higher prices in America than in belligerent countries of Europe. For us to permit such conditions to continue while our own Nation is at war would be a confession of our indifference or our incompetency as a Nation.

We have a good crop prospect. We have the food, not only for our own people but in sufficient quantities to furnish a large, though not an ample, supply to our allies. These conditions present the necessity for the law now proposed. Food is too high, too scarce. There are three possible sources of relief: First, more food; second, greater economy and more efficient use of the supply available; and, third, lower prices, so that sufficient quantities shall be in reach of the people of the country.

So far as this year is concerned, the law we propose can do little toward increasing the supply of food. The planting season is mostly past. The prospect of an assured market at good prices is the greatest and best incentive for a large production. That incentive has existed during the planting season of this year. Our production will be limited rather by weather conditions, shortage of labor, or inability to finance the crop, than by any reasons the law can now obviate.

Should the war continue with its incidental shortage of food among the combatants and the consequent need of a greater supply from us, this bill may aid a greater production for the coming year. It authorizes the Government to guarantee minimum prices for necessaries, so that the producer, whether of limited means or otherwise, can plant his nonperishable crops with assurance of a market and satisfactory prices. To that extent the Government may encourage the producer by relieving him of part of the hazard of the undertaking.

The bill also authorizes the Government to purchase, store, provide storage facilities, and sell necessaries.

It authorizes the President, when in his judgment necessary, to assure an adequate and continuous supply of food, to regulate, limit, and prohibit the use of foods in the manufacture of beverages.

The above provisions may to some extent increase the quantity of foods available. But in all probability the practical assurance of a market at good prices will prevail next year and be the greatest and most reliable inducement for the production of a large crop.

Greater economy and efficiency in the use of foods available is aided, encouraged, and supported by this bill, not by methods of compulsion, but rather by providing for the cooperation of the people and consumers of the Nation in a great system of voluntary economy. By securing the interest and cooperation of millions of American housewives and consumers in general, it is expected that a vast saving of our food products can be secured. We have been prosperous, prodigal, and waste has been a habit in the use of our food supplies. Now, the economy of thrift, organized and inspired not only by the motive of saving, but also by the commendable motive of serving the country's needs offers to increase the value of the country's food supply by its more efficient use.

The greatest benefit this law can give will be lower prices for food products to the consumers of the Nation as well as our allies. This feature of the bill presents its effective and virile provisions. Probably the most essential part of this law is section 5, which provides that a license shall be required for the importation, exportation, manufacture, storage, and distribution of necessaries. This is a familiar method of regulating business, where strict and prompt supervision is required. No one will be permitted to engage in such business without securing and holding a license authorizing him so to do. The continuance of the license shall be subject to such regulations as the President may determine "as may be essential" to prevent (1) uneconomical manufacture and (2) inequitable distribution. The President is authorized to prescribe requirements for the issuance of such licenses, systems of accounts and auditing, submission of reports, and to provide for the entry and inspection of the place of business of such persons. The President is also authorized to order a discontinuance of any (1) rate, (2) charge, or (3) practice which is (a) unjust, (b) unreasonable, (c) discriminatory, (d) unfair, or (e) wasteful.

The President shall also determine what is a (1) just, (2) reasonable, (3) nondiscriminatory, (4) fair, or (5) economical, (a) rate, (b) charge, or (c) practice.

Carrying on such business without the license required or violating any of the regulations prescribed is punishable by heavy penalties.

Exemptions from the operation of this section include farmers as to products of their lands, retailers as to the business actually conducted by them, and common carriers.

It is generally asserted that the consumers of the country pay for the products of the farm at the rate of $3 to each $1 paid the farmer. In other words, some place between the farm and the table of the consumer two-thirds of the charge against the consumer originates. Out of the $1 received by the farmer he must pay the expense of seed, planting, cultivation, harvesting, and containers for his crop, interest and taxes, support and educate his family.

This bill is based upon the theory that methods of distribution that exact two-thirds of the retail price of the products of the farmer is doing an injustice to the consumer. It recognizes that the same inefficient or unjust methods of distribution often exact unfair terms from the farmer in the disposal of his products. In other words, the virile purpose of this bill is to regulate and control those products not in the hands of the farmer but in the hands of those through whom they pass between the farmer and the retailer. The object is not to take away part of the dollar from the farmer, but to save part of the $2 to the consumer.

The usefulness and necessity of the man who buys the farmer's crops and holds them that later they may be supplied to meet the demands of the consumer are recognized by this law. The average farmer must sell at crop time or shortly after. It is to his interest and to the interest of the country to have a buyer. For the services that the buyer performs in turning over the purchase price to the farmer and preserving the crop for the consumer, the use of his money, and the hazard of the investment he is entitled to just compensation. This law empowers the President to prohibit hoarding, cornering the market, and manipulating prices. It permits a dealer to purchase the farmer's crop and retain it so far as reasonably required to furnish the same seasonably throughout the period of scant or no production, as well as to satisfy the reasonable requirements of his business for use or sale for a reasonable time. The law does, however, prohibit such dealer from withholding such products for the purpose of unreasonably increasing or diminishing the price thereof.

In order to carry out these provisions the President is authorized to make regulations controlling the business of such persons and confining their charges to just, reasonable, and nondiscriminatory figures.

It is contended that the powers thus granted to the President are capable of abuse. I concede such to be the fact. But I deny the probability of such abuse. Only the war and the abnormal conditions incidental to the war can, in my judgment, justify the enactment of this legislation. The evils at which this law are aimed are apparent to all. At each mealtime they are impressed upon every American and every citizen of a belligerent country. This law is not proposed for any trivial, theoretical, or abstract reason.

The necessity of regulation is also apparent. Three possible methods of exercising that control may be considered. In the first place, we might omit the food administrator and the discretionary powers of the President and instead attempt to meet the situation by specific provisions of law. Under this plan we might impose minimum and maximum prices for necessaries. We might conscript men and lands for increased production. We might at great length define and limit profits and compensation to be permitted for the various distributive services rendered by existing agencies. Finally, in order to enforce the many arbitrary rules so established, we might provide penalties and place the enforcement of the law in the hands of the Department of Justice. But who will contend that such a system would be reasonably satisfactory or desired by either the producer, distributor, or consumer? Its lack of pliancy to the conditions of the various industries of the country and the slowness and inefficiency of establishing and pursuing its remedies through the courts prohibit this method from serious consideration.

The acute demands and necessities of war require sensitiveness to business conditions and positive and prompt use of the administrative powers.

In the second place, instead of conferring these vast powers upon the President, we might establish a semijudicial body, similar to the Interstate Commerce Commission, with power to make regulations such as this law proposes to confer upon the President. Such commission would proceed as a deliberative body, basing its actions upon investigation, the production of

testimony, orderly hearings of all interested parties, and a system of enforcing its orders.

If we were attempting to provide a permanent system of food control, to be retained after peace shall come, I would favor that method. It would substitute semijudicial powers for what may be called the arbitrary powers of this law. The promptness of action now required can not be supplied by a deliberative body. The need is present and pressing. We are not in a position to pursue the most desirable or most idealistic methods of handling the war situation. We are forced to act by the most available methods, not next year, but now.

The third possible method of regulation is the one proposed by this bill. The President is the executive head of the Nation, selected but for a brief period to exercise its great powers. Shortly the time comes when those great prerogatives are conferred upon another, and the man who was President steps down and out, deprived of the prestige of power and office, mingles with the rest of us, and thereafter wields only that influence to which his ability and moral worth entitles him. In conferring these great powers upon our President we have this assurance: No President has ever betrayed us. His motive is only patriotic; only to serve. No one will ascribe a purpose to injure any legitimate industry. All will ascribe a patriotic purpose to strengthen and mobilize our country and its resources, so that we may rise up in solid phalanx, with all our potential powers active, coordinated, devoted, and consecrated to the cause of our country and mankind. In the common sense, industry, and disposition to patient investigation of our President, and in these great motives, I find ample reason for trusting him for the best and wisest exercise of these great temporary powers.

It is probable that during the next year the labor of our country will be employed. High prices have made the wages of the employed laboring man and the moderate income of many insufficient for properly meeting their financial obligations. That great mass of our people that compose such a large proportion of our citizenship deserve the highest consideration in our legislation. Oppressive living conditions, oppressive to competent and industrious men, are not conducive to patriotism or to the best interests of our country. Economic conditions may become as oppressive as any unjust laws Congress or our legislators can write. I conceive it to be our duty, so far as lies in our power, to anticipate and provide against the evil conditions abroad in the land, largely created by hysteria, hoarding, speculation, and price manipulation.

I believe that conferring any powers on anybody that are sufficient to meet the needs of the situation would carry with them powers capable of abuse and possible of inflicting serious injury upon the business of the country. The Supreme Court has a power that could be destructively used. So has every court in the country. So has every great executive officer. That is particularly true of the war powers conferred upon our President. When we placed in his hands the fate of our boys, we have nothing more valuable to give. But we have no reason to suppose that a destructive use of the power is either desired, intended, or would be exercised.

This law can not be successful unless it deprives some men of money they otherwise would have realized by boosting food prices. It is extremely desirable that this great power be exercised with the greatest possible consideration for the legitimate business and industries of the country consistent with its just purposes. The centralization of the power in the President gives a wise and just administrator the opportunity to enforce the purposes of the law with a minimum of interference and a maximum of results.

A law like this must have a moral right, founded upon a necessity. I believe that when the people of a nation are engaged in the cooperative essential purpose of fighting for its preservation and their own liberties, no man has a moral right, however great his power may be to exact it, of preying and prospering upon the necessities of his fellow men. I believe that under these circumstances any right or supposed right of indiscriminate liberty of the individual is subordinate to the immeasurably greater right of the Nation to advance, protect, and defend its own welfare and the general welfare of its people. Upon this moral right and upon this necessity I base the need and justice of this law.

It is not a question as to whether or not our industries are going to be regulated. We know they shall be. Their regulation will be limited by the cruel necessities of war, by the unconscionable efforts of the speculator, by the hysteria of war conditions, by those influences which have made "war prices" the known and dreaded accompaniment of every war, or else they will be regulated by methods here proposed. Therefore I support the remedy as proposed by this bill as a matter of necessity.

It is asserted that the powers thus conferred upon our President are autocratic. They are autocratic in the sense that they do not conform to the political theories of democracy. But they conform to the more potent democracy—the democracy of necessity. Yesterday I heard Mr. Hoover testify before the Agricultural Committee of the Senate. I was impressed with the fact that he was a man of humane instincts, impelled by a controlling desire to serve humanity. His examination indicated that he was not much concerned with political theories or as to the technical construction of this proposed law. He was concerned with results rather than the letter of the law. He manifested a deep interest and purpose to be of use to his country and to the millions of people among us and our allies to whom the bread-and-butter question is a real and pressing problem. The appointment of Mr. Hoover by the President is most promising.

Mr. Hoover devoted himself to the starving fathers, mothers, and children of Belgium in a way that has endeared him to them forever. The President seeks to utilize his experience, his demonstrated administrative ability, and his devotion to this work. Mr. Hoover has complied with the request and has offered to serve without compensation. With zeal, patience, and energy he is applying himself to this great service. He seeks only to help redeem a stricken world. I regret that men in responsible positions in opposing the provisions of this bill have deemed it necessary or patriotic to make unjustified attacks upon Mr. Hoover. This is the time when we can ill afford to stricken the hand outstretched to aid those in need. Men may question the wisdom of his plans, but the worthiness of his motives should at least temper the violence of their criticism.

It has been asserted here that the price of those things the farmer buys should be regulated as well as the price of the products he sells. In the general principle of that expression I concur. But, as I understand the situation, there is no intention to prescribe a limit on the sale price of the products in the hands of the farmer. He is at liberty to sell when he pleases and at the best price he can procure. The Government steps in to regulate only after the product has left his hands. In other words, this is a practice regulating rather than a price-fixing law.

It is not the purpose of this law to substitute or destroy those legitimate agencies that are now distributing the food products of the Nation. On the contrary, it is recognized that they perform legitimate and necessary functions of our economic life. They are to be preserved and utilized in the continuance of their necessary services. By continuing their work freed from some of the impositions and methods now detrimental to legitimate business they can still prosper.

This law will not only aid us to be of greater assistance to our allies and in that way help us to win the war, but it will also give a hope and a promise to every family that gathers around an American breakfast table to-morrow morning. It will give a hope and a promise of lightening the load of the father and the breadwinners of the home, because it will offer some relief from conditions now serious and oppressive.

The constantly rising prices of foods levy an additional toll upon every other necessary article of the consumer. Wages, salaries, and incomes of the average men do not advance to meet the rising prices. This means less of needed clothing, shoes for children, and necessaries of the home. It delays the getting of those semiluxuries of the family for which frugal fathers, mothers, and children strive. Its unjust exactions lessen the opportunity with which the young men and women of America face the problems of life and enter upon its responsibilities.

Legislation can not be designed for a more beneficent purpose in these trying times than to preserve to the average man and woman of America the right to supply the table of themselves and their families and the necessaries of life upon terms of equity and justice, upon terms that restrain and limit the aggressions of avarice and greed and yet seek to retain, utilize, and protect all those existing legitimate producing and distributing agencies of the country.

This law is without precedent in our history. Those who have drawn it have followed the unbeaten path, striving toward an end that has not been attained in our country. We are dealing with conditions unprecedented in the history of the world and we seek to meet them by methods without precedent in our land. We may well search ourselves and current history for the surest and most efficient implements with which to serve the needs of our time. This act in its inspiration and purpose deserves to take its place beside those measures which have been enacted in recent times for the betterment of the conditions of the people of this country and with those great war measures

recently adopted in the confident hope and for the purpose of making our Nation America aroused, America mobilized, America efficient, America triumphant!

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose ,and Mr. SIMS having taken the chair as Speaker pro tempore, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 4961) for the control and distribution of food products and fuel, and had come to no resolution thereon.

EXTENSION OF REMARKS.

Mr. DYER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD, on the subject of transportation.

The SPEAKER pro tempore. The gentleman from Missouri asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

HOUR OF MEETING TO-MORROW—11 A. M.

Mr. LEVER. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. to-morrow.

The SPEAKER pro tempore. The gentleman from South Carolina asks unanimous consent that when the House adjourns to-night it adjourn to meet at 11 a. m. to-morrow. Is there objection?

There was no objection.

SENATE BILL REFERRED.

Under clause 2 of Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. 2453. An act to authorize condemnation proceedings of lands for military purposes; to the Committee on Military Affairs.

ADJOURNMENT.

Mr. LEVER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 10 o'clock and 21 minutes p. m.), the House adjourned until to-morrow, Thursday, June 21, 1917, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of the Treasury, transmitting copy of a communication of the Secretary of the Navy submitting an additional estimate of appropriation for pay of professors and others, Naval Academy, for the fiscal year ending June 30, 1917 (H. Doc. No. 192); to the Committee on Appropriations and ordered to be printed.

2. A letter from the chairman of the Federal Trade Commission, transmitting report of anthracite and bituminous coal situation and the relation of rail and water transportation to the present fuel problem (H. Doc. No. 193); to the Committee on Interstate and Foreign Commerce and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. DENT, from the Committee on Military Affairs, to which was referred the bill (S. 2453) to authorize condemnation proceedings of lands for military purposes, reported the same with amendment, accompanied by a report (No. 83) which said bill and report were referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. LITTLE: A bill (H. R. 5114) reinstating any officer to his former rank and grade in the United States Army; to the Committee on Military Affairs.

By Mr. KALANIANAOLE: A bill (H. R. 5115) to authorize the governor of the Territory of Hawaii to ratify the agreements of certain persons made with the commissioner of public lands of the Territory of Hawaii, and to issue land patents to those eligible under the terms of said agreements; to the Committee on the Territories.

By Mr. NEELY: A bill (H. R. 5116) authorizing the Secretary of War to donate to Marion County, W. Va., two bronze or brass cannon or fieldpieces; to the Committee on Military Affairs.

By Mr. CARY: A bill (H. R. 5117) to amend the Army appropriation bill; to the Committee on Military Affairs.

By Mr. SMITH of Idaho: A bill (H. R. 5118) to provide for the selection of osteopathic physicians in the Medical Service of the Army and Navy of the United States and to provide for their official status, rank, and pay, and for other purposes; to the Committee on Military Affairs.

By Mr. GEORGE W. FAIRCHILD: Joint resolution (H. J. Res. 106) to terminate the reciprocity treaty with the Republic of Cuba; to the Committee on Foreign Affairs.

By Mr. KALANIANAOLE: Memorial of the Legislature of the Territory of Hawaii, favoring the authorization by Congress of the governor of Hawaii to ratify certain agreements with the commissioner of public lands; to the Committee on the Territories.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. COADY: A bill (H. R. 5119) granting a pension to Patrick F. Flannery; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5120) granting a pension to Mina Sieber; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5121) granting an increase of pension to William T. De Vaughn; to the Committee on Pensions.

By Mr. LITTLE: A bill (H. R. 5122) granting an increase of pension to Mary E. Hottenstein; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5123) granting a pension to Virginia F. Huddleston; to the Committee on Invalid Pensions.

By Mr. NEELY: A bill (H. R. 5124) granting an increase of pension to Ellen Hopkins; to the Committee on Invalid Pensions.

By Mr. SHOUSE: A bill (H. R. 5125) granting an increase of pension to Wilber D. West; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5126) granting an increase of pension to Harrison Smith; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5127) granting a pension to Almeda King; to the Committee on Invalid Pensions.

By Mr. STRONG: A bill (H. R. 5128) granting a pension to Sarah A. Henry; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5129) granting an increase of pension to William H. H. Adams; to the Committee on Invalid Pensions.

By Mr. WELTY: A bill (H. R. 5130) granting an increase of pension to Eli C. Long; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. CARY: Petition of the executive committee of the National Association of Game and Fish Commissioners, held at Washington, D. C., on June 13, 1917, urging that immediate and favorable consideration be given the bills now before Congress, Senate bill 1553 and House bill 2612, to give effect to the migratory-bird treaty between the United States and Great Britain for the protection of migratory game and insectivorous birds in the United States and Canada; to the Committee on Foreign Affairs.

Also, memorial of State Retail Liquor Dealers' Protective Association, Milwaukee, Wis., against national prohibition as a war measure; to the Committee on the Judiciary.

By Mr. DALE of New York: Petition of Ward Baking Co., urging the passage of the Lever food-control bill; to the Committee on Agriculture.

By Mr. DUNN: Petition of sundry citizens of Rochester, N. Y., asking that a prohibitory law be enacted on both spirituous and malt liquors as a war measure; to the Committee on the Judiciary.

By Mr. DYER: Petition of sundry labor organizations of St. Louis, Mo., urging a congressional investigation into the circumstances of the bomb-throwing incident in San Francisco, Cal., in 1916; to the Committee on Labor.

Also, petition of Amalgamated Lithographers of America, Local St. Louis, protesting against the intent of Congress to increase the rate on second-class mail matter and the postage on view and picture cards; to the Committee on Ways and Means.

Also, petition of Central Trades and Labor Union, St. Louis, Mo., and vicinity, protesting against any suspension of or encroachment upon the child-labor laws upon the statutes to-day; to the Committee on Labor.

By Mr. EMERSON: Petition of Rev. L. B. Bradrick and others, opposing use of grain in manufacture of liquors; to the Committee on the Judiciary.

By Mr. ESCH: Memorial of Wisconsin State Conference of Defense Councils, favoring prohibition as a war measure; to the Committee on the Judiciary.

Also, memorial of National Association of Game and Fish Commissioners, favoring passage of Senate bill 1553 and House bill 2612 relative to migratory-bird treaty; to the Committee on Foreign Affairs.

By Mr. HAMILTON of New York: Petitions of sundry citizens of Findley Lake, N. Y., favoring national prohibition as a war measure; to the Committee on the Judiciary.

By Mr. KENNEDY of Rhode Island: Resolution of the Catholic Total Abstinence Union of the diocese of Providence, in the State of Rhode Island, favoring legislation prohibiting the manufacture and sale of intoxicating liquors as a war measure; to the Committee on the Judiciary.

Also, petition of Bethany Free Baptist Church and Brotherhood Societies of Pawtucket, in the State of Rhode Island, favoring prohibition during war; to the Committee on the Judiciary.

Also, petition of John Warren and 40 others, of Providence, R. I., favoring passage of food-control legislation; to the Committee on Agriculture.

Also, petition of congregation of Christ Church of Lonsdale, in the State of Rhode Island, favoring prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of Canio Alianiello, of Providence, in the State of Rhode Island, opposing taxation on all drug articles; to the Committee on Ways and Means.

Also, petition of J. E. La Brosse, of Central Falls, in the State of Rhode Island, favoring daylight-saving plan; to the Committee on Interstate and Foreign Commerce.

By Mr. KETTNER: Petition of F. F. Hanes and other residents of Encanto, Cal., asking conservation of foodstuffs, etc.; to the Committee on Agriculture.

Also, petition of Miss Anna B. Hayes, president, and other members of the Loyal Women's Bible Class, First Christian Church, Ontario, Cal., for closing of all breweries, distilleries, etc., until the close of the war; to the Committee on Agriculture.

Also, petitions of Essie Crandall and other citizens of Perris, Edsen H. Ward and other residents of Santee, and Wilfred Kent and sundry other citizens of Oceanside, all in the State of California, for the immediate enactment of prohibition; to the Committee on the Judiciary.

Also, resolution of directors of San Diego County Farm Bureau, San Diego, Cal., requesting the Congress to guarantee a minimum price for staple farm products; to the Committee on Agriculture.

Also, petition of Myrtle Miller, commander, and Marion Squire, record keeper, Review of the Woman's Benefit Association of the Maccabees, located at Riverside, Cal., urging immediate submission of Federal amendment for woman suffrage; to the Committee on the Judiciary.

By Mr. KING: Petition of Dr. W. E. Mercer, J. W. Klarner, N. F. Fisher, M. E. Graff, Lucas Akers, superintendents of five Sunday schools in Liberty Township, Adams County, Ill., demanding as a war measure the entire prohibition of the manufacture and sale of all intoxicating liquors; to the Committee on the Judiciary.

By Mr. LESHER: Petition of 41 citizens of Sullivan County, Pa., favoring a Christian amendment to the Constitution of the United States; to the Committee on the Judiciary.

By Mr. LONERGAN: Petition of the Connecticut Branch of the Association of Collegiate Alumnæ, providing for a zone around military camps from which saloons and questionable resorts will be barred; to the Committee on Military Affairs.

Also, petition of the Farmers' Club of East Wallop, Conn., opposing the passage of the daylight-saving bill; to the Committee on Interstate and Foreign Commerce.

By Mr. MAGEE: Petition of congregation of Warner Methodist Episcopal Church, Warner, N. Y., favoring full national prohibition of the manufacture, sale, and transportation of intoxicating beverages for the period of the war, etc.; to the Committee on the Judiciary.

Also, petition of Dr. N. A. Monroe and Frederick H. Kimman, of Syracuse, N. Y., favoring full national prohibition of the manufacture, sale, and transportation of intoxicating beverages for the period of the war, etc.; to the Committee on the Judiciary.

Also, petition of Federation of Protestant Associations, Syracuse, N. Y., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. MEEKER: Petition of Grand Avenue Methodist Mission, of St. Louis, Mo., in favor of prohibition of the liquor traffic as a war measure; to the Committee on the Judiciary.

By Mr. NOLAN: Petition of Asphalt Workers' Local, No. 84, of San Francisco, Cal., protesting against any attempt to amend the Chinese-exclusion act to permit of the importation of Chinese into the United States; to the Committee on Immigration and Naturalization.

By Mr. PARKER of New York: Petition of sundry citizens of Saratoga Springs, Hoosick, Ballston, and Gansevoort, all in the State of New York, favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. PRATT: Petition of Woman's Home Missionary Society, the Woman's Foreign Missionary Society, and the Woman's Christian Temperance Union, all of Elmira, N. Y., favoring the adoption of an amendment to the Federal Constitution to prohibit polygamy; to the Committee on the Judiciary.

By Mr. PRICE: Memorial of members of the Red Cross Auxiliary, of Pocomoke City, Md., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. SANDERS of New York: Petition of W. R. Bathrick and seven other residents of Perry, N. Y., favoring national prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of Washington Beck and 10 other residents of Rochester, N. Y., favoring national prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of Harry Martin and 10 other residents of Perry, N. Y., favoring national prohibition as a war measure; to the Committee on the Judiciary.

By Mr. SLOAN: Petitions of N. R. Chamberlain and 39 others, H. W. Campbell and 14 others, W. J. Beachy and 52 others, D. C. Winship and 43 others, G. W. Snyder and 46 others, all of the State of Nebraska, favoring prohibition; to the Committee on the Judiciary.

By Mr. SNYDER: Petition of various organizations of Boonville, N. Y., favoring national prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of 34 residents of the thirty-third district of New York, favoring the daylight bill; to the Committee on Interstate and Foreign Commerce.

SENATE.

THURSDAY, *June 21, 1917.*

Rev. M. A. Matthews, D. D., of Seattle, Wash., offered the following prayer:

Kind heavenly Father, we thank Thee for the preservation of our lives until the present moment. Do Thou guide us in the duties and responsibilities of this day. Do Thou bless the President of the United States, the Vice President, and the officers of the Federal Government, the Houses of Congress, and all concerned in the work now before us. Bless our homes and those constituents of this Government who are looking to us to lead them aright. And, O God, do Thou teach us what to do and how to do it, that after it is all finished Thy name may be honored and glorified and the cause for which we are now striving may triumph. We ask it for Christ's sake. Amen.

The Journal of the proceedings of the legislative day of Tuesday, June 19, 1917, was read and approved.

PETITIONS AND MEMORIALS.

Mr. HUSTING presented memorials of sundry citizens of Wisconsin, remonstrating against the enactment of legislation to prevent the use of dry malted grain in the manufacture of intoxicating liquors, which were ordered to lie on the table.

He also presented a petition of the Woman's Home Missionary Society of Barron, Wis., praying for national prohibition as a war measure, which was ordered to lie on the table.

Mr. SHERMAN presented petitions of sundry citizens of Galesburg, Canton, Clayton, Savanna, Greenville, Peoria, Jacksonville, Glasford, Carthage, Joliet, Galia, and Jerseyville, all in the State of Illinois, relative to the proposed increased tax on cigars, which were referred to the Committee on Finance.

He also presented memorials of Local Union No. 274, Cigar Makers' International Union, of Pekin; of Local Union No. 154, Cigar Makers' International Union, of Lincoln; of Local Union No. 99, Cigar Makers' International Union, of Ottawa; and of Local Union No. 455, Cigar Makers' International Union, of Galena, all in the State of Illinois, remonstrating against the

proposed increase in the tax on cigars, which were referred to the Committee on Finance.

He also presented petitions of sundry citizens of Chicago, Easton, Compton, Herrin, Granite City, Saunemin, Jacksonville, Beardstown, Armstrong, Good Hope, Morris, Bethany, St. Francisville, Edison Park, Danville, Greenville, Warrensburg, Roberts, Decatur, Mount Carroll, Fairbury, Paloma, Buckhart, Moline, Delavan, Nepansit, Allerton, Princeton, Kansas, Beaucoup, Anna, Millersville, North Henderson, Streator, Brocton, Mason City, Metcalfe, Alton, Charleston, Bluffs and vicinity, Princeville, Illinois City, Earlsville, Centralia, Carterville, Pesotum, Alhambra, Byron, Brighton, Elgin, Genoa, Congress Park, Georgetown, Golden, Stonington, and Prophetstown, all in the State of Illinois, praying for national prohibition as a war measure, which were ordered to lie on the table.

He also presented resolutions from citizens of Chicago, Hagerstown, Vandalia, Springfield, Urbana, Coal City, Diamond, Kincaid, Wilmington, Wilmette, Morris, Kinsman, Rockwell City, Evanston, Forest Park, and Winnetka, all in the State of Illinois, pledging support to the Government in time of war, which were ordered to lie on the table.

Mr. McLEAN presented petitions of the Connecticut Housewives' League; of Local Union No. 484, Cigar Makers' International Union of America, of Meriden; and of the Moving Picture Machine Operators' Protective Union, of New Haven, all in the State of Connecticut, praying for Federal control of food products, which were ordered to lie on the table.

He also presented petitions of 248 citizens of Meriden; of the congregation of the Grace Methodist Episcopal Church, of New Haven; of 50 students of the State Normal Training School, of Willimantic; of the J. B. Williams Co., of Glastonbury; of the Connecticut State Branch of the Association of Collegiate Alumnæ; and of the Templars of Honor and Temperance, all in the State of Connecticut, praying for national prohibition, which were ordered to lie on the table.

He also presented a memorial of 133 citizens of Danbury, Conn., remonstrating against nation-wide prohibition, which was ordered to lie on the table.

Mr. SHEPPARD presented a petition of sundry citizens of Rhome, Tex., remonstrating against the use of foodstuffs in the manufacture of alcoholic liquors, which was ordered to lie on the table.

He also presented a petition of the elders of the Church of Christ of Denton, Krum, Justin, Stony, Little Elm, and Bolivar, all in the State of Texas, praying for the incorporation of a clause in the conscription act exempting from military service members of religious organizations, which was ordered to lie on the table.

He also presented petitions of the Sunday School of the Methodist Episcopal Church South, of Alvin, and of sundry citizens of Alvin, in the State of Texas, praying for national prohibition as a war measure, which was ordered to lie on the table.

He also presented a memorial of sundry citizens of Annona, Tex., remonstrating against the use of grain in the manufacture of alcoholic liquors, which was ordered to lie on the table.

He also presented petitions of sundry citizens of Diboll, Joaquin, Miles, Thompson, Woods, Jacksonville, Palestine, Unaha, Nacogdoches, Carthage, Luskin, Marshall, Marlin, Galveston, Plehweville, Lott, San Antonio, and Riviera, all in the State of Texas, praying for national prohibition, which were ordered to lie on the table.

Mr. NELSON presented a petition of sundry citizens of Brainerd, Minn., praying for national prohibition as a food-conservation measure, which was ordered to lie on the table.

He also presented petitions of sundry citizens of Kingston and Minneapolis; of the Ladies' Bible Class of Linden Hills Congregational Church, of Minneapolis; and of the Epworth League of Bemidji, all in the State of Minnesota, praying for national prohibition as a war measure, which were ordered to lie on the table.

He also presented a petition of the National Woman's Party of St. Paul, Minn., praying for the adoption of the so-called Susan B. Anthony amendment to the Constitution, which was referred to the Committee on Woman Suffrage.

Mr. PAGE presented a petition of sundry citizens of South Shaftsbury, Vt., praying for the enactment of legislation to prohibit the use of food products in the manufacture of intoxicating liquors, which was ordered to lie on the table.

Mr. JAMES. I ask to have printed in the RECORD a resolution adopted by the Falls City Branch, No. 14, National Association of Letter Carriers, of Louisville, Ky., in regard to the high cost of food products.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

FALLS CITY BRANCH, NO. 14,
NATIONAL ASSOCIATION OF LETTER CARRIERS,
Louisville, Ky., June 13, 1917.

Hon. OLLIE JAMES, Senator,
Washington, D. C.

DEAR SIR: Will ask you to please consider the following resolution:

"Whereas that the cost of living has increased from 50 to 100 per cent during the last six years and the commodities of life have now reached that point where the majority of the masses can not procure the common necessaries of life; and

"Whereas this condition has been forced upon the people by combinations of capital and gambling in the food products of the country; and

"Whereas the earning power of the masses has not increased in a just proportion to the cost of living: Therefore be it

"*Resolved*, That the letter carriers of Louisville, in meeting assembled, do hereby request the representatives of this district in Congress to take such action as they deem best to break up these unlawful combinations in controlling the food products of this country; and

"*Resolved*, That loyalty and devotion to flag and country is the duty of every American citizen, which we fully indorse, and pledge ourselves to sustain our President in all his acts."

We also recognize that it is the duty of this Government to protect its citizens in their rights to purchase the commodities of life in the open market uncontrolled by trusts and other brutal contaminations of capital, and the time is near at hand when the people will demand in very plain language of their Representatives that these parasites that have been sucking the vital energies of the people be dealt with in accordance with their deeds; and be it further resolved that a copy of these resolutions be sent each of the Representatives from this State in Congress.

Respectfully. D. R. BEAUCHAMP, *Secretary.*

PRICE OF STEEL.

Mr. SMITH of Michigan. Mr. President, in view of the discussion of the shipbuilding matter the other day I desire to have printed in the RECORD a telegram received this morning from Hon. B. N. Baker, of Baltimore, addressed to myself, saying, under date of June 20:

BALTIMORE, MD.

Senator WILLIAM ALDEN SMITH,
United States Senate, Washington, D. C.:

Before the Shipping Board was formally organized the proposal was made to the then appointed members by the largest shipbuilding and steel company in this country to construct for our Government all their capacity, representing then at least 40 per cent of the deep-sea shipping building of our country, price to be fixed by the Shipping Board.

B. N. BAKER.

As Senators know, Mr. Baker was appointed as a member of the Shipping Board and assisted in its organization. He resigned shortly thereafter of his own volition, although urged by the President to remain. He was the recognized author of the shipping bill and performed most valuable service for the Government during the Spanish-American War. He is now trustee of the Johns Hopkins University.

I wish this telegram to appear in the RECORD in order that there may be little question about the attitude of the shipbuilding companies toward the Government in this crisis.

DELAWARE'S RED CROSS CONTRIBUTION.

Mr. SAULSBURY. Mr. President, I have a letter here covering resolutions passed by the Delaware Red Cross Association engaged in collecting funds to make up the large fund which they desire for their work. It is signed by the chairman of the committee engaged in this work in Delaware. I ask that it be printed in the RECORD.

The letter shows the desire of those who are doing such good work there that there may be an amendment incorporated in the pending revenue bill exempting gifts to the Red Cross from the income tax, or rather allowing persons who make such gifts to deduct them in their income-tax returns.

I may state in this connection that the allotment by the general committee to be collected in my State was only $250,000. It was a full proportionate allotment, and on the first two days by magnificent efforts more than twice that amount was raised. They have now set the figure which they propose to raise for this great work at $1,000,000, instead of $250,000, and the morning papers inform me that they have already had contributed six hundred and forty-nine and odd thousand dollars. If the rest of the country contributed in the same proportion, about three to four hundred million will be raised for this just object. I ask that the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN RED CROSS,
DELAWARE CHAPTER,
Wilmington, June 19, 1917.

Hon. WILLARD SAULSBURY,
United States Senate, Washington, D. C.

DEAR SENATOR SAULSBURY: I am inclosing herewith a list of some people who were at the Red Cross campaign dinner at the Hotel Du Pont last evening, which list you will note includes as representative a gathering of citizens of the State of Delaware as has ever been held.

Delaware was requested to raise $250,000 toward the $100,000,000 Red Cross war fund. Delaware voluntarily agreed to raise double this amount, or $500,000, and it does one's heart good to see the wonderful amount of enthusiasm prevailing.

At the meeting last evening the following resolution was unanimously adopted, and in line therewith I trust that our Senators and Representative in Congress will do everything possible to exempt from taxation income which is contributed to this great Red Cross work:

"Whereas the people of the United States are being solicited this week to contribute $100,000,000 to meet the immediate needs of the American National Red Cross; and

"Whereas the work of the American National Red Cross is quasi governmental work: Now, therefore, be it

"*Resolved*, That the Delaware campaign committee are unanimously of the opinion that incomes used for contributions to this work should be exempt from taxation and that the chairman of this committee be directed to so notify our Senators and Representative in Congress, with the request that they do all in their power to incorporate in the revenue bills now before Congress such provisions as will accomplish this object."

It may be argued that if exception is made in the case of the Red Cross it will necessarily have to be made in charities of all kinds, and there is no telling where the end might be. This, however, seems to me to be not true. The Red Cross work being a national work in which every man, woman, and child in the United States is interested and being a quasi-governmental institution places it in a class distinctly by itself. In other words, it is a work which, if not done voluntarily and privately, would of necessity be met by taxation, in which event those people now voluntarily subscribing would be exempt from having to pay an income tax for the privilege of making subscriptions.

Sincerely, yours,

H. P. SCOTT, *Chairman*.

POEM BY CHARLES PRESSLEY SIMONTON.

Mr. MCKELLAR. Mr. President, I desire to submit a short patriotic poem, written by my esteemed friend the Hon. Charles Pressley Simonton, of Covington, Tenn. I believe it will be of much interest to Members of the Senate and to the country, and I ask that it be printed in the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

GOD SENT TO US A PILOT; FOLLOW HIM.

[Dedicated to President Woodrow Wilson.]

(By Charles Pressley Simonton, Covington, Tenn.)

A master hand, as kind and tender as
A mother's hand, but strong and certain as
Is fate inexorable, now steers the ship
Of state. Blest winds of justice, liberty,
And hope distend her sails and proudly urge
Her on in safety 'tween the hungry jaws
Of Scylla and Charybdis grim. He spreads
No sails to catch the fickle breezes that
Oft spring from the misguided populace,
Though often they caress their white expanse
And, welcomed not, depart, return, and then
Depart again, but scorning waters shoal
And smiling depths, whose coral reefs oft lure
To endless ruin and destruction fair
And gallant ships, he onward steers straight for
Old ocean's mighty deeps and storm-tossed waves,
For well he knows there lies the way of peace
With honor, freedom, safety, happiness.

A master mind, full stored with wisdom of
The ages past, and which hath sought and found
The guarded knowledge of the yet to be,
Inspired and guides the pilot's hand. To his
Prophetic eye, futurity's dark veil
Is rent in twain, and with clear vision he
Discerns the way that lies beyond and in
The mellow distance leads to smiling hav'n
Of peace and happiness for all mankind.
Toward it the master pilot steers. About
His shoulders liberty's blest mantle of
The Stars and Stripes, and red and white and blue
Is draped, which patriot pilots did to him
Intrust when, faithful labors o'er, the wise
And loving father pilot called them home.
As Hur and Aaron once upheld the hands
Of Moses that o'er Amalek the sons
Of Israel might prevail, thus givers of
The law and men of eloquence, of pray'r,
And men with pens more mighty than the sword,
And horny-handed farmers and true men
In overalls, and women brave, uphold
And stay the master pilot's patriot hands.

Upon her docks are trusty seamen and
Brave men of arms from land and sea, who once
More welcome give the mighty tempest's breath,
For well they know enduring peace, good will,
And calm fast follow in its wake, content
To do their pilot's bidding and to yield
Up life itself so that the ship of state
Sail safely on, and in the morrow's dawn
Eternal burn the red and white and blue
Of glorious banners of sweet liberty.
Within her cabins wide are gathered there
Fair women, little children, and the old
And weak, and as her precious passengers
She bears the hopes and fears and pray'rs of all
Humanity. Their presence ever gives
The master pilot's hand its strength of steel;
And that mysterious message and the oft
Unspoken, whispered pray'r of love and trust,
Which heart to other heart oft breathes, are to
His loving heart encouragement as sweet
As smile of hope to one who would despair.
Then marvel not that he e'er scorns the waves
Of angry passion and timeservers' sneers,
And weaklings' murmurs and the poisoned darts
By traitors cast, for destiny gave not
To him one life alone to guard and keep.

'Tis not for self, he steers the ship of state—
For lives of millions and world liberty
And happiness lie in his arms. God sends
No tempest, but He also with it sends
A pilot, who will lead humanity
Safe into hav'n. Then fear not; follow him!
God sent to us a pilot; all is well!

STATUS OF NATURALIZED CITIZENS.

Mr. CHAMBERLAIN, from the Committee on Military Affairs, to which was referred the bill (S. 2467) fixing the status as naturalized citizens of enlisted men, commissioned officers of the Army, Navy, or Marine Corps, asked to be discharged from its further consideration, and that it be referred to the Committee on Immigration, which was agreed to.

THE COMMITTEE ON PRINTING.

Mr. THOMPSON, from the Committee to Audit and Control the Contingent Expenses of the Senate, to which was referred Senate resolution 89, submitted by the Senator from Arizona [Mr. SMITH] on the 20th instant, reported it without amendment, and it was considered by unanimous consent and agreed to, as follows:

Resolved, That the Committee on Printing, or any subcommittee thereof, be, and hereby is, authorized during the Sixty-fifth Congress to send for persons, books, and papers; to administer oaths, and to employ a stenographer, at a cost not exceeding $1 per printed page, to report such hearings as may be had in connection with any subject which may be pending before said committee, the expenses thereof to be paid out of the contingent fund of the Senate, and that the committee, or any subcommittee thereof, may sit during the sessions or recess of the Senate.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SHEPPARD:

A bill (S. 2484) granting to American women married to foreigners the right to retain their citizenship; to the Committee on Immigration.

A bill (S. 2485) for the maintenance and protection of useful farm bird reservations belonging to the Government of the United States; to the Committee on Agriculture and Forestry.

A bill (S. 2486) requiring all public-building bills to be submitted to the Secretary of the Treasury for investigation and report as to whether proposed buildings and sites are needed and the expenditure justified, and as to the lowest cost at which buildings found necessary may be erected with economy and efficiency; to the Committee on Public Buildings and Grounds.

By Mr. SHAFROTH:

A bill (S. 2487) permitting Frances Mack Mann to purchase certain public lands; to the Committee on Public Lands.

By Mr. OVERMAN:

A bill (S. 2488) to relieve Congress from the adjudication of private claims against the Government; and

A bill (S. 2489) to create two additional associate justices of the Supreme Court of the District of Columbia; to the Committee on the Judiciary.

A bill (S. 2490) to commission as officers in the Regular Army of the United States National Guard officers attending service schools; and

A bill (S. 2491) providing for the transfer of Lieut. Max H. Carter from the Philippine Scouts to the Regular Army; to the Committee on Military Affairs.

By Mr. HOLLIS:

A bill (S. 2492) granting an increase of pension to Hildur M. Phillips (with accompanying papers); to the Committee on Pensions.

WITHDRAWAL OF PAPERS—JENNIE T. HAMILTON.

On motion of Mr. PENROSE, it was

Ordered, That the papers accompanying the bill S. 228, Sixty-fourth Congress, for the relief of Jennie T. Hamilton, be withdrawn from the files of the Senate, no adverse report having been made thereon.

CITIZENS OF FOREIGN NATIONS.

Mr. CALDER submitted the following resolution (S. Res. 90), which was read, considered by unanimous consent, and agreed to:

Resolved, That the Secretary of War be, and he is hereby, requested to furnish to the Senate a statement, by States, of the number of men in the United States between the ages of 21 and 31 years who are citizens of foreign nations now engaged in war with the Imperial German Government, and also those who are denominated alien enemies.

CONSERVATION OF FOOD AND FUEL.

The VICE PRESIDENT. The morning business is closed.

Mr. CHAMBERLAIN. I move that the Senate proceed to consideration of Senate bill 2463, the unfinished business.

The motion was agreed to, and the Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 2463) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

Mr. CHAMBERLAIN. I understood there were some Senators who desired to speak; I do not know, but if there is no one ready to speak I ask that the bill be placed before the Senate to be voted upon.

Mr. GORE. Mr. President, I make the point of no quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hitchcock	Martin	Smith, Md.
Beckham	Hollis	Nelson	Smith, Mich.
Brady	Husting	New	Smoot
Brandegee	James	Newlands	Sterling
Calder	Johnson, Cal.	Norris	Sutherland
Chamberlain	Johnson, S. Dak.	Overman	Swanson
Colt	Jones, N. Mex.	Page	Thomas
Culberson	Kellogg	Penrose	Thompson
Cummins	Kendrick	Poindexter	Townsend
Curtis	Kenyon	Ransdell	Trammell
Dillingham	King	Reed	Underwood
Frelinghuysen	Kirby	Saulsbury	Vardaman
Gallinger	La Follette	Shafroth	Walsh
Gerry	McCumber	Sheppard	Warren
Gore	McKellar	Sherman	Wolcott
Hale	McLean	Simmons	
Harding	McNary	Smith, Ariz.	

Mr. GERRY. I desire to announce that the senior Senator from California [Mr. PHELAN] and the senior Senator from Illinois [Mr. LEWIS] are detained from the Senate on official business.

Mr. SUTHERLAND. I desire to announce the absence of the senior Senator from West Virginia [Mr. GOFF] on account of illness. I ask that this announcement may stand for the day.

Mr. McKELLAR. I desire to state that the senior Senator from Tennessee [Mr. SHIELDS] is absent on account of illness. I should like to have this announcement stand for the day.

Mr. KIRBY. I wish to announce the absence of my colleague [Mr. ROBINSON] on official business. I wish this announcement to stand for the day.

The VICE PRESIDENT. Sixty-six Senators have answered to the roll call. There is a quorum present.

Mr. SHERMAN. Mr. President, I understand unless some one desires to discuss the bill further in Committee of the Whole it will be reported to the Senate for further parliamentary action. Before that is done, within the very brief limit I hope to encompass my comments, to make some statement in regard to it.

I listened with a great deal of satisfaction, Mr. President, to the discussion by the junior Senator from Iowa [Mr. KENYON] of the various phases of this bill. There was in it nothing, however, to confirm my opinion of it as requiring, even if Congress has the power, the suspension of the constitutional limitations under which I understand we are still living. I do not understand that even Congress, acting on the demand of the Executive, can abrogate the Constitution, although it would be popular in many places to do so. That must be done by the concurrent action of a certain number of States.

I do not understand that even the writ of habeas corpus can be suspended except by an act of Congress, however urgent the emergency or however desirable the remedy that might be thereby produced would be.

Many elemental principles are found in our Constitution which are intrenched beyond our power or the President's to modify or destroy. I have read a portion of the testimony of the putative food dictator of the coming régime. It is quite instructive. I have no criticism to make of the gentleman who will be intrusted with this powerful department of the Government. To me it is perfectly evident that he is like other departmental officers; he is without a proper appreciation of the just limitations of authority under which all governmental agencies act. This body is conscious many times of its limitations. We have only certain powers, and rightfully so. It has been that way from the beginning. We are sitting here only by virtue of express written authority. It does not come from any immemorial usages, from any practices that reach back through the centuries, but we assemble here under the positive written mandates of a charter under which this Government had its origin and under which to-day it is exercising its powers.

There is only one way in which that charter and its limitations can be removed. It can be done by actual war in a theater in which civil laws become silent and the laws of the camp and of armies proclaimed as the only regulatory features of the military area. There the Constitution ceases to exist and civil laws no longer control or bind. That has not yet occurred in any portion of our country.

The mere fact, Mr. President, that we may apprehend sometime that if England's naval power shall be broken hostile forces will land on our shores and make it necessary in some parts of the country to proclaim martial law, does not justify the belief nor our legislation on the assumption that martial law exists any place within the borders of this country, either State or nationally, at this time.

Therefore, we are proceeding here under the limitations of the charter under which we are elected, assembled, and act. I understand that it is said there is some vital enlargement of the powers of legislation because we are at war.

Mr. HARDING. Mr. President——

The VICE PRESIDENT. Does the Senator from Illinois yield to the Senator from Ohio?

Mr. SHERMAN. Certainly.

Mr. HARDING. I dislike to interrupt the Senator, but I have been straining my ears to hear him. Would it be in order to ask for the suspension of conversation in the Chamber?

The VICE PRESIDENT. It is in order, but it seems to be in vain.

Mr. SHERMAN. I appreciate the courtesy and wish of the Senator from Ohio [Mr. HARDING]. I wish to insert in the CONGRESSIONAL RECORD, and I promise not to expurgate it in looking over my copy, that I will make myself heard here, in spite of the noise in this body. I have had much more tumultuous bodies within the reach of my vocal activities before this, and I have often made them hear. If they do not hear, Mr. President, it will be because they are of that kind that, having eyes they see not, and having ears, in Scriptural language, they hear not. I can do no more, nor shall I be solicitous whether the Senators hear me or whether my admonitions fall upon barren ground. I shall satisfy myself by inserting in the CONGRESSIONAL RECORD such matters as appear to me to be meet and timely in the proper discussion of this bill.

This Senate is a place of voluntary attendance. I have not known in the time—limited, it is true—since I have been here when anybody, save the Sergeant at Arms, could compel any Senator to remain in his seat; that is a matter of choice. I do not ask an involuntary audience; I never expect to have any audience in this Senate save from those who choose to remain. I have it in the galleries and in an attentive listener in the chair, whoever may occupy it, and especially the regular occupant of the chair, the Vice President, who has at all times given courteous treatment to every Member of this body. But as to the galleries and as to the public outside, we do expect that we shall reach them; and we have a right to reach them, because there is now the direct election of Senators; we are no longer dependent upon the often idle caprice of State legislatures, but we go directly to the body of the voters in the several States that we have the honor and duty to represent.

With me it is not a matter of concern which is the popular side of this question. I am amphibious in my dwelling place, belonging to the crowded centers of population of Chicago and its suburbs, and to the backwoods of the Ohio and the Wabash River bottoms. I am a natural habitat of both countries, and am equally cosmopolitan in my instincts, applied to the habits of those who dwell in any of those localities. I trust I know fairly well the opinions and customs of all.

I am not ready, Mr. President, to vote for this bill as it is reported out of the committee. To me it seems to undertake many things that can not be successfully performed by government.

Government has its limitations; it is not all powerful. The Chief Executive, certain Members of this body, and many members of the departments are proceeding upon the assumption that Government can do anything. It can not. It can not compel a farmer to raise a bushel of potatoes; it can not add to the food supply by a single measure of barley; it can not add a solitary bushel of wheat. All it can do is wisely to use whatever the farmer, the market gardener, and the truck-patch man produce or may be induced to produce. More than that Government can not do.

It will undertake under this bill to perform a great variety of activities. It will signally fail in three out of four attempts proposed in this bill. I should hope that we would raise more in 1917, and more yet in 1918, but that can not be done by legislation. All that is in this bill, all that has been hoped for by its most ardent advocates, will not add one particle to the food production of this country. The mere mandate of legislation can not induce a single farmer in this country to do more than he is doing now. Within the limits of weather, his help, and the productive instrumentalities at hand, the farmer is now in every section of this country trying to produce every pound of foodstuff of which he is capable to add to the general market of the country.

If this bill has any good features in it, it will simply be those that look to the conservation, to the collection, and to the distribution of grain after it shall have been produced.

In the committee hearings, in which the future food controller of this country was heard, constant reference was made to the producer. In two of the principal sections of the bill the farmers and producers are exempted from the mandatory provisions of the proposed act. It is supposed that those exemptions are sufficient to give the farmer and the producer complete latitude of action. The first of these provisions so exempting the producer is found in section 5, on page 6, of the Senate bill. It provides:

Provided, That this section shall not apply to any farmer, gardener, or other person with respect to the products of any farm, garden, or other land owned, leased, or cultivated by him, nor to any retailer with respect to the retail business actually conducted by him.

In section 6, on page 7, referring to the hoarding provision, it reads:

Provided, however, That any accumulating or withholding by any farmer, gardener, or any other person, of the products of any farm, garden, or other land owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

Beyond those two exemptions, the producer is covered by the obligations of this bill as much as is the commission man, as is the wholesaler, or as is any one who by any of the various processes of collection and distribution handles any of the products of the farm or garden in its journey from the producer to the consumer. The first section is very sweeping in its language. It provides:

And to facilitate the movement of foods, feeds, fuel, and articles required for their production, hereafter in this act called necessaries; to prevent, locally or generally, scarcity, monopolization, hoarding, injurious speculation, manipulations, and private controls, affecting such supply, distribution, and movement; and to establish and maintain governmental control of such necessaries during the war.

Certain enactments are made. It will be observed in this language that the word "necessaries" covers not only food, feed, and fuel, but that it covers the articles required for their production. It requires every cord of wood, every ton of coal, every pound of sheet steel, every bolt, every nut, every pound of pig iron in the yards of every agricultural manufacturing company in this country from the great manufacturing areas of Moline, Ill., in which within the area of 3 miles are manufactured more agricultural implements than in any other point in the world—it would take every one of their productive activities and put them under the head of "necessaries" because no crop can be raised in North America without the very necessary implements which are produced by this manufacturing center. It seizes in its grasp every flouring mill, grain warehouse, cold-storage warehouse, every mill that makes process foods of the grains, packing houses, stockyards, animal-food factories, canneries, evaporating or drying plants, glucose products, and bakeries.

I placed some remarks in the RECORD not many weeks ago showing the methods by which the productive capacity of this manufacturing area had been disturbed by the Council of National Defense. I will not repeat what I said at that time, except to say that those remarks are necessarily connected with the attempts made in this bill to cover the production of foods, feeds, and fuel. "Necessaries," including the raw material out of which they are made, would embrace all the seed supply of this country; would embrace every pound of binding twine; all the forage; and would embrace every hoe, shovel, and every tractor engine in all this country, whether in the hands of the farmer or in the hands of the manufacturer or the agricultural implement dealer.

I am approaching the discussion of this question primarily from the viewpoint of the farmer. For the great grain exchanges of the country, for the various chambers of commerce, and for all the activities related to the collection and distribution of foods, feeds, and fuel I shall occupy no time here to-day. They have been heard at other times and places, in the committee and elsewhere. They will take care of themselves in the due course of events. After this furor is past the main current of normal action will resume its operation. We can but hope the transitory expedients of this character may do a minimum of damage.

I wish to say no more in behalf of the great grain exchange in Chicago. I have not a particle of interest in it. I never bought or sold there a bushel of grain, and I never sold or bought a pound of mess pork or preserved or salted meats on any exchange of the country in my life, and probably never will. I am as free of any personal interest in the affairs of this grain exchange as any Member of the Senate. It is the greatest grain exchange in the world. I took occasion to say not long ago that nearly all of its members were engaged in legitimate business, and that even a greater percentage of its great volume of transactions in the course of a year was entirely legitimate; that there was in it no element of gambling, and there was in it nothing except the legitimate purpose of acting as the great medium of exchange between the producer and the ultimate consumers of this country. It is literally true, therefore, that this bill is one in which we may for the moment set aside in this discussion the interests of all that great intermediary machinery that handles the grain after it leaves the producer and serves as a distributing agency between the farmer and the consumer of his products.

Mr. REED. Mr. President, will the Senator yield to me for a moment, since he has touched on the question of the interest of the farmer, to read a short letter to the Senate?

Mr. SHERMAN. I would be very glad indeed to have the Senator do so, and I yield for that purpose.

Mr. REED. I will say to the Senate that I am in receipt of this letter from a man whom I have never seen. It is written in the handwriting of some one who evidently is a farmer. I desire to read it to the Senate and commend it to the Senate for consideration.

Fall Branch, Tenn.—

Perhaps the Senator from Tennessee may know this man—

DEAR SIR: While they are striving so hard to put the price of foodstuffs down and give Mr. Wilson authority to set the price, please do not let them forget that there are some things just as essential to we farmers, if we feed the world, as the foodstuff is to England, France, etc. Yet we see no signs of the price of what we buy being lowered or reduced. For instance, wheat at $1 used to buy a pair of shoes; now wheat at $2.50 buys a pair. Corn at 50 cents per bushel bought a pair of overalls; now at $1.50 a bushel it pays for one pair. Eggs at 12½ cents per dozen bought 2 pounds and over of sugar; now at 25 cents per dozen they buy 2 pounds. One pound of butter at 10 cents a pound would buy 2 yards of calico; now at 20 cents a pound it buys 2 yards. A calf for $8 would buy a corn planter; now $16 buys the same planter. It is the same way with wire, fertilizer, nails, building materials, and everything we have to buy.

I say it is not fair to make the farmer feed the world at a price that will not even pay his war tax, much less clothe him and his family. If you go at price fixing, go at it right. If you do not, you can not buy what is not to be had. If the workingmen can strike and raise wages, the farmer can and will refuse to work at a dead loss; in fact, he can not. So that is all there is to it. Hoover and our Government in New York City know just about as much about farming as a last year's almanac.

Respectfully,

E. B. PHILLIPS,
Fall Branch, Tenn.

I commend that letter to the Senate as containing more sound sense than anything I have seen on the food question for the last six months.

Mr. SHERMAN. Mr. President, the writer of the letter read by the Senator from Missouri is the same type of man who, in 1622 and 1640, was a farmer in England; he is the same type of man who, in 1215, met with the old priest—Stephen de Langdon at Runnymede—and took from the first John, King of England, the great charter, whose provisions to-day are found in the organic instrument under which we are holding our session. It was the farmers of England who wrote the great charter of 1215; it was the farmers of England, in 1649, who took the first Charles from the throne and beheaded him on the streets of London, after performing all of the formalities that attend the indictment, prosecution, and trial under the forms and guaranties of the civil liberties of England. The men who carried the pikes and the old broadswords with Oliver Cromwell are the same type of men who wrote the letter read by the Senator from Missouri. You can reach them in only one way. I know them. I know their blood, their aspirations, their fearlessness when once aroused. It is beyond the reach of senates, beyond the reach of executives, beyond the reach of any power in mundane affairs except the simple power of justice, and their hearts are always open to that appeal. It is a never-failing avenue of approach. This Tennessee farmer touches the vital spot. Why regulate and fix the price of everything the farmer produces and leave him to shift for himself on everything he has to buy?

I am talking for the farmers, not of my own State but of the great productive areas of the West and Northwest and the whole country. If there is one type of people in this world that I know, it is those who follow the occupation of all the earlier part of my life.

Whence comes this cry for food dictatorship? Who supports it? What powerful agencies undertake to force it through Congress? The ultimate consumer, found in the great centers of population, and Government departments and officials, who see but a single purpose.

Who is the ultimate consumer? As far as the farmer is concerned, it is the nonproducer of his crops. This Senate and that House will pass anything that any labor union indorses and undertakes to thrust through them, right or wrong. I shall not criticize labor unions. Most of them are my friends; but if I never have another friend in organized labor in my life I am going to tell the truth to-day on the floor of the Senate. Labor controls legislation in this administration. It controlled it in the last administration. It is organized; it is militant.

It dictates to Senators. Its thoughts are Senators' thoughts, its acts are Senators' acts with a considerable number who sit in this body.

I do not mean that as a criticism. I am stating it as a fact. Farmers are unorganized. I know of but one State now in which to-day they are a dominant, united, aggressive power. How long they will hold together there no one knows.

There are practically, taking the percentages of increase, 7,000,000 farmers in the United States to-day. There are among them no unions. There is no common aggressive organization. They vote their different political affiliations without following the decree of anybody at the head of a great agricultural federation. Each of them votes according to his previous political affiliations or his present judgment when the issue is presented to him.

These 7,000,000 people affected by this legislation are all food producers, either directly or indirectly. It is proposed by this bill to control every bushel of grain, every pound of meat, every particle of food production of any kind that may come from the fields or the gardens or the truck patches of the United States. It is said in the two sections I have referred to, and which I shall not read, in order to expedite what I have to say, that the farmer is excepted out of its provisions. Let me refer to a single section:

No. 1. To facilitate the movement of foods, feeds, fuels, and articles required for their production, hereafter called necessaries, these powers are given to prevent, locally or generally, scarcity, monopolization, hoarding, injurious speculation, manipulations, and private controls affecting such supply, distribution, and movement.

In section 3 there is provided a governmental control of necessaries, having defined them in the preceding section, section 1, which shall extend to and include all the processes, methods, and activities—I will read the part to which I have direct reference in this comment—of and for the production of necessaries. Leave out all the other verbiage, and this is the backbone of the section that affects the agricultural producer in this country.

Section 3 directly applies to farmers. That language is intended to apply to the farmer, in the production of necessaries. Not only that, but it shall extend to the sale, pledging, and financing of necessaries.

I undertake to say that under section 3 of this bill, after it shall have passed into the statutes of the country, a farmer can not mortgage his land unless subject to the provisions of this act and the actions of the department in Washington. He can make no time lease beyond a mere crop lease. He would be subject to the dictatorial hand of a food controller on the terms of his lease, how the land shall be farmed, and what disposition shall be made of the rental return to the owner of the premises, as well as dictating to the tenant for a term of years, if the lease is made at all, how the land shall be cultivated.

The fantastic thought that some Government employee can supersede 7,000,000 American farmers and direct them successfully to do what they have successfully done is seriously considered nowhere outside of bedlam, Congress, and the executive department.

Do not undertake to argue with me on the language employed in section 3. I know what it means. Unless it and other sections shall be modified, as I see my duty in this body, I shall vote against the entire bill.

From what source comes the clamor for food control outside of governmental circles? From the consumer in cities. I have from the cities a great mass of correspondence from my own and adjoining States. In that correspondence not a solitary producer is heard, not a farmer, but in every instance the man on the pay roll in a great industrial center, the merchant producing nothing, those on the pay rolls of the great carrier systems of Chicago, in the great industrial center of Peoria, Ill., where grain, corn, barley, rye, and even rice are used in the manufacture of distilled and malt liquors—even there we are told by some of the residents of that city that there must be a conservation of food supplies!

What a mighty sarcasm on the economics of the United States, that from the greatest whisky-producing center in the world, that mashes more corn in her distilleries and damns more souls with her beverage products in 12 months than any other place in the civilized world, we are approached with a desire on their part to conserve food products! I replied to those gentlemen, living in the great whisky belt of this continent, advising them to begin at home, and, using the admonition in a certain passage of Scripture, to pluck the beam out of their own eye before they see the mote that is in mine. Let alcohol for industrial, chemical, medical purposes, the arts and sciences, be made, but cease its manufacture for drink.

If an All-Wise Deity keeps books on worldly affairs, I will take my chance in the final audit with anybody that lives that manufactures whisky to be used as a beverage.

I am not a prohibitionist. I am not even a teetotaler. I never professed to be; but I will help bring about the day when even I can not get it myself. I am willing to do without it in order to conserve the food supply while this war is on; I am perfectly willing to do without it after the war is over, because by that time I think I shall be pretty well weaned from any desire for that form of exhilaration. If the ordeal of war shall burn into our understanding the madness of turning grain into whisky, we can afford to pay the price.

This war is no summer holiday. It will not be over by the time the hazel nuts are beginning to break the burr and the pecans are falling on the Wabash River bottoms. It will be here a long time; if we get the conservation of food supplies by stopping the manufacture of intoxicating liquor now, there is no use of any of us to take the pledge. The logic of events will be pledge enough by the time this unhappy difficulty in Europe is over.

The farmer is sought to be, and in the explanation in the hearing before the committee it is said that he is, exempted. I refer now to the hearing on June 19, 1917, in which the future food controller of this country was the principal witness, and gave a very fair account of his understanding of the powers of this bill and its probable operation, assuming that he would be the person charged with the responsibility of executing its various provisions. It was found on examination, and especially by some questions propounded by the junior Senator from Missouri [Mr. REED], that it was intended that this bill should apply to the producers of foodstuffs.

Who are the producers of the 600,000,000 bushels of wheat raised in 1916, of the 2,500,000,000 bushels of corn, of the 200,000,000 bushels of barley, of the 50,000,000 bushels of rye, and the 1,250,000,000 bushels of oats, making the five great primary food grains of the country? Who produces them? Outside of the comparatively small quantity of foodstuffs produced in the truck patches and other market gardens, the orchards, and berry fields, the most of which are perishable in character, all of the foodstuffs of the country are produced by the farmers, who, in round numbers, comprise about 7,000,000 in the United States at this time, with something like 5,500,000, say, of farm laborers who themselves are not engaged as the managers of farms, but are working in that line of production. These men are reached and, it is admitted in the hearing on this bill before the Senate Committee on Agriculture and Forestry, were embraced in its provisions.

Let me read one of these sections.

All such necessaries—

And the word "necessaries" is defined as meaning foods, feeds, and fuels, together with the means of producing them. After that definition the word "necessaries" has a fixed technical meaning in the discussion of this bill—

all such necessaries, processes, methods, and activities are hereby declared to be affected with a public interest.

That declaration does not extend by one paragraph or one process of reasoning any of the undertakings of this country that are affected with a public interest. That is a matter for the supreme judicial tribunal of this country to declare. We might declare that when a person takes fish by hook and line in any of the public water courses of this country where there is no ownership, save reducing the fish to possession, that the fish is affected with a public interest because it does affect the public food supply. Would a legislative declaration in this body extend the list? Certainly not. Whether a given product or occupation is impressed with a public interest depends entirely upon the character of the act, the use to which the merchandise is put, or the means by which it is produced originally, together with the declaration of the Supreme Court that it is affected with such a public interest. They will not, of course, lightly set aside any enactment of ours, but the mere fact that we might be at war will lend nothing to the significance or the scope of this definition. It was argued very forcibly and, I think, with as much power as it is possible for that view to be presented by the very capable junior Senator from Iowa [Mr. KENYON] on yesterday, that the war power would enlarge this definition of merchandise and all occupations affected with a public interest, and would thereby increase the power of the Senate in declaring what property was so subjected to that public interest. I do not so regard it for two reasons. One is that the Supreme Court itself will judge, in the first instance, upon all such legislation of its character in that particular.

Another is that this country is not invaded. It is not even, so far as we know, subjected in any of its territory to the foot of a single invading foe. Outside of domestic treason, there is no public enemy that has yet set foot within our borders.

We do have war powers, it is true, that would more liberally interpret the length to which we can go in legislation than we otherwise could. This must be sought in granted powers and what may be implied as incidental to them. It can not be derived as original power from a mere declaration of war. There is a general provision in the powers vested in Congress by which it is said that we shall have such powers as "shall be necessary and proper for carrying into execution the foregoing powers" granted. The foregoing powers are all enumerated, a specific delegation of powers vested in the Government by those who created the Constitution. Those powers defined what we could do in our legislative actions.

The general enabling power to use incidental means to perform granted powers adds nothing to any specific grant of power. All it does is to give the necessary means reasonable and proper to execute a power already granted. It is a constitutional declaration simply of a rule of interpretation, and that we shall interpret liberally, to say the utmost of it, the power granted and all the incidental powers necessary to make effective a granted power. It can go no further.

It is said there is a declaration of war. Let it be granted. That enlarges no congressional power. It adds nothing to any constitutional power vested in the Senate or the House. It does not give any of the incidental means of executing a granted power we did not already possess. All it has done is to authorize or induce Congress to use more instrumentalities for the purpose of carrying out the declaration of war pursuant to enumerated powers than we otherwise would. It has added nothing to the Constitution. It has not abrogated a single section. It has not broken down a single limitation upon the powers of Congress. It has not enlarged Executive authority by so much as a word. It has neither added to nor subtracted from in a solitary instance any of the powers of the charter under which we are acting here to-day. Therefore under the claim that we have more powers because war has been declared it devolves upon those who make that statement to show where any added powers have been vested in Congress.

Let me follow that up by saying that nothing is more important than the personal rights of the individual in this country. No severer test was ever imposed on free government than during the Civil War. In the military district comprising Indiana there were arrested under the guise of military law and of necessity certain disloyal citizens of that State. They were tried in the camp by martial law. One of them at least was sentenced to death. He sued out a writ of habeas corpus in the Federal court of Indiana. It was supposed that because military law had been declared his conviction by a drumhead court-martial would be sustained. It was not. The courts of Indiana, both State and Federal, were open. Process could be issued and was issued, executions were had upon judgments, decrees were rendered, and all the ordinary procedure in the civil courts was unimpaired. There was no reason because there was some treason in the State to declare that the civil law had been suspended. Acting, however, on the presumption that the country was in a state of war and that Indiana had certain traitors within its borders, they were arrested, tried before a court-martial, and one of them at least was condemned to death as stated. On the petition for a habeas corpus the court used the language that applies at this time. I wish to insert it in the CONGRESSIONAL RECORD:

> The necessities of the service, during the late rebellion, required that the loyal States should be placed within the limits of certain military districts and commanders appointed in them; and, it is urged, that this, in a military sense, constituted them the theater of military operations; and, as in this case, Indiana had been and was again threatened with invasion by the enemy, the occasion was furnished to establish martial law. The conclusion does not follow from the premises. If armies were collected in Indiana, they were to be employed in another locality, where the laws were obstructed and the national authority disputed. On her soil there was no hostile foot; if once invaded, that invasion was at an end, and with it all pretext for martial law. Martial law can not arise from a threatened invasion. The necessity must be actual and present; the invasion real, such as effectually closes the courts and deposes the civil administration.
>
> It is difficult to see how the safety of the country required martial law in Indiana. If any of her citizens were plotting treason, the power of arrest could secure them, until the Government was prepared for their trial, when the courts were open and ready to try them. It was as easy to protect witnesses before a civil as a military tribunal; and as there could be no wish to convict, except on sufficient legal evidence, surely an ordained and established court was better able to judge of this than a military tribunal composed of gentlemen not trained to the profession of the law.
>
> It follows, from what has been said on this subject, that there are occasions when martial rule can be properly applied. If, in foreign invasion or civil war, the courts are actually closed, and it is impossible to administer criminal justice according to law, then, on the theater of active military operations, where war really prevails, there is a necessity to furnish a substitute for the civil authority, thus overthrown, to preserve the safety of the army and society; and as no power is left but the military, it is allowed to govern by martial rule until the laws can have their free course. As necessity creates the rule, so it limits its duration; for, if this Government is continued after the courts are reinstated, it is a gross usurpation of power. Martial rule can never exist where the courts are open, and in the proper and unobstructed exercise of their jurisdiction. It is also confined to the locality of actual war. Because, during the late rebellion it could have been enforced in Virginia, where the national authority was overturned and the courts driven out, it does not follow that it should obtain in Indiana, where that authority was never disputed, and justice was always administered. And so in the case of a foreign invasion, martial rule may become a necessity in one State, when, in another, it would be "mere lawless violence."

It seems to me that fits the present condition. No one claims, Mr. President, that there is any invasion of this country or of any of its Territories. Not even our insular possessions are invaded. No foreign enemy has set foot upon a single shore of the United States in either ocean or on this continent. How, then, can the theory of invasion or a mere state of war be made the ground to enlarge the constitutional powers of this body?

It seems to me like all the claim here in the preliminary section 1, and that is all it is, is declaring that by reason of the existence of a state of war it is essential to the national security and defense for the successful prosecution of the war that all the provisions in its various sections shall be enacted. If that abrogates the Constitution or creates novel war powers beyond its provisions, then we could impanel in the city of Washington a court-martial and try before a military tribunal any offense against any of the laws that are directly or indirectly connected with the prosecution of this war. It makes Congress even subject to the military powers, and Senators could be seized and taken from their seats if this is so.

I undertake to say that a farmer in the grain-producing country of the Northwest, where I come from, could not mortgage, lease, nor even pledge by chattel mortgage any of his personal property raised on the place, connected with the food supply, whether it be grain or live stock, without being subject to the provisions of this bill, because section 3 says:

> That there is hereby established a governmental control of necessaries which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries.

"Necessaries" now have a specific and fixed meaning. It is defined in the first section of the act to comprise food, fuel, and feed, together with the instrumentalities used in the production of any of these three classes of merchandise. When this is done, there is nothing left for a farmer to exercise his individual activity upon. The Government can reach out its hand and lay it upon his plow handle and upon the harness of every horse in all the farming communities where the food supplies of this country are to be raised.

Here is a phrase in the same section on page 3:

> And in carrying out the purposes of this section the President is authorized to enter into any voluntary arrangements or agreements, to use any agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person, to utilize any department or agency of the Government, and to coordinate their activities so as to avoid any preventable loss or duplication of effort or funds.

I have heard that phrase, "coordination of activities," for more than 16 years. I heard a professor of economics in the Chicago University use it the first time 16 years ago this summer. It has been tripping blithely along ever since. It has more sins charged up against it than any other phrase known in the English language. I know of half a dozen State statutes in which the phrase "to coordinate their activities" is used. I can send for the Revised Statutes of Illinois, and I can show you the pharse "coordinate their activities" in three acts at least. I can send for nine bills that have been printed in this body, all using the phrase "to coordinate their activities." I do not know of anybody, not even professors of economics, of whom we could get two of them together and put them down under a shade tree in my part of the country or take them out and turn them loose in the prune belt on the Pacific coast who would agree for five minutes on how to coordinate their activities or anybody else's. To coordinate their activities! That is what the matter is with a person with the St. Vitus dance. He can not coordinate his activities. That is what the matter is with this administration. It never has been able to coordinate its activities from the time it went in, March 4, 1913, down to this afternoon. It began in a state of profound apathy. It frowned on our loaning money in China. It looked askance on buying the allies' securities the first two years of the war. It slumbered for four or five years. Rip Van Winkle has no copyright on being asleep. This administration was asleep when the *Lusitania* went to the bottom and cold-blooded murder was committed, when helpless babes floated in the chill waters of

the North Atlantic, when my neighbors were slaughtered in Mexico by blood-thirsty bandits.

When Belgium's neutrality was outraged, when her men were driven into exile and her women into worse than exile, when the speechless babe died at its mother's bosom, when their works of art of 500 years of European civilization were destroyed, when everything—sacred and profane—sank in blended ruin, when the plighted faith of European nations was broken by the strong hand of the martial German, when treaties were held to be scraps of paper, still the slumber proceeded. Still no voice was raised to avenge the violated neutrality of a helpless people. Hundreds of our fellow citizens went down in the Atlantic in their final sleep. Men, women, and children died. Their expiring wail struck no responsive chord at the head of the executive department of this Republic. Our neutral trade was destroyed; ship after ship of merchandise was submarined and sunk in the free ocean. The neutrality of the United States and her rights to trade at neutral ports were shamelessly violated by some of our present allies. Nearly three years of international outrage proceeded unrebuked and unrevenged.

To go from the sober and the sublimity of human sorrow to the ridiculous, Mr. President, this administration reminds me of a balky horse on the Illinois prairies. Lazy, indifferent, apathetic, unsympathetic, with murder unspeakable, with outrage infinite on sea and on land, suddenly, like that indifferent creature when he wakes up and decides to go, he is the most impulsive animal in the world and does not have ordinary equine sense. There is nothing more dangerous on the face of the earth than an apathetic person averse to a given course of action once he is scared into that action by some fright that he does not well understand.

We have passed from apathy to hysteria; from boundless extravagance to governmental parsimony; from the extremes of individual liberty to a demand for despotism; to food control, fixing the price of a soup bone and a crust of corn bread. Where will it end? Nobody knows. I can make a fair estimate. It will end before a judicial tribunal that, in the absence of an invasion by the enemy, will sit issuing its processes and adjudicating such controversies as properly are before it. That tribunal will decide whether the decision in the Milligan case, which arose in Indiana during the Civil War, is still the law of the land. I anticipate that in some proper form the question will be submitted, whether a mere congressional declaration of war can abrogate the Constitution; can set aside all the ordinary safeguards of person and property, and can, by an immeasurable act like this, throw aside the ordinary restraints upon all that we hold to be the property rights protected by civil government, and make them subject to the caprice of Congress or the dictation of an unbridled Executive.

Mr. JOHNSON of South Dakota. Mr. President——

The PRESIDING OFFICER (Mr. McNARY in the chair). Does the Senator from Illinois yield to the Senator from South Dakota?

Mr. SHERMAN. Yes, sir.

Mr. JOHNSON of South Dakota. I want to ask the Senator if it would not be possible and practicable, instead of fixing the prices of the great packers, the terminal elevators, and people of that character, who sell, to fix a percentage which they might make on the transaction and yet not unfavorably affect the producer?

Mr. SHERMAN. I did not quite get the drift of the Senator's question in regard to fixing prices.

Mr. JOHNSON of South Dakota. The thought I had was that, instead of fixing the prices, about which the Senator from Illinois was speaking, at which necessaries may be sold, whether it would not be practicable to fix a percentage which the storage man might receive, a percentage of cost, and in that way not affect the producer in any manner that I can see?

Mr. SHERMAN. As to that, Mr. President, the only way that prices can be regulated by the Government, or fixed by the Government, would be to say that what would be called "necessaries" should be sold at what the bill calls a guaranteed price. That is neither a maximum nor a minimum price. It might, as the Senator has in mind, be provided that prices to middlemen be on a percentage basis. With wise restrictions, this offers some advantages in contracting on purchases of merchandise.

Mr. FRELINGHUYSEN. Mr. President——

Mr. SHERMAN. I yield to the Senator from New Jersey.

Mr. FRELINGHUYSEN. With the consent of the Senator from Illinois, I send to the desk a letter, but I will ask that its reading be postponed until there are more Senators present. I present the letter simply because it contains many practical thoughts and much valuable information regarding the point of view of the farmer on the food-control bill. I do not desire it to be understood that I have any hostility to the bill in introducing the letter. I ask that the letter lie on the Secretary's desk until it may be read to a full Senate.

The PRESIDING OFFICER. In the absence of objection, it will be so ordered.

Mr. SHERMAN. Mr. President, the inquiry propounded by the Senator from South Dakota [Mr. JOHNSON] relates back to the provision of the bill which fixes what is called a guaranteed price. What is a "guaranteed price"? It is one at which the ultimate consumer will buy and the original producer will receive. How will you get away from it?

Mr. JOHNSON of South Dakota. Mr. President——

Mr. SHERMAN. I will yield to the Senator to answer the question.

Mr. JOHNSON of South Dakota. I do not think the Senator from Illinois understood my question. The question I asked was whether it would not be practicable to fix the price upon which the storage man should sell his commodities or his necessaries at a percentage? In other words, to say to him, "You shall receive a certain per cent of the price of the products, and no more." I am unable to see how that would affect the farmer or the producer in the price which he would get. That was the question which I asked the Senator from Illinois.

Mr. SHERMAN. Mr. President, I still adhere to the statement that I made, that under the guaranteed price it does not make any difference how you affect the man having the article in storage or holding it in quantities which are far in excess of the needs of the individual producer. It does not make any difference about fixing the price at which he shall sell the risk he takes or how long he shall hold in storage before he sells; it does not make a particle of difference if you compel him and commandeer his services or enlist him in the Army and make him collect and distribute foodstuffs for nothing. That will not affect the original producer or the ultimate consumer, except as the Government can make prices. It will not be controlling on this question. Between the man that raises a food article and the one who eats it, there are various intermediate agencies. If those agencies are broken down or prohibited by legislative action—supposing, now, that we have the full power so to do—the only effect of it will be, if we keep up the passage of the article from the producer to the consumer, to substitute a governmental agency in place of the natural agency, which has grown up for 150 years or more in this country. You can substitute, therefore, in place of these collecting and distributing agencies, often referred to as the much-criticized and hated middleman—you can substitute in place of the middleman some form of governmental activity; but when that is done, there is only one escape for the Government. It must either have for the original producer no market or an effective market, or it must take the place of the middleman, and must itself furnish a market for the producer.

Unless that is done you have destroyed the ability of the producer to sell his surplus. That, in turn, would react on the producer, and he would raise no more than enough to feed his own family and to answer his immediate needs. There can be no middleman unless there is a surplus. It is with that surplus we are concerned; it is with that surplus we are trying today to legislate in some way to increase it, to husband it, to make it reach its ultimate destination, so that there shall be as little toll taken out as possible, as little lost motion, as little lost merchandise as may be possible to cover any distribution we may devise. When the distributing mechanism is broken down the Government must substitute its service. It might require, as the Senator from South Dakota [Mr. JOHNSON] has intimated, a percentage basis. This, however, keeps the private distributing agencies. This bill does not ultimately intend this shall be done. It is written in a spirit of hostility to the middleman. Its spirit is to eliminate him.

Mr. KENYON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Iowa?

Mr. SHERMAN. Yes, sir.

Mr. KENYON. Does the Senator think the occasion or emergency might ever arise in our national history when it would be necessary for the Government to step in and be the middleman?

Mr. SHERMAN. I could not think of that, Mr. President, except in case of actual invasion. I am totally opposed, according to my philosophy and experience so far as I have traveled this journey which we call human life, to substituting the Government in place of the middleman.

Mr. KENYON. Suppose, instead of invasion, that there should practically be a revolution in the country on the part of the people who could not secure the things to eat, does the

Senator think that such a circumstance would justify the Government stepping in and being the middleman?

Mr. SHERMAN. No, sir. I will tell you what it would justify——

Mr. KENYON. Not in the case of revolution?

Mr. SHERMAN. It would not.

Mr. KENYON. And the Senator would not favor that even to stop revolution?

Mr. SHERMAN. No, sir; I would not. I will accept the full responsibility of the logic of my understanding of it. I would commandeer, if I had the power, every one who was in civil commotion, I would send him to the field, put him to work, and give him sustenance for himself and family as long as he rendered service. If he would not render service I would commandeer him and make him render it involuntarily, as I believe a convict ought to be treated who has a family—taken to a penal institution and made to work, and part of the proceeds of his labor turned over to his family where they are dependent upon him for support.

Mr. KENYON. If a majority of the people were in this state of commotion of which the Senator speaks, how would he commandeer them?

Mr. SHERMAN. I would get, first, 7,000,000 farmers and 5,000,000 farm laborers, and I would give them to understand that here were gentlemen who persisted in living in cities, who would not move to the country, who further persisted in three meals a day, and would not work in a field to earn them—that is the way I talk to my farmer friends—and they would meet your mob with pitchforks and bulldogs. That is what would happen.

I know what is the matter with this country. I am not a dealer in empirics, but I know what is the matter with this country. There are too many consumers and too few producers. I have seen the drift for more than 25 years. I am going to wind up on a farm; I am going to "hit the back trail" and go to where I came from. The population of the city of Chicago is drawn from every State in the Union. I am going to take that city as a horrible example, for I have more detailed information concerning it than of any other of the large cities of the country. Chicago is the second largest city on the Western Hemisphere. No other city, except New York, has within its limits more population, and they are all "ultimate consumers." Outside of a few detached, isolated cabbage patches in Cook County there is not anything raised there to feed the people. All food comes from the outside, all the way from the State of the Senator from Iowa, where the Hawkeye farmer contributes meats and breadstuffs to support that city; from the wheat fields of the Northwest; from all the western and northwestern sections clear out to the Pacific coast, from which we bring hops to brew beer and prunes to supply the boarding houses of Chicago. I have not heard of any riots in the prune belt, but I have heard during the season, when the Industrial Workers of the World were endeavoring to reorganize human society in the hop fields on the Pacific coast, of some difficulties in that immediate locality. The trouble was suppressed, however, by the local authorities.

But to return to Chicago. In that city there are in the neighborhood of 3,000,000 people, and scarcely a producer amongst them, except out in the suburbs, where a retired farmer has come to live after having put some of the boys or a tenant on his farm and moved into the city. There is not a producer who lives inside of the city limits. New York is in the same condition, as are Boston, Philadelphia, Pittsburgh, Kansas City, St. Louis, Mo., and all the largest centers of population. According to the census returns, a majority of the population of our 100,000,000 people live inside the corporate limits of municipalities. They drifted away from the plow handle; and that has been the drift for two censuses periods. I have looked at the reports for the decennial census period, beginning with 1890 and including 1900 and 1910, and in the last two periods the drift to the cities has been especially marked. That takes in the last 20 years preceding 1910.

What is happening to the country? We are in the same condition that Imperial Rome was before its fall. We do not realize that; we do not realize it as the historian will who may have the melancholy task of writing of our decline and fall, as Gibbon wrote of the great Latin Republic. We do not realize that our rural population is passing away. Go into the corn belt in my State. A very decided preponderance of the 6,000,000 people of Illinois once lived outside of the cities; but to-day, if a census were taken, a majority of that 6,000,000 would be found to be living inside of Chicago, Peoria, Springfield, Quincy, Decatur, and the remainder of the larger towns, including East St. Louis. The acreage and the holdings of individual holders of farm land has increased. When Sam Allerton died he had 4,000 acres of corn land down in central Illinois, the largest part of it being in Piatt County. There are many other large holdings of land throughout the State. The original owners, who held the land from pioneer days having died, some of the sons have bought out the others, and the remainder of the family has moved West. The holdings are consolidated; the lands have increased in value; and those who have not moved West to get more land and cheaper land, have moved to the cities. Some are engineers, some are motormen on street cars, some in machine shops, mercantile pursuits, and so on. I know the history of hundreds of the farmer boys who have left the fields of Illinois.

What has happened there on a limited scale has happened on a gigantic scale in the New England States. The New England States are no longer self-supporting. If outside food supplies were withdrawn from New England and the Middle States to-day, they would be in the clutch of famine inside of 10 days. They must draw their foodstuffs from the outside world, and especially from the West and Northwestern section. In that great drift of population, which has been going on now for more than 20 years, the large families have split up and moved away, sold their lands, drifted to the city, and there remains but a single holder of a thousand acres where before there were six or eight holders, farming each of them individually, and living with their families on their acres.

How long that can continue, I do not know; but I do know there is no remedy for that condition in such a bill as this. When we speak of possible food riots, when we speak of civil revolution as a result of famine, we are urged to have the Government prevent it. Why, that is like a man with blood poison going to a surgeon and asking him to remove a joint because the poison has broken out at that joint. The treatment must be constitutional and radical. It must begin further back. We are treating a symptom here in this bill. We ought to treat the disease. This bill is a mere makeshift. It possesses none of the elements of statesmanship. There is in it no profound philosophical study of the underlying causes that make production possible and ward off famine from the great city populations. If the people of cities must indulge in a riot they will gain nothing by it. If they will help raise food they will apply a remedy.

The cities have drawn from this country generally until they can number in the census reports a majority of our 100,000,000 population. Let me make one prediction. We may criticize the German. I dislike his Government. I dislike his Kaiser. I dislike the governing heads about him who give him advice. They are brutal; they are conscienceless; they are cruel; they have no God but war; they have no standard but success; they have no method of warfare but unrestrained murder, stopping at no limitation with men, women, children, the sanctity of the household, or infancy in the cradle. That is their Government. That is the embodied form of Prussianism. It is a barbaric relic of the dark ages, and Germany's government is Prussian government. It is not a government of the mild and gentle nature of the Bavarian, of the Saxon, of the Westphalian. It is not a government of any of the races or Provinces of Germany who before this war began, and especially in former years, sent of their teeming population to our Republic. But in this country the only nationals that are increasing their holdings of farm lands are the Germans from the German Provinces of Alsace and Lorraine, who speak the German language, but are of French blood and French habits of thought. Those are all found in the western country. They are found in my own country.

If I go from the city of Chicago, from the Ghetto and from the Bohemian wards, with the various dialects of Austria, down into the country, I will find 27 races inside my own State. I know them, their racial characteristics, their peculiarities, their faults, their virtues, and their strength. The German and the Scandinavian are the farmers of the United States to-day. The German is the producer on the farm, and with those from the Scandinavian Peninsula they are the great strains of alien blood that will produce the meats and the breadstuffs of our country in the years to come unless there is a change, and a radical change, and a drift from the city back to the farm, where we can produce by those of English descent or those that are entirely American in their habits of thought and daily life these necessaries that are sought to be covered by this bill.

The German is of large family. They obey the scriptural admonition to replenish the earth, and they are replenishing it at a rapid gait. The family continues. The home ties are stronger than among the average of our own population of long native habits, or descended from the original English stock. I can go to a German settlement in the old counties in southern Illinois where I used to live; I can count an entire township

where there are but three Americans, as we call them, or those of English descent, to be found. I can count in a township the families of the Germans, and in none of them are there fewer than five children. It seems, too, that the good Lord, having some hand in our mundane affairs, makes a majority of most German families boys. They are raising the foods of the country. Next to them the Scandinavian goes to the farm in larger proportions than anybody else.

The Irish come here in large numbers, and they all go into the police departments. They are maintaining order. They are the police force of the world. In Cape Town, Africa, you will find somebody that has kissed the blarney stone and has a very broad brogue. The last time I went through East St. Louis, getting over to the city on the other side that is trying to put our governor and the rest of our city officials in jail, I stopped a moment, and a policeman at the relay station on this side of the river was an Irishman. Why, it is an exception to find an Irishman raising corn in the corn belt. You see them in Peoria occasionally, mostly on the police force there, sometimes working in private pursuits. These people of alien origin are the ones that have more to do in solving the problem in this bill than all the puny legislation that can be invented. All the fiats of Congress, all the proclamations of the President, will be but sounding brass and tinkling cymbals—to fall into scriptural phrase—in the great finish of this economic question.

If I return to the very pertinent question or suggestion of the junior Senator from Iowa [Mr. KENYON] about food roits, I remember that they happened in the French Revolution. I remember that they happened in the time of Jack Cade, of whom the great dramatist gives an account. Jack Cade said that he would put five hoops on a barrel of beer instead of three and sell it for less money. He said further, in a conference of his fellows—and there are some things in the report of the hearing of this committee that sound a good deal like it—"Away with the laws of the realm! My mouth shall be the parliament of England." That is what this bill is for. It is to make the mouth of the President the parliament of this Republic; and while the hand is the hand of the Executive, apparently, the voice will be the voice of Hoover when the bill is passed and is in lusty operation.

How will we prevent riots and food disturbances? Raise more food. First, I want to say that there is more scare than there is hurt; there is more cry than there is wool in the shearing of this sheep. We are not as badly off as we think we are. When wheat reached $3 or $2.97 on the board of trade of Chicago in May if there had been any box cars available it would have surprised the "longs" on wheat to see the surplus wheat that would have rolled in, all the way from the Platte River country out in Nebraska to the uttermost limits of the wheat belt of the North. If there had been box cars available, they would have brought the visible supply of wheat into Chicago. That was the trouble. They wanted to let loose their surplus wheat, and they could not find any transportation to get it into the market. I alluded to that upon another occasion in commenting on another bill here several weeks ago.

The wheat is there, but a beneficent Council of National Defense have commandeered all the freight cars for coal, iron, and steel and for building a fleet of steel or wooden ships—I have forgotten what it was, now—and you could not get any box cars to carry the food products into Chicago to get the advantage of this price. It was the $2.97 a bushel on wheat that loosened it from the farmers' bins.

It is said that we do not intend here to interfere with production, to interfere with the farmer in any way; it is only that we must prevent food riots. Now, who is going to produce the food riot? The men without food in the great centers of population, presumably in Chicago, New York, Boston, and Philadelphia. Well, what are they going to riot about? Because they have not anything to eat. What will they do? Suppose the civil authorities are overcome. They will take all the food that is accessible. They will break into the cold-storage warehouses, into the grain warehouses, into all the places where packed and preserved meats are stored, into all the wholesale or jobbing and retail grocery houses where the supplies for their customers are drawn from. They will loot all the retail shops, and they will gratify their appetites for food. All right. Let that be done. I am not defending those people. I am not an inhabitant, except by force of circumstances, of a large city. I am naturally a disciple of the soil. I belong among the farmers, and when I get upon the grain exchange or around the curbstone in a large city, it is only because I must go there. I do not belong there. I am an alien in any large city. I am naturally a countryman, and a "rube" at that. I have bought no gold bricks. I have been accused of selling them, but they never induced me to invest in them.

After you have looted all the food supplies in Chicago—and I am not representing nor arguing for the cold-storage man, for the grain warehouseman, for the jobber, for the retailer, for anybody that is the collector and acts as the middleman in reaching the ultimate consumer—after you have done all that, what is left? You have nothing but a curbstone and empty houses and hungry people. What do you do next? Move out in the country. All right. I have no objection to that. I think that is a good cure. But when the dweller in cities reaches the country he must become a producer or his last condition will be as bad as the first. The only thing in the world that can be done, Mr. President, when a hungry mobs gets tired of looting a city, and there is nothing more to take or break into or steal or take away or eat, is to spread them out over the soil. It is a disinfectant, anyhow. If a population has piled up on itself, as Thomas Jefferson said in one of his letters, until it has become lawless and can not support itself, let the population spread out over the rural districts and go to work with their hands.

That is what is the matter in this country, anyhow. It is not quite so aristocratic, it does not look quite so nice nor sound so well to pull a hoe handle, to work a tractor engine, or to hold on to a pitchfork or a plow. You ask what a fellow is. "He is a farmer." You city dwellers lose interest in him right away. He is just a farmer. You want to riot to get the bread he raises for you, but you go away from him and begin to talk about somebody that is a master of finance, or some of the fellows that are controlling boards of trade—horrible object lessons. They are the people that everybody in the city wants to be. Now, naturally, we are not jealous of the millionaire. We do not want to kill him. All we really mean is that we want what he has got. That is the reason he is pointed out as a horrible example.

After you have eaten up everything in the city and pulled down the warehouses and destroyed the cold-storage people, after you have looted the board of trade and have driven its 1,600 members into exile, or given them a Government job at $1 a year—after you have done all that and have eaten up everything in Chicago, she would eat herself empty in three days if inbound shipments stopped. They do not raise anything. It is of no use to cultivate a vacant lot there. It is a good deal like it is in Washington. As soon as the product is fit to eat somebody steals it at night. That is what they are kicking about now up in my part of town. All the vacant lots are filled with onions and cabbages and things of that kind, and they went and even stole the seed out of the ground before it came up on the next lot to me. They were a little previous; that was all. It is a good thing to talk about the early bird getting the worm, but those early birds got the seed potatoes.

After they have done all that, Mr. President, and eaten up everything in the city, where will they go? Out in the country. Well, the sooner they go there the better. That is what is the matter. A man can not live on a cobblestone. It produces nothing edible or nourishing. The board of trade down at the foot of La Salle Street is nothing under the sun but a distributing agency. Those men can live. Out of the 1,632 men, I think I know personally 1,000 of them. Some of them were farmers when I was a farmer. Some of them bought grain in a local elevator at the crossroads and then afterwards went to Chicago and became grain dealers. They belong to this hated class. They only buy grain, not on their own account, 95 out of 100 of them, as I said one day; they buy for somebody else—the miller or the exporter.

But after that is all done, after they have consumed and taken away everything there is in the large centers of population, what are they going to do? They have to raise some more. Who will raise it? That is what is the matter now. People are not going to the farm; they are not raising enough to feed a hundred million people. That is where the trouble begins. What we need here is not a food dictator, we need a farm-labor dictator. As I have said on several occasions, all my people are farmers. I know something of their trouble in getting labor. What they want is not a guaranteed price named in this bill, they want a guaranteed farm hand who will stick to the job, and that is what they can not get.

I will tell you what is the matter with this country now, Mr. President. There are too many aristocrats. I do not mean it in any offensive sense, but there are too many men who do not like to be seen with a dirty shirt and with callous places on the palms of their hands. They do not like to work on a farm. The hours are long. There are no heroics in it. We are suffering as ancient, decayed, and extinct races suffered. Their fields were untilled, their orchards were uncared for, their food sup-

plies, their oranges, their fruits, their grain products in such ancient and favored countries went to neglect and their population gathered in the large city. That was the beginning of their fall. The Dark Ages were ushered in when a majority of the Roman people were found in her great cities. They had perfumed baths, they had personal-service attendants, they had gladiator and animal fights galore. All the amusements of an effete population were found there, and I can find most of them in Chicago or New York any day, in spite of the reform wave that has swept over both those cities. I think I can go with any good member of Tammany and I can find all the amusements, legitimate and illegitimate, I want in New York, and I know I can in Chicago. The population gathers there; they stay there. If a food riot comes it will come in the large cities, and I am not sure but that, like a malignant carbuncle, the sooner it comes to a head the better, and let civil authority thrust a probe into it and perform a major operation that will remove the ever present, underlying cause. When they can not eat they will leave the city and go out to the original sources of food. That is the source of the trouble in this country now. It is not the grain exchanges. It is not the alleged greedy middleman. It is the fact that to-day the first production cost of all the articles of food has gone up and has kept pace with the price of land and fewer actual producers. It is reflected in higher prices. It would have happened even if war had not come to a troubled world. The war has merely hastened and aggravated it.

There is section 6 on page 6, which provides—

That any person who willfully hoards any necessaries—

Using this word now that has a fixed legal meaning in this bill if it should be passed—

That any person who willfully hoards any necessaries shall upon conviction thereof be fined not exceeding—

So much money and jail penalties. There is a proviso in this section—

That any accumulating or withholding by any farmer, gardener, or any other person, of the product of any farm, garden, or other land owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

Apparently that excepts the original producer of foodstuffs from the penalties of this section. It does except him from any penal liability, but if it be taken with section 3, and there is an established and governmental control of necessaries which shall extend to the production and sale of necessaries, you have complete Government control of the farmer. There is no escape from this provision. So section 6 with its proviso on page 7 is to be read and interpreted with section 3, which does include a farmer, although exempting him from penal liabilities within the provisions of section 3.

There are many ways in which a farmer can be affected without sending him to jail. If the market be controlled by a guaranteed price, if a guaranteed price be made, and that is what is contemplated in this bill, it will affect the surplus of every pound of meat and every bushel of grain that a farmer has to sell.

If we go on with this in section 9 on page 8:

That to carry into effect the purposes of this act the President is authorized to purchase, provide for the production or manufacture of necessaries; to store them and to provide storage facilities for them by construction, purchase, lease or otherwise; to sell them; and to require any person having the control of any necessaries * * * to furnish the whole—

I am omitting certain parts that are not material and taking the substance of the section where it affects the farmer—

to furnish the whole or any part of such necessaries or storage space to the Government in such quantities, at such times, and at such prices as shall be determined by the President to be reasonable.

There is a direct control of any surplus that the farmer has not needed to support his own family or for seeding next year's crop. It is concealed in a great mass of verbiage it is true, but nevertheless it is there.

That to carry into effect the purposes of this act the President is authorized to purchase, provide for the production or manufacture of necessaries, to store them, and to provide storage facilities—

How? By purchase. From whom? From any person having the control of any necessaries. By requiring such person "to furnish the whole or any part of such necessaries or storage space to the Government in such quantities, at such times, and at such prices as shall be determined by the President to be reasonable." Suppose one of my farmer constituents has a thousand bushels of wheat. He has a family of five. It will require with Government-fixed rations about so much to maintain the family until another crop is raised. Making reasonable allowances for seed wheat, all the rest of the thousand bushels is subject to the orders of the Government. It is said that the farmer is excepted out in the other two sections, but he is not excepted out in section 9.

In the hearing before the committee Mr. Hoover is specifically asked about that by the junior Senator from Missouri [Mr. REED], and without reading it my recollection is that he answers it in effect by admitting that a Government agent may do this: A Government agent may go into the farmer's place into the bin where his barley, wheat, rye, or oats are stored, may take a census of his family, put him on rations, on breadstuffs, inquire from him how much he intends to seed for the next year, and then, under the power of section 9, he can commandeer and take every bushel away above the requirement estimated by the Government agent. When can that be done? After a hostile fleet lands an invading force on our shores? No. After we are conquered? No. After any part of our territory is subjected to the warlike forces of a public enemy? No. Any time after the President approves this bill. If within a week he has affixed his signature, the next day Mr. Hoover can send to the farmers of North Dakota or the farmers of Illinois an agent to make an estimate of their grain and compel the rest of it to be sold. At what price? At a market price? No; at a guaranteed price, as it is called in another section of the bill, of the surplus grain.

Mr. KENYON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Iowa?

Mr. SHERMAN. Yes, sir; I do.

Mr. KENYON. I do not know where the Senator gets the information as to Mr. Hoover making that statement.

Mr. SHERMAN. It is in the hearing some place. I will point it out to the Senator.

Mr. KENYON. If the Senator will turn to page 26, which, I think, covers that section, he will find that Mr. Hoover said that there was no intention of that kind in the whole legislation. There are other places on that page where it might possibly appear he thought such power would have to be used at some time, but said there is no such intention in the legislation, and I am sure——

Mr. SHERMAN. Does the Senator move to strike that out?

Mr. KENYON. I have offered an amendment on that very question to make it clear. I do not think anybody is for any such proposition as that.

Mr. SHERMAN. Mr. Hoover uses this language:

Senator REED. To buy and sell in the market——

Mr. KENYON. Where is the Senator reading?

Mr. SHERMAN. On page 26. It is three or four paragraphs from the top down, just below an answer by Mr. Hoover.

Senator REED. To buy and sell in the market; but this goes further than that; it is the right to take in the market. What do you say about that, Mr. Hoover—giving authority to take the farmer's crop from his crib, from his bin, or from his house?

Mr. HOOVER. So far as I am concerned, I would not attempt to execute that provision.

Senator REED. If you would not attempt to execute it, it would be a useless thing.

Senator KENYON. It is not the theory of this bill.

Then, I presume, the Senator offered on that idea, carrying out his good faith in the matter, this proposed amendment. I very greatly hope that that amendment will be adopted.

Mr. KENYON. Will the Senator read on just a few paragraphs?

Mr. SHERMAN. All right; I will read on.

Mr. HOOVER. So far as our present situation appears; we might drift into a situation any time during the winter when it might be vitally necessary.

Senator REED. But there would be time for action then, would there not?

Mr. HOOVER. Yes, sir.

Senator REED. I want to know if you affirm or deny it?

Mr. HOOVER. In discussing section 11, I think it was—the section relating to the taking over of manufactures, etc.— I made the statement that we did not propose to requisition materials. We may need the right—we may possibly have to have the right—to requisition storage space.

The CHAIRMAN. But you do not contemplate any extremity, under any circumstances, which would lead you to insist upon the power to take wheat out of a farmer's barn that he had produced?

Mr. HOOVER. No, no; there is no intention of that kind in the whole legislation.

Mr. KENYON. That is the point I wanted to bring out.

Mr. SHERMAN. It will be noted though that he does not deny that the bill as it stands at the present time contains the power which might be applied in that way, and it is admitted.

Mr. KENYON. There is not a bit of doubt but what it does. I think section 9 contains that power now, but section 9 ought to be changed, because I think there is no one in favor of giving that power. That illustrates the value of discussion here.

Mr. SHERMAN. I am very glad the Senator interpolated this explanation. I am glad to have it, indeed, because I agree with him on that. While we are talking about food riots I anticipate that if you went out to the habitat of a farmer who had five or six hundred bushels of barley or wheat that he did not want to sell, and the Government agent undertook to

requisition that under present conditions, there would be a different kind of a riot. It would not be exactly a food riot; it would be a riot composed of agriculturists, bulldogs, pitchforks, and several ladies of the household all mingled together in one indiscriminate fray, because the farmer is great individually. He lives much apart from large multitudes, is very much given to reflection while working by himself, and I am inclined to think he might resent, even at the hands of a Government agent with all its great penalties, any such interference on his property right. Even though it were undertaken to be guaranteed here by an act of Congress, he takes the consequence. I think he would about as leave spend his time in jail as to have his property taken away from him and nothing but a certificate given him that some time the Government would pay what it agreed to pay here in Washington, and then if there is anything above that it would have to be submitted to a lawsuit some time in the future, that would be reached like some of the rest of the war claims that arose in 1865—52 years ago—some of which are just being settled now. The farmer does not want to invest in futures of that kind. But the provision is written that way.

Let me call the attention of Senators present here to what will happen to many of these things that are admitted to be objectionable. It will go through this body, and the House passes it in its entire form, known as the Lever bill. The differences will be sharply drawn between the bill as passed by the House and the bill as amended and passed here. A conference committee in due course will be appointed. The purpose of a conference committee, of course, is to confer. That is the parliamentary supposition. They do much more than confer, because the conference committee really legislates. The most important legislation takes place on matters of difference between the two bodies of Congress and comes from a conference committee. So it will be settled there finally. It comes back here. We must vote against the entire bill or we have got to support it with whatever is objectionable in it in order to get what good might possibly remain.

To the license feature I have no objection. If the President wants to license everybody, including the farmer, I have no objection to it. I do not think the farmer will pay very much attention to it. By the time licenses are issued to some 7,000,000 farmers the department would have considerable clerical work.

Mr. KENYON. The Senator has, perhaps, overlooked the proviso of the licensing section on page 6. It does not apply to farmers nor does it apply to retailers. I wonder what the Senator's view is as to licensing the retailer or omitting the retailer from the bill.

Mr. SHERMAN. Then, as the Senator has called attention to the proviso, it would leave only the middleman?

Mr. KENYON. Yes.

Mr. SHERMAN. Then let it go at that. The producers, however, if the open or unrestricted market remains, would sell in a market in which only licensed middlemen were the purchasers, and the farmer is just as bad off as if he had to have a license himself. Let me control the market in which the farmer sells his surplus and I do not care anything about the farmer's right to produce. It is the right to sell in the market. The only right he has is to go and get what he is offered, subject to this guaranteed price, providing the Government exterminates all the middlemen and takes the middleman's place. It will have to stop the grain exchanges, every commission man, every factor of meat and breadstuffs, and substitute Government employees. All the vast machinery that has been built up through the years will be eliminated, and in place of those men who, of course, can not be trusted, we shall have to appoint somebody who is certified by the Civil Service Commission; they are infallible, omniscient.

Mr. KENYON. I do not want to interrupt the Senator to take up unnecessary time, but I am interested in the discussion, and I have been very much interested in what the Senator has said because he has such clear notions about these matters. Take the thousand bushels of wheat and trace it down through under this provision. Does the Senator think it would not fix the price to the farmer if an arrangement of this kind was made under the licensing section?

Mr. SHERMAN. A guaranteed price?

Mr. KENYON. I am not talking about a guaranteed price now, but under the licensing section, to the elevator man he says your profit can not be any more than so much per cent, 10 per cent to illustrate, or 6 per cent, then to the miller your profit shall not be over 6 per cent or 10 per cent, not saying how much they shall pay the farmer. It makes no difference what they pay the farmer, the intention is, as I understand it, to limit the profits of the middleman. Now, will that reflect back and fix the price for the farmer?

Mr. SHERMAN. Certainly.

Mr. KENYON. I am interested in knowing how the Senator reasons that out. I am not clear in my mind about it.

Mr. SHERMAN. I will be very glad to state it. One of two things must result. Either the distributing agency that is summarized here under the name of "middleman" must remain or he must be exterminated and the Government must substitute itself and undertake the collection and distribution of surplus grain supplies or foodstuffs. Suppose the middleman is allowed, together with all his mechanism, to remain. It will fix his profits at 10 per cent, I understand, though in that event there is to be no price fixed by the Government except what it buys for Government supplies. In other words, it is a free or an unrestricted market, with the middleman having a percentage basis of profit. That is the supposed condition. Now, let us see how it will work out as it affects the farmer, with his surplus grain. The middleman is said to have fixed for him 10 per cent as his legitimate profit. The price of a bushel of barley that the malster is to use is fixed by the demand on the market. The Government is not yet price fixing under this condition. That price must necessarily go up or down according to the demand or supply, obeying the natural laws of trade. If the Government fixes his profit at 10 per cent and the price goes up, the farmer will get more. If it goes down, he will get less. But the 10 per cent is an invariable fixed margin of profit, and it may in some instances be grossly unreasonable. I know many actual deals which I have investigated running into a considerable volume of grain where the margin of profit was not 10 per cent, but was a fraction of 1 per cent in some transactions. I assume now the Government is buying grain in large quantities and that some factor or commission men would sell to the Government, furnishing their service for such compensation as they would get out of the 10 per cent. They would sell in large amounts. The larger the volume of the transaction the smaller the percentage of profit, necessarily. The higher the market price the more the middleman's profit. It is 10 per cent on principal. It can all be done in one trade, in one day's work, with one set of books kept, with one transaction. The smaller relatively the volume of the transaction the more the broker's commission would rise until it reached the limit of 10 per cent. That is a schedule of charges with a 10 per cent maximum limit. It will fluctuate just the same, except there is a maximum limit of 10 per cent of profit to the middleman. The only effect of that would be at times to limit the price that the producer gets for his surplus. If the commission man can only get 10 per cent for his profit, and that is not enough to pay him for his trouble, he is going to bid down to the farmer for the surplus the latter has to sell. The middleman's 10 per cent profit is on the sale to the Government or a consumer who will be meditating a bread riot. It is not on the price to the farmer. The Government so far has not undertaken to fix the price to the farmer when he goes to the elevator man at his village to sell his grain, and the latter in turn is governed by prices quoted to him that morning or received by telephone from the grain center, where eventually this surplus goes. So 10 per cent is a fixed limit, and when it is insufficient compensation the commission man will bid down to the bushel to the farmer.

You can not get away from it. Where there is a limit on the profit in selling to the consumer and no fixing of the price of the article when it is sold by the bushel or measure a mere fixing of the profit of the middleman does not control the price or the market. Neither does it help the farmer. Nowhere in this bill is there a thought for the farmer except he is not sent to jail.

Mr. KELLOGG. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Minnesota?

Mr. SHERMAN. I yield.

Mr. KELLOGG. Is it not a fact that this bill, together with the embargo clause in the espionage act, will give the Government absolute power to fix the prices? Let me invite the Senator's attention, first, to the embargo act, which enables the President to place an embargo on all exports. He may say to all purchasing foreign countries "you must buy through the Government here or not ship at all." Under section 5 also the Government can license all elevators, farmers' elevators, mills, or concerns handling grain and fix the terms and the conditions under which they shall do business, and fix the charges therefor. If that will not accomplish it, may not the Government under section 9 say to the elevators, mills, and farmers' elevators if you pay more or less than a certain price the Govern-

ment will purchase, store, and handle these products itself? Will it be possible for anbody to pay any other and a different price than the Government has to fix? I should like to get the Senator's views upon that subject.

Mr. SHERMAN. Mr. President, that is a part of this discussion. After I pass from the question of the open and the unrestricted market as to the producer and the consumer to a restricted compensation for the middleman, when we leave that as being insufficient for the purposes in view, then we must pass to another condition of doing business. That will be the second status of the food supplies, their production, and distribution in this country. The middleman in that event will be legislated out of business, or by a proclamation of the President will be retired from further business. The Government then, through its agencies provided for in the bill, will substitute the Government in place of this intermediate mechanism of distribution that stands now between the producer and the ultimate consumer.

Mr. KELLOGG. Mr. President——

Mr. SHERMAN. I yield to the Senator.

Mr. KELLOGG. I did not mean to say that that was the proper construction, or that that in substance is the bill. I asked the Senator his opinion on that question. That is all I intended.

Mr. SHERMAN. That will be the second condition in the event the middlemen are by the President eliminated from any agency in the food supply of the country. Let us take that feature of it. That necessarily connects itself with the guaranteed price by the Government.

Just as soon as the Government has taken the responsibility of collecting and distributing the grain or has eliminated the middleman, the only thing left is for the Government to fix a guaranteed price for the farmer and to take from him as the original producer his surplus. There will then be no middleman. The only thing the middleman does now is to take up the surplus in the days when the market is slack and the price may not be attractive unless it can be held for the future. A large surplus is a condition of a low-price market. Somebody must always turn some of his product into money, perhaps, for his various needs. So, when the market is low the middleman accumulates and holds in the hope of a more remunerative future market. Under the second condition he is out, and nobody remains except the Government as the purchaser. The Government has now taken over all of the powers and duties of the middleman.

Then we come to the following section, section 12 in the bill, which is to be interpreted alongside of section 9. I will first read the section and comment on it afterwards:

SEC. 12. That whenever the President shall find that an emergency exists requiring stimulation of production and that it is essential that the producers of any nonperishable agricultural products produced within the United States shall have the benefits of the guaranty provided for in this section in order to stimulate production of such products, he is authorized, from time to time, seasonably and as far in advance of seeding time as practicable, to determine and fix and to give public notice of what, under specified conditions, is a reasonable guaranteed price for any such products, in order to assure such producers a reasonable profit.

The Government now substitutes itself for the middleman. Let me put it in this way: In 1915, of the five primary food grains of the world, there were produced 15,000,000,000 bushels—corn, wheat, oats, rye, and barley. If you take those out of the food market, there would not be anything left for breadstuffs in any form that would be worth mentioning. In 1916 following, the total produced of the five grains named was 10,000,000,000 bushels in the known civilized world. They were 33⅓ per cent short. In 1912 there was the largest production of food grains known. It likely reached the maximum since men have kept records of grain production. That was the year when we produced 3,100,000,000 bushels of corn in the United States alone, and reached the maximum of over 1,000,000,000 bushels of wheat produced, thrashed out, and accounted for.

The production of barley and rye and oats went up to something like similar proportions. The market price fell under the influence of a large visible surplus. Naturally, when 1916 came along, with one-third of that surplus cut off, it led to a change in market conditions. When the surplus was here in 1912, say, the middleman loaded up with the surplus at the best low price he could get; he carried that just as the cold storage man may carry now perishable products—because section 12 refers to the nonperishable products.

What I have to say now refers to matters of merchandise that can be carried over indefinitely from year to year if they are kept in proper surroundings. The middleman now carries a surplus under the conditions named. In 1916 he carried the surplus of the short crop year. Various causes—I shall not stop to enumerate them—some climatic, some entirely had their origin in war, but, at any rate, there was a short production. The middleman in the years of large surplus carried that surplus and held it until it reached the ultimate consumer. He held it at his own risk. That risk turned out disastrously to many dealers, and many fortunes were lost, large and small, in 1912. It was a bountiful year, and those who accumulated lines of surplus, carrying over, hoping for a rising market, were disappointed; they lost.

Now, you come to a guaranteed price. In 1916, with one-third of the production of the year in food grain short, the price naturally rose. Wherever there was a surplus to be found on a market, the middleman had accumulated that line of surplus; he held it; and now he is taking the benefit of a rising market. As to those who weathered the storms of 1912 and emerged without bankruptcy over into 1916—the good year of 1916—the rising market no more than compensated them for the loss of the bad year of 1912 on a falling market.

What is proposed now under this bill? It may last one year or it may last five years. Who can tell—no human intelligence—what will happen under section 12, with a guaranteed price and with purchases by the Government?

We hear of the successful speculator; we hear of the man who makes money; but there are no tears shed for the bankrupt, for the one who loses his all. I never heard anybody even on the board of trade cry about the trader who lost his fortune because he loaded up on a long supply.

Naturally the Government takes that place; the Government now undertakes to accumulate the surplus line of foodstuffs, and not only that, but meats—because they are included; and it only adds to the gravity of the problem—the Government must carry all the surplus lines under the guaranteed price.

Who will fix the price? Hoover. Who will tell Hoover? Nobody but Hoover. He is to evolve that out of his inner consciousness. I never met Mr. Hoover; I certainly can have no prejudice against him; but Mr. Hoover is by this bill required to perform superhuman duties. Mr. Hoover and no other living man can perform those duties with justice to the Government and to private interests. Mr. Hoover is no demigod; he is not vested with extraordinary human capabilities; he is but a mere man of flesh and blood, subject to the same errors and imperfections as the rest of us are.

On a sign facing visitors entering Mr. Hoover's office is the following pious legend: "To hell with yesterday. This is to-day." This is to reassure ladies with nerves not to think about the past. A man that can not think about yesterday will not think about to-morrow. I am thinking of both to-morrow and to-day. Yesterday does not interest me except for its experience and its lessons. "To hell" with experience and the future is the slogan of the new school of government. Just give it unlimited power and watch it perform. Congress never needed to retain its power more than now. The joint resolution of the junior Senator from Massachusetts [Mr. WEEKS] on the control of the war never had a stronger reason for its passage than this bill and the persons behind it. There is no to-morrow in their scheme of life or government.

Where will Mr. Hoover get his information? He will get it from war conditions. From the market? There will not be any market; the Government is the market. As to guaranteed prices, when he fixes the guaranteed price, how will he know how to fix it? He will consult Mr. Balfour or Lloyd-George. Lloyd-George is supposed to be up on those things. He will consult them by cable. If he had consulted them by cable or by personal conference this last month there would not have been any flurry in wheat in Chicago. That is what was the matter. The allies bought in this country on our markets 40,000,000 bushels of wheat. They bought a half million bushels in one day in Chicago on the grain exchange. Everybody cursed the brokers, from Dan to Beersheba, because the price of wheat went up. Wheat is just like this administration: It is affected every time the English come here. Congress will soon be a subcommittee of Parliament.

I presume, Mr. President, before long that we shall be wearing tweeds, dropping our h's, and drinking Bass ale. That will be the only recourse when we go "bone dry"—to get it from across the water.

But the guaranteed price provided for in section 12 imposes upon the Government this liability:

Thereupon—

To continue—and the inquiry made by the junior Senator from Minnesota [Mr. KELLOGG] was very much in point on this subject—

Thereupon the Government of the United States hereby guarantees every producer of any merchantable, nonperishable agricultural products produced within the United States, for which a guaranteed price shall be fixed by notice in accordance with this section, that, upon compliance by him with the regulations prescribed by the President, he

will receive for any such products produced in reliance upon this guarantee within the period, not exceeding three years, prescribed in the notice, a price not less than the guaranteed price therefor as fixed pursuant to this section.

What is the Government going to do under that provision for three years? It will substitute itself in place of the middleman, who now handles this product; taking the gains and bearing the losses. It is going to stimulate—that is the purpose of the section as disclosed in the very first lines of section 12—it is going to stimulate the production by fixing guaranteed prices. Suppose the Mediterranean Sea shall open up, and suppose there is a big wheat crop in the Argentine; suppose Canada is productive—a great many of our citizens are going up into the wheat country of Canada and opening up new lands—suppose there is a good crop of wheat raised outside of the United States, and the price falls, not this year, but about the second year after the Government has a guaranteed price and begun to buy the stored wheat under the preceding section, what will happen? There are $150,000,000 provided in this bill. What is that? It is described in this way all the way through—a very favorite phrase. It is like the "coordination of activities" that has run the gamut of all legislation, State and National, for 16 years, until I have got unconscionably tired of ever hearing of it again. They have a phrase in here that I think the same professorial mind invented—it is a "revolving fund." Well, I have heard of vanishing funds, of invisible funds, of guaranteed funds, and of various other kinds of funds, and even "no funds," sometimes seen on checks, but it has remained for this blessed Republic of ours to discover such a thing as a "revolving fund." I want to test that revolving fund, and see just where it will revolve to. By the time it has revolved through about two years' market in which the middleman is now doing the revolving, it will have revolved itself into bankruptcy.

No human agency has ever been devised to carry successfully the burdens, the benefits, and the shortcomings of a system of finance or economics that 100,000,000 people are now carrying, without subjecting the Government to incalculable loss.

Under this "revolving fund" and the "guaranteed price" plan, if the world's production of wheat or any of the other primary food grains should be large, the Government, with its storage facilities, with its accumulated surplus of grain on the market, with a guaranteed price to the farmer of, say, $1.50 on wheat, will be confronted with the necessity of keeping the $1.25 price up. Well, suppose there is a big wheat crop in Argentina, and they begin to ship it up here—wheat is free listed—what will happen? As a matter of fact, wheat may be brought here and sold for 90 cents. The cure proposed is worse than the disease; and how some men can swallow the remedy I do not understand; but the bill proposes a remedy. If the wheat production of the world is large, the prices begin to fall. Wheat, as I have said, is free listed, and can come here without paying a cent of duty. Naturally it begins to seek our markets, where there is a guaranteed price of $1.50. Down at New Orleans I have a couple of steamships, and I have some barges which can go up the river. I take these steamships and go down into South America and import wheat into the United States to get the guaranteed price.

Well, there is another provision in the same section, I believe, under which one of two things must happen. The Government can continue selling wheat at $1.50, say, to the miller; or, if the price in the world market, in Liverpool or elsewhere, goes down, then the Government must stand the loss between $1.50 and the price of wheat elsewhere, or the price for which it could be brought here and sold.

What is proposed in that case? The Government can either stand the loss, which means a drain on the Treasury, because wheat bought at $1.50 and sold at 90 cents would involve a loss of 60 cents a bushel, or it must maintain the price at $1.50 and sell the wheat to the miller to be milled at $1.50, and to be furnished to the consumer in the form of flour or bread from the bakeshop on the basis of $1.50. How is that to be done? Oh, by the simplest process in the world. It is the easiest thing to create a mechanism of this kind. All you have to do is to write it down on paper, and it will work automatically. It is like the theory of perpetual motion. There is always some genius who is figuring away on perpetual motion. The Patent Office in Washington is full of devices of that kind. Well, that is this bill—perpetual motion of the "revolving fund." If the taxpayers of this country go "broke," the motion will stop. All the governmental follies of this country are only prevented from actual demonstration of their folly by the inexhaustible resources of the taxpayers. Now, here is the device:

That whenever the President—

It is the simplest thing in the world. It is a compound of Adam Smith, of Henry George, of William Jennings Bryan, of a high-tariff New England Republican, of a low-tariff Hoosier, a South Carolina free trader, and a fellow who does not care a rap about any sort of political economy rolled into one paragraph—all the economic science of modern times, all the opinions of learned professors, all the wisdom of the wise man in the White House, the men in the Cabinet, and Mr. Hoover with his experience in Belgium in on top of it, in one awful category, blended in the philosophy of "to hell with yesterday"—are comprised in the legislative brew of this section.

SEC. 11. That whenever the President finds it essential in order to prevent undue enhancement or fluctuation of prices of, or in order to prevent injurious speculation in, or in order to prevent unjust market manipulation or unfair and misleading market quotations of the prices of necessaries, hereafter in this section called evil practices, he is authorized to prescribe such regulations governing, or may either wholly or partly prohibit, operations, practices, and transactions at, on, in, or under the rules of any exchange, board of trade, or similar institution or place of business as he may find essential in order to prevent, correct, or remove such evil practices.

That is from section 11. Then, in section 12, after the President has fixed the guaranteed price and he finds the wheat or any other grain market in the outside world is such as to stimulate importation and sales in our market, the following provision, on page 13 of the bill, beginning in line 15, comes into play:

When the President finds that the importation into the United States of any such products produced outside of the United States seriously interferes or is likely seriously to interfere with the practical operation of any guaranteed price therefor fixed pursuant to this section, or materially enhances or is likely materially to enhance the liabilities of the United States under guarantees of prices therefor made pursuant to this section, and shall so proclaim, there shall be levied, collected, and paid a rate of duty, upon the products so imported, the amount of which rate of duty shall be ascertained and proclaimed by the President, which amount shall, when added to the value of the product at the time it is offered for entry, be sufficient to bring the price thereof at which imported up to the price which shall have been fixed therefor pursuant to this section.

What becomes of "ye consumer"? Why, Mr. President, the price of wheat has gone down; perhaps we are importing wheat from South America and there is a large yield in Canada. There is much wheat land there not yet developed, and our people are going there, and premiums are offered them by the Canadian Government for settling in that country. Suppose our wheat crop should be short. We only have this year in the United States from 51 to 59 per cent—it is very variously estimated—of a full crop. Suppose next year the crop should only be 50 per cent of the normal. A great variety of things can happen—rust, the Hessian fly, winter killing, bad weather in the spring-wheat area, a thousand things, climate, insects, and market conditions may happen here to discourage a large acreage, so that next year we would have a 50 per cent crop.

Now, we will have a guaranteed price fixed this year on the strength of which the farmers have raised a 50 per cent crop. Assume, for the purpose of the illustration, the price to be $1.50, let us see where we will come to. This coming year we will have, say, a 50 per cent production, with $1.50 as the guaranteed price. All the remainder of the wheat area of the Western Hemisphere produces more than the average crop. A great surplus results, some of which can be imported into the United States. The imported wheat might reach the price of 90 cents or a dollar. Having a 50 per cent crop naturally we would not export any. We would clamor for imports. What would happen? A guaranteed price has been given to the farmer to induce him to raise even a 50 per cent crop. Under the conditions described imports begin. Then this portion of the bill which I have read becomes operative, and the President, in order to preserve the Government against inordinate losses on a dollar and a half guaranteed price, must keep all of the foreign wheat out of our markets. So he issues a proclamation which stops the importation of wheat. To be consistent, he must stop the importation of all forms of manufactured wheat, because the indirect result would be the same as the direct. What naturally follows under this in practice unworkable section? He issues a proclamation fixing a duty on importations of wheat sufficient to bring the market price of imported wheat up to a dollar and fifty cents a bushel. What effect does that have on the ultimate consumer? He is the man who is indulging in bread riots. Well, who is he going to riot against now? The Government. The fellows engaged in food riots against a benevolent government will hold the Government responsible for keeping up the price of flour and bread. The middlemen are just now the objects of popular wrath. But the Government must take their place and keep up prices or bankrupt the Treasury.

What is the alternative? That the Government step in on a falling market and stand the loss that the middleman now stands every time he buys long and holds on the market. Nobody sympathizes with the middleman, but somebody will sympathize with the Government; at least the taxpayers will sympathize enough at the next election to visit with the seal of their con-

demnation such infamous folly as the Government undertaking to interfere with the economic laws of a great Nation and with the markets that rise and fall in accordance with supply and demand. That is the natural result of section 12; there is no escape from it.

That has been faintly touched upon to some extent by Mr. Hoover. Mr. Hoover, when he was approached on this matter, gave no very succinct explanation. I will summarize his conclusions, without taking the time to read from the hearing. He said that these are legal matters that are somewhat beyond the scope of his duties, and he would not undertake to discuss them. All that is left for mere plodders, who really think of details.

So the Government stands to do one of two things—either to support a falling market at the expense of the Treasury, which is at the taxpayers' expense, or to keep the price up by levying a duty under a proclamation of the President, keeping all of the imports of lower-priced wheat out of the American market, guaranteed unless it pays duty and sells at the price in our markets, and selling the flour milled to the baker, and the baker selling the bread to the consumer on the basis of a dollar-and-a-half wheat, the inflated artificial price which the consumer will have to pay. So you will have a bread riot in either instance; and between the two, I would prefer that if there be any riot at all there be a bread riot under the natural condition of things than under the artificial one produced by the Government, with no consequent benefit save that of finally making a bankrupt Treasury.

First, there was a maximum price. That was the favorite plan. The maximum price has disappeared in the discussion. Even the minimum price is not very vociferous. It is nothing but the guaranteed price. I can not refrain from referring here to England's example. I think we are, as suggested, a kind of a subcommittee of the House of Commons or Parliament, anyhow. We seem to be taking most of our information on this question from abroad, and as long as we are doing that it is proper to quote from Sir Alfred Booth. He is the chairman of the board of the Cunard Steamship Co.

England fixed a maximum price on grain, foodstuff, beyond which nobody could sell. She abandoned that as a disastrous experiment. Sir Alfred Booth, at Liverpool last month, gave out a public statement condemning in unmeasured terms the interference of the Government on the maximum-price plan. He said it had produced no good results to the consumer; that it had disordered markets; that it was a disastrous experiment for the British Government; and that it ought to have been abandoned or never ought to have been attempted, even; that no well-considered plan would ever for a moment think of fixing the supply in that way.

What does the minimum price do? It is intended to assure to the farmer, in accordance with this guaranteed-price idea, that when he produces he shall have so much for every bushel of surplus grain or every pound of surplus meat that he puts upon the market. That is exactly the same thing. The Government must sustain the guaranteed price; it must keep faith with the producer, having once induced him to enter upon a given course of production.

These difficulties are ones that suggest themselves to me on these two features. There are parts of this bill to which I have no objection. I would support without a question those provisions; but the parts of the bill referring to guaranteed prices, and the licensing and the limiting of production, and the seizing of foodstuffs in the hands of the original producers, are so wholly disturbing in character that they can result in nothing except disaster. Instead of producing the remedy sought, it will be a double disaster, not only in prices to the consumer but ultimately in bankruptcy to the Treasury.

In addition to what I have said about the British authorities, I read from a cablegram, a news report, in the Washington Post of June 19. It may be gratifying to us to know that the English approve of this bill. They approve of Mr. Hoover. This legislation is popular in London. I anticipate that it will be more popular in London than it will be in the November election of 1918 in the grain-producing country if it passes in its present form and is put into operation. But we are doing everything English, you know, now. I am proud of our English ancestry and our language and our literature and our laws. I do not know anything about my origin, so I can not have any personal feeling whatever in it. I never looked it up. I am not concerned about it. It is enough for me to know that I am here, and want to stay as long as I reasonably can, without inquiring into my ancestry, whether it is English or German or French or what it is. But here is what they say of us in London:

The whole problem of the nation's food primarily depends upon the supply, and unless we can be assured of food sufficient to enable this and the other allied countries of Europe to carry on the war to a successful conclusion it would be almost superfluous to appoint a food controller.

For this food supply we depend to a vital degree upon the United States and Canada. No one recognizes that more fully than I do.

This is from Lord Rhondda:

CONFIDENCE IN CONGRESS.

In accepting this office, one of its few attractions—perhaps its only attraction—was the knowledge that President Wilson had asked a man of Mr. Hoover's caliber, experience, and understanding of the allies to tackle in America those problems which have an intimate bearing day by day upon the food situation in this country. I have perfect confidence that the American Congress and the American people will respond to the calls now being made to them.

I hope I shall not be misconstrued or thought impatient if I say that the sooner your food administration measures are enacted the sooner we shall breathe more easily. At present our policy and the practical details of our buying are rendered more difficult, more complex, by the uncertainty regarding the future.

SURE GERMANY WILL FAIL.

My experiences in America before and since the war have given me an unusual opportunity of appreciating the vastness of her resources. If these are organized to their full capacity I am confident the German hope of starving the allies or of causing civilians unrest by the scarcity of food or high price is doomed to failure.

We are doing what we can "off our own bat" by increasing home production and decreasing consumption, but in the main the solution of the primary problem of supply lies in the hands of our American allies. I am sure they will not "let us down."

If they had not since January, 1915, confiscated so many cargoes of our food supplies in their admiralty courts, some of which they have paid for and some of which they have not, I would feel myself more like giving some heed to the argument; but it is sufficient to say that this plan of a food dictatorship is very popular in England. England has not been able to supply herself with her own food probably for a century, possibly longer. She has always depended upon other countries for her food supplies. She is a naturally short purchaser. Even in time of peace, though not in so aggravated a form, it is true; this same problem is presented to England.

Here is a provision in the fourth section that I had omitted to note, and of which I wish to make passing mention:

It is hereby made unlawful for any person willfully to destroy any necessaries—

Which is a very proper regulation; and then, following on down, without any change, it is made unlawful, in line 16—

To hoard, as defined in section 6 of this act, any necessaries; to monopolize or attempt to monopolize, either locally or generally, any necessaries; to engage in any discriminatory and unfair, or any deceptive or wasteful practice or device, or to make any unjust or unreasonable rate or charge, in handling or dealing in or with any necessaries.

I want to say just one thing to the local trade here in Washington. If there were a penalty in this section, there are some of the local dealers in Washington who certainly would get into trouble. I wish to say for the retail trade in Washington that they will profitably stand as much watching in wrapping up a package when you are not looking at them as any retail merchants I know of in the United States, up to this time. I have bearded the retailer in his den two or three times, not because I cared for the deception or the few cents I might have lost, but just to study the "critter's" behavior.

I have carried back some of the worst-looking fruit wrapped up in the bottom of a bag that I ever saw. Meats do not bother me. I am practically a vegetarian. That is what makes me so peaceable; I am not a meat eater. So I live on a great deal of fruit and grain. I am a herbivorous animal, so to speak. These carnivorous animals are the ones who are supposed to be the fighters. They are meat eaters. But I go and buy a bag of fruit, and if I do not look at the honest tradesman as he fills up the bottom of the bag I will get some culls out of the box. I go and buy a chair to rest my weary frame on after the deliberations here all day. Out of caution, of late, I even put my initials somewhere on the chair to identify the article after having looked it over to my satisfaction. It is delivered. I can not carry it around here during the business hours of the day. I have to wait for it to be delivered. When it is delivered it is something else. It does not have my initials on it. It has a loose leg; it has the varnish knocked off; or something the matter with it. I am just a rurality that came in that they did not know. Perhaps I had not brushed my hair very sleek that morning, or my trousers bagged at the knee more than common, and they thought I was from over in Virginia somewhere. Some of my relatives live over there, and I look a good deal like them. They might think: "All right; put that off on him." I get home and find it that evening or the next day.

I buy some dry goods, and they give me a piece off the end that is faded. I buy a shirt, and I get the wrong number, that I did not order. I return it and get another with a wristband torn off.

I order a pound of dairy butter and I get oleomargarine right here in the shadow of Uncle Sam's beneficent Government that is going to do all of these happy things. You can not fool me

on butterine. I live in a dairy State and in a butterine State, both, and I can tell them. I have been around the laboratory when they were testing these things long enough to find out. Anybody can go out here and order good clover dairy butter for 48 to 50 cents a pound, and get butterine that cost 10½ cents wholesale, colored. That happens every week in Washington. These other things happen every time I buy something. Will you regulate those things by law? If you do, there will be more men on the pay roll under this bill trying to enforce its provisions than there will be Americans in the European armies across the sea trying to settle this question with the Kaiser.

There are some good provisions in this bill that I want to vote for; but there are more foolish, impracticable, economic theories and practices wrapped up in this bill than in any similar piece of paper that has ever been made out of pulp since Cadmus invented letters or Gutenberg invented type. I will not vote for it in its present form. I have a host of letters and petitions and orders for it, every one of them coming from the cities. I have protests from the farmers, from the producers. They are beginning to know what this means. I will take my stand with the producers. I am never very popular in the great cities, anyhow. The last time I was a candidate they beat me in the city of Chicago by 60,000 votes. I do not particularly owe the consumer anything from a political viewpoint. It was the corn row and hay-field vote out in the country that saved me every time I have run for office. I am one of them. I know what they think, how they live, how they act most of the time. These communications, I repeat, come from the cities. They come from the ultimate consumer.

Now, see what this means. You are not going to mislead me about this. I will take my chances. Most of the ultimate consumers that write me from a city are members of a labor union three times out of four. They are organized. They are a compact force. They are a belligerent power in legislation and politics. They directed Congress to pass the Adamson Act to raise wages by shortening hours. They control wages. They put them up. We legislate accordingly. The unions control this administration in everything that concerns the unions. I want to see how many men that carry a union card and apply for exemption are conscripted into the service under this administration. You tell me that, and then I will illuminate some other things that I know right now. There will be no union labor conscripted into the armies of the United States that does not want to go.

Mr. CALDER. Mr. President——

The PRESIDING OFFICER (Mr. NEW in the chair). Does the Senator from Illinois yield to the Senator from New York?

Mr. SHERMAN. Yes, sir.

Mr. CALDER. I will say to the Senator that I understand that the President of the American Federation of Labor has asked that a member of his organization be placed on every exemption board.

Mr. SHERMAN. There is no doubt about it. They will be "needed for productive purposes at home," every one of them. It will be important. They will be producing sheet steel, or zinc, or pewter, or brass, or sewing machines, or washing machines, or something, all the way through the line of industrial activity, and there will be none of them conscripted unless they want to go. The soldier will come from some other occupation.

The producer of foodstuffs, therefore, being an unorganized body, has no such advantages. The farmer and the farm laborer of this country has no compact organization to present resolutions and to come here and demand legislation. If some of us do not represent that great unorganized body of farmers and farm laborers here, it will have no representation. The unions will take care of themselves. I will do no injustice to them by any vote of mine; but in any price fixing which will make a market either with the middle man in and the Government out, or the Government in and the middle man out, you make a market in which the farmer must sell his surplus grain in a way so that his price is in that market. You can not get away from it. So that the farmer is selling in a market made by consumers, in which he has no influence in the legislation save as he can exercise it through us. The price of his grain is to be fixed by the Government, in response to whom? In response to the consumer, a large part of whom is on the union pay roll; they will fix it at a price that suits them, in view of the wages they are receiving. So you fix the farmer's price in a guaranteed price in this bill, unrepresented save as a Member of Congress may represent him; but the wages of the consumer in the industrial centers using this product are fixed by the Government, in which union labor has a representative who will be heard; and you call passing such a measure as that government for the people!

I shall be ashamed of the day that I ever vote for this bill in its present form or permit it to come to a roll call without voicing against it my eternal protest.

Mr. CHAMBERLAIN. Mr. President, I think there are some Senators who desire to speak this afternoon, and I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. NEW in the chair). The Senator from Oregon suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names.

Ashurst	Harding	La Follette	Smith, Md.
Borah	Hollis	Lewis	Smith, Mich.
Brandegee	Husting	McKellar	Smith, S. C.
Broussard	James	McNary	Smoot
Calder	Johnson, Cal.	Norris	Sterling
Chamberlain	Johnson, S. Dak.	Page	Sutherland
Colt	Jones, N. Mex.	Poindexter	Swanson
Culberson	Kellogg	Ransdell	Trammell
Curtis	Kendrick	Reed	Walsh
Dillingham	Kenyon	Shafroth	Williams
Gallinger	King	Sheppard	Wolcott
Gerry	Kirby	Sherman	
Gore	Knox	Smith, Ariz.	

Mr. KIRBY. I wish to announce the unavoidable absence of my colleague [Mr. ROBINSON] and of the Senator from Mississippi [Mr. VARDAMAN] on official business. I ask that this announcement may stand for the day.

Mr. SUTHERLAND. I desire to announce the unavoidable absence of my colleague [Mr. GOFF] on account of illness.

The VICE PRESIDENT. Fifty Senators have answered to the roll call. There is a quorum present.

Mr. GORE. Mr. President, the junior Senator from New Jersey [Mr. FRELINGHUYSEN] presented a letter a short time ago which he desired to have read into the RECORD, and requested me in his absence to call it to the attention of the Senate. I now ask to have the letter read. I might say that it was written apparently before the advocates of this measure confessed error in regard to the maximum-price proposition, which renders the letter perhaps somewhat less pertinent, but not less illuminating. I ask that the letter be now read to the Senate.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read it.

The Secretary read as follows:

HACKETTSTOWN, N. J., *June 8, 1917.*

HON. JOSEPH S. FRELINGHUYSEN,
Washington, D. C.

MY DEAR SENATOR: May I point out for your information the farmer's point of view on Hoover's proposal to put a maximum price of $1.50 on wheat, which is a fine idea from the point of view of the consumer and is interesting to us inasmuch as in two months we will be planning for winter grain.

The farmer is patriotic and will do as much and more for the country and for France than any other class. He will be delighted to provide wheat at $1.50 instead of at $2.60, which he is now getting, provided that he can buy binders at the prewar price of $103 instead of $156; land rollers at $18 instead of at $30; shoes at $3 instead of $6.50; overalls at $1.25 instead of $2.25; feed at $20 a ton instead of $50; brewery grains at 20 cents a hundred instead of 60 cents; get help at $1 a day and keep for 15 hours' work instead of $2.50 for 10 hours, etc.

He will not object if munition workers get $3 a day instead of $10, if he has only to pay a cent for his afternoon paper instead of 2 cents; if the railroad men work 10 hours for less pay instead of 8 hours for more; if the bankers have no longer the opportunity of buying city of Paris 6's on an 8 per cent basis, Anglo-French 5's on a 7 per cent, and French Republic on a 7½ per cent; if contractors for the Government were not allowed to make sure profits by a cost and percentage method of awarding contracts which tempts him to pay maximum prices for labor and material; if the output of pleasure automobiles were curtailed, thus saving the steel for plates, shapes, railroad, and ship supplies; if the maximum price on women's hats were fixed at $5 and a supertax levied on women's clothes in the inverse proportion to their weight and covering ability; if steamship owners were getting 15s. a ton for freight to Europe instead of $65 to $100 for a cubic ton of 40 feet; if gasoline cost 10 or 12 cents instead of 24; if horseshoeing cost $1.50 instead of $3.50; if it was against the law for a farmer to get up at 4.30 a. m. and only quit work at 8 p. m. as well as acting as midwife for his stock in the middle of the night and putting his clothes on in the wee sma' hours when there is a thunderstorm in order to be ready to get the horses out should the barn be struck by lightning.

As it is doubtful if the wage earner will be willing to have his salary reduced by 50 or 60 per cent, the farmer hardly sees why he should be singled out as a philanthropist to a lot of people who are making more money than ever before, while everything that he has to buy continues at exorbitant prices, even such necessities to his business as binder twine, sacks, fertilizer, lime, implements, spray mixtures, gasoline, pails, and cans, horseshoes, feed, and seed.

Vox populi is asking that we sell our $2.60 wheat at $1.50 maximum, a reduction of 44 per cent, in order to help along the war. We will readily do it provided that the same law which exacts this confiscatory price also provides that all farmers may buy everything that they require at a reduction of 44 per cent from the price that the same article is purchaseable in the open market by the ordinary consumer, thus letting the retailer, middleman, jobber, manufacturer, and wage earner in all lines of business share his labor loss pro bono publico. This will allow everyone to do his bit, equally and without fear or favor in this emergency.

The alternative may also be interesting to the consumer. If wheat is limited in price to $1.50 after we have spent eight months plowing, fertilizing, seeding, harvesting, stacking, thrashing, rat proofing, grading, cleaning, bagging, hauling, and marketing, it will be easier and

cheaper to feed it to our chickens, hogs, and cows instead of substituting other products. If it is exacted that wheat shall only be used for human food, then fields will be seen planted to rye which is a surer crop, as valuable as a stock feed, and in view of the proposal to abolish whiskey drinking, will hardly be liable to confiscation.

If, on the other hand, it is desired to put the maximum amount of ground into grain next year, let things alone so that the farmer can take a chance on his judgment of future market prices; or, better still, establish a minimum price of $2 a bushel at the farm which will act as an incentive not only to cut down the rye acreage and put it into wheat but also will cause to be planted corn land from which by hurrying—especially in the case where silage corn is grown—the corn can be removed in time to sow winter grain instead of letting the ground lie fallow or cause it to be planted to a green manure crop.

You may have it in mind that the cold hard facts above outlined do not contain an ounce of patriotism. I admit the indictment; but as far as I am concerned personally, I reply that I only direct this farm, and that I am not essential to its operation, and that I gladly offer my services to the Government in any capacity that may be desired, either with or without salary. I am 36 years old, a veteran of the Navy during the Spanish War, a little too fat to get into the Officers' Reserve Corps or in the Quartermaster's Department without a special dispensation, which I have neither the knowledge or influence to get; have been in the export business; have just returned from France; speak French; know the export business, the automobile business, the railroad business, the operating of ships, and the farming business, and have crossed the Atlantic some 40 times. I would like to be authorized to go to France and raise a corps of interpreters from among the Americans resident in France, so that they will be ready to act when our troops get there. There was a crying need for these kind of men in the British Army at the beginning of the war, which was filled by the appointment of "officiers interpretes" from among both the French and English civil population. Failing this, I volunteer to go to Switzerland and round up the millions of dollars' worth of German-stamped bonds that there are in that country on which the holders are now getting no interest, as there is an embargo on getting them through France and Italy, and substitute therefor liberty bonds, thus allowing us to sell these and get the cash for our Government while making the German and Swiss holders of these securities pay for our war through holding our Government obligations. This exchange I know to my knowledge can be made profitably. I offer my services to the Secret Service, to the Quartermaster's Department, to the Treasury, to the food-control board, to the Shipping Board; in fact, to anybody who wants me. And I leave this application in your hands to pass along or throw into the waste-paper basket.

May I also tell you from the point of view of the man in the street why the liberty loan is not a success? In the first place it has been bungled. The first enthusiasm was lost because nobody knew either the rate of interest or the time limit. Then the rate of interest is too low. A poor man, to whom the tax exempt feature does not appeal, can see no reason why he should draw his 4 per cent money out of the savings bank and put it into this 3½ per cent obligation. Thirdly, the American public is not used to investing in bonds, and many would buy if the actual bond was passed across the counter instead of a receipt. Nevertheless, little Hackettstown, with 3,000 population and only two small industries, has subscribed to $52,000 worth. Put out a 4 per cent 10-year issue, have the actual bonds deliverable at any post office so that the man in the street can exhibit his purchase with pride to his neighbor and $200,000,000 that is not used to investments will be available in a week.

Thus concluding my part of the entertainment, sincerely yours,

JOHN KANE MILLS.

Mr. GORE. Mr. President, I have here a short article from the Chicago Tribune, which I ask to have read into the RECORD merely in order to illustrate the point of view of the writer of the article.

The VICE PRESIDENT. Without objection, the Secretary will read it.

The Secretary read as follows:

The Chicago Tribune says: "Farmers are beginning to realize the necessity of grain exchanges in the merchandising of wheat. The Southwest is already clamoring for the removal of trading restrictions in the wheat markets of the country, finding it impossible to interest buyers at anywhere near present prices. Indiana farmers are wanting to sell wheat for forward delivery, but as dealers are unable to buy wheat with the usual hedging provisions, there is little demand. Oklahoma wheat is being cut and thrashing will start this week, and in Texas the wheat is about all cut. Millers are under the same handicap as country dealers and cash houses generally are not trying to buy new wheat, as they are unable to hedge under present conditions without driving prices down for futures. Exporters being unable to buy futures are also handicapped. With the new crop beginning to move the situation is more serious than a few weeks ago, when there was practically no hedging pressure. Consequently the demand is becoming more urgent for the removal of restrictions on buying."

EXECUTIVE SESSION.

Mr. CHAMBERLAIN. Mr. President, I do not know whether any Senators are prepared to go on to-night. None have indicated to me a determination to speak to-day, but I am advised by a number of them that they will be prepared to go on with the discussion of the measure to-morrow morning. In view of that statement, and because there is some executive business to be attended to, I move that the Senate proceed to the consideration of executive business.

The motion was agred to, and the Senate proceeded to the consideration of executive business. After 10 minutes spent in executive session the doors were reopened.

LOS ANGELES SHIPBUILDING & DRY DOCK CO.

Mr. PHELAN. Mr. President, on June 19 the Senator from Michigan [Mr. SMITH] sought information during the debate concerning the Los Angeles Shipbuilding & Dry Dock Co., and I stated that I had no late nor definite information and that it was a new concern. Somehow the California Shipbuilding Co. of Long Beach, Los Angeles County, Cal., was also referred to and the two companies were spoken of as one. Hence the confusion.

The Los Angeles Shipbuilding & Dry Dock Co. is of comparatively recent organization; in strong hands, however, and capable of accepting contracts and doing work, but as yet has not actually delivered ships. On the other hand the California Shipbuilding Co. has an enviable record of achievement.

In order to do justice to these companies I ask leave of the Senate, out of order, to present two communications which will set every doubt and question at rest.

Southern California, rich in all the resources of nature, is also keen to attain distinction in all industrial activities, including the building of ships, and has made a gallant beginning which should not be misunderstood.

There being no objection the matter referred to was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *June 21, 1917.*

Hon. JAMES D. PHELAN,
United States Senate, Washington, D. C.

DEAR SENATOR PHELAN: Immediately after you called upon me yesterday for information in regard to the Los Angeles Shipbuilding & Dry Dock Co., and a perusal of the debate in the Senate on June 19, in which reference was made to the contract between the United States Shipping Board and the Los Angeles Shipbuilding Co., I wired Mr. Fred L. Baker, president of the company, at Los Angeles, for fuller information than I had as to the personnel and plans of the company and the $95 per ton clause of the contract.

I am this morning in receipt of a wire from Mr. Baker, which I hand you herewith.

I desire to say that the directors mentioned by Mr. Baker are all well known to me.

Mr. Baker himself is president of the Baker Iron Works, one of the largest establishments of that kind in southern California.

Mr. S. L. Napthaly, vice president and manager of the company, is, I am informed, a man of practical experience in shipbuilding.

Mr. J. F. Sartori is president of the Security Trust & Savings Bank and the Security National Bank of Los Angeles, which carry deposits of about $50,000,000.

Mr. Stoddard Jess is president of the First National Bank of Los Angeles, which carries deposits of about $25,000,000.

Mr. Dan Murphy is a very wealthy producer of oil and a man of large business experience and of high character.

The other gentlemen named as stockholders are each and every one of the very highest standing as business men and citizens in southern California.

It would be difficult to name altogether a stronger and more capable body of men than those embraced in the list which you will find in Mr. Baker's dispatch.

You will observe that the Government provides the steel which goes into the making of the ships, and so they have no responsibility or direct financial interest in the price of the steel.

I desire to thank you for taking the interest in this matter which you have done.

Very cordially, yours, H. Z. OSBORNE, M. C.

LOS ANGELES, CAL., *June 20, 1917.*

H. Z. OSBORNE, M. C.,
Washington, D. C.:

Our contract with United States Shipping Board Emergency Fleet Corporation, dated May 13, speaks for itself. They provide the steel. Our company is fast getting its plant into shape, and see no reason why we can not deliver ships in accordance with contract; expect to have first two keels laid about 1st of August. We have ample funds. Our stockholders are few and all wealthy men fully able to carry out their agreements. Our directors are Fred L. Baker, president; S. L. Napthaly, vice president and general manager; J. F. Sartori, president of Security National Bank; Stoddard Jess, president of First National Bank; Dan Murphy, capitalist. Balance of stockholders are H. G. Otis, of Los Angeles Times; Paul Shoup, president of Pacific Electric Railway Co.; H. Jevne; J. A. Jevne; W. B. Walker, of the Citizens' National Bank; W. I. Hollingsworth; W. B. Scott, president Columbia Oil Co.; J. O. Koepfli, president Bishop & Co.; and O. F. Brant, vice president of Title Insurance & Trust Co. One slipway is about finished; dredgers and pile drivers still working; office buildings completed; organizations fully completed and located at plant, and work on buildings proceeding as fast as possible. Week ago Government inspector for the board made first inspection of plant and progress of work, and has reported favorably. Pleased to give any further details you desire.

FRED L. BAKER.

CALIFORNIA SHIPBUILDING CO.

Mr. PHELAN. Mr. President, I have also this statement of facts from the attorney of the California Shipbuilding Co., dated Washington, D. C., June 20, 1917, who asks that only the facts of his letter be stated. Without further explanation, as "they speak for themselves," the letter reads as follows:

CALIFORNIA SHIPBUILDING CO.,
SUBMARINE AND OTHER TORPEDO BOATS,
SHIPBUILDING, DRY DOCK, REPAIRS.

(a) An equipped shipbuilding plant occupying more than 18 acres adjacent to Los Angeles Harbor, at Long Beach, Cal., with a skilled force of mechanics, berths for sidewise launching of more than 800 feet in length. Also essential buildings, viz, punch shop, 46 by 176 feet; blacksmith shop, 46 by 64; machine shop, 90 by 128; foundry, 88 by 64; mold loft 64 by 220; joiner and pattern shop, 40 by 206; pattern vault, 30 by 50; power house, 40 by 48; boiler house, 24 by 30; office, 32 by 32; dry dock (floating), length on keel blocks, 284 feet; draft, 21 feet. Main building berths have overhead trestle and two traveling cranes, also such cranes for handling plates and shapes; buildings are fully equipped with standard shipbuilding machinery. Yard-built cargo vessels registered in Lloyd's as *General Hubbard, Navajo, Camino, Paraiso, Edward Vance, Alvarado,* several dredges, and other steel craft.

President, G. H. Bixby (president Long Beach Savings Bank & Trust Co.); treasurer, P. E. Hatch (president National Bank of Long Beach, Cal.); secretary, W. G. Bunnell; vice president and general manager, W. C. Foley, who was a superintendent of construction of many war and merchant vessels at Newport News, Va.; the company's consulting engineer and naval architect is Commander R. H. M. Robinson, who, as a United States naval constructor, had charge of the design of every dreadnaught afloat and many other Government craft.

Attached hereto is a copy of two photographs which were published in the Washington Post on June 13, 1917, page 4, entitled "California Shipbuilding Co., Long Beach, Cal. A building slip and launching ways recently photographed after the launching of lighthouse tender *Cedar*," and second photo, "Only dry dock on lower third of Pacific coast, California Shipbuilding Co., Long Beach."

The vessels which you will note on one end of the ways are three United States Navy submarines. Two others were recently launched and are undergoing trials.

The vessel in the dry dock is a United States naval vessel.

It seems proper that you fully print the above physical facts which speak for themselves and not make any general statement as to what the shipyards consist of, what it has done, and is doing; its record is self-explanatory, and I feel that the Senate will be pleased to realize that the vessels to which you referred are to be built by a real shipyard, by experienced men, and let us all hope within the memory of men now living.

Incidentally, may I add a personal remark? I have done business in shipbuilding for many years in United States, England, Germany, Austria, and Russia, and have never seen a man with the natural ability of Gen. Goethals, who I have an opportunity to observe at close range. He is surrounding himself with healthy, clean-cut, naturally intelligent men, who are not afraid to work. The general is having plans, specifications, shipyards, and propositions minutely investigated by competent men, who report to him facts upon which he can base an intelligent business judgment even if he is not an old shipbuilder.

It seems unfortunate for the Congress to have debate based upon newspaper hearsay about such technical matters as ships and the statements of your good self are a fair example of the misinformation which naturally leads Congress and the public to form erroneous impressions which do a substantial injustice to everybody. Pray don't take my remarks as any criticism, because they are not. I simply call attention to the fact that everybody in such times as the present naturally jump at conclusions which in a mature moment would not prevail.

PACIFIC MAIL STEAMSHIP CO.

Mr. PHELAN. Mr. President, a question was also recently raised as to the ownership of the new Pacific Mail Steamship Co., because some of the odium of the old organization might attach to it in the minds of certain Senators.

It has actually changed hands, is now in the ownership of a distinguished American firm, and is maintaining the American flag on its fleet between San Francisco and the Orient. I offer the following letter in evidence:

NEW YORK, *June 19, 1917.*

Hon JAMES D. PHELAN,
United States Senate, Washington, D. C.

DEAR SIR: We have the pleasure to acknowledge your favor of the 16th instant.

It is quite true that the Pacific Mail Steamship Co. opposed the passage of the La Follette seamen's bill in 1915, and in consequence of the passage of this bill sold its trans-Pacific steamers and practically decided to go into liquidation. At this time 51 per cent of the total capital stock was held by the Southern Pacific Co.

In December, 1915, the American International Corporation and W. R. Grace & Co. purchased the holdings of the Southern Pacific Co., stopped the liquidation, and later arranged to restore, in so far as possible, the trans-Pacific service.

All of this took place before the so-called shipping bill was enacted, and the company at no time took any steps to oppose the passage of this bill, which, by the way, was approved on September 7, 1916.

The holdings of the American International Corporation and ourselves have since been somewhat increased, and we now own between us about two-thirds of the entire common stock of the company.

The assets and liabilities of the Pacific Mail Steamship Co., as of December 31, 1916, the date of the last annual report, was as follows:

Assets.

Steamers, equipment, and other property		$6,605,492.10
Less amount set up for reserve for depreciation		2,487,787.35
		4,117,704.75
Investments		164,451.08
Cash and working assets		565,310.42
Deferred debit items		506,669.59
Total		5,354,135.84

Liabilities.

Capital stock		$2,850,000.00
Premium on capital stock		150,000.00
		3,000,000.00
Working liabilities		506,980.97
Deferred credit items		556,578.21
Profit and loss		1,290,576.66
Total		5,354,135.84

The capital stock consists of $1,700,000, par value, 7 per cent cumulative preferred stock. This stock does not participate in payments on stock after the payment of 7 per cent, and $1,150,000 par value of common stock.

We inclose herewith a copy of the last report, from which the above figures are taken. If there is any further information that you desire, we shall be very glad to furnish it. We are

Very truly, yours, W. R. GRACE & CO.

ADJOURNMENT.

Mr. CHAMBERLAIN. I move that the Senate adjourn.

The motion was agreed to; and (at 3 o'clock and 55 minutes p. m.) the Senate adjourned until to-morrow, Friday, June 22, 1917, at 12 o'clock m.

NOMINATIONS.

Executive nominations received by the Senate June 21, 1917.

CALIFORNIA DÉBRIS COMMISSION.

Col. William Henry Heuer, United States Army (retired), for appointment as a member of the California Débris Commission provided for by the act of Congress approved March 1, 1892, entitled "An act to create the California Débris Commission and regulate hydraulic mining in the State of California," vice Col. Edward Burr, Corps of Engineers, United States Army.

MISSISSIPPI RIVER COMMISSION.

Brig. Gen. William Herbert Bixby, United States Army (retired), for appointment as a member of the Mississippi River Commission provided for by the act of Congress approved June 28, 1879, entitled "An act to provide for the appointment of a 'Mississippi River Commission' for the improvement of said river from the Head of the Passes near its mouth to its headwaters," vice Col. Curtis McD. Townsend, Corps of Engineers, United States Army.

RECEIVER OF PUBLIC MONEYS.

George W. Bruce, of Delta, Colo., to be receiver of public moneys at Montrose, Colo., vice Samuel B. Berry, term expired.

PROMOTIONS IN THE ARMY.

INFANTRY ARM.

To be lieutenant colonels, with rank from May 15, 1917, to fill vacancies created or caused in the Infantry arm under the provisions of said act:

Maj. Harry A. Smith, Infantry, to fill an original vacancy.

Maj. George C. Saffarrans, Infantry, to fill an original vacancy.

Maj. Palmer E. Pierce, Infantry (General Staff Corps), to fill an original vacancy.

Maj. Charles G. French, Infantry, to fill an original vacancy.

Maj. Lutz Wahl, Infantry (detached officers' list), to fill an original vacancy.

Maj. William P. Jackson, Infantry, to fill an original vacancy.

Maj. John L. Hines, Infantry (Adjutant General), to fill an original vacancy.

Maj. Matthias Crowley, Infantry, to fill an original vacancy.

Maj. John J. Bradley, Infantry, to fill an original vacancy.

Maj. Douglas Settle, Infantry, to fill an original vacancy.

Maj. John S. Switzer, Infantry (Adjutant General), to fill an original vacancy.

Maj. Herbert O. Williams, Infantry (Inspector General), to fill an original vacancy.

Maj. George D. Guyer, Infantry (Quartermaster Corps), to fill an original vacancy.

Maj. William F. Grote, Infantry (Quartermaster Corps), subject to examination required by law, to fill an original vacancy.

Maj. Isaac C. Jenks, Infantry, to fill an original vacancy.

Maj. Hanson E. Ely, Infantry, to fill an original vacancy.

Maj. Lewis S. Sorley, Infantry, to fill an original vacancy.

Maj. William M. Morrow, Infantry, to fill an original vacancy.

Maj. Benjamin F. Hardaway, Infantry, to fill an original vacancy.

Maj. Albert C. Dalton, Infantry (Quartermaster Corps), subject to examination required by law, to fill an original vacancy.

Maj. Joseph C. Castner, Infantry (detached officers' list), to fill an original vacancy.

Maj. Edward Sigerfoos, Infantry, to fill an original vacancy.

Maj. Edward A. Shuttleworth, Infantry (detached officers' list), to fill an original vacancy.

Maj. John Howard, Infantry, to fill an original vacancy.

Maj. Ralph H. Van Deman, Infantry (General Staff Corps), to fill an original vacancy.

Maj. Peter E. Marquart, Infantry (Quartermaster Corps), to fill an original vacancy.

Maj. William Brooke, Infantry, to fill an original vacancy.

Maj. Harrison J. Price, Infantry, vice Croxton, promoted.

Maj. William H. Simons, Infantry (Inspector General), vice Jones, promoted.

Maj. John F. Madden, Infantry (Quartermaster Corps), vice Johnson, promoted.

Maj. William Wallace, Infantry (detached officers' list), subject to examination required by law, vice Martin, promoted.

Maj. Ferdinand W. Kobbé, Infantry, vice Weigel, promoted.

Maj. John McA. Palmer, Infantry (General Staff Corps), vice Jones (William K.), promoted.

Maj. John K. Miller, Infantry, vice Hersey, promoted.

Maj. William Newman, Infantry, vice Albright, promoted.

Maj. Frank A. Wilcox, Infantry, subject to examination required by law, vice Carnahan, promoted.

Maj. Hansford L. Threlkeld, Infantry (detached officers' list), vice Lewis, promoted.
Maj. Peter W. Davison, Infantry (detached officers' list), subject to examination required by law, vice Tayman, promoted.
Maj. Marcus B. Stokes, Infantry, vice Chrisman, promoted.
Maj. John H. Parker, Infantry, vice Wilder, promoted.
Maj. John E. Woodward, Infantry (Adjutant General), vice Sample, promoted.
Maj. William D. Davis, Infantry (detached officers' list), vice Dashiell, promoted.
Maj. George McD. Weeks, Infantry, vice Bennett, promoted.
Maj. Isaac Erwin, Infantry (detached officers' list), vice Sargent, promoted.
Maj. Samuel V. Ham, Infantry (detached officers' list), vice Chase, promoted.
Maj. George H. McMaster, Infantry, vice Lee, promoted.
Maj. Robert W. Mearns, Infantry (detached officers' list), vice Pierce, promoted and retained in the General Staff Corps.
Maj. Henry L. Kinnison, Infantry, vice Hines, promoted and retained in The Adjutant General's Department.
Maj. Guy G. Palmer, Infantry, vice Switzer, promoted and retained in The Adjutant General's Department.
Maj. Orrin R. Wilfe, Infantry (Adjutant General), vice Williams, promoted and retained in the Inspector General's Department.
Maj. Howard L. Laubach, Infantry, vice Guyer, promoted and retained in the Quartermaster Corps.
Maj. Elmer W. Clark, Infantry (Quartermaster Corps), vice Grote, promoted and retained in the Quartermaster Corps.
Maj. Howard R. Perry, Infantry, vice Dalton, promoted and retained in the Quartermaster Corps.
Maj. George E. Houle, Infantry (detached officers' list), subject to examination required by law, vice Van Deman, promoted and retained in the General Staff Corps.
Maj. Lincoln F. Kilbourne, Infantry (detached officers' list), vice Marquart, promoted and retained in the Quartermaster Corps.
Maj. William C. Rogers, Infantry (detached officers' list), vice Simons, promoted and retained in the Inspector General's Department.
Maj. George H. Jamerson, Infantry (Inspector General), subject to examination required by law, vice Madden, promoted and retained in the Quartermaster Corps.
Maj. Edward C. Carey, Infantry, vice Palmer, promoted and retained in the General Staff Corps.
Maj. Hamilton A. Smith, Infantry (Inspector General), vice Woodward, promoted and retained in The Adjutant General's Department.
Maj. Hunter B. Nelson, Infantry, vice Wolfe, promoted and retained in The Adjutant General's Department.
Maj. Mathew E. Saville, Infantry (Quartermaster Corps), vice Clark, promoted and retained in the Quartermaster Corps.
Maj. Frank E. Bamford, Infantry, vice Jamerson, promoted and retained in the Inspector General's Department.
Maj. Fredrik L. Knudsen, Infantry, vice Smith, promoted and retained in the Inspector General's Department.

To be majors with rank from May 15, 1917.

Capt. James H. Bradford, jr., Infantry, to fill an original vacancy.
Capt. David L. Stone, Infantry (Quartermaster Corps), to fill an original vacancy.
Capt. Alfred W. Bjornstad, Infantry (detached officers' list), to fill an original vacancy.
Capt. Patrick A. Connolly, Infantry, to fill an original vacancy.
Capt. John B. Schoeffel, Infantry, to fill an original vacancy.
Capt. Walter T. Bates, Infantry (detached officers' list), to fill an original vacancy.
Capt. Englebert G. Ovenshine, Infantry, to fill an original vacancy.
Capt. Robert J. Maxey, Infantry, subject to examination required by law, to fill an original vacancy.
Capt. George N. Bomford, Infantry, to fill an original vacancy.
Capt. Benjamin P. Nicklin, Infantry, to fill an original vacancy.
Capt. John W. French, Infantry, to fill an original vacancy.
Capt. Cromwell Stacey, Infantry (detached officers' list), to fill an original vacancy.
Capt. William A. Cavenaugh, Infantry, to fill an original vacancy.
Capt. George M. Grimes, Infantry (Quartermaster Corps), to fill an original vacancy.
Capt. Thomas R. Harker, Infantry (Quartermaster Corps), to fill an original vacancy.
Capt. Frank D. Wickham, Infantry, to fill an original vacancy.
Capt. Bryan Conrad, Infantry, to fill an original vacancy.
Capt. William K. Naylor, Infantry, to fill an original vacancy.
Capt. William H. Oury, Infantry (Quartermaster Corps), to fill an original vacancy.
Capt. Austin F. Prescott, Infantry, to fill an original vacancy.
Capt. Edgar A. Fry, Infantry, to fill an original vacancy.
Capt. Harry A. Eaton, Infantry (Quartermaster Corps), to fill an original vacancy.
Capt. Campbell King, Infantry, to fill an original vacancy.
Capt. Tenney Ross, Infantry (General Staff Corps), to fill an original vacancy.
Capt. Robert O. Van Horn, Infantry (detached officers' list), to fill an original vacancy.
Capt. Hanson B. Black, Infantry (Signal Corps), to fill an original vacancy.
Capt. Ezekiel J. Williams, Infantry (General Staff Corps), to fill an original vacancy.
Capt. Moor N. Falls, Infantry, to fill an original vacancy.
Capt. John R. R. Hannay, Infantry (Quartermaster Corps), to fill an original vacancy.
Capt. James M. Graham, Infantry (detached officers' list), to fill an original vacancy.
Capt. Joseph L. Gilbreth, Infantry (detached officers' list), to fill an original vacancy.
Capt. Charles F. Humphrey, jr., Infantry, to fill an original vacancy.
Capt. Willey Howell, Infantry (detached officers' list), to fill an original vacancy.
Capt. Benjamin J. Tillman, Infantry, to fill an original vacancy.
Capt. George J. Holden, Infantry, to fill an original vacancy.
Capt. Charles F. Bates, Infantry, to fill an original vacancy.
Capt. John J. Toffey, jr., Infantry (detached officers' list), to fill an original vacancy.
Capt. Carl A. Martin, Infantry (detached officers' list), to fill an original vacancy.
Capt. Mark Wheeler, Infantry, to fill an original vacancy.
Capt. George D. Arrowsmith, Infantry, to fill an original vacancy.
Capt. G. Soulard Turner, Infantry, to fill an original vacancy.
Capt. Ivers W. Leonard, Infantry (detached officers' list), to fill an original vacancy.
Capt. Pearl M. Shaffer, Infantry (detached officers' list), subject to examination required by law, to fill an original vacancy.
Capt. Laurence A. Curtis, Infantry, to fill an original vacancy.
Capt. William H. Jordan, jr., Infantry, subject to examination required by law, to fill an original vacancy.
Capt. Irving J. Carr, Infantry, to fill an original vacancy.
Capt. Easton R. Gibson, Infantry (detached officers' list), to fill an original vacancy.
Capt. Henry C. Bonnycastle, Infantry (Quartermaster Corps), to fill an original vacancy.
Capt. Edward Croft, Infantry, to fill an original vacancy.
Capt. Adolphe H. Huguet, Infantry, to fill an original vacancy.
Capt. Raymond Sheldon, Infantry (detached officers' list), to fill an original vacancy.
Capt. James D. Taylor, Infantry (detached officers' list), to fill an original vacancy.
Capt. Frank Halstead, Infantry, to fill an original vacancy.
Capt. Harry E. Knight, Infantry, subject to examination required by law, to fill an original vacancy.
Capt. Campbell E. Babcock, Infantry, subject to examination required by law, to fill an original vacancy.
Capt. Archie J. Harris, Infantry, subject to examination required by law, to fill an original vacancy.
Capt. Alexander J. Macnab, Infantry, to fill an original vacancy.
Capt. Ralph B. Parrott, Infantry, to fill an original vacancy.
Capt. Stanley H. Ford, Infantry, to fill an original vacancy.
Capt. Robert M. Brambila, Infantry, to fill an original vacancy.
Capt. Harry F. Dalton, Infantry, to fill an original vacancy.
Capt. John N. Straat, Infantry, to fill an original vacancy.
Capt. G. de Grasse Catlin, Infantry, to fill an original vacancy.
Capt. Henry S. Wagner, Infantry, to fill an original vacancy.
Capt. Frederick G. Knabenshue, Infantry, to fill an original vacancy.
Capt. Thomas J. Powers, Infantry, subject to examination required by law, to fill an original vacancy.
Capt. James E. Bell, Infantry (detached officers' list), to fill an original vacancy.
Capt. Martin L. Crimmins, Infantry, to fill an original vacancy.
Capt. James M. Love, jr., Infantry (detached officers' list), to fill an original vacancy.
Capt. Paul H. McCook, Infantry, to fill an original vacancy.
Capt. Frederick W. Coleman, Infantry (Quartermaster Corps), to fill an original vacancy.

Capt. Frederick S. L. Price, Infantry, to fill an original vacancy.
Capt. George B. Pond, Infantry, to fill an original vacancy.
Capt. Dana T. Merrill, Infantry (General Staff Corps), to fill an original vacancy.
Capt. Alexander M. Wetherill, Infantry, to fill an original vacancy.
Capt. Theodore A. Baldwin, jr., Infantry, to fill an original vacancy.
Capt. Eleutheros H. Cooke, Infantry, to fill an original vacancy.
Capt. Arthur L. Conger, Infantry (General Staff Corps), to fill an original vacancy.

Capt. John R. Thomas, jr., Infantry, vice Erickson, promoted and retained in the Quartermaster Corps.
Capt. Milton A. Elliott, jr., Infantry (detached officers' list), vice Furlow, promoted and retained in the Quartermaster Corps.

CORPS OF ENGINEERS.

To be captains with rank from May 15, 1917, to fill original vacancies.

First Lieut. George Mayo, subject to examination required by law.
First Lieut. Paul T. Bogk, subject to examination required by law.
First Lieut. Arthur P. von Deesten, subject to examination required by law.
First Lieut. John H. Wills.
First Lieut. Raymond G. Moses, subject to examination required by law.
First Lieut. Wilhelm D. Styer, subject to examination required by law.
First Lieut. John W. Fraser, subject to examination required by law.
First Lieut. Charles H. Cunningham, subject to examination required by law.
First Lieut. Dwight F. Johns, subject to examination required by law.
First Lieut. William A. Snow, subject to examination required by law.
First Lieut. Thomas D. Finley.
First Lieut. William H. Britton.
First Lieut. Elroy S. J. Irvine.
First Lieut. Notley Y. Du Hamel.
First Lieut. Wilburn H. Henderson, subject to examination required by law.
First Lieut. Robert G. Guyer.
First Lieut. Robert A. Sharrer.
First Lieut. Ludson D. Worsham.
First Lieut. Edward G. Bliss.
First Lieut. Ralph G. Barrows, subject to examination required by law.
First Lieut. Holland L. Robb.
First Lieut. Frederick W. Bonfils, subject to examination required by law.
First Lieut. Robert R. Neyland, jr.
First Lieut. William M. Hoge, jr.
First Lieut. Stanley L. Scott, subject to examination required by law.
First Lieut. Tattnall D. Simkins, subject to examination required by law.

To be first lieutenants with rank from May 15, 1917, to fill original vacancies.

Second Lieut. Harris Jones.
Second Lieut. Francis L. Palmer.
Second Lieut. William F. Heavey.
Second Lieut. Harold R. Richards.
Second Lieut. John J. F. Steiner.
Second Lieut. Daniel Noce.
Second Lieut. Willis E. Teale.
Second Lieut. Clark Kittrell.
Second Lieut. Samuel R. Irwin.
Second Lieut. Henry Hutchings, jr.

PROVISIONAL APPOINTMENT IN THE ARMY.

INFANTRY ARM.

Boatswain Frank Bruce to be a chief boatswain.
Lieut. Commander Julius F. Hellweg to be a commander.
The following-named lieutenants to be lieutenant commanders:
Anthony J. James,
William E. Eberle,
William L. Culbertson,
John M. Poole, 3d, and
William T. Lightle.
Lieut. (Junior Grade) George W. Hewlett to be a lieutenant.
Ensign Allan W. Ashbrook to be a lieutenant (junior grade).
Pay Inspector Henry A. Dent to be pay director.
Passed Asst. Paymaster Swinton L. Bethea to be a paymaster.
Gunner George C. Smith to be a chief gunner.
Machinist Rufus H. Bush to be a chief machinist.

HOUSE OF REPRESENTATIVES.

THURSDAY, *June 21, 1917.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Our Father in heaven, Author of our being and the Bestower of every gift, we lift up our hearts in gratitude to Thee for all Thy favors, and we most fervently pray that Thy Spirit may so completely possess us that it may crowd out of our being all evil desires and sinful propensities, that we may hallow Thy Name in all that we undertake this day, that no sorrows, no regrets shall follow in its wake to disturb our peace, and we shall ascribe all praise to Thee through Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

EXTENSION OF REMARKS.

Mr. RAKER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. The gentleman from California asks unanimous consent to extend his remarks in the RECORD. Is there objection?

Mr. WALSH. Mr. Speaker, I object.

Mr. RAKER. Mr. Speaker, perhaps if I state the subject upon which I desire to extend my remarks the gentleman will not object. I ask unanimous consent to extend my remarks in the RECORD upon a bill in regard to the bird reserve on Klamath Lake, which is pending, and which has a favorable report from the Department of the Interior and the Department of Agriculture.

Mr. WALSH. Mr. Speaker, reserving the right to object, I ask the gentleman if his extension of remarks is to contain anything except his own remarks?

Mr. RAKER. Only the bill and my own remarks, with the reports of the department upon it, so that I may have it printed and have it before the House as a piece of emergency legislation.

Mr. WALSH. Mr. Speaker, I object.

Mr. BLANTON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing in connection therewith a few communications from constituents on the food conservation feature of this bill.

The SPEAKER. The gentleman from Texas ask unanimous consent to extend his remarks in the RECORD. Is there objection?

Mr. WALSH. Mr. Speaker, I object.

Mr. BLANTON. Mr. Speaker, I will state to the gentleman that if I do not get permission I shall ask for time upon the bill, and this would save my time and the time of the committee.

The SPEAKER. The gentleman already has leave to print his remarks upon the bill.

Mr. LEVER. Unanimous consent has already been granted to extend on this bill.

The SPEAKER. The gentleman from Texas has an absolute right to extend his remarks upon this bill. He can not extend them generally.

Mr. KING. Mr. Speaker, I ask unanimous consent to have read from the desk a short letter from a young editor of a paper in my district, the young gentleman being 13 years of age. He appears to be a friend of Congress. He issues this paper in

typewriting every Saturday when his father permits him to do it.

Mr. RAKER. Mr. Speaker, reserving the right to object——

Mr. KING. Mr. Speaker, this is purely for the edification of Congress. He is a friend of Congress.

Mr. RAKER. I appreciate that. I wondered if it is the intention of gentlemen upon the Republican side to keep us upon this side from inserting in the RECORD those things that Congress ought to be informed upon, and that are actual living, valuable, necessary pieces of legislation to increase the food production of the country?

Mr. LANGLEY. Mr. Speaker, reserving the right to object, I will ask the gentleman from Illinois if he has the boy's father's consent to have this put in the RECORD?

Mr. KING. I think the father will consent to it. It is an unusual case.

The SPEAKER. Is there objection?

Mr. WALSH. Mr. Speaker, I object.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. BYRNS of Tennessee, indefinitely, on account of sickness.

RUSSIAN MISSION.

Mr. SIEGEL. Mr. Speaker, I ask unanimous consent that the Speaker be authorized to extend an invitation to the Russian mission to visit the House upon Saturday next, and that the House take a recess at that time for 30 minutes.

The SPEAKER. The gentleman from New York asks unanimous consent that the Speaker be authorized to invite the Russian mission to visit the House on Saturday next, and that the House stand in recess for 30 minutes at that time. Is there objection?

There was no objection.

ORDER OF BUSINESS.

Mr. LEVER. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER. The gentleman from South Carolina makes the point of order that there is no quorum present. Evidently there is not. The Doorkeeper will close the doors, the Sergeant at Arms will notify the absentees, and the Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

Adamson	Eagle	Hull, Tenn.	Russell
Almon	Edmonds	Husted	Sabath
Anthony	Ellsworth	Ireland	Sanders, N. Y.
Browne	Estopinal	Johnson, Ky.	Sanford
Bruckner	Fairchild, G. W.	Johnson, S. Dak.	Saunders, Va.
Burnett	Ferris	Key, Ohio	Schall
Byrns, Tenn.	Fields	Kiess, Pa.	Scott, Pa.
Cantrill	Fisher	Kitchin	Scully
Capstick	Flynn	Kreider	Sells
Carew	Focht	Larsen	Shackleford
Carlin	Fordney	Littlepage	Shallenberger
Church	Foss	Lunn	Sherwood
Clark, Fla.	Francis	McArthur	Smith, Thomas F.
Classon	Freeman	McCormick	Steenerson
Coady	Fuller, Ill.	McCulloch	Stephens, Nebr.
Copley	Fuller, Mass.	Mann	Sterling, Ill.
Costello	Gallivan	Martin, Ill.	Stiness
Cox	Glynn	Mudd	Sullivan
Crisp	Godwin, N. C.	Neely	Swift
Crosser	Goodall	Nelson	Talbott
Currie, Mich.	Gould	Nichols, Mich.	Templeton
Curry, Cal.	Gray, Ala.	Oliver, N. Y.	Tilson
Dale, N. Y.	Gray, N. J.	Olney	Tinkham
Davis	Green, Iowa	O'Shaunessy	Treadway
Decker	Greene, Vt.	Parker, N. Y.	Van Dyke
Dempsey	Griest	Platt	Watson, Va.
Denton	Hamilton, N. Y.	Polk	Williams
Dooling	Haskell	Porter	Wilson, Ill.
Doremus	Hayes	Pou	Winslow
Drane	Helm	Powers	Wood, Ind.
Dunn	Hill	Price	Woodyard
Dupré	Hollingsworth	Riordan	
Eagan	Hull, Iowa	Rowland	

The SPEAKER. On this roll call 300 Members, a quorum, answered to their names.

Mr. LEVER. Mr. Speaker, I move to dispense with further proceedings under the call.

The motion was agreed to.

The SPEAKER. The Doorkeeper will unlock the doors. The gentleman from South Carolina [Mr. LEVER].

Mr. LEVER. Mr. Speaker, I understand the gentleman from California desires to submit a unanimous-consent request.

Mr. OSBORNE. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting a newspaper article which I would like to submit——

The SPEAKER. Is there objection?

Mr. WALSH. Mr. Speaker, reserving the right to object, upon what subject?

Mr. OSBORNE. It is a sketch of Mr. Herbert C. Hoover. So little is known about——

Mr. WALSH. In connection with this bill?

The SPEAKER. The gentleman already has leave to extend his remarks on this bill if that is the subject he desires to talk about. The Chair wishes all gentlemen would remember there has already been granted five legislative days in which to print speeches in the RECORD or extend their remarks in the RECORD on this bill.

CONSERVATION OF FOOD AND FUEL.

Mr. LEVER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961, and pending that I ask unanimous consent that all general debate on this bill may be now closed.

The SPEAKER. The gentleman from South Carolina asks unanimous consent that general debate on this bill be now closed. Is there objection?

Mr. HAUGEN. Mr. Speaker, reserving the right to object, I desire to say to the gentleman that I have a number of requests that would take several hours to accommodate the gentlemen who have made those requests for time. I also appreciate the urgent request and demand for the immediate passage of this bill, and at the same time I appreciate that every Member of this House has some rights and that he has a right to insist that he be heard. This probably will be the only opportunity he will have, and in view of the importance of the bill it seems to me that it would not be unfair to ask that those gentlemen be at least given a few minutes. In conferring with various Members here numbers of them have generously agreed to yield the time if they may be accorded the privilege of discussing it more freely under the five-minute rule, and if the gentleman will grant us an hour and a half on this side, which I trust will not be considered unreasonable, I believe we can get along and everybody can be accommodated. I would ask the gentleman to modify his request so as to give us an hour and a half on this side.

The SPEAKER. What does the gentleman from South Carolina say?

Mr. LEVER. "The gentleman from South Carolina," Mr. Speaker, is trying to think a little bit with his colleagues. Mr. Speaker, how would the suggestion that general debate close at 1.30, of course to be confined to the bill, meet the view of the gentleman?

Mr. HAUGEN. I suggest to the gentleman that 1.30 would give about two hours, and I have already these requests which I have stated, and a number of Members have generously agreed to yield time, but there are a number of Members who have been promised that they would be given an opportunity to express their views, and I feel that in justice to them, in justice to the House, in justice to the occasion that we should at least have an hour and a half on this side. Furthermore, I desire to call the attention of the chairman to the fact that the chairman of the Committee on Agriculture used two hours in discussing this bill. I have not taken one minute in the discussion of it. I believe I am entitled to some time. I felt it necessary to yield my time to others, but of course if the gentleman finds the urgency requires that we immediately close debate——

Mr. LEVER. Mr. Speaker, I have absolutely no desire to deny the gentleman from Iowa the privilege of addressing the House, and I ask unanimous consent——

Mr. HAUGEN. Do we have an hour and a half on this side?

Mr. LEVER (continuing). That general debate on this bill close at 2 o'clock, the time to be equally controlled by the two sides.

Mr. HAUGEN. Not taking into consideration the time already consumed, that the time to be used to-day is to be equally divided?

Mr. LEVER. Yes.

Mr. GILLETT. If the gentleman will permit a suggestion, the gentleman will appreciate that we have endeavored on this side to cooperate with the gentleman——

Mr. LEVER. Undoubtedly.

Mr. GILLETT. And what I would suggest is that there might be other business; there might be a roll call and the gentleman from Iowa has requests for over three hours. He is willing to take an hour and a half, and it seems to me the gentleman might agree that we have an hour and a half and the gentleman from South Carolina might take as much or as little as he pleases.

Mr. LEVER. If we close debate at 2 o'clock, it will give 2 hours and 20 minutes.

Mr. GILLETT. It would if nobody makes the point of no quorum.

Mr. LEVER. I dare say nobody will make the point of no quorum.

Mr. GILLETT. I hope nobody will.

Mr. HAUGEN. Why not limit it to a certain number of hours?

Mr. LEVER. Mr. Speaker, I ask unanimous consent that general debate on this bill shall continue for two and a half hours, one half to be controlled by the gentleman from Iowa and the other half by the gentleman from South Carolina.

Mr. CANNON. Mr. Speaker, I would like to have unanimous consent for two minutes now.

The SPEAKER. The gentleman from Illinois asks unanimous consent to proceed for two minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. CANNON. Mr. Speaker, I have listened to this debate. This is an exceedingly important bill. I do not desire to obstruct its passage, but I desire to cooperate. Woodrow Wilson is my President as well as yours. [Applause.] I believe the bill ought to be amended. I listened with great pleasure to my colleague from Wisconsin [Mr. LENROOT] on yesterday. He said much that I would have desired to have said and could not have said so well. This bill is so important I think we need not rush. I think we want a little freedom of debate under the five-minute rule if this matter is agreed to.

From a patriotic standpoint, and not from a carping or critical standpoint, once in a while I desire a little time. The spirit is moving me this morning, but I can not get time if the general debate is closed. I am perfectly willing to await the five-minute rule, and I want to say further—in my two minutes—that with a bill of this great importance the Members of the House should be heard. There is no extraordinary hurry about closing debate and passing this bill by Saturday night. The Senate will be talking on it 10 days from now. I think the House ought to have reasonable leeway, with its 435 Members. On the consideration of this bill, a quorum should be here every minute of time from now until the bill is passed. [Applause.]

Mr. LEVER. The gentleman would have no objection to the request I have submitted to extend the time two and a half hours?

Mr. CANNON. So far as I am concerned, if I have any message at all, I trust I will not be obliged to deliver it to only 25 or 30 men. I would like and would prefer a little liberal treatment as to time under the five-minute rule when we are down to the actual consideration of the bill.

The SPEAKER. The gentleman from South Carolina [Mr. LEVER] asks unanimous consent that the general debate on this bill be closed in two hours and one-half, half of the time to be controlled by himself and the other half by the gentleman from Iowa [Mr. HAUGEN].

Mr. MADDEN. Reserving the right to object, I would not object if the gentleman from South Carolina would indicate that the House would not be kept in session in the consideration of the bill later than 5.30 this afternoon.

Mr. LEVER. I understand, I will say to the gentleman from Illinois that his party is to have a conference in this Hall, and, of course, there is no disposition to interfere with that, and it is my intention to rise at about 5.30 this afternoon.

Mr. MADDEN. I am quite sure that the gentleman will, without any agreement, grant a good deal of latitude in the matter of debate under the five-minute rule.

Mr. LEVER. I would say in that respect I think my conduct here of bills has shown that I am liberal in that respect. I do not think we ought to take up more time than this week in the passage of this bill.

Mr. MADDEN. I am anxious to see the bill passed. I am in favor of amending it in some particulars, but I do not want to have any unnecessary delay in the completion of the work that is before us. But I do think that those of us who are in favor of suggesting amendments ought to have time to discuss those amendments.

Mr. LEVER. There will be no disposition to limit the debate under the five-minute rule when that debate is bona fide.

Mr. MADDEN. Of course, there ought to be no other debate than bona fide debate. This is too important.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina [Mr. LEVER]?

Mr. MADDEN. I do not object.

Mr. HEFLIN. Mr. Speaker, reserving the right to object, I want to suggest to the chairman of this committee that a great deal of time has already been consumed in the discussion of this bill. This is not a very long bill, but it is a very important one and ought to be passed at the earliest date possible in spite of what the Senate may do to delay legislation of this character, and I for one am anxious to see the bill pass by Saturday night, and I am willing to stay here in session Saturday night until it is passed. I think this House ought to insist on passing the bill this week.

Mr. MADDEN. I will say to the gentleman from Alabama [Mr. HEFLIN] that I will be glad to cooperate in order to get the bill through as soon as possible.

Mr. FOSTER. Mr. Speaker, I ask for the regular order.

The SPEAKER. The gentleman from Illinois [Mr. FOSTER] demands the regular order, and the regular order is, Is there objection to the request of the gentleman from South Carolina? [After a pause.] The Chairs hears none.

The question is on going into the Committee of the Whole House on the state of the Union.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961, with Mr. HAMLIN in the chair.

The CHAIRMAN. The House is in the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 4961) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from New York [Mr. LAGUARDIA].

Mr. LAGUARDIA. Mr. Chairman, judging from the debate on this bill, which I have followed with great interest and with close attention, there seems to be no doubt of its passage. In fact, I predict that it will pass this House with little modifications and by a very large majority. All the announced opposition, the promised flank attack on its constitutionality, seems to have vanished. This, I believe, is due to the fact that the opponents have since read the bill, understand it now, approve of it, and shall vote for it.

Coming from the great city of New York, gentlemen, I assure you that we are much concerned in the food situation. There has been no difference of opinion expressed on this floor on existing prices of food supplies. Everyone knows that prices have been constantly increasing and have now reached a prohibited mark. Ordinary necessities of yesterday are luxuries to-day. Food formerly sold by the pound is now sold by the ounce. Gentlemen, in plain, cold words, the American people are not getting enough to eat.

And right here I want to express my admiration and high regard for the distinguished chairman of the Committee on Agriculture, the gentleman from South Carolina [Mr. LEVER]. His task was a difficult one, sure to be unpopular in certain powerful quarters, certain to be misunderstood in rural districts, but bound to meet the approval of the great majority of the American people as soon as its beneficial purpose is realized. To-day all through this land people are waiting patiently the action of this House on this bill. Everyone knows that there is plenty of available food in this country; it is an open secret that the warehouses and cold-storage places are bulging with food. There are plenty of supplies on the shelves of our retailers. Yet in the land able to appropriate billions of dollars without a murmur, where billions of bonds can be subscribed for in a few days, where everyone seems to be employed at this time, in its greatest city we have had food riots. I gave considerable and personal investigation to the food riots which took place in New York City a few months ago, and, gentlemen, I give you my personal assurance that the cause of that disturbance, the action of those unhappy women, was nothing else than empty stomachs. Wage earners themselves, most of them, others with husbands working, and yet unable to provide for the proper nourishment of their families. Is that not cause for reflection? Granting the existence of unusual conditions all over the world, conceding the abnormal amount of foodstuffs exported from this country, it does not take a professor of political economy to know that with what food there is available prices are out of all proportion to the ordinary rule of supply and demand; that somebody is taking advantage of the situation, amassing great fortunes at the expense of the health and happiness of the American people. Yes, gentlemen, I say happiness knowingly, because no man is happy when he is hungry. No matter how much self-control, no matter how well disciplined, a hungry man is depressed, unsatisfied, and out of harmony with society; and nature was just in making him so. What is more, in the past two years the American people have been thinking. They know as well as we do the cause of the high cost of living, and never before was there such a united determination that the cause should be removed.

I followed with absorbed attention the remarks of the distinguished gentleman from Missouri [Mr. HAMLIN] on the con-

stitutionality of the law involved in this bill. I, too, gave that phase of the question considerable study. And I realize that we can support our vote on this bill on the grounds of its being a necessary war measure. I feel that no Member of this House would vote for a measure which he knows to be unconstitutional. The fundamental law of the land is the greatest bulwark of our independence and freedom, and we are bound to keep ourselves within its limitations. There is no doubt in my mind, after careful research of the law on the question, that this is a necessary war measure within the meaning of the Constitution and decisions on that point. While it is quite true that the letter of the Constitution would not permit in normal times the exercise of food control by the National Government, still I am not convinced that it was the intention of the framers of the Constitution and the people who subsequently ratified it that this all-important and necessary power should not be vested in the National Government instead of with each individual State. Gentlemen, you will all agree that at the time of the Declaration of Independence, and continuing to the time of the adoption of our Constitution, this was a land, as it is now, of plenty. With this difference, that the plenty was enjoyed by all of the people and not by a handful of men. It was then beyond the imagination of the people that there could ever come a time in this country when the people working and earning could not get enough to eat. It was beyond the vision of the far-sighted liberty-loving men who worked on the Constitution and its bill of rights that a situation would ever occur where the food could be cornered, as it is to-day, and the robust, full-blooded, red-cheeked American fade into a weak, anemic, underfed, disgruntled individual. My friends, could they have foreseen that, I am certain, as I read the history of that Constitution, that they would have made ample provision to assure to every American, among the inalienable rights of life, liberty, and the pursuit of happiness, the absolute right to proper and sufficient nourishment. That is what we are doing to-day. We are making it clear that the inalienable right of life and happiness carries with it for every man willing to work the right to food, shelter, and clothing.

I have here a long list of food prices in the city of New York, which I will omit, as the RECORD already carries abundant tables of prices. I want to read here, however, a letter from the Charity Organization Society, of my city. This society comes in contact daily with thousands of families in distress and in need of assistance. Their information is first hand:

THE CHARITY ORGANIZATION SOCIETY,
New York, June 20, 1917.

The Hon. F. H. LAGUARDIA,
House of Representatives, Washington, D. C.

DEAR SIR: In response to your telegram of the 19th, we are sending you the following statement of the advance which we have experienced in prices in New York:

Since January potatoes have increased 75 per cent in price. They were $0.75 a peck; they are now $1.25 a peck. Bread has increased 50 per cent. In January, 14 ounces of bread cost $0.06; now 12 ounces cost $0.10. Milk has increased 10 per cent and meats from 14 per cent to 20 per cent. Flour has shown an increase of from 2 to 4 cents a pound. It is now $0.07 a pound. Cereals and breakfast foods have increased from 25 to 50 per cent; that is, from 1 to 5 cents on a package. Canned meats have increased from 6 to 20 cents per can. Canned fruits and canned vegetables have increased from 1 to 5 cents per can. Butter has increased 4 per cent. Eggs, which ought to have materially decreased in price with the coming of spring, have practically remained stationary.

The number of families now applying for assistance to the society is substantially the same as those seeking assistance at this time last year. This is probably because of the fact that employment is plentiful and that there have been increases in wages. However, in families in which there is only one wage earner the increase in wages has, in our experience, by no means equalled the increased cost of living.

The hardships due to the increased cost of food, and especially the increased cost of vegetables, are certainly most serious. In many instances families are cutting down their supply of milk and are resorting to other economies which are certain to be injurious to health.

Our workers report that families in which sickness or other causes make it impossible for the wage earner to continue work come for assistance more quickly than formerly, because the high prices very quickly use up their savings.

The society has not taken a position upon the Lever bill. I am personally in favor of its passage.

Very truly, yours, EDWARD T. DEVINE, *Secretary.*

Now let me read a few telegrams from settlement workers in New York City, who specialize in social work and are daily engaged in ministering to the needy. Their statements are not sensational and their judgment on this subject should be seriously considered.

NEW YORK, N. Y., *June 20, 1917.*

Hon. F. H. LAGUARDIA,
Washington, D. C.:

Increased cost of food in the last six months bringing great hardship to people in neighborhood of Union settlement. Most staple article gone up. Price advance in price of meat and flour felt particularly as this is workingmen's neighborhood. Urge passage of food bill recommended by President.

JOSEPHINE SCHAIN.

NEW YORK, N. Y., *June 20, 1917.*

Congressman F. H. LAGUARDIA,
Washington, D. C.:

We approve national control of production and distribution of food supplies during the period of the war, but have had no opportunity to examine pending bill. Prices have increased over 13 per cent in six months; over 40 per cent in two years. Wages of those on minimum level have not increased proportionately.

NEW YORK ASSOCIATION FOR IMPROVING THE CONDITION OF THE POOR.

NEW YORK, N. Y., *June 20, 1917.*

Congressman F. H. LAGUARDIA,
Washington, D. C.:

We strongly urge your best support of President's food bill, which will take life necessaries out of hands ruthless speculators who have forced prices to unnecessary height for selfish purposes in last six months. Bread aised 6 to 8 cents loaf, rice doubled, corn meal about one-third, and most food in proportion. Continuation of these conditions serious to peace of city.

ROSALIE MANNUNG,
Chairman Food and Market Committee,
Neighborhood Workers' Association.

The steady increase in price of food, however, has been felt, not only by the unfortunate, but by all with the exception of a certain few. The man earning $25 to $35 a week and a family to support is unable to make ends meet. Staple articles of the American breakfast table and Sunday roasts, heretofore considered necessary, have long since been omitted. The meatless diet of the Siberian peasant and the rice meal of the Chinese cooly have supplanted the roast beef and the pie of the average American. Let me read this letter from a personal friend of mine; a man earning about $1,500 a year. This man is as good an American as there is in the whole country, with a splendid family, holding a responsible position, writes most feelingly on the subject. I fear not publishing his name, for I know he is patriotic enough to help in the situation, although this publicity may cause him embarrassment:

NEW YORK, *June 20, 1917.*

Hon. F. H. LAGUARDIA,
Washington, D. C.

DEAR COUNSELLOR: If you can do anything for us on this food question, in your capacity as a Congressman, in present or future legislation, for heaven's name do so; it is really appalling how the common necessities have gone upward in price, and it is the poor sinners like me and my family and a lot of your constituents you well know, in similar stations of life trying to keep up a decent standard of living, who are suffering; we have to have the things and can only do so in lesser quantities, thereby lowering our physical force of resistance and opening ourselves to the attacks of most any epidemic that might break out. There seems to be no reason why things should be so high in this glorious land of plenty, and the time of simple investigation is past and good active legal action at hand; lend your moral support to any measures that will bring us relief.

Respectfully, yours, WM. J. STEWART.

A good deal is being said that excessive profits are added all along the line. If that is so, I believe there is sufficient power given in this bill to ferret out excessive profits wherever found. I have here a letter from one of the largest bakeries in New York City. This concern has been compelled to raise the price of bread, I believe, twice within a short time. A similar letter, I understand, has been sent to all Representatives from New York, if not to the entire membership, and it clearly indicates the entire good faith of the bakers of New York to bring down prices, if they can get the flour at normal cost. Here is the letter:

NEW YORK, *June 19, 1917.*

Hon. F. H. LAGUARDIA,
House of Representatives, Washington, D. C.

HONORABLE SIR: In view of the rapidly approaching harvest it may be said that the immediate passage of the Lever bill is imperative.

We are receiving criticisms and inquiries about the price of bread over which we have no control because of the present high price of flour, and we are hoping that the appointment of food administration and the closing of grain exchanges will result in the reducing and stabilizing of prices of flour so that we can produce cheaper bread for the people, and cheaper food, we believe, is necessary to maintain a social balance in our country.

In the name of our country's poor, please lend your best efforts to an early passage of this bill.

Very truly, yours, GEORGE S. WARD,
President Ward Baking Co.

Mr. Chairman, I am confident in the successful outcome of this bill if it is enacted into law. It gives unheard of powers; yes, but necessary powers. With its proper, intelligent, and impartial enforcement I can not see how it can possibly fail. If there is hoarding it gives power to take the hoarded supplies away; food may be sold at a reasonable price in order to bring down unreasonable and artificially created high prices; speculation can be curbed; exportation regulated; every possible trick of the trade detected and stopped. It is bound to bring about the much-needed relief.

Gentlemen, the passage of this bill will do more to demoralize the enemy than anything which we have enacted during this session. Our declaration of war did not surprise the Kaiser. He expected that. The $7,000,000,000 bond issue did not unduly worry him. He believes we will waste it. The conscription law

causes him no immediate anxiety, for he believes that it will take a long time before its effect will be felt. But, gentlemen, the marshaling of our food supplies, the control of exportation, this great getting together of the people, the taking of this drastic action unheard of in our history will have a telling effect upon the Kaiser and he will know that we mean business. Thoroughness and efficiency are not his personal monopoly, and when enacted by the Representatives of a free people, enforced and obeyed with true American spirit, it means success to our cause and spells "Peace."

Gentlemen, I am so thoroughly convinced of the need and benefit of the provisions of this bill that I feel that it is not only a war measure but a permanent institution with us. After the war, if we are not careful, the speculators will soon be back to the old game. As long as I live I do not wish to witness another food riot. You want and I want and every American wants everybody to get enough to eat. I realize that there is a lot to do before we can bring about such ideal conditions. But let us start now. I have taken the first step toward that end. I have this day introduced a constitutional amendment giving power to the National Government at all times to regulate and control the production, conservation, and distribution of food supplies. This may sound extreme and perhaps radical, but under similar conditions the founders of this country and the framers of the Constitution would have it so. It is the will of the American people.

Gentlemen, I shall give my whole-hearted support to the Lever bill.

Mr. HAUGEN. Mr. Chairman, I yield 25 minutes to the gentleman from Wyoming [Mr. MONDELL].

Mr. MONDELL. Mr. Chairman, the present session of Congress will go down in history as the most important since the Civil War. In fact it is quite possible that the verdict of history shall be that the questions discussed and the conclusions reached during this session had a more far-reaching and deciding effect upon the Nation and its people, particularly in respect to their relationships with and influence upon the world at large, than those of any other session in our history.

We have already enacted legislation tremendously important, unusual, radical, and far-reaching in its purpose and effect. We have provided for bond issues, made appropriations, and proposed revenue bills of staggering proportions, and in the main unanimously or with the support of a large majority of the membership of Congress.

It is now proposed in the bill before us to establish as a war measure a governmental control of production, manufacture, procurement, storage, distribution, and so forth, of foods, feeds, and fuel. Without in any wise minimizing the importance of the steps heretofore proposed and taken in the matter of legislation and appropriation during this session, I think it is no exaggeration to say that from the standpoint of its character and possible—even probable—far-reaching effect, both in the immediate and in the more distant future, nothing that Congress has done or is likely to do in legislation is of more vital and tremendous importance than the propositions contained in the bill now before us.

I think that on reflection the truth of this statement will be admitted without regard to the views we may entertain as to our authority to enact such legislation or as to the necessity or wisdom of doing so. The authority proposed to be invoked, the powers proposed to be granted, are so unusual, so vast, so far-reaching, and so tremendous in their scope as to give pause to those most profoundly impressed with the importance and the necessity of invoking and granting them. On the other hand, the seriousness of the situation, as evidenced in innumerable ways, and in no way more strikingly than by the fact that men of known conservatism propose and support legislation of this character, compels its careful consideration by all thoughtful men devoted to the welfare of their country, in which category I place all Members of Congress.

The consideration of this bill raises at once two important questions. One as to the power and authority of Congress to legislate as is proposed and to grant authority as is contemplated, and, second, as to the wisdom, the necessity, the advisability of doing so. Not being a lawyer by profession, I have never claimed to be a professional expounder of the American Constitution, but as a layman who has a profound and continuing respect, admiration, and regard for that great fundamental document, I must admit at the outset that it has been necessary for me to somewhat reform and readjust certain views I have entertained relative to that great instrument in order to view with tolerance, much less with approval, certain features of this bill and of some other legislation we have been called to pass upon. As I examine these readjustments of view in their application to the legislation I am, however, comforted by the thought that they relate rather to theory than to substance.

We are at war. War involves a contest which may develop into a struggle for national existence, a struggle for the perpetuation not only of the Government itself but of freedom, of liberty under law, and of the opportunity for the pursuit of happiness under its protection. In the midst of war it is impossible to return to the fountain of authority for any additional grant of power which may be necessary for the perpetuation of Government. Therefore it must, I think, be assumed that as it would be futile to establish governments without the power and authority to insure their perpetuation, it must be assumed that in a time of war involving, as all great wars must, the possible issue of national existence, there resides in the branch of the Government charged with the duty of legislation, authority to do those things which in the judgment of the legislative body are essential to the successful prosecution of the war.

It may be said that this is an extreme and dangerous view to take of the war powers of the Congress; possibly so, but unless we do plant our feet on some such view as a basis and foundation we can not logically approve either this legislation as to its main features or other legislation we have already approved.

Congress has assumed and exercised the power to compel the citizen to offer his life to his country. We have enrolled and in due time we shall call to a service, which shall mean, to some at least, possibly for many of the finest young men of the Nation, a surrender of life itself. If we have authority to demand this heroic service, this supreme sacrifice, can it be claimed in reason and logic that we may not assert the authority and control contemplated by this act, which is not intended at least to require any sacrifice on the part of anyone, unless the foregoing of excessive profits, wrung from the necessities of the people by middlemen, may be considered a sacrifice. Surely no one who advocated, indorsed, or approved the passage of the conscription act can reasonably or logically hold that we have not the authority or that we are not justified in the very limited and partial conscription of the Nation's resources.

I leave the constitutional questions involved with this thought: Congress may do unconstitutional things. It has in the past. Congresses may and Congresses have done foolish and unnecessary things, but no Government of the people, by the people, and for the people will ever perish from the earth, however much its people may temporarily suffer through usurpations by the legislative branch. The dangers of fatal usurpation of power lie in the Executive. In time of stress and war and crisis, the wisest and the best intentioned Executive may be tempted to usurp power in the promotion of what the Executive may conceive to be the public good. It is infinitely better that the Congress, which is the repository of the power and authority which the people have conferred, shall grant specific authority along well-considered lines, even to the point of questionable wisdom than that the Executive shall be left in time of stress and crisis in a position tempting the usurpation of power without specific grant.

Beyond the question of constitutional authority lies the question of advisability, of necessity. Is there a situation, or is one likely to arise, in which it is or may be essential for the successful prosecution of the war to confer upon the executive branch of the Government authority such as is proposed in this bill? Frankly I have been loath to believe that such a necessity existed, and that entirely separate and apart from the question as to the possibility of wisely administering the powers proposed to be conferred, I have found it difficult to believe that with all of our enormous exports there was really such a shortage of foods and commodities as constituted a real menace or warranted a tremendous expansion of prices. But notwithstanding that view, prices have advanced. They continue to advance by leaps and bounds. They long since ceased to be merely a hardship. We have arrived at a condition where even considerable advances in wages and salaries are inadequate, and in which a large portion of our people find it almost or entirely impossible to make ends meet, and certain portions of them suffer actual want. It is very apparent that nothing should be left undone that holds out any reasonable hope of relief.

This distressing condition of perfectly scandalous and oppressive prices in certain lines is manifestly not due, so far as food products are concerned, to abnormal or unreasonably high prices, compared with the cost of production, received by the producer. While the producer has been securing, in the main, higher prices than formerly and for some classes of products very excellent returns, in the main these have not been unreasonable, or even unusually high, compared with increased costs of production and the increased prices which the agricultural producer must pay for those things he buys. The farmer and

the stock raiser has not been the beneficiary in the majority of cases of the abnormal raise in prices. The tremendous increases in the prices of agricultural products, using that term in its broadest sense, have come after the products left the hand of the producer and before they reached the consumer.

It may be argued that as the heart-breaking and the pocketbook-depleting prices have attached themselves to produce and products, foodstuffs, after they have left the hand of the producer these increases must be due, to a considerable extent at least, to combinations, agreements, manipulations, speculation, hoarding, and that these practices are now punishable by law and therefore no further legislation is necessary. There are two flaws in this argument. One is that in time of unusual demand, particularly when that is accompanied with all sorts of predictions, prophecies, prognostications as to probable increased demand and present or impending shortage, prices are certain to rise, even without combinations, conspiracies, or unlawful practices of any sort. The holder or seller simply takes advantage of the situation to advance his price, and the public pays it, not without grumbling, but without any concerted or united effort to keep the price down.

Unfortunately we have been plagued and pestered with a multitude of official proclaimers of shortage and prognosticators of still greater shortage to come. Speculators, traders, hoarders have seized upon the lugubrious proclamations of official promoters of panic as the most effective agencies in the furtherance of their schemes of extortion. There are times when, waiving aside all other considerations, I am inclined to give and grant all of the authority sought, proposed, or suggested, on the sole theory that whatever harm may come or mistakes made they will be offset by the relief we shall obtain by the possible cessation of the outpourings of official shortage prophets, with a view of forcing the hand of Congress.

So far as high prices of food products are due to combinations, manipulations, agreements, speculation, it is true that the statute books are crowded with legislation tending to abate and punish such acts, but it is very evident that we can not expect any present relief from these evil practices through the prohibitory and penal statutes intended to prevent and punish them. The hand of the administration seems utterly palsied and ineffectual. I shall not stop to discuss the question as to whether this lamentable condition grows out of apathy, indifference, understandings, or is merely the result of dullness, stupidity, or blundering. The effect is the same, whatever the reason or excuse, and we waste our time for the present and under present control of things in suggesting relief through any one of the almost innumerable agents and agencies now consuming the vast appropriations made for the purpose of protecting the people from combinations, conspiracies, and illegal practices, which are responsible, to a considerable extent, for the great increases in prices from which the people are now suffering.

In this state of affairs something must be done, and as far as I am concerned I am thoroughly convinced that no halfway measures will suffice. In view of the utter breakdown or paralysis of the agencies created to protect the people against extortion, it is worse than idle, it is wicked deception to propose or attempt further efforts along the lines of the penal and prohibitory statutes now on the statute books.

If there is to be any amelioration of the present situation a warding off of the infinitely worse conditions which are prophesied and feared, it will come, it seems to me, if at all, through some system of administration and control. It may be said that if the agencies already provided have made such a failure of it, how can we expect better results under another plan? The answer to that is that the plan now proposed is more direct, more complete, more far-reaching. It is to be hoped that its administration will be in practical hands, and at any rate we can scarcely justify a refusal to attempt to remedy the situation on the plea that the attempt will be nullified by unwise administration.

Mr. Chairman, basing my action on the views and considerations which I have hastily sketched, I shall in the main support this measure. I shall give my support to various amendments which I have in mind and which will be offered. I shall contribute my support to efforts to improve the legislation, and, improved as I hope it may be, I shall vote for it. But in so voting I want to make it quite clear that I am not expecting as highly beneficial results as it has been claimed by some will follow its enactment. I shall hope, and I do hope, that something may be done to reduce the present high prices of foodstuffs so far as they result from speculation and manipulation. I hope, and with some confidence expect, that an administration may be created which will equalize prices and will give the necessaries of life to the consumer at a reasonable margin above what the producer receives and is entitled to receive.

It would be little short of criminal, however, for one to hold out the hope that anything we may do will restore peace prices in this time of war or, under certain contingencies, keep prices from going still higher. So long as the German submarines are sowing the bottom of the seas with great cargoes of grain and foodstuffs of every kind, so long as tonnages of foodstuffs running into the millions are being fed to the fish by the ruthless pirates of the deep, our best endeavors to stimulate production, regulate the use, and conserve the supply of food will not keep down prices. Therefore the measures we now undertake must be supplemented by the utmost effort to put these wolves of the sea out of business.

It may be suggested that if we put an embargo on the shipment of food abroad we need not worry about the submarine menace. Such a plan now would be in imitation of the ostrich, who, when pursued, sticks his head in the sand and foolishly believes his exposed body will be safe. If the German war lords can starve out England, France, and Italy, or any one of them, there will be peace on Germany's terms, and it would be the height of folly to suppose that in such an event the combined navies and armies which Germany would then command would not be turned on us and we be compelled to bear alone the full force of the mighty forces that would be concentrated and hurled at us. As one of the parties to this war, it is as essential to our safety that our allies shall be fed as that our own people shall be fed.

One of the provisions of the bill which is highly important is that which authorizes the fixing of a minimum guaranty for the producer of nonperishable agricultural products. If there is anyone who hopes to have the price of foodstuffs and necessaries lowered at the expense of a good, fair, and remunerative price to the producer, I hope, and confidently expect, they will be disappointed. The cost of food production has increased greatly since the beginning of the war and the producer might be paid even more than he expected—much more than he has heretofore generally received—without unduly enhancing the price to the consumer, providing the intermediate speculative profits are cut out. Whoever shall administer this law will, I hope, bear that in mind, for it is fundamentally essential to the success of our efforts to enlarge production and maintain reasonable prices. The very first essential is the stimulation of production, and that can only be had on the assurance that a large production shall not, under manipulation, impoverish or bankrupt the producer by bringing a break in prices to a point below a remunerative return.

Mr. SLAYDEN. Mr. Chairman, will the gentleman yield?

Mr. MONDELL. Yes.

Mr. SLAYDEN. I would like to ask my friend from Wyoming, Mr. Chairman, if he does not think that the greatest incentive to increased production, and the one that in the past never has failed to increase production, is the prevalence of extraordinarily high prices, such as those at present, for the commodities he is speaking of?

Mr. MONDELL. That is true, but the gentleman realizes that the intent of this legislation is to put in motion forces and organizations the tendency of which will be to equalize, adjust, and lower prices.

Mr. SLAYDEN. Arbitrarily by law?

Mr. MONDELL. Well, you can not do those things arbitrarily. You can only do them by administrative effort along the line of clearing the pathways of the law of supply and demand and preventing, so far as possible, unreasonable increases in prices between the producer and the consumer. But while you are making that effort, the more successful that effort shall be the more essential it is that, on the other hand, assurance is received on the part of the producer that great crops and largely increased production shall not by a great decrease in production, caused, for instance, through a sudden close of the war, bring a break in prices that will bankrupt the producer.

Now, I would like to yield further, but I have not any more time.

Not the least important of the provisions of this bill are those contained in section 13, which authorizes the President to limit, reduce, regulate, or prohibit the use of foods or food material in the production of alcohol or alcoholic beverages. The use of grains and other food products for such purposes, except to the extent that may be necessary to produce a supply of alcohol for use in the industries, including the manufacture of munitions, can not be justified at a time when the success of the war may hang upon our ability to feed our people and help feed our allies.

In closing let me make this suggestion which, while it does not relate directly to the legislation before us, does relate in a general way to all of our legislation and to all of our governmental activities in this time of war. The Executive recommended a declaration of war and the majority of us believed that conditions existed leading up to and culminating in the President's recommendation which made a declaration inevitable. We are engaged in the war thus declared. It is true we have only touched upon its fringes. We are yet to feel the sting of its full impact, but we have been asked, and we have approved, the granting of great credits, the making of tremendous appropriations, the expenditure of staggering sums.

The administration has requested of Congress vast and far-reaching power and authority, far beyond anything heretofore dreamed of in our philosophy. The broad power and wide authority sought has or will in a large measure be granted. The Chief Executive is thus clothed and is to be clothed and plano-plied with power and authority beyond that of any monarch on earth to-day. He is endowed with funds compared with which even the vast resources of the greatest of the nations arrayed in this war are small.

All this having been done, is it unreasonable to suggest that in the discharge of these great duties, in the assumption of these tremendous responsibilities, in the exercise of these enormous powers, in the expenditure of these vast sums the Executive should invite the wisest, the ablest, the most thoroughly tried and completely proven men of the Nation, without regard to party lines or party affiliations, to share in the labors, in the responsibility, and in the burden of this stupendous trust?

I have no purpose of criticism of the present aides, advisors, helpers, assistants, and counselors of the Chief Executive. I hold no brief for and I appear as the champion of no individual seeking place, honor, or responsibility, but I do call attention to the fact that up to this time, unless the judgment of the Nation is grievously in error, there is much to be desired in the character of the selections that have been made within the President's own party. The two great parties in the Nation represent each about one-half of the voting population, and one-half—and we believe a most intelligent and effective half—has had practically no representation in the high councils that have determined the great questions which are confronting us.

Not another nation engaged in this great struggle but has found it necessary to largely forget party lines in administration, as we in this country have practically for the time obliterated party lines in legislation. While I have no individual in mind to suggest or propose for high place of responsibility, I am impressed with the tremendous importance, from the standpoint of good administration, of successful prosecution of this great struggle, of the best interests of the administration itself, that there shall be a large recognition of the fact that this is the Nation's war and that the best and wisest of the Nation, without regard to party, should be called upon and counseled in reference to its conduct. [Applause.]

Mr. Chairman, I yield back the balance of my time.

Mr. HAUGEN. Mr. Chairman, I yield 30 minutes to the gentleman from Kansas [Mr. LITTLE].

The CHAIRMAN. The gentleman from Kansas is recognized for 30 minutes.

Mr. LITTLE. Mr. Chairman, there is a frequent complaint on the floor that the measures of this bill are drastic, and perhaps they are. The powers here granted to the President are, they charge, akin to those exercised by the Czar of Russia and which terminated with his reign. These powers will be exercised as they were in his dominion, not by the Chief Executive in person but by various boards and bureaus, because no one man could possibly follow the details of such a system. That there should be opposition to such a phenomenal step is not to be unexpected, and Americans would indeed be lacking in the spirit of seventy-six if they lightly granted such authority to any man; but when we entered this great war we took off every bridle, and no man can tell how far it will be necessary for us to ride without check or bound. You can not expect to escape from this tremendous combat without tremendous scars. The sailors of Columbus, far at sea, wept and wrung their hands at the terrors of the unknown deep, but there was no time left to them for escape and no place for retreat. We steered the ship of state straight at the breakers of this gigantic conflict, and who is there here that will blanch at the roar of the surf and flinch as the storm drives us on? When war was declared we knew all this was to come, and this is no time to falter at sacrifice. Gentlemen, the only way out of this fight is to win it, and the rights that you give up under this bill are a mere fraction of the freight we will throw overboard to save the ship before we have steered it back to safety and peace. And to this object every loyal citizen must dedicate, if necessary, not only his technical privileges but his property and his life.

Yes; the bill is drastic and the grants of power are beyond custom in a republic, but for a long time the cost of living has mounted, and since the 5th of April it has gone upward by leaps and bounds. At every quadrennial election we were promised something should be done to bring the prices of life's necessities within the reach of average men, that their families might enjoy the average comforts without this constant strain upon their capacities. This bill, after weeks of study, has been offered, to give this Government control of food speculators, to give it control of the necessities of life, and to put a stop to the amassing of great fortunes by unscrupulous and heartless speculators who accumulate at the expense of those who live by the labor of their hands. The distance from the farmer's field to the consumer's table has been too great, and this bill is here to make the line of travel from one to the other a direct one, as far as possible. Its authors hope that what the people eat and burn shall reach them at a price they can afford and that the major portion of its price shall go to its producers. Yes; the bill is mighty drastic, but nobody has suggested any other way to escape these difficulties. I know of nothing more drastic than the way the food speculators have advantaged themselves of the laws of trade to rob the people. Let the two drastic evils fight it out. Sometimes two poisons are found to be antidotes for each other. [Applause.]

The men who desire a full discussion of this legislation are right. The committee has been weeks considering this matter, and the House should have ample time to look it over.

If they were in such a hurry, the committee should have brought the bill in sooner. This is a legislative body, made so by the Constitution. The edicts of this Congress are not irresponsible articles published to interest idle readers. They are the mandates of a mighty Nation forged into laws to govern a hundred millions of people. Why should the Members of this Congress be expected to debate these great projects as reporters rustle out the morning paper? The men who enact the statutes for this august Republic should do so with deliberation and dignity. Haste makes waste, and a lack of careful thought here now may mar the destinies of our people for generations. There should be time for debate. The emergency has now reached a point where we have not time and must put this bill through without delay, but it leaves many points open that should have been carefully discussed here, and if this bill had been placed before the House at an earlier date perhaps better results might be achieved.

There is a provision in the bill that the President may stop the manufacture of liquor during this war. If the chairman of the committee can assure us that the President will do that, that will be satisfactory to those of us who are interested in that proposition; but the administration asks of the House a revenue of $400,000,000 on liquor, and many of us fear that the desire to utilize that revenue may prevent the administration from exercising the power granted in that section. With more time this provision could have been whipped into more definite shape. I would prefer to see a positive law passed on this subject in this legislation and thus remove the responsibilities from shoulders that are burdened weightily enough already. There will be an amendment offered putting a stop during this war to the manufacture of liquor, and I hope that it will become a part of the law. The brilliant gentleman from Atlanta, perhaps the most eloquent of the prohibition orators on the floor, speaking here Tuesday, called attention to the fact that there are from 300,000,000 to 500,000,000 gallons of distilled liquor now in the country which would not be affected by cessation of the manufacture of liquors. He suggested that—

> In five months every drop of beer in the United States will have been consumed, * * * and the men who are inclined to consume alcoholic beverages will be forced to drink distilled liquors, and if this war lasts three years, by the enactment of that very section of this bill you will create more drunkards than have been created in a decade before, because you will force every man who has a craving for alcohol to drink distilled liquors.

This section is presented not as a temperance measure but as a conservation of food measure. Whatever barley, whatever corn can be added to our food supply will be to our advantage and will be a help. While stopping the manufacture would not stop the sale, and as the gentleman evidently believes will not close the saloons or keep men from getting drunk on the whisky on hand or to be imported, it certainly will put a crimp in liquor manufacture that they will feel after the war when they open again. It will "help some" eventually even if it does not just now put it's finger upon the sore spot.

The gentleman and I have all through this session stood together in the great battle for temperance, and if he will refresh his memory he will recall House bill 2308, intro-

duced by a friend of his from Kansas the night war was declared, which if enacted would drive whisky 20 miles from every camp and fort where we train young men, and would make a temperate American army and preserve the morals and the character of young men we are about to send to the European battle front. It would complement this legislation by beginning to stop the sale in as drastic a manner as our Constitution permits, according to these constitutional lawyers. It is urged against this zone bill that it would stop the sale of liquor in Boston, New York, Chicago, St. Louis, San Francisco, and every great city where a fort is maintained—and it would—and those like the gentleman from Georgia [Mr. HOWARD], who so earnestly favor national prohibition, can take its first step under the Constitution with the zone bill. When the temperance forces of this Congress shall close the saloons in Boston, New York, Chicago, St. Louis, and San Francisco they will have broken the backbone of the liquor traffic, and the promised land will be immediately in sight, so my delightful friend can well afford to work for both measures. Of course, if the administration is looking to a revenue from liquor and should decide not to make an Executive order with regard to the discontinuance of liquor manufacture, this feature would be inoperative, and therefore I hope an amendment will be adopted making it mandatory legislation, and our temperance people may be free to turn their efforts to stop the sale of liquor about our forts and camps to save the soldiers and incidentally to shut up the saloons in New York City and all our great cities.

This committee has heard the testimony of many who have given these subjects careful consideration, including this Mr. Hoover, who is to head the practical application of the plan. They have voiced an effort to see that the farmer, not the gambler, gets the bulk of what the consumer pays for a crop. We shall not allow the speculator to amass millions out of the necessities of those who labor at the forge and the shop and the rail and the mine. We purpose that these silk-hat pirates shall no longer grab the fair remuneration due those who toil in the field. I hope they have struck the solution of that great difficulty in the main. Doubtless supplementary legislation will be essential to complete what we have started here.

For example, it appears to me that this bill does not do as much as it should about the trade in coal. Every winter our people are confronted by the threat of a coal famine and live in dread that they will not be able to keep the fireside alight, while these coal speculators and coal barons mount higher and higher with their demands upon us. In my judgment, these provisions should have been more definite and more drastic. Why make so many bites of a cherry?

> Why blame plain Cromwell that he never shed
> Obsequious tears o'er Charles the Tyrant's head,
> But made no speech, and cut it off instead?

In our country about every other winter the railroads run out of coal and have to commandeer it from the rest of us, while en route, to keep their engines running. Out at Leoti, Kans., some years ago, when the villagers ran short of coal and winter bit hard, and a couple of cars of railroad coal lay on the track, the citizens went up and retaliated and commandeered that, receipted the station agent for it, and placed it definitely in their cellars, and paid the bills when they were presented. As I understand it, they claimed this was a species of the exercise of the public right of eminent domain as applied to chattels that were the necessaries of existence. In my judgment, the people of this country are not going to stand any foolishness this winter about coal or any enormities as to its price. I hope this bill is such sufficient warning to speculators in the right of human beings to keep warm and cook their food that it will not be necessary for the Government to take possession of the coal mines during this war, and I hope that this bill has lodged in the hands of the administration the power to do this. But the provisions with regard to coal made by the gentleman who framed this bill should have been a trifle more definite, more incisive, so definite, so certain, that hereafter as long as this war lasts a man will not have to sell a farm every time he buys a ton of coal. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield to the gentleman from Kentucky [Mr. LANGLEY] such time as he may desire to use.

The CHAIRMAN. The gentleman from Kentucky is recognized. [Loud applause.]

Mr. LANGLEY. I would not go into a lengthy discussion of this bill if I could get all the time I wanted, because I know it would not change a single vote, and that the only effect would be to delay the passage of it just to the extent of the time I would occupy, and incidentally to try the patience of the committee, which I know has already grown weary of this long-drawn-out debate. I would not speak at all but for the fact that I regard this bill, among all the war measures, as second in importance only to the war resolution itself. It is more important than the revenue bill, because, while taxation does miss a few without harming them, if food misses anyone it means starvation and death. It is relatively more important than war munitions, because these are powerless without men and men are powerless without food. So I feel that I owe it to myself and to the people I represent to say a few words at least in explanation of my reasons for giving it my support, reserving the right, however, to support certain amendments that I know are to be offered.

If I wanted to be partisan and unkind to my Democratic friends I would show that our experience in recent times proves that they were wrong and misled the people when they claimed that Republican legislation was responsible for the advance in the cost of living. I would show that this war has conclusively demonstrated the wisdom and the soundness of the economic policy of the party to which I belong, which fosters national self-reliance and self-support by encouraging and developing our own industries and resources and helps to "sharpen our wits" to these great ends, rather than for the purpose, as their present titular leader, the President once said, of inviting the competition of foreign lands. But I shall not go into these matters now.

Let me pause here to say that I have always believed, and still believe, that we should pay more attention to the development of our own matchless resources and powers as a nation, and to the cultivation of closer relations, commercial and otherwise, with our neighbors on this continent, both to the north and south of us, and meddle as little as possible with the affairs of the nations across the seas, so that we may ultimately have here practically a world unto ourselves—one mighty continental republic, or union of republics, with ours the greatest of them all, free from the strife and bickerings of the Old World and the fallacy of its "divine right of kings," and with universal liberty and equal rights to all before the law reigning supreme. This was the dream of the earlier statesmen of this continent, and I believe the hand of Divinity has marked out that pathway for us. Of course all things must be subordinated to winning victory in this war, now that we are in it, but after that has been achieved we should resume obedience to the admonitions of Washington and all work together for a greater America on this continent, for therein alone lies security for the permanency of our peace, happiness, and prosperity. [Applause.]

But to return to my subject. We are confronted with a profoundly grave food situation and there is no need of wasting time theorizing about it. The people are suffering from the exorbitant prices of the necessaries of life. No one denies that this situation is due chiefly to gambling and to other improper means by which men who are not producers are reaping the benefits of these high prices, although I think we are somewhat to blame ourselves for failing to heed the danger and permitting so much of our products to go abroad. Be that as it may, the people are suffering and are crying for relief. The President and his advisers tell us that they can give that relief if we will grant them this power. Let us do it, and as promptly as possible. If they succeed the people will give credit where credit is due. If they fail the people will place the blame where it belongs. I hope and pray they may succeed. [Applause.]

Complaint is made that the bill proposes to confer unprecedented powers upon the Executive. The bill undoubtedly does do that. It fairly bristles with unprecedented powers. Autocracy oozes from its every pore. But the ends sought justify the means. We are dealing with a desperate situation and it requires a heroic remedy. We can not assume that these powers will be used improperly or unwisely. If that is to be the case, then, gentlemen, we have already granted the Executive enough power to wreck the Republic.

Some gentlemen seem to be fearful that in granting such sweeping powers to the Executive we are risking the danger of autocratizing our own country in the effort to democratize the balance of the world. Personally I do not share that anxiety. Our people are wedded to a republican form of government, and they will never stand for any other kind. I was reared by Christian parents, and one of the first things they taught me was that the best way to fight the devil was with fire; but I never understood that in thus choosing his majesty's own weapons one thereby committed himself to the devil's principles or form of government. [Laughter.] So if the President needs the weapons of autocracy in this war with autocratic Germany, I am in favor of giving them to him. [Applause.]

I notice that a distinguished gentleman in another body criticized this bill because, he said, it gives the President the power, if he chooses to exercise it, of telling us when and what we shall eat. Of course, I would rather not have that done to me, but I shall be worried less over the possibility of it if he will only fix

it so as to guarantee that we can all continue to get something to eat until this war is over. So far as I am concerned, Democrat though he is, I would rather have him tell me when and what to eat than to have the Kaiser do it. As between Wilson and Wilhelm, I am for Wilson, the exercise of which privilege affords the consoling assurance that a Congressman still has a voice in some things and that the constitutional prerogatives of this great body have not been entirely abrogated. [Applause and laughter.]

Gentlemen, I represent a large farming and mining constituency, and if I believed this bill would harm them I would vote against it. I do not believe it will, but, on the contrary, I believe it will be mutually helpful to them, if it is justly and fairly administered and properly applied to all necessaries of life, as we must assume it will be. If any gentleman can point out anything in the bill that might endanger their interests and rights in any way I will gladly vote for an amendment to eliminate the danger. But the producer and consumer should be treated alike. There should be the same supervision and control during this war over other commodities—shoes, clothing, and all other necessaries, especially those things that the producers of food, feed, and fuel have to buy—and I understand it to be the purpose of those in control of Congress to follow or amend this bill with other provisions to accomplish that end. I shall vote for these, too. [Applause.]

I am going to say one thing, however, at the risk of being criticized. I know that we must help our allies, but I am opposed to taking our food products away from this country for the use of the people of any foreign country, allies or otherwise, if by so doing American citizens are left unprovided for. I believe in the old doctrine of charity beginning at home. I am for America first on the food question, just the same as I am on every other question. [Applause.]

Mr. LEVER. Mr. Chairman, I yield 10 minutes to the gentleman from Alabama [Mr. HUDDLESTON].

The CHAIRMAN. The gentleman from Alabama is recognized for 10 minutes.

Mr. HUDDLESTON. Mr. Chairman, I want to call attention to a provision contained in section 4 of the bill. Section 4 is as follows:

SEC. 4. *That it is hereby made unlawful for any person* willfully to destroy any necessaries for the purpose of enhancing the price or restricting the supply thereof; knowingly to commit waste or willfully to permit preventable deterioration of any necessaries in or in connection with their production, manufacture, or distribution; to hoard, as defined in section 6 of this act, any necessaries; to monopolize or attempt to monopolize, either locally or generally, any necessaries; to engage in any discriminatory and unfair, or any deceptive or wasteful practice or device, or to make any unjust or unreasonable rate or charge, in handling or dealing in or with any necessaries; *to conspire, combine, agree, or arrange with any other person, (a) to limit the facilities for transporting, producing, manufacturing, supplying, storing, or dealing in any necessaries; (b) to restrict the supply of any necessaries; (c) to restrict distribution of any necessaries; (d) to prevent, limit, or lessen the manufacture or production of any necessaries,* or to enhance the price thereof, or (e) to exact excessive prices for any necessaries; *or to aid or abet the doing of any act made unlawful by this section.*

This section makes it unlawful to do a number of things. Among other things, it is made unlawful to conspire, combine, agree, or arrange with any other person to limit the facilities for transporting, producing, manufacturing, supplying, storing, or dealing in certain of the necessaries of life, and so forth. There are a number of other things mentioned in that section, and it is made a crime for two men to agree together to do those things.

Now, manifestly, if two farm hands agree to quit work until they get better wages, or 15 hours a day instead of 16, or a place to sleep in the house instead of in the hay—if two farm hands should agree together for these purposes, they will be agreeing together to restrict production, and will commit a serious criminal offense. By the same sign, if the 20,000 coal miners in my district should agree with each other to strike for better wages, they will commit the crime that is denounced by this section.

Upon this statement of the matter gentlemen will observe that this is a very important section of the bill. In a recent meeting, at which Mr. Hoover was present, in reply to my question, he said that the bill had no purpose to prevent lawful and legitimate combinations of labor and a suspension of work or a refusal to accept employment in carrying out the legitimate objects of labor agreements. The chairman of the Committee on Agriculture also advises me to the same effect, so that I am hoping that an amendment may be adopted to this section which will reserve to the workingmen of this country the right that they have always had, the right that I trust the American people will always be fair enough to secure to them, to try to do something to better their condition, to try to get decent wages and living conditions.

Now, this section 4 of the bill, according to the interpretation which may be given to it, and which should be given it, as it is written now would make it absolutely impossible for men engaged as workmen and laborers in the production of food, fuel, and feed to agree together to quit work in such way as to limit production. This would, of course, include men engaged in the mining industry. It would require those men to be content with the conditions in their occupations which are now existing. It would absolutely forbid miners, railroad men, and agricultural laborers to use the only weapon that labor has for its defense, which is to quit work. That is labor's only weapon to better its condition. I do not think we ought now to say that labor must be content with whatever wages and hours and whatever conditions employers have granted heretofore. I know that the condition of labor in my district is far from ideal. I know that those men ought to have the right to try to do something in a legitimate way to better their situation, to get better wages, and to adjust their lives and work to the changes in conditions and the greatly increased cost of living in these times.

Mr. RUBEY. Will the gentleman yield?

Mr. HUDDLESTON. I yield to the gentleman.

Mr. RUBEY. The gentleman will realize that this is a war measure, and he stands for labor. Does he think we ought to put anything in this bill that will encourage men to strike in these times and under these circumstances?

Mr. HUDDLESTON. I think if we intend to prevent labor from striking we ought to be men enough to say so. If we have such a purpose, we ought to be manly enough to meet the issue without evasion and to throw the challenge into the face of labor, and say, "You shall not strike. We conscript you now as servants for your employers—you miners, railroaders, and farm hands—and we demand that you shall continue to work at the wages that you are now getting." When we legislate we ought to be frank and open and not take away the rights and privileges of men by any subterfuge or any evasion or half-concealed joker in a bill offered to remedy a public emergency. I want to say to the gentleman that there never has been an emergency in this or any other country which, in my mind, justified the enslavement of the men who toil.

Mr. CANNON. Will the gentleman yield?

Mr. HUDDLESTON. I yield to the gentleman from Illinois.

Mr. CANNON. It is an open secret that railroad labor, mining labor, farm labor, and much other labor will be exempted from conscription, kept out of the trenches. Does the gentleman think that being thus exempted, they should be at liberty to conspire together to prevent the production of the necessities of life during the war?

Mr. HUDDLESTON. The gentleman speaks of an open secret. The secret is evidently open to the gentleman——

Mr. CANNON. It is open to everybody.

Mr. HUDDLESTON. But it is not open to me. To the contrary, I know that no occupations have been exempted as classes, and if we are to trust the statement of the War Department no such exemption will be granted. I know that coal miners, as a class, are not going to be exempted. I know that farmers are not going to be exempted.

Do not plead bankruptcy. Do not come in here trying to pass an important bill like this, and go into mental and moral bankruptcy right at the outset. If we are going to take away men's rights, let us be men and say so when we do it. Do not let us come here afterwards and say we did not know we were doing it. Do not let the American Congress put itself in the unenviable position of adopting a measure of far-reaching consequences, touching the lives of hundreds of thousands of men in this Republic, and do it under some other guise or pretention than a frank and open avowal of intention to take away the right of the workingman to try to better his condition. If we mean that, let us be men enough to say so.

I shall offer an amendment to correct this defect that I think is in the bill. Certain gentlemen have intimated by their questions that they favor a provision in this bill to forbid strikes. I want to ask those gentlemen to come out into the open and offer an amendment to this bill expressly forbidding strikes. Let us test the sentiment of the House in a fair way. If we do not want such a provision in the bill, let us make it absolutely clear and sure that such is not the purpose of the bill, and shall not be its effect as interpreted after it becomes a law.

I will put my amendment in the RECORD as a part of my remarks.

Amend section 4 by adding at the end of the section the following:

Provided, That nothing in this section shall be construed to repeal, modify, or affect either section 6 or section 20 of an act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914, nor

to restrict the right of workmen, employees, or persons seeking employment to agree together not to accept employment or to quit work for purposes of mutual help or to secure better wages, shorter hours, or better working conditions, nor of persons in good faith to aid and abet them therein.

I want to say a few things with reference to the bill generally. I shall vote for this bill. I shall do so without expecting anything extraordinary from it. Prices are high. The cost of living is almost beyond the reach of common men, and I vote for this bill knowing in my own mind that it will not produce the great measure of relief that has been hoped for from it by some of the more optimistic. I think the country ought to be warned and prepared for a continued general advance in prices. The country ought to be frankly told that about all that can reasonably be expected from this bill is to stabilize prices and to prevent hoarding and speculation and unjust and unfair practices in the handling of foods and fuel. That is about all that can be done with this bill, and even that can not be done unless it has an administrator of almost superhuman ability. I do not envy the man or the men who shall have the duty imposed upon them of administering this bill. It will prove a most difficult piece of legislation to put into effect. The people of the country have had their hopes keyed up. They have been told by one and another, either innocently or with malice aforethought, that great relief is going to be given to the consumers of the country by this bill, and they are going to expect to see something important done. They are going to expect things done that no man can possibly hope to do under this bill. Prices, generally speaking, are not going to be reduced. There are some articles as to which there may be reductions. There are certain articles of food that are being sold for more in the United States than in the war-beleaguered countries abroad. That will be corrected. If this bill is wisely and efficiently administered, about all that can be done is to bring the producer and the consumer closer together, so that they may deal with each other without their efforts being thwarted by outsiders interfering for their own selfish purposes.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LEE of Georgia. I yield five minutes to the gentleman from Alabama.

Mr. HUDDLESTON. Mr. Chairman, prices are going up because of certain economic laws. It is a mistake to assume that the great increase in prices has been wholly due to speculation. It has been, so far as potatoes and flour are concerned, and some other things, but there has been a general advance in prices all along the line due to certain economic laws that you can not repeal by a piece of legislation going through Congress. There has been a reduction in production. There has been an increase in consumption. Half the men in the world have been engaged in worse than idleness, standing with arms in their hands, consuming and not producing, and they have got to eat, and the food has got to come from somewhere. So the consumption has been greatly increased, and that increase is going to continue, and we can not stop it here.

Then there has been an immense increase in the circulation of money in this country since the war began in 1914. We have got in circulation to-day $45.49 per capita in the United States, the largest amount that was ever in circulation in this country in its history. In July, 1914, the money in circulation in the United States was $3,402,015,427, a per capita of $34.35. Our circulation on June 1 of this year was $4,731,326,982.

We have got $1,329,311,555 more money in circulation than we had in 1914, and that affects prices all along the line.

In addition to that we have taken over something like two to three billions of dollars of European securities in the last two or three years. We have had an immense flotation of foreign bonds and other securities. They have been taken up and are held by bankers and the large interests and not by the people. They are being used as a basis of credit, and that has resulted in great inflation and is another cause of the great increase in prices. That is going to continue. The flotation of five billions of our own bonds in this country is going to make prices higher. Prices of all kinds of goods are going to be higher. There is no way to stop it by law. There is going to be a general advance all along the line, and all that we can hope to do is to try and keep out friction, to keep out the hoarding and the speculation, try to stabilize the prices, try to fix it so that a man can buy things for what they are really worth, so that he will get his dollar's worth.

A dollar is worth less than it was three years ago. It is worth less than it was a month ago, and from now on it is going to decrease in purchasing value. The purchasing power of a dollar, whether it be in land, in goods, in food, in manufactured articles, or in securities, is going down every day, and we might as well realize that now as at any time. When we say that the purchasing power of money goes down that is merely another way of saying that the sale value of products of one kind and another is going up.

Let us not stand in the bed of a mighty river and undertake to turn it upstream. Gentlemen, you can not begin to do it. Let us not deceive the American people, let us not make them think that they are going to get prices back to what they were several years ago merely because Congress has marched up and down and to and fro and the Executive has put his name to a bill. Economic laws are inexorable; you can not repeal them, you can not stand against them, for they will sweep you away. You may fix the price of one thing, perhaps—the Government may buy up the whole crop and fix the price on wheat. You can perhaps control it for a little while, for a year or two; you may dam a brook, but you can not dam the Mississippi. But when you come to prices as a whole, they are going up; the passage of this law can not stop it, and the American people ought to know it, and it is for the people to make preparation for increased prices all along the line. If we do not warn the people, we will make a sad mistake and be failing in our duty to them. [Applause.]

Mr. HAUGEN. Mr. Chairman, I yield 15 minutes to the gentleman from Ohio [Mr. FESS].

Mr. FESS. Mr. Chairman, in the discussion of the bill there are two or three outstanding facts that I think all of us ought to have clearly in mind and ought to keep them in mind. The one that appeals to me more than any other is the food situation now and the probably increasingly embarrassing situation in the future. I presume that in this war of attrition, which is now the professed method of ending it and which from the beginning seemed the only way because of the inevitable struggle between land and sea power, the food question will go further in determining the result than any other items. Germany has so regarded it and is now staking her all on her campaign of starvation, even to the extent of destruction of all food and fuel supply she can touch. It is evident that Germany is concentrating to that end all of her energy, her skill, her ingenuity, her money and man power, and her activity in the submarine campaign. In other words, she has willfully surrendered the good opinion of all mankind and has employed the tactics of the pirate to bring her enemy to her knees by starvation. That is really why we are in war. Her exigencies were sufficient to openly attack the liberty, sovereignty, and common rights of our Nation. It seems to be the last resort of this Imperial Government, and in order to starve her enemy she was willing to make war upon the United States unless we voluntarily surrendered our rights upon the sea.

Growing out of that determination of this great military power certain things are more or less startling to me, and I think to the membership of this House when viewed in the light of the world situation. In the first place, the world's food supply is going to be lessened as the productive ability of the world is rapidly depleting, because it is becoming consumptive. The increase of the number of consumers finds a corresponding decrease of the number of producers. The ranks of production are being depleted by taking the producers out of that class and making them consumers. The agriculturist leaves the farm to take his place at the front, where his demands as a consumer are increased. In turn the ranks of the producer are being recruited by inefficient, inexperienced, untrained labor of the classes that heretofore have never been enlisted. This inevitably reduces the man as well as machine power of production and must be felt in results. Aside from this inefficient labor we also recognize the lack of elements of fertility in the soil supplied by fertilizers which now must be absorbed by war purposes. That means an interruption of the productive forces of the world on the one hand and the depletion of the fertility of the soil on the other, which together are bound to result in loss of crops to feed the world. This argues loudly for a campaign of increased effort on our part to produce as well as to conserve against waste.

Aside from that, we are facing to-day a campaign of actual destruction of the food that is now existing and will exist in the future. This campaign is a studied elaboration of the brains of a great Government, which to say the least is ominous. So that, on the one hand, we see the ability to produce lessened, and, on the other hand, the power to consume increased, for the reason that the consumption is by the agency of destruction, the submarine, whose activities since February 1, when the campaign began, have been sleepless and relentless, respecting nothing save death of the commanders.

If we attempt to meet this destruction of food by methods of simply increasing the transportation ability such as our shipping board is doing, we will not entirely relieve the situation. I do not by this mean to minimize the importance of rapidity

in shipbuilding. But that will not solve the question of conservation of food. For, suppose we can build two ships to the destruction of Germany's one, and I think we can do it, suppose we do, that does not save the food supply if the ship that carries the food to Europe is sunk. Every shipload of food that goes to the bottom of the sea reduces our needed supply that much. Building ships does not relieve the situation permanently, and for that reason, although the campaign for increasing the carrying power is wise, it does not give us security against impairment in the future. It is not so much the number of ships, wooden or steel, that we build, but it is the number of ships Germany sinks that must be the chief concern of this Nation to-day.

If we read the papers we are led to believe that while the submarine campaign, save the present week, is not so active as heretofore, yet we must not be misled for that does not mean that it will not be increasingly active. The figures supplied by to-day's press are full of suggestive possibilities:

LOSSES BY U-BOATS RISE TO THE LARGEST FIGURES IN SIX WEEKS.

This week's figures of British shipping losses as the result of Germany's submarine warfare show a large number of vessels of 1,600 tons and over sunk than in any of the six preceding weeks. Not since the seven-day period ended April 28 has a greater number of ships over 1,600 tons been destroyed. During that week 51 vessels—38 over and 13 under 1,600 tons—were sunk.

The heaviest totals since the Teuton submarine campaign was opened in February last was registered in the week ended April 21, when 40 steamers of more than 1,600 tons were sunk and 15 vessels of the smaller tonnage were sent to the bottom.

Since the middle of April when the undersea boat activity recorded its highest toll 303 British vessels, of which 220 measured more than 1,600 tons, were sunk, the weekly total being as follows:

Week ending—	Over 1,600 tons.	Under 1,600 tons.
Apr. 21	40	15
Apr. 23	38	13
May 5	24	22
May 12	18	5
May 19	18	9
May 26	18	1
June 3	15	3
June 10	22	10
June 20	27	5

It appears to me that the one supreme purpose of our country is to find a counter action against the submarines that destroy the foodstuffs that we are trying to supply our fighting legions in the allied army; for what would it mean for us to send an American army in increasing numbers to the trenches in Europe if the food that we send to supply the allied armies can not reach those armies. It would only complicate our troubles and make a situation, perilous at best, vastly worse than it now is. I do not think it is wise to add to the difficulties a really dangerous situation. I know it is common to preach to us that we ought not to be pessimistic and that we ought to be optimistic; but that is the wisdom of the ostrich that hides its head in the sand and thinks its body is protected against attack. At such a time as this it is not wise to permit our wish to become father of our thought. Is he an enemy of his country who insists on having the truth, the whole truth, in order that we may provide for the worst?

It is confidently asserted that Germany has taken her labor off her capital ships and placed it in the construction of submarines. We are told she has now a capacity of 100 per month. It goes without saying that as time goes on the character of these underworld pirates, in size and strength as well as efficiency, will be increased and the operations will also grow more skillful. Their power must be seen on the increase and the real operation ought to be looked at squarely.

We ought to open our eyes wide and see this situation as it faces us. In that light the food problem is the biggest problem confronting the Nation to-day, in my judgment, because even though we have now plenty of food, as has been stated over and over again here on the floor, food for ourselves and to spare, that does not solve the problem unless we can get the food to the forces that are fighting our enemies. If we can insure victualizing our allies at the front we will hasten the inevitable victory. If we can not get the food to them, then we do not make it possible for the enemies of Germany to be effective at the front, and the loss of food through the submarine will tend to weaken ourselves and in the end provoke a domestic situation only less in gravity than the war. This being true, then it seems to me that the food question is the supreme question from a military standpoint. How can we prevent weakening our power against our enemy and embarrassment of the allied armies through a campaign of starvation? If a nation is starved, then its enemy has the most effective weapon that now exists, more effective than the weapons of modern warfare, powerful and destructive as they are.

If we can not secure our food in its transit to a fighting force dependent upon the outside world for its food supplies; if we can not secure it against these pirates of the underworld which are in a campaign now to sink everything, including food, only one end will result, and everyone knows that. These forces fighting our enemy must be fed by food that comes from across the sea. None of our allies in western Europe can produce the needed supplies. Our business is to clear the seas of the submarines, make safe the transit of supplies, or there will be embarrassment to the forces with which we are allied. The most stupendous fatality is locked up in our inability to control the submarine. Should we find that to be a fact, the mere contemplation of what would follow is frightful; it is bewildering. If we do not control it and Italy, left to her own food resources can not be fed, and France thus helpless can not be fed, and especially England, totally dependent upon her colonies now closed against her, can not be fed by food that comes from across the sea, there is only one result, and that will be terms of peace dictated to the people who are starved by the enemy of the starving which is our enemy in this struggle. If ever that point is reached, the very first demand that will be made by the militarist power, as everybody must recognize, will be the transfer of the British fleet into the power of the country that is making the terms; and when we contemplate the German fleet in the Kiel Canal, joined with the British fleet that has been transferred from the starved nations, and the two are combined under German control, our own Navy, brilliant as it is, will not last a week in a contest that in that case must be inevitable. Canada will then be on the market, and we will have to call to our colors all our available defense to defend our borders from attack both by sea and by land, and by the most efficient and brilliant military organization and naval combination in history. It is no use for us to close our eyes and say that we will refuse to look into the face of the situation because it is unpleasant to contemplate. He who takes off the coverings and shows the real possibility in its naked condition is not lacking either in patriotism or in devotion to country. Neither is he to be classed as an alarmist, but simply a messenger of bad news which to know before it is too late is wise. [Applause.] There is nothing to be gained by minimizing the dangers of the situation. One thing must be done. We must keep open the lanes of trade through the ocean, through which we must convey our food supply to our fighting allies. The submarine must be swept from the sea, or its activities neutralized by our antisubmarine craft. If it is not done, anyone can see the inevitable result.

Germany knows that as well as we do, and she is playing her last card, even though it incurs the bitterest hatred of all the civilized world. She has gone to it as her last resort and we have got to meet it; and, as I said before, we can not meet it by simply building ships to carry more food. We can not repeat too often that it is not the number of ships that we can build but the rapidity with which Germany can sink the food ships that is the concern of this country. We may sow the seas with our craft, but if we do not stop the sinkings the situation is not relieved. Our Navy is already on guard. Our destroyers command the Irish waters. Our scouts await the pirate of the sea. All of the ability in discovery, in science, in invention is being enlisted to find a sure combatant against this covert enemy of humanity. All the genius there is in America is being concentrated on the problem of how to control this new weapon of the outlaw—the German submarine. I believe we will control it. I have faith in our Edisons, or it may be yet some dreamy boy untaught that will solve it. But I beg of you not to make the mistake of thinking that this war is simply a summer excursion; that it is not going to last very long. Many there are who think it will be of short duration. Many times have I heard it said we would not send troops to Europe. Let us not deceive ourselves. Our Government believes that it will last for some time. We are moving on the assumption that there is no end in sight. If Russia is out of the war, and we all pray that she is not, a serious condition confronts us. Russia is confronted with a revolution at home, and because of that there is lack of solidarity and she loses effectiveness at the front. Everyone must realize that revolutions breathe revolutions. At best, a revolution has all it can do to maintain substantial order at home. It is too much to hope for effective action at the front, where millions of men, unaware of the real situation back home and divided in judgment of duty in line, must meet the well-disciplined army of an enemy. At such a time any propaganda for peace must inevitably grow. Our hopes are cast on the possible outcome of our commission now in Russia. Every Member here must know that if Russia is

out of the war we are in for a long war. It is a situation hard to contemplate, but it is not wisdom to refuse to see it simply because it is hard.

Mr. HARDY. Mr. Chairman, will the gentleman yield?

Mr. FESS. Yes; I yield to the gentleman from Texas.

Mr. HARDY. Would not an embargo, as suggested by some here, that lessened the food of our allies be the shortest-sighted policy that this Government could pursue?

Mr. FESS. Certainly. The fighting forces must be fed. We must do that if we are in this war to win, and rest assured we are going to stay in it until it is ended properly. [Applause.]

Mr. Chairman, there are some general impressions that we must correct. Germany is not, as a great many people continually express it, in a state of revolution, and, in my judgment, she will not enter such a state. Anyone who knows the German people will not believe for a moment that a revolution is possible in Germany, because they, from least to greatest, have great devotion to the régime that has made them what they are. It may be difficult for an American to realize it, but devotion to the powers that be is German religion.

Those who believe that Germany is on the verge of starvation forget that in 1914 with 68,000,000 people, with intensive methods of farming, she was not only feeding her own people but exporting. That was the result of the ability of intensive production. She has added to her area the rich fields of Roumania and the acreage of Poland. She has added at least 50,000,000 of people to her 68,000,000, and all of them are at intensive work, so far as the production from the soil is concerned, together with 3,000,000 prisoners. Those 3,000,000 prisoners are all, under the direction of German experts, working in the soil and in the shops, producing to keep Germany strong at home. With the labor of the subject millions not belonging to her, with the labor of 3,000,000 prisoners, all under the most skillful direction of experts, you can easily see what Germany is doing to maintain herself. We are in a long war, my friends, if we conduct it on the basis of attrition, dependent upon time as our real weapon. If we can end the submarine and throw against our enemy our available force of man and money power, we will end the war in a short time. With the submarine uncontrolled I look upon the food situation as the greatest problem confronting America to-day. That is the reason that with all of my opposition to the drift toward centralization in our National Government, with all of my opposition toward giving too much power to the Executive, that I shall vote for this measure as an emergency measure. I do not want to use superlative terms, but if we do not control the submarine then we are face to face with the most dangerous item that confronts the world to-day. If we can not meet the very thing that Germany is now spending her entire energy to prevent us from meeting, anyone can see what is going to come out of the struggle. With that conviction clearly before me, I shall not stand long on what is my duty toward the food problem. I will not allow theories of Government to deter me from action.

I am not very much afraid of the statement that we are giving dangerous power to the President. I have been one of the critics of the President for extending the Executive function over this branch. I saw in it what appeared a danger. I stood up here and spoke for an hour on that particular question four years ago and called the country's attention to the President's political theory. What I then criticized was the President's political control as a theory, not an impulse—my friend from Ohio [Mr. GORDON] remembers it, for he at the time interrupted me. That danger is not in this bill. It is not a theory of government written in this bill that I am afraid of. When we give this power to the President as written in this proposed act, it is the Congress which gives it to him, which is vastly unlike his taking it without our permission. The President can not control Congress save as Congress permits him to do so, while this Congress can remove the President if it wants to do so. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. FESS. Can I have two minutes more?

Mr. HAUGEN. I will yield the gentleman two minutes additional.

Mr. FESS. Mr. Chairman, I want to say, while I am going to vote for this measure because I believe it is in the right direction toward controlling the food situation that may become very grave if not taken in hand, yet I fear we are going to be disappointed in what it is going to do. I do not believe that all the problems we are to meet is the middleman. It is popular to charge against him, but that alone will not relieve a war situation. I do not believe that the only danger is high prices, and I fear if we are holding out the promise here that we are going to reduce prices of articles to make it vastly easier for our population we are making a promise we will not be able to keep, and I think we might as well realize that. High prices are caused by a combination of forces now at play, difficult to control. There is a second thing. I doubt very much whether the minimum guaranteed price will not become the maximum. I do not know that that is true, but I believe that is an economic proposition, and we are likely to see that. I deplore the fact that the bill does not extend its control over clothing, shoes, and other articles. As it is written it extends control over what the farmer sells but not what he buys. His problems of labor are acute and demand some attention that his products may be sowed and harvested. But this is not a question of this item or that item. The question with me is, here is a problem that is awfully embarrassing, and we have not only got to get products easier from the producer to the consumer, but, vastly more than that, we have got to keep our hands upon the throttle and win this war, which goes far beyond high prices in this country for the things we consume. It is a war that must be won or else America's destiny is in the balance. I have no doubt of the results. As one item of legislation, I shall support this bill. [Applause.]

Mr. LEE of Georgia. Mr. Chairman, I yield 10 minutes to the gentleman from Missouri [Mr. RUCKER].

Mr. RUCKER. Mr. Chairman, I am glad the time has been fixed when debate on this bill will end and its consideration will be had under the five-minute rule. During the time I have had the honor to serve in this House no bill, in my judgment, has been discussed more fairly or more profitably than this. The debate has been instructive and illuminating in the highest degree. I do not concur, of course, with gentlemen who see hidden dangers lurking in every paragraph and section of the bill, nor do I concur or give my approval to those things—inadvertently said, no doubt—which may be construed as a reflection upon the great man who holds the most exalted place in America and in the world to-day, or which might be construed as a criticism of the administrative agents who will be selected by him to enforce and execute its provisions.

It is charged that this bill is radical in its terms and purposes. This is unquestionably true. It is a departure from all the precedents and principles of both political parties, but, Mr. Chairman, every gentleman here knows that conditions which now confront and surround us are radically different from those with which we have dealt in the past. We find ourselves confronting a situation which is unprecedented, phenominal, unexpected—lamentably so. We are at war. Just a short time ago it was the proud boast of American citizens that our country was at peace with all the world; that this great Republic, the champion and exponent of the rights and liberties of men and nations, would not engage in war; that this great Nation, the beacon light of all the nations of the earth, stood for peace. We to-day love peace and hate war, but unfortunately, by reason of conditions we could not control, we have been forced to declare war, in order to protect the dignity of that flag and to command respect for the sovereignty of this great Republic. This war for world-wide democracy and humanity must necessarily be fought by men. Men can not fight without food. To-day, more essentially than ever before in the history of the world, the nations of the earth are looking to us for supplies. But a short time ago our granaries were full, America had plenty, and happiness reigned supreme. But to-day from every business center of this good land, from those great congested districts where men toil to produce those things which are necessary to industrial life and which are imperatively necessary to the proper and successful prosecution of this war, we hear appeals for relief, accompanied by grave suggestions that there is a dangerous shortage in the food supplies in the land. The cry from the humble homes of the poor, from the abodes of the workingmen, and re-echoed all over the land, is that the cost of necessities of life has leaped so high as to be almost prohibitory. Gentlemen tell us we yet have an abundance of supplies in America. Perhaps we have. But what does it signify, gentlemen of this committee, what does it signify if there is abundance of food locked in warehouses, concealed and hoarded away from those who need it for daily consumption, if the people can not obtain it? Will we permit those men who gamble in foodstuffs—who first rob the producer and then rob the consumer, those greedy, insatiate, merciless cormorants—to continue to pillage, or will we pass this bill, open their warehouses, and put food on the market at fair prices?

I concur in much that was said in the speech just delivered by the distinguished gentleman from Ohio [Mr. FESS]. I doubt very much if prices are going to be cut in two by this legislation. We are in war and in my judgment war prices will prevail; but, Mr. Chairman, it becomes the patriotic duty of every citizen of this country, and especially of every Member of this House and of the Congress, to see to it that prices do not keep on piling upward toward the skies until famine stalks broadcast throughout our land. I believe we are to-day considering

a most important piece of legislation. It does not attempt to provide uniforms for the soldiers; it does not provide for those engines and missiles of death which must and will be used, but it deals with and attempts to supply a want which is just as essential—it protects and conserves the food supply which the soldier boy in the field must have. Some of our boys have already gone across the waters into foreign lands, and ere long from over this broad land of ours, this beautiful country which has so long advocated and proclaimed the doctrine of peace, more of them, perhaps millions more of them, will follow to fight and maybe to die for the cause of humanity.

Gentlemen of the committee, in my judgment nothing will do more to terrorize the forces against us or to safeguard the lives and strengthen the arms of those who are fighting for liberty than to waft across the ocean the glad tidings that the Congress of the United States is determined that every American soldier, as well as every allied soldier, shall be supplied with all the necessities of life. [Applause.]

Mr. Chairman, something has been said here about the provision authorizing a minimum price for nonperishable farm products.

It is feared that it will become the maximum price. I do not share that fear. I believe that the demand in the next four or five years will be so unlimited for all the products of the American farm that the minimum price will be lost sight of under the operation of the great principle of supply and demand. It is essential, in my judgment, to fix a minimum price in order to stimulate production. And let me say here that I hope the man in the White House, who has shown such great wisdom, whose judgment has been so unerringly true in all he has done up to date, will see to it, through the agencies appointed by him, that the minimum price is fixed high enough to guarantee to every man who produces a fair and reasonable profit on his crop, taking into consideration, of course, the high price of labor and farm tools.

This is not an effort to protect the farmer because he is a farmer. It is an effort, well directed, to encourage and care for those things which the farmer alone can and does produce. We must have the products of his farm, and to enable the farmer to successfully compete with the enormous cost of labor, with the elements, with cyclones, hail storms, and floods, we must guarantee to him a reasonable profit on the products of the soil. I hope the minimum price will be set high enough to do that. [Applause.]

Mr. Chairman, I will insert as a part of my remarks an interesting and patriotic newspaper article from the pen of Sam Jordan, farm advisor of Chariton County, Mo., a very distinguished writer and lecturer on subjects pertaining to production and conservation of farm crops:

AFTER THE WAR, WHAT?

"IT IS AN ILL WIND THAT BLOWS NOBODY GOOD."

Out of chaos may come order; out of wrong may come right. Some new views of civilization may appear. A new code of human rights may be established. It may be that a new meaning will be given to humanity and human liberty. It may be that war will cause us to place property of less value than we put upon life. Would it not be wonderful if, when the war is over, we could understand that every human being has, and that each one should have, an equal chance in the race of life?

When the war is over we may actually believe that society owes to every citizen the right to earn an honest living, and also owes that citizen the preparation to efficiently earn that living. We may perhaps conclude that no education is finished until the citizen has learned to be of some service to society, and we may actually think that honest toil is honorable, even more so than inheriting great wealth that the citizen had no part in earning.

There may come a time when the war is over that we will conclude that no government has a right to exist only so long as it does not trample on humanity, and does not forget justice.

We may come to a time when we will think that promotion in public office should come only through honest, economic, efficient service. There may come a time when we think that the burdens of government should be borne by those able to bear them, and a government is wrong when it starves the weak to feed the already overstrong, and we may actually think that the Government should not undermine its own foundation by destroying the quality and the efficiency of its citizens.

It may dawn upon the country at large that "Nations rise and fall with their agriculture." It may appear that the very foundations of our Nation, its prosperity, its health, its wealth, its happiness, its very existence, have been menaced by the mischief that has been done to our agriculture by short-visioned lawmakers, and by others who have been permitted to exploit the farmer's products. It may dawn upon the country that wealth is very largely a relative term, that when one man gets rich he most often gets rich at the cost of the other fellow.

This is partly true of all who do not produce something in the way of value, and it is wholly true of the speculator and the gambler. It may occur to our lawmakers that the people who produce are as important to the country as are the exploiters. It may be that Congress will learn that the debt on Missouri farms is one twenty-eighth of that of the new seven billion national war debt, or that Iowa farmers carry a debt on their farms of almost one-seventh of that enormous amount, a sum of which the human mind can not conceive, or that the farmers of this country owe on their farms a sum equal to one-half of the great war bonds, the greatest single bond issue of all time, ancient or modern, and that under present economic laws and conditions they can never hope to pay. Horrible as the war is, it may be teaching some folks that we must in the end depend on the land for our very existence. It seems that in the past so many have not had any such curious notions. Most of the talk now is "how to feed the people" during our present conflict. The war may bring us to see that we yet must look to the farmer for our very existence as a Nation, and that war is not the all-important thing to prepare for, unless that preparation looks first to our soil, and those who toil upon it.

Wouldn't it be funny if the Congress could see that a commission might regulate the prices of staple food products just as well as a bunch of gamblers, speculators, and exploiters do it? Congress might actually see some time that the prices of staple food products do not need to be changed several times a day, as the gamblers desire. They may actually see, when the war is over, that it is of interest to the gambler only as prices fluctuate, and that fluctuation wrecks the farmer. It may dawn upon at least some members of society that the farmer really has a right to a square deal in the market place. It may bring us to the knowledge that we are wrong somewhere when in our country, the richest in the world, and the most prosperous, under shadow of the Stars and Stripes, some of our citizens at this hour are literally starving to death while in their midst there are many who count their wealth in terms of millions, much of it being accumulated by the exploitation of the farmer's products. We may arouse to the fact, when the war is over, that the fertile soil is the Nation's most important heritage, and produces more in a single year than do all the gold mines of the earth in an age, and that it is by the fertile soil that all life is maintained.

Will it really dawn upon us that any system of farm tenancy is a menace to the Nation, and that at this very hour, in this country farm tenancy and landlordism are rapidly making equal increases? Will the awful conflict bring us to a realization of such fact, and urge us to ascertain the cause, which can be placed upon the truth that the farmer has not been getting a square deal in the market place. His state of tenancy, his burden of debt from which he sees no escape, make him lose faith, and even abandon hope.

We may realize when the conflict is over that the Nation's real strength is not in its armies and its navies, but in the hearts, in the homes of a contented people made so by an efficient, honest Government that looks first to the welfare of all the people.

Would it not be splendid if we could but see that the very lifeblood of our Nation begins its flow in the furrows of the farmers' fields, and that "Sunny Slope" is as important to the country as is Fifth Avenue?

If it takes bloody war to teach us the importance of the land and its resources, and that the farmer deserves a square deal in our legislatures and in the market place, and that he really desires a home of his own, maybe it will be worth all the treasure it has cost. God grant that it will do these things, and if it shall so be, then "This Government of the people, by the people, for the people" will "not perish from the earth."

SAM JORDAN.

Mr. LEE of Georgia. Mr. Chairman, I yield to the gentleman from Ohio [Mr. BRUMBAUGH].

Mr. BRUMBAUGH. Mr. Chairman and gentlemen of the House, I shall vote for this food bill (H. R. 4961) now under consideration, whose title proclaims its purpose in the following language:

A bill to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

I shall vote for this bill cheerfully and willingly, not that I approve of each and every detail of the bill, nor for the reason that I am satisfied with each and every provision of the bill, but because I believe that the serious situation that has confronted this country in regard to the food and fuel supply, its cost and distribution, is a most serious, vital problem, not only in the present war situation but has been a very serious, vital problem for the past three years. The present war condition has simply magnified a situation that already existed and has compelled men to think and act who seemed unwilling to think and act before in regard to this serious and vital domestic situation. I shall vote for this bill because the present alarming situation demands immediate action and demands that something along drastic lines be done. A great committee of this House, representing all sections and all parties in the Nation, has almost unanimously agreed that this bill presents the best thing to be done to meet the present situation. I accept their conclusions and give the bill my hearty and willing support.

THE FOOD PIRATE A GREATER ENEMY TO OUR COUNTRY THAN AN ARMED FOE.

Mr. Chairman, the food pirate as he exists to-day in all parts of the United States is no less an enemy of our country than an armed foe is an enemy of our country, and he is the more detestable of the two. In fact, the food pirate is an assassin of American life and American liberty, and whenever it is shown that greed and avarice alone, without mitigating circumstances and conditions, has prompted his action of starvation and robbery, he deserves to be dealt with by the law as a pirate and assassin. Even a penitentiary sentence is not enough for such oppressors of the people and of laboring men, women, and children, for some men are so avaricious that they would endure even a penitentiary sentence if by so enduring in the end they would retain a fortune thus obtained and saved. The food pirate should be made to serve the sentence, and he, his estate, and backers should be made to pay back fourfold for every cent of his extortion. He not only brings pain and suffering, misery, woe, and want to thousands of homes, but he endangers the very existence of this Republic. He shakes the very foundations on which society and democratic government is founded. We must destroy him or he will destroy the faith of our people

in the fairness, protection, and justice of our national laws, and when that situation comes about the days of the Republic will have been numbered. [Applause.]

THE UNJUST AND ALARMING SITUATION.

Let us look at the alarming situation and notice what has been going on among avaricious men and food pirates for the last few years, coining money out of the stint and suffering of laboring men, robbing all our homes, and taking their extortionate toll from the mouths and backs of women and children. Let me cite just a few examples of the many that could be given. The other day the public press carried announcement stating that it had been ascertained that cars on a siding close to a town in Illinois had been billed and rebilled labeled as coal, while the same contained potatoes that were allowed to rot in the cars while the people were paying unheard-of prices for potatoes on account of the supposed shortage in the supply of the same. I have recently received a letter from a prominent business man in my city, and I am going to quote two short paragraphs from that letter. He shows how peaches and potatoes, by arrangement of an association to raise prices, were paid for on the tree and in the ground and allowed to rot to assist in maintaining the announced shortage of the crop and the extortionate high prices charged all the people. I quote the paragraphs:

In the fall of 1916 peach growers in northern Ohio received 65 cents per bushel for select peaches, when these same peaches were sold in the Columbus market at $3.25 and $3.50 per bushel, and in many cases peaches were bought and paid for and allowed to rot on the trees, rather than reduce prices to the consumer.

I also know of one specific case where 200 acres of potatoes, bought and paid for at $1.10 per bushel, with the understanding that the producer of these potatoes was to dig them and have them ready for market under the direction of the purchaser. These potatoes are still in the ground, even though the producer protested against this waste.

Is not this situation both alarming and criminal? It leads my correspondent to make this observation, which I also quote:

From my observation I am inclined to believe that the lack of interest in volunteers or offering their services to our Army is due, to a very large extent, to the fact that there is a universal feeling that our own Government has been unable to take care of a situation such as described, and in the absence of such protection and consideration on the part of the Government, the people are inclined to be slow in offering their services to the Government.

I believe that this bill will show that our Government will and can take care of this situation and correct this evil and bring relief. It is our bounden duty to see that the people get relief.

THE UNPATRIOTIC EFFECT OF THE PRESENT SITUATION.

These speculators in the necessities of life—food pirates—are striking a more deadly blow at our country than any foreign foe could strike. In this critical hour when men are offering their lives and their fortunes for the defense of republican institutions and the honor of our flag we would be recreants if we did not vote to lay the heavy hand of the law upon these criminals. Our laboring men, when they kiss their wives and babies good-bye to go to the front, have most distressed, anxious thought for their homes, because of the extortion of these men. In a great Ohio daily, the Ohio State Journal of April 12, is a very suggestive cartoon that tells the entire story. Here is the young father bidding farewell to the anxious ones at home and as he passes out the front door to answer his country's call the food speculator, with the black mask and revolver, in the garb of the burglar, enters the back door of that home, and the cartoon well states that while the father goes out of the front door the food speculator must be kept out of the back door. I am willing to do that, even if to do it we must send them to the penitentiary for life and make them and their estates pay back fourfold all their extortions. They have played their horrible game so long and to such a limit that they must be dealt with as traitors to our country and as despoilers of our homes. Why make such a fuss about common gamblers in money with loaded dice and cards and sit supinely by while the wealthy food pirate gambles on the foods of all kinds—food of which they never have seen a bushel from one year's end to another and food of which they never have spent one day working on the farm in the noonday sunlight of an August day to produce or to gather to feed the children of mankind? Why should we permit them to bottle up in cold-storage houses our food and then eke it out to the people at any old price that suits them and to keep the price up, let it rot, or throw it out on the dump, when people are crying with hunger? What they can not store and bottle up they have let rot, in many instances, in the field to keep it off the market. The 1915 crop of apples was only one instance. They could not find store room for all that crop, yet they held the price to $4 per barrel while they permitted thousands of bushels to rot, and in the springtime threw thousands of bushels on the dump.

THE CRITICAL SITUATION THE COUNTRY FACES.

Gentlemen of the House, I am trying to be conservative and mild in my statement of this case. If you do not think so, read the statement given to the press the other day by Mr. Hoover, the national food commissioner, in which he states that the food pirates and food speculators have robbed this Nation of $50,000,000 per month—$50,000,000 per month taken by extortion. Mr. Hoover states that in the last five months $250,000,000 has been extorted from the American consumer in excess of normal profits of manufacturers and distributors. Think of this being allowed to continue while meat and butter and many of the necessities of life have been driven from the workingman's table simply because he can not earn enough to have upon his table the things that his hard labor demands and to which he is justly entitled. For myself, I want to say that I am no new convert on this subject. I was greatly gratified when months ago one of the great dailies of my native city, the Columbus Dispatch, recognized and commented upon my efforts in regard to the importance of the food and fuel situation, and I take pleasure in inserting here an editorial from the above, which reads as follows:

MR. BRUMBAUGH ALERT TO SERVE.

The Dispatch has word from Congressman BRUMBAUGH that he is deeply interested in all efforts to cut the fraud out of the prices of the necessaries of life, that he is fully cognizant of the evils that are bringing so much hardship to the poor and interfering with the heartiness of the people's patriotic response, and is alert to do all that may be done to put an end to the injustice. The first of the administration's bills to deal with the situation was introduced Monday, and others will follow. Mr. BRUMBAUGH has never yet failed to stand squarely behind the President in his efforts to establish justice at home as well as abroad. His voice and vote have always been for the patient, far-seeing man in the White House, and there is every reason to believe that they will so continue.

In the Ohio delegation there are some "willful men" who have not helped but hindered their country's cause, but Franklin County can be grateful that its representative is not one of them.

I have considered this food and fuel situation a very important and critical situation for three years past and have done my individual utmost to remedy the situation, even when others were perfectly satisfied with the situation and some making money out of the situation. The food and fuel problem was a critical problem long before the war began. It is an outrage upon the people that the food and fuel situation has been allowed to remain in the condition we now find it. It has been a heartless wrong and cruel injustice on the people. I trust this bill will correct the wrong and injustice.

Mr. FARR. Does the gentleman say he knows positively the statement he makes now is a fact?

Mr. BRUMBAUGH. My correspondent says he knows it is a fact. He is a well-known business man and manufacturer in my city.

Mr. FARR. This year?

Mr. BRUMBAUGH. For the fall of 1916.

Mr. Chairman, I am not an alarmist, but I honestly and sincerely believe that the people will not much longer tolerate allowing greed and avarice to control the food and fuel situation so that thousands of men, and I might say millions of men and families, must go cold and hungry while a few amass great fortunes in the control of food and fuel prices. I am not an alarmist, but I believe a change must soon come in regard to the management and control of men and institutions dealing with the food and fuel supply or our country will drift into very serious domestic and internal difficulties and insurrections that, if not checked by giving relief and doing justice, will lead to a commune as tragic as the French commune that horrified the world, but which, like the lightning and storm, cleared the atmosphere when it was over. [Applause.]

THE GREAT POWER CONFERRED UPON THE PRESIDENT.

Some have objected to this bill because it confers upon the President unlimited authority and power. In ordinary times and times of peace I would be unwilling to vote for any measure that conferred upon any man the unlimited power and authority that this bill confers; but in this crisis, the greatest our country has ever faced, I am willing to trust and follow the President in the future as I have in the past, and pray that he may be given great wisdom to execute the provisions of this bill, and I pray for more strength to his good right arm in dealing with this appalling situation.

FUEL AS WELL AS FOOD.

In my mind I have long associated the fuel situation with the food situation. In many cases it presents the same dastardly situation. I have not been one of those who have thought that Government ownership would solve all of these problems; but we must solve them, and if we do not the people themselves will arise and solve them by some sort of Government ownership.

The poet has said that man's inhumanity to man makes countless millions mourn. The people will not much longer be satisfied to let man's inhumanity to man in the shape of avarice and greed make countless millions go cold and hungry while a few, through this greed and avarice, amass unheard-of fortunes out of the want and necessities of the people, and especially of laboring people and the poor.

THE FARMER AND LOCAL STOREKEEPER NOT TO BLAME.

I am not criticizing or condemning the farmer, or the grower of grain, fruits, food and feed products, or even many of the middlemen, the local storekeepers, who preserve, take care of and sell us the same ofttimes at a very low and reasonable margin of profit. The farmer and the grower of grain, fruit, food and feed products, the toiler who raises the same, who follows the plow or handles the hoe, plants, gathers, and harvests the crops, who works in the sun heat from daylight to dark, day in and day out, as many of us have ofttimes done, are not the hoarders of foods and are not the food-price pirates. These toilers are entitled to any advanced price that comes to them out of the natural order of supply and demand. Neither am I referring to the great majority of the local middlemen merchants who serve us in our localities. These men are making in most cases only a fair profit, and in many cases less profit than formerly. They, like the rest of us, are the victims of the food-pirate-made prices. I am condemning as an enemy to his country and his fellowmen the food pirate who speculates in foods and feeds, corners the supply, hoards it, sells it back to us at his own avaricious price, and to maintain that price lets it rot or throws it on the dump rather than feed the hungry, the laborer, and the poor. These are the men who must be dealt with in these critical times as enemies of our country and as enemies and despoilers of our homes.

A PROPOSED REMEDY.

It is well enough to recognize evils, but it is better still to propose a remedy. I am going to be bold enough to make two suggestions that might be developed into remedies:

First. Action by State legislatures.

State legislatures in the various States could pass a law authorizing municipalities to bond themselves and establish municipal cold-storage plants and fuel-supply yards. By State arrangement provisions and fuel could be purchased when prices are low and sold to the people at a small profit when prices otherwise would be ordinarily highest. These plants could act, not as competitive plants with individual enterprises but simply as a reserve supply to assist in controlling the situation and prevent food speculation.

Second. Prompt action by the legal department of the Government.

But better than all this would be the effect of prompt and vigorous and unrelenting action by the legal department of the Federal Government. Take the cases I have cited above as examples. Is there any reason why, after and upon undisputable evidence and proof, these men should not be arrested and convicted within a few days for such outrageous action against society and the peace of the country? If some misguided old man anywhere in the United States should chance to make some unguarded remark, through many sources he is quickly reported and within a few hours he is brought to answer for his unwise or unpatriotic remarks. Through these same sources of information, could not these Government agencies of various kinds all over the country report these serious offenses and offenders? And could not our United States district attorneys and the legal department of the Government be just as vigorous and speedy in the prosecution of the same and as prompt to bring the offender to the bar of justice? If this was done in every community it would soon break up the nefarious practice that shames the name of justice and smells to heaven.

A WORD TO THE LEGAL DEPARTMENT OF THE GOVERNMENT.

The legal department of the United States Government has a great duty to perform, a sacred and patriotic duty to the people and to the Nation. No law is of any effect unless it is enforced. We give you this drastic law. You must enforce it. You must prosecute. You must be able to see, to hunt out, to convict, and to send to the penitentiary the wealthy food gambler as well as the petty thief who steals a ham or a loaf of bread. Even the great patriotism of our people will not cause them to continue to pay for food higher prices right here in the land of abounding plenty than that same food is now selling for in London to-day. I want to emphatically say that our people are getting very impatient at legal delays and inactions on the part of the Federal arm of the law in dealing with these food pirates, who not only rob us, but flaunt their ill-gotten wealth in our very faces.

For myself I have no hesitancy in saying that I am unwilling to shut my eyes or ears either to the fact of the wrong or to the cry of the people. I am unwilling either to enslave our own people while aiding others to be free, or to starve our own people while feeding others. It is not necessary to do so either to free or to feed others.

A WORD OF WARNING.

It is hard. Mr. Chairman, to use conservative language in dealing with these men and this situation. The greatest enemy that threatens our country to-day is this internal enemy. The sooner this internal enemy is crushed the better the Nation will be equipped from every point of view to withstand and overcome our military autocratic enemy. Civilization itself is at stake. The people demand immediate action upon the part of the Government against the vultures who buy and store vast amounts of grain and food produce of every kind until it decays and is hauled to the dump, or who hoard and hold it to amass wealth out of want and suffering of the people, thus preventing the workingmen, women, and children, in many cases, from getting sufficient amount of food to keep body and soul together. We owe it to our fellow men to protect them from the enemies within as well as the enemies without. It is an oft-repeated saying that history repeats itself. The people may be patient and long-suffering, but he is a fool who thinks they will be patient and long-suffering forever. The cup is full; it is full to overflowing. In the hope that this law will be an instrument in the hands of the Federal authorities, we grant this unheard-of power carried in this bill. We confidently hope and trust that the power granted will be promptly and energetically used to bring relief to all the people, to make mankind feel that we are all brothers seeking each other's good and safety, and thus do our part to avert the danger that threatens our country—to bring new light to the face of labor, new hope to the homes of the poor, and make the earth a better place to live upon, fuller of love, and truth, and justice for all.

We must pass a drastic measure such as this to win this war, and we must win this war. The honor, the glory, and the future of our country is in our keeping. We dare not fail, and we will not fail. [Applause.]

Mr. LEE of Georgia. Mr. Chairman, I yield five minutes to the gentleman from Oklahoma [Mr. HASTINGS].

Mr. HASTINGS. Mr. Chairman, this bill has for its purpose encouraging the production and conserving the supplies, as well as controlling the distribution of necessaries defined in section 1 as "food, feeds, fuel, and articles required for their production." It seeks to prevent the hoarding, monopolization, or speculation in these necessaries, and to establish and maintain Government control over them during the war, and authorizes the creation of certain agencies to carry out the purposes of the act.

Everyone realizes the very great importance of the bill under discussion. It is appreciated that the passage of the bill or a similar measure is imperative. In effect, it establishes a governmental control over these necessaries, and places the responsibility upon the President of the United States, and those whom he may designate, to see that the act is fairly and equitably administered. It contains many drastic provisions, but it must be remembered that this is a war measure and that by the very terms of the act itself it ceases to be effective not later than one year after the termination of the war, the exact date to be ascertained and promulgated by the President.

In considering this bill, it is important to inquire as to the necessity for the legislation—whether the particular bill is the best means of effecting our purpose and whether Congress has the constitutional power to enact the desired legislation.

So far as the constitutionality of this bill is concerned, I think it is clearly shown by the brief submitted by the chairman of the committee, prepared for the purpose, that Congress has the power, as a war measure, to enact this legislation. It has also been shown by the very able speeches recently made on this floor. In my judgment under "the war powers of the Constitution" Congress has the constitutional power to enact this legislation. Indeed, I think no one seriously assails the constitutionality of this bill. Congress has the power to declare war, to raise and support armies, and to provide and maintain a navy, as well as to make all laws that may be necessary to carry into execution the foregoing powers.

Everyone admits the necessity for this legislation. The prices of fuel and food products have rapidly risen. Some legislation is required to correct the hoarding, monopolization, and speculation in the common necessaries of life. The object of this bill is to encourage the producer and not hurt him; but in a very drastic manner it is designed to do away with the excessive profits of the middlemen. The farmers of the country who produce food supplies do not hoard, monopolize, or speculate in these necessaries of life, nor do they enter into combinations to enhance the value of food products. It has been repeatedly stated during this discussion that 90 per cent of the

products raised on the farm are sold within a reasonable time after they are harvested, and that the profits from excessive prices for which these products now sell in a large measure go to middlemen, who have nothing to do with their production.

Speaking of the products raised in my district, I know that this is true, especially of staple products like wheat and cotton. Cotton is now selling for about 25 cents per pound. Most of the cotton was sold when picked last fall for 13 to 16 cents per pound. A little of it perhaps sold for a higher price.

Hon. F. M. Gault, president of the Oklahoma State Board of Agriculture, in a statement inserted in the RECORD by me with reference to the 1916 wheat crop raised in Oklahoma, says that prior to October 1, 73 per cent of the wheat was marketed at an average price of $1.05 per bushel, that during the month of October 7 per cent was marketed at $1.42 per bushel, and that the remainder was marketed at various dates thereafter, while the average price received was only $1.22 per bushel for last year's crop. In Oklahoma flour is selling for $16 per barrel, which should make wheat worth $3.80 per bushel, giving the middleman or speculator an average profit of $2.58 per bushel.

The purpose of this bill is to eliminate so far as possible the profits of the speculator or middleman, and in order to do it drastic provisions are gathered into it that would not be enacted into law during peace times.

Section 3 establishes Government control not only over the fuel and food products named in the bill but it extends the law to include all the processes and methods of their production, distribution, and marketing, and places this responsibility on the President, giving him the authority to enter into any voluntary arrangements or agreements and to use any agencies or cooperate with them or to accept the services of any persons without compensation. It is a very comprehensive section.

The next section makes it unlawful to hoard, monopolize, willfully destroy, or engage in discriminatory, unfair, or deceptive practices for the purpose of enhancing prices or restricting the supply or to combine or agree to limit or restrict the production, supply, distibution or manufacture of any necessaries or to enhance the price thereof.

Section 5 authorizes the President, when he shall deem it necessary, to license the importation, exportation, manufacture, storage, or distribution of any of the necessaries and make regulations for carrying the same into effect. It prescribes a penalty for the violation of same. Under the regulations to be issued under this section, reports may be required and accounts audited. The President is authorized to correct any unjust, unreasonable, discriminatory, or unfair rate or charge, to find out what would be reasonable, and to compel the observance of the same. Farmers, gardeners, and retail dealers are exempted from the penalties of this section.

Ample provisions are contained in section 6 against willful hoarding of necessaries in quantities exceeding reasonable requirements of any individual, manufacturer, or wholesale, retail, or other dealer, but the individual who produces products on his farm or garden is exempt from the provisions of this section.

Section 7 provides that where necessaries are hoarded, in addition to the criminal provisions of section 6, proceedings may be instituted for the purpose of condemning the necessaries hoarded, selling the same, and paying to the owner the proceeds derived therefrom, less court costs and charges.

The President is authorized by section 9 to purchase, provide for the production and storage, and afterwards sell such necessaries as may be required by the Government; and he is authorized by section 10 to requisition and take over, use, or operate any factory, mine, or other plant in which necessaries may be manufactured, produced, prepared, or mined, which, in his judgment, are essential for the national security or defense, upon the payment for them of a just compensation to be determined by him. The owner is permitted to sue in the courts to recover any additional sum claimed to be due.

Section 11 is designed to prevent undue enhancement or fluctuation of prices and prevent speculation in products. It authorizes the President to prohibit operations and transactions of boards of trade or similar places of business, and, what is more important, it specifically states that such places of business may be required to keep records and statements of account and make reports of all transactions, so that every detail of stock gambling may be inquired into, and plenary power is given to correct all abuses.

The President is authorized by section 12, in the event he finds it necessary to stimulate production of nonperishable agricultural products, to guarantee a price for such products before seeding time and to insure the producers thereof a reasonable profit. The purpose of this provision is to increase production by agreeing with the farmer in advance that he shall receive a fair price for his products. If this guaranty is given by or under the direction of the President, there will be no danger of overproduction to the farmer and an adequate supply of all food products will be secured for the Government and our allies. I am sure that the farmers of this country can trust the President of the United States in this emergency. [Applause.] I do not believe there can be any overproduction during the war or for years after it. Hence, I do not believe there is any financial danger to the Government in guaranteeing a reasonably high price to men producing the food products of the country. The expectation of sure profits and better prices, I am inclined to believe, will prove a sufficient stimulation to the farmers. I think the best provisions of this bill, the ones which the President will be called upon to exercise most, are those that are designed to prevent hoarding, monopolization, or manipulation of prices by speculators and stock gamblers. I do not care how drastic the provisions of the bill are made as to them.

In order to carry out the provisions of the bill, an appropriation of $2,500,000 is made for the administrative features and the sum of $150,000,000 is appropriated for the other purposes of the act, and made immediately available. Provision is made in the bill for using the money as a revolving fund.

Section 13 places the power in the hands of the President of regulating or limiting the use of food products in the production of alcoholic liquors, or nonalcoholic beverages, and prescribes a penalty for the violation of the section. I shall be glad to support an amendment having for its purpose national prohibition. I do not believe that any of our food products, in the first place, should go into the production of alcoholic liquors, and this provision can be defended as a peace measure as well as a war measure. I am in favor of prohibition—local, State, and national—and will vote for any provision looking to that end.

I have not attempted to analyze all the provisions of this bill, but have contented myself by reviewing them in a somewhat general way, stating the general purposes of the act and the evils intended to be corrected.

This has been a most trying session to every Member of Congress. We all feel keenly the responsibility resting upon us. On April 2, the day we convened and immediately after organizing, the President appeared before us and delivered his memorable message. On April 5, by an almost unanimous vote, we declared that a state of war existed with the Imperial German Government. Since that time we have provided for a five billion dollar bond issue, and the issuance of $2,000,000,000 in Treasury certificates. We passed an act providing the means of raising an army to carry on this war and made appropriations, the largest in the history of this Government, for the Army and Navy, as well as larger appropriations for the other departments of the Government. This House passed a revenue bill to raise in round numbers the very large sum of $1,800,000,000, in addition to taxes heretofore raised by other methods. Much other legislation of a very important character, which I will not take the time to enumerate but which is well known to the public, has been enacted. One bill provided for raising an army, and June 5 was set apart as the day upon which all persons coming within its provisions should register. Differences of opinion naturally arose as to all bills under consideration. Committees considered each, thrashed out their differences, and reported to this House, where the several bills were debated at length, both under general debate and under detailed consideration of the various provisions of each, and they were enacted into law.

We are in the greatest war known to history. No man will even hazard a guess as to when it will end. No one can tell what it will cost in blood and treasure. We have entered this war. The past is behind us. Our face is to the enemy and the flag of our country, which has never known defeat, in the end will wave in victory over a triumphant army. The President of the United States has a tremendous responsibility to bear during these trying times, and every man connected with the various departments of the Government is each helping him share this great burden. It has been lightened greatly by the loyal and enthusiastic support of 110,000,000 brave citizens of this Republic. They love their flag and will never see it go down to defeat. They appreciate the liberty secured for them in the trying days of seventy-six, and they now know that they are battling against the greatest autocracy the world has ever known. The people of this country without regard to party are valiantly supporting their great leader. [Applause.] It is inspiring indeed to read in almost every daily paper about the two living ex-Presidents zealously, ardently, and patriotically supporting the President in this national emergency. Of course, all the legislation enacted did not meet with their complete approval, but their country having spoken they have felt that it is their

patriotic duty to sustain the President. They do not covertly go about attacking this act's or that act's constitutionality.

I want to say that while I do not set myself up as a measure for any man's patriotism, and that while I, in common with others, entertained differences of opinion on the details of the various bills introduced, considered, and enacted in this House, yet when this Congress has spoken and when the existence of my country is imperiled and the liberty of the people involved, I shall sink all personal differences and withhold all individual criticisms and loyally, enthusiastically, and patriotically support the President of the United States. [Applause.] In these trying times I am impatient with partisanship and impatient with demagogy. Incendiary speeches should be suppressed. The constitutionality of acts should be tested in the courts and not argued in a forum where everyone knows there is absolutely no chance of repealing them and no serious intention to do so on the part of anyone making the attack. Incalculable harm can be done to the plain citizens throughout this Republic by a garbled or a partial statement of facts. For instance, the opinion of an Attorney General in 1912 as to the use of the militia can not be held applicable to legislation subsequently enacted federalizing the National Guard. The less informed citizens throughout the country reading the garbled statements may arrive at erroneous conclusions and become themselves violators of the law, which will render the task of the President much more difficult in this crisis.

I shall not say more, but want to emphasize in my humble way my impatience, condemnation, and protest against any person in public or private life who in this hour of our Nation's peril utters a single word or writes a single line or does a single act which will make more difficult in the slightest degree the carrying on of this war to a successful conclusion.

The people of this country are going to be called upon to make the very greatest sacrifices. They will have to bear an immense financial burden. They have already generously subscribed to liberty loan bonds and will do their duty in supporting the Red Cross. They will make every other necessary personal and financial sacrifice. Above and beyond all, they will send the flower of the country into the Army, many never to return.

I do not want to be understood as saying that I am against any just criticism or fair debate upon any bill up for consideration, but I am opposed to anyone protesting loyalty in one breath and in the next saying things which make the burden of our leaders more difficult to bear.

Let me close, paraphrasing the words of Decatur, with this sentiment: "Here is to my country! May she always be right; but right or wrong, my country." [Applause.]

Mr. LEE of Georgia. Mr. Chairman, I yield 10 minutes to the gentleman from Kansas [Mr. HELVERING].

Mr. HELVERING. Mr. Chairman, I ask unanimous consent to extend, in connection with my remarks, an article by the governor of our State, Mr. Capper, not really on this bill, but in connection with the subject I shall discuss.

The CHAIRMAN. The gentleman asks unanimous consent to extend his remarks as indicated. Is there objection? [After a pause.] The Chair hears none.

Mr. HELVERING. Mr. Chairman and gentlemen, there are undoubtedly many novel reasons why this bill is not being supported by some few Members of this House. The most novel, in my opinion, is that which actuates the gentleman from the tenth district of Missouri [Mr. MEEKER]. I think when we read section 13 and take in connection with section 13 the powers granted there to the President of the United States we can readily understand his position. Section 13 provides:

That whenever the President shall find that limitation, regulation, or prohibition of the use of foods, food materials, or feeds in the production of alcohol or of alcoholic or nonalcoholic beverages, or such nonalcoholic beverages as he shall determine, or that reduction of the alcoholic content of any beverage is essential in order to assure an adequate and continuous supply of food, he is authorized, from time to time, to prescribe and give public notice of the extent of the limitation, regulation, prohibition, or reduction so necessitated.

I think that solves the objection to this bill raised by the gentleman from Missouri [Mr. MEEKER]. I intend briefly to corroborate that statement by answering an attack, if I may be allowed this digression, which was made by this gentleman upon the State which I have the honor in part to represent, shortly after the close of the last session of Congress, and I desire now to speak on "Kansas and prohibition" and bring to light the character of the attacks made on the State by the brewery advocates as an admission of their desperation.

In the CONGRESSIONAL RECORD of March 8, after Congress had adjourned and it was impossible for any Representative from Kansas to defend the State he loves, the Representative from the tenth congressional district of Missouri inserted an article which occupied 67 pages of that issue, and was entirely devoted to an attack upon the State which I have the honor to represent in part.

I might well denounce the manner and the time in which this article was inserted. If the author of it, or I should say the sponsor for it, for a discredited and unreliable former Kansan was in truth the author, had a slight regard for the amenities which should govern in dealing with neighbors and friends, he would have inserted that article at a time when a reply could have been made. That he did not do so is proof of the fact that he felt somewhat ashamed of what he was doing, and that the work of years of scandal-mongering and of digging into the files of press and the columns of muckraking magazines did not result so satisfactorily that he dared come out into the open and give opportunity for disproof. It would seem that he acted on the belief that if Congress did not convene again until December next, as was then believed, his statements, whether true or false, would receive such wide circulation with the aid of a Government frank that they never could be contradicted successfully and that the breweries would have splendid additional material with which to attack Kansas and its ideals.

But we can afford to pass over all that. Fortunately we have come together sooner than was then expected. Unfortunate is the cause which brought us here, but it is fortunate for my State that we have an opportunity, sooner than was expected, to challenge the statements contained in that article in the RECORD and aid in bringing forth the truth.

The gentleman who stands responsible for the article referred to says:

Some 10 years ago I became interested in the study of the excise and prohibitory laws of the United States and other countries. Since that time I have endeavored to maintain the attitude of a student.

Now, it may be merely a coincidence, but the gentleman moved into the greatest brewery district in the United States in 1906—see his own statement in the Congressional Directory, Sixty-fourth Congress, first session—and that would make the time correspond with the period when he declares that he became interested in the study of prohibition. Environment is very apt to color the human judgment. The gentleman could look all around him and note the industry which was bringing prosperity to his parishioners. He would have been less than human did he not begin to dread anything which would tend to drag down that industry, and therefore it was but natural that his studies would be taken with the view of finding evidence in favor of that industry rather than with the idea of helping to destroy it. But what was the business which he found was the mainstay of so many of his church members?

FIFTEEN PRINCIPAL INDUSTRIES.

I have always been a believer in the idea that a man should in fact represent his district. That is what he is sent here for. Also I am not among those who believe that the brewery business is illegitimate, although it will be so when we secure national prohibition, and I hope that day is close at hand.

In the meantime we must regard the business as a legitimate one. It is recognized by the Government to the extent that we derive a tax from its product. Now, I notice that the Representative from Missouri, who is so bitterly opposed to prohibition in Kansas, has no less than 15 of these legitimate industries in his congressional district. Here are the names and locations:

Anheuser Busch Brewery, Ninth and Pentalozzi.
American Brewery, 2825 South Broadway.
Empire Brewery, Sarah and Wabash Railroad.
Green Tree Brewery, Sidney, southwest corner of Ninth.
Griesdeck, Nineteenth, corner of Shenandoah.
Grone Brewery, 2219 Clark Avenue.
Klausmann Brewery, 8639 South Broadway.
Lemp Brewery, 3322 South Thirteenth.
Mutual Brewery, 236 South Boyle.
National Brewery, Eighteenth, southwest corner of Gratiot.
Obert Brewery, 2700 South Twelfth.
Stifel Brewery, Gravois Avenue and Michigan Avenue.
St. Louis Bottle Beer Co., 2825 South Broadway.
Union Brewery, 3126 Gravois Avenue.
Wainwright Brewery, Papin, Tenth to Eleventh.

There you have 15 reasons why the Representative from the tenth district of Missouri should oppose Kansas prohibition and strive to make it unpopular in the Nation. [Laughter.] We can all understand that. He has 15 institutions in his district which make profit by making men drunkards, while Kansas is engaged in the effort to prevent her sons from answering to the call of the 15. Of a truth "there's a reason." [Applause.]

NO QUARREL WITH MISSOURI.

It is not my intent or desire to assail Missouri, or any other State, in order to sing the praises of Kansas. Thank God, Kan-

sas does not need that kind of advertising. I have the highest regard for our sister State of Missouri, and for the splendid representation which it has always had in this body. But when a Representative from that State assails Kansas, ridicules her ideals, misrepresents her people, and strives to have the country believe that a policy which Kansas has seen free to adopt is resulting in bringing the State into a condition of "dry rot," I am justified in calling attention to the actual facts, and if in making a comparison with Missouri I shall offend, then it must be borne in mind that it was an attack made upon Kansas by a Missouri Representative which is the cause.

Look up the United States Census for 1910, the last available authentic authority, and you will find that only 2.2 per cent of the people of Kansas are illiterate, while in Missouri the percentage was 4.3. I do not propose to claim that the immense difference between the two represents the difference between saloon influence and the influences operating in communities in which the saloon is ostracized, but I would be justified in doing so in answering a critic who seems to believe that every evil in Kansas is due to the fact that we shut out the brewer and his products.

Look up the same authority and you will discover that in the 10-year period, from 1900 to 1910, Kansas increased in population 15 per cent, while Missouri added but 6 per cent to her total.

Surely these statistics do not indicate that prohibition is injuring Kansas intellectually, nor is it driving population away. Before I am through I propose to show that we have gained immensely in material wealth. In the face of this evidence, which is not the mere assertion of an individual, but the results of governmental investigation, the country can well decide whether or not prohibition has resulted to the detriment of Kansas.

IMMATERIAL AND IRRELEVANT.

The author of the article published in the RECORD on March 8 was believed to be a lawyer, and the sponsor for the article has finally drifted into the same profession, therefore both should be cognizant as to the quality of evidence which will be ruled out of court because it is "immaterial and irrelevant." Of the 67 pages in the article referred to, at least 60 have no bearing whatever on the subject of prohibition, or of its effects in Kansas.

Page after page is given up to an attack upon the State government of Kansas and to the parsimonious manner in which the State has been conducting its institutions. Pages are devoted to attacks upon Gov. Capper and ex-Govs. Hodges and Stubbs. Gov. Capper and ex-Gov. Stubbs are not of my political faith, but I am free to testify that both stand for the best interests of Kansas, as does ex-Gov. Hodges, and not one of the three gentlemen would for a moment support a single measure which would be adverse to Kansas or which would prove detrimental to the interests of a single individual in the State. All three are known to the Nation as representing humanitarianism in its best sense, and when they are assailed because they have worked for economical State government in Kansas it simply shows that prejudice and not reason is controlling their critics.

And when you analyze the character of the evidence which is brought forth to condemn these gentlemen you can at once see how little it is worthy of credence. Columns are used up to give the quotations from the reports of the superintendents of the various State institutions. No criticism need be made of these gentlemen.

As far as I know they are sincere men and capable men. But we have to deal every day here with department heads, and we know very well that their estimate of the needs of their various departments is generally far in excess of our own. The head of every State institution is an enthusiast, if he is the proper kind of a man. He believes in the work he is doing, and is ever striving to extend his sphere of usefulness. You will always find him appealing to the power which has control of expenditures for new buildings, extra help, increases in wages, and authority to take up new activities. He knows, as we all know who have had to deal with the appropriation of public money, that there is keen competition between him and all others who want appropriations, and that the only way for him to get part of what he wants is to ask for a great deal more than he ever expects to get. He will get up a report which will show to those who are not familiar with the facts that his institution will go to ruin unless he has $1,000,000, and when he gets $20,000 he finds that he is able to get along without any trouble. Take any State, and I do not care which one you pick, and if it were to appropriate the amount of money asked for it would be bankrupt in one year. But in these matters we have to exercise common sense, and we find that we can practice sensible economy without causing hardship. Kansas has and will continue to always keep her institutions at a high standard, and the people of Kansas have never been backward in paying the price for anything their State really needed.

The matter of our treatment of our State institutions is the business of the people of Kansas alone, and it has no bearing whatever on the question as to whether prohibition is beneficial or detrimental. But when it is held up to Kansas that her students are going elsewhere to receive their education, and that the State is financially the loser thereby, I desire to say that the charge is ridiculous. Human nature is always the same. The thought that the thing far away is better than what we can find under our hand is one that will never be eliminated from humanity. No matter how high the standing of the educational institutions in any State, you will find students in that State who prefer to go elsewhere. Look up the student body at Yale and note how many are there from Massachusetts; make the same investigation at Harvard, and you will be surprised at the number who are enrolled from Connecticut. Does anyone for a moment believe that such evidence is a reflection upon the intellectual standing of either institution? I have before me a catalogue of one of our State educational institutions in Kansas, and I find that the enrollment comes from 27 States and 5 foreign countries. Missouri alone contributes 43 students, and yet Missouri has a splendid institution of the same kind. The attendence of these students in Kansas is no reflection upon Missouri, but rather it serves to emphasize the thought which I have expressed before—we prefer to go farther afield for what we desire, rather than to pick it up when it lies under our hand.

But, as I have said, all of these things have no bearing upon prohibition or upon its effects in Kansas, and we can sweep aside the bulk of the material submitted by the gentleman from Missouri. I am willing to discuss it at any time or in any place, but I do not propose to diverge from the material point at issue, and that is the success or failure of prohibition.

PROGRESS OF PROHIBITION.

Kansas, in common with most States, has learned that prohibition is a matter of progress and of evolution. The first step taken was to pass a prohibition law, but the enforcement of that law was largely left to local authorities, and it naturally followed that law enforcement, or neglect to enforce, followed the trend of thought of the officials in the different localities.

Then, in 1906, ex-Senator Harris aroused the people of Kansas to the necessity of real enforcement, and out of his efforts came the resolve of the State authorities to insist upon the city and county authorities driving out the saloon, and where these officials failed to perform their duty the strong arm of the State was used and the saloon was driven out of Kansas.

But that was not enough. Kansas was surrounded on four sides by States which authorized the open saloon, and it naturally followed that liquor could be shipped in, or brought in, with comparative ease, and the work of the bootlegger was aided. But Kansas appreciated the great gain which had resulted from even partial prohibition, and therefore from time to time the law has been amended so as to remedy any defects shown. A law was passed to show by record every shipment made into the State by the express companies, and as this was not sufficient to prevent the men who would go to the border cities and bring in their supplies, Kansas took advantage of the opportunity provided by the decree of the Supreme Court on the constitutionality of the Webb-Kenyon Act and enacted what is known as the "bone-dry" law, which prohibits the bringing in, shipping in, or having possession of intoxicating beverages. We believe that we have solved the problem as far as Kansas is concerned. At any rate it appears to be working well, as may be noted by the following clipping, taken from the Junction City Union of March 19, a paper published in a city of nearly 7,000 people, if we include the inhabitants of Fort Riley, one of our most important military posts, which adjoins the city. The Union says:

ONLY ONE ARREST—BONE-DRY LAW CUTS DOWN THE WORK OF THE POLICE FORCE.

Since the "bone-dry" law went into effect, almost a month ago, there has been but one arrest in Junction City on a drunkenness charge, and in that case the offender acquired his jag in Kansas City and came to Junction City on a night train before it had worn off.

But there never has been a time when Kansas has faltered in her faith in the efficacy of prohibition. After careful observance of its effects she has long since come to the conclusion that even when the law was ignored in spots, nevertheless it was valuable in building up a better citizenship, in making many homes happier, and in adding to the material prosperity of the State. Never has there been a time when she would have gone back to the day of the wide-open saloon, and she has given ample proof of that when the opportunity was afforded.

And Kansas calls the attention of the people of the United States to the real proof which is so plainly before them. While there was a time, and that not so many years ago, when our State was surrounded on all four sides by States which tolerated the saloon, to-day three of the four have followed the lead of Kansas and are in the prohibition column. And the leaven is continuing to work on the fourth, as can be plainly seen by the vote on prohibition in Missouri during the last election. The bulk of the State showed its approval of that policy; every county along the Kansas border voted its approval, and even though Mr. Paul Conwell, coauthor with the Missouri Representative in preparing the article published in the RECORD on March 8, had moved to Kansas City, Mo., to prove that prohibition in Kansas was an absolute failure, his efforts were in vain, and city and county came into the prohibition column. Evidently the people of Kansas City preferred to believe in their own personal observation and knowledge rather than in the arguments advanced by paid attorneys of the liquor interests.

The country at large could secure no stronger proof as to the fact that prohibition is a success, and that it is of value to the people in general, than the knowledge that the people surrounding a prohibition State, people who had long been advocating the wide-open saloon, after watching the work of prohibition and its effects upon those who were living under it, came around to see the error of their ways, are now advocating prohibition and are practicing it. Certainly such proof should have greater weight than the charges of a Representative from a brewery district or those of a paid attorney for the liquor interests.

GOV. CAPPER TESTIFIES.

Much of what has been printed to the discredit of Kansas is "old stuff" and it has long since been proven false. Some time since the liquor element made use of Royal E. Cabell, who published an article assailing Kansas. That article was taken up in detail by Gov. Arthur Capper, and as that answer deals with many of the things brought against Kansas by the Representative from the tenth Missouri district I herewith submit it:

The National Wholesale Liquor Dealers' Association is circulating much literature throughout the country, which is so distinctly misleading and harmful that prompt and forceful repudiation of its contents is imperative.

The liquor interests do not fight fairly; they resort to falsehood and innuendo and subterfuge. What else is left to them? Can they defend the gambling, the resorts they own and use to retail their poison? There is one thing, and one alone, that the liquor interests can do, and that is to wade into the statistical masses of the census, trusting to the confusing power of twisted figures to make black appear white in the eyes of the average man.

The liquor interests have declared, in effect, that the Legislature of Kansas has lied; that more than 700 editors of Kansas have lied; that every political party of Kansas has lied; that every minister and school-teacher of Kansas has lied; that the president of the Kansas State Retailers' Association has lied; that the president of the State bankers association and 166 bankers of Kansas have lied; that the president of the State medical society has lied; that the president of the Commercial Clubs of Kansas has lied; that the governor of the State of Kansas and many State officials have lied; that 457,000 people, who piled a majority on the wet candidate, Mr. Billard, in the last election and thereby indorsed prohibition, have lied.

CABELL'S "FACTS ABOUT KANSAS."

Just at present the wholesale liquor dealers are circulating an article by Royal E. Cabell on "Facts about prohibition in Kansas." Mr. Cabell says that Kansas's death-rate figures are unreliable, for "Kansas is not in the registration area." So he takes the death rate of Kansas cities and compares them with the State death rate of licensed States and makes no explanation that the rate in the latter case is dragged down by rural statistics. Since Mr. Cabell first wrote his article Kansas has been admitted to the registration area, but the liquor people are still industriously circulating the statement, "Kansas figures are not accepted by the United States Government."

Cabell infers that Kansas has a rate of death by violence, excluding suicide, of 123. In 1912, according to Dr. J. S. Crumbine, secretary of the board of health, the rate of violent deaths in Kansas was 60.8, including both accidents and homicides. Mr. Cabell has taken the figures for leading cities and compared them with the figures covering both cities and rural districts in license States. He infers that the rate of suicide in Kansas is 22 to the 100,000. According to the figures of Dr. Crumbine, the rate of suicide in Kansas in 1912 was 12.2.

If, in this literature, issued by the liquor men, they want to set forth facts in which intelligent opinion may be formed, why does it not say in this connection that the death rate in Kansas in connection with all of those causes of death in which alcohol prominently figures is, in nearly every case, below that of near-by States and is in every single case below that of the registration area? Why, for instance, would it not illuminate the problem to say that while the death rate in the registration area from cirrhosis of the liver was 14, in Kansas, in 1912, it was only 7? Why not say that while the death rate from violent deaths in the registration area was 91.2, in Kansas it was 60.8? It might even be well to bring out the fact that while the death rate from homicide in the registration area was 6.6, the homicide rate in Kansas, in 1912, was 4.8. It undoubtedly would be instructive to say that the death rate in the registration area from suicide was 16.2, and in Kansas, in 1912, was 12.2. The death rate from Bright's disease in the registration area was 87.5, and in Kansas only 55.4; for pneumonia in the registration area 89.2, and in Kansas, in 1912, it was 45.6.

Mr. Cabell does not say these things. They contain "the whole truth," and the whole truth would be fatal to Mr. Cabell's cause.

DIVORCE.

Mr. Cabell figures that Kansas has a divorce rate of 286, but the latest available reports from the United States Government do not agree with him. For the five years—1898 to 1902, inclusive—the rate of divorce in Kansas, according to the United States Government, was 109—not 286. Divorce statistics are so chaotic and are affected by such varying conditions that it is not possible to make a reasonable comparison, but when Mr. Cabell makes an error of 177 to the 100,000, considerably more than doubling the Kansas rate for purposes of his propaganda, when he carefully refrains from saying that the divorce rate in the prohibition State of North Dakota is only 88; that in Arizona—then license—it was 120; in Arkansas—then license—136; in Colorado—then license—158; in Idaho—then license—120; in Indiana 142; in Montana 167; in Oregon—then license—134; in Oklahoma—then license—129; in Wyoming 118; in Texas 131; in Washington—then license—184; when he ignores these significant facts and continues his false figures there is no reason why he should receive consideration.

Mr. Cabell says that 15 license States have a rate of divorce to wives because of husband's drunkenness lower than the rate in Kansas, but he carefully kicks sand over the important fact that drunkenness is not a cause for divorce in Vermont, New York, New Jersey, Pennsylvania, Maryland, Virginia, West Virginia, North Carolina, and Texas. Even then, what is the sense in saying that 15 license States have a lower rate of divorce for drunkenness than Kansas? It simply makes obvious the fact that 32 States have a higher rate.

In regard to this divorce question, something further should be said. Divorce is not common among foreign-born citizens or among the population of our great industrial centers. Some women accept their daily beating uncomplainingly. In States where the population is largely native American, where women demand consideration on the part of their husbands, a rough tongue-lashing is very apt to result in a divorce.

PRISONS.

It is stated in this literature that Kansas has a higher life-prisoner rate than 21 other States. But it omits the important fact that there is no capital punishment in Kansas. Kansas imprisons its murderers for life; Illinois punishes them with death. The thing is so obvious as to be ridiculous.

We suggest to Mr. Cabell and his employers that they present to the people of the United States these facts:

The prison rate in 1910 for the entire United States was 121.4; in Kansas it was 91.1; in North Dakota, another prohibition State, it was 63. In the same year the rate of commitments to prison in the United States was 520, and in Kansas it was only 200, while the average rate of the license States in the west north central division, in which Kansas is located, was 465. The following table, showing the rate of commitments to prison in the whole United States, in the division of States in which Kansas is located, and in all the States of that division, brings out the truth in startling fashion:

United States	520
Minnesota	499
Missouri	481
South Dakota	273
Kansas	200
West north central (average of license States)	465
Iowa (then license)	585
North Dakota	163
Nebraska	482
Colorado (then license)	610

DELINQUENT JUVENILES.

In regard to the question of juvenile delinquency Mr. Cabell says that 19 States had a lower rate than had Kansas. The fact is that some of these States had no juvenile delinquents at all, because they had no such system. Consequently they show up much better than Kansas.

It also affects the situation that some States that have juvenile delinquency systems have them in an undeveloped state; some States have an extensive parole system; some States spank the children for offenses that put them in charge in other States. Why should not Mr. Cabell say that North Dakota, a prohibition State, has the lowest juvenile delinquency rate in the west central division of States? Why should he not say, for instance, that Nebraska, which he compares with Kansas, had a percentage of discharge and parole of 51 as compared with a percentage of 39 in Kansas? These are some of the things that it is necessary for Mr. Cabell and the wholesale liquor dealers to avoid as carefully as a British grain ship avoids the glint of a periscope.

PAUPERISM.

We are told that 14 States had a lower pauper rate than Kansas. The sentence is not complete or it would read, "and 33 have a higher pauper rate than Kansas." Mr. Cabell says that Nebraska has only a slightly higher rate of pauperism than Kansas, but he does not bring out the fact that Nebraska has poorhouses in only 51 out of 92 counties and that Kansas had poorhouses in 74 out of 105 counties.

A complete study of the question of pauperism furnishes one of the most amazing arguments for prohibition. For instance, if we take all the prohibition States and all the license States (and they are both so well scattered as to make a comparison fair), we find that on the basis of the census of 1910 the paupers in the United States would number:

At the rate for the continental United States	88,319
If the rate in the license States prevailed throughout the country	108,808
If the rate in the prohibition States prevailed throughout the country	27,309
If the Kansas rate had prevailed throughout the country	22,819

The United States as a whole, according to the figures of the census of 1910, had a poorhouse commitment rate of 96.3. The license States of the Union had a rate of 110 and the prohibition States a rate of 29.8. If Mr. Cabell can make anything out of this, let him go to it.

LIQUOR CONSUMPTION IN KANSAS.

Mr. Cabell says he has been unable to locate any reliable figures in regard to liquor consumption in Kansas. Indeed, he is habitually unable to arrive at the truth or to locate any figures that are complete and correct. With great pleasure we furnish him with the following

liquor-consumption statistics, the estimates being made from reports made to county clerks under the Mahin law:

Kansas population	1,690,949
Liquor consumption, gallons	6,239,601.81
Paid for liquors	$5,303,666.04
Paid per capita	$3.04
Per capita cost in Nation as a whole	$21.00
At the rate of $21 per capita Kansas would pay	$34,509,929.00
Saving due to prohibition	$29,206,263.00

We are also very eager to furnish the following figures for Mr. Cabell's discussion. They were secured direct from the State officials by the Temperance Society of the Methodist Episcopal Church, and show the discrepancy between the Federal licenses and State licenses (or totals of local licenses). As is well known, this difference between Federal and State licenses is practically a census of "blind pigs" in any State. The table follows:

State.	Number State licenses.	Number Federal licenses.	Excess Federal licenses.
Michigan	[1]3,983	[2]7,939	3,953
Florida	354	1,267	913
New Hampshire	606	855	249
Rhode Island	397	1,552	1,155
Washington	2,340	3,169	829
Texas	3,100	3,336	233
Ohio	5,355	13,299	7,944
Idaho	226	794	568
Kansas	.....	[3]766	766

[1] Both wholesale and retail. [2] Retail only. [3] June 30, 1914.

WHAT THE WITNESSES SAY.

Let us call the witnesses and see what they think of prohibition in Kansas. If anyone should know, they should know, for they live with it and under it:

The governor of Kansas says prohibition is a great success.

Every State official who has spoken out says prohibition succeeds.

More than 700 editors and newspaper men of Kansas, in State convention, unanimously indorsed prohibition.

Every political party in Kansas favors the prohibition law.

No minister has ever opened his mouth in favor of return to license; neither has any school teacher.

The president of Kansas retailers says prohibition pays.

The president of the State Bankers' Association believes that prohibition is a tremendous asset to Kansas.

One hundred and sixty-six bankers have filed their testimony in favor of the law with the Temperance Society of the Methodist Episcopal Church, and only six could be found in all the State who doubted the wisdom of this legislation.

The president of the Kansas Medical Society believes in prohibition.

The president of the commercial clubs of Kansas has said that prohibition has added real value to every acre of Kansas land.

The supreme court has testified in the following strong language to the benefits of the prohibition law:

"The prohibitory law is well enforced throughout the State. It is as generally well enforced as any other criminal law. The enforcement of the law distinctly promotes social welfare and reduces to a minimum economic waste consequent upon the liquor traffic and allied evils. The saloonkeeper and his comrades have been excluded from effective participation in the politics of the State."

And to completely settle the question for all time the Legislature of Kansas, not by a majority but unanimously, passed the following concurrent resolution at the last session:

"Senate concurrent resolution No. 33 (by Senator Kinkel) concerning the welfare of Kansas under prohibition.

"Whereas the liquor interests throughout the country, and those allied with them in their nefarious business, are publishing abroad in form of paid advertisements in the newspapers, certain false and defamatory statements to the effect that prohibition in Kansas has caused increase in crime, death rate, homicide, suicides, divorces, and juvenile delinquents; and,

"Whereas the saloon trust is making use of juggled statistics, falsehoods manufactured by criminal interests, allied to the alcohol venders and derogatory statements made by a few unreliable and irresponsible citizens of Kansas, all with the intention of creating prejudice in the minds of the legislators of other States, and thus influencing proposed antiliquor legislation; and

"Whereas there is a lobby, the members of which profess to be Kansas men, operating in the Legislature of the State of Utah, and alleging that evil follows in the train of prohibition, and that the enforcement of the prohibitory law in Kansas has resulted in multiplying crime and deteriorating all the mental and moral faculties of the people of Kansas: Therefore be it

"*Resolved by the senate (the house of representatives concurring therein)*, That all of such charges are libelous and false, and do but represent the sentiments of men who, when this State exiled the saloon, were compelled to leave Kansas for her good; and be it further

"*Resolved*, That the reverse of these statements is true; that the State of Kansas is cleaner, better, more advanced in mental culture, and stronger in moral fiber and conviction; that her homes are happier and more comfortable, her children better educated than ever before in her history; that crime is less prevalent and poverty less general; and that all this is due largely to the fact that the saloon is such an outlaw that none of her school children have ever seen a saloon, and are unacquainted with the appearance of a saloon keeper; and be it further

"*Resolved*, That we, as representatives of the people of Kansas, hereby declare our allegiance to the cause of temperance, sobriety, and right living, as exemplified by the ultimate result of constitutional prohibition, and its enforcement in our midst; and that we are opposed to any return to the domination of intoxicating liquors, and that no proposition looking to a resubmission of the prohibitory amendment, and that no law which has for its object the reestablishment of places for the sale of liquor anywhere in Kansas will be given serious consideration, either by the legislature or by any of its committees; and be it further

"*Resolved*, That a copy of these resolutions be spread upon the journals of the house and senate, and that the chief clerk of the house and the secretary of the senate are directed to send certified copies of this resolution to all States of the Union which now have legislatures convened and in session for the enactment of laws."

The figures used in this statement are correct and authoritative. We have avoided nothing, evaded nothing, misconstrued nothing, covered nothing up. Anything further that might be said would simply add to the mass. Let the American people hear the truth and judge.

As I have before stated, Gov. Capper is not of my political faith, but in order to show you that Democrats and Republicans alike are enthusiastic over the results of prohibition in Kansas I desire to bring in the testimony of a man whose Democratic faith is known to the Nation, and whose services to Kansas and to her people are known and appreciated by its citizenship.

GEORGE H. HODGES ON PROHIBITION.

Ex-Gov. Hodges is the man to whom I refer. He stood with ex-Senator Harris in favor of law enforcement and has ever been a champion of real prohibition. No one knows better than he what Kansas and her people have gained by driving out the saloon, and he has this to say about it:

What has 30 years of prohibition done for Kansas? In bookmaking something. The geography of years ago pictured Kansas as the Great American Desert. Hardly a desert now, with 34,000,000 acres in cultivation. Very little indigence in Kansas with $132 on deposit in our banks for every person in the State. We have $3,000,000,000 worth of property on the tax roll, assessed on not to exceed 70 per cent of the actual cash value of our resources. This only makes our citizens pay taxes on $1,765 each a little over $100 more than they paid on a year ago, even though this was the worst drought season in our history. Our agriculturists use the best for their own tables, and a plentiful supply at that, but after using all the butter, eggs, and poultry they needed they only sold $22,000,000 worth of butter, eggs, and poultry last year. Just a little revenue of $7,000,000 more than this Government paid for about a third of the total acreage of these United States—the Louisiana Purchase. We only own one automobile for every 45 persons in Kansas, but we hope to do a little better next year, for our farmers are now standing around waiting for the mayor and county commissioners to sign municipal improvement bonds and bonds issued for the building of permanent highways that they are endeavoring to buy at about 10 per cent above par. A great many of our farmers are complaining because they can't pay off their mortgage until it becomes due, though they have decreased their recorded indebtedness from 55 per cent to 45 per cent in the past 10 years. At the same time they have boosted the home-owned securities from $13,000,000 to $67,000,000.

The death rate in Kansas is only 10 to every 1,000 inhabitants, and we feel assured the abstinence from liquor gives that low rate of mortality; while the same abstinence contributes to about 35,000 healthy, newly born Kansans every 12 months. Every year our State creates a new wealth; last year a wealth of $2,000,000 a day was the record. Only $1.25 was spent on an average by each person for intoxicating liquors during the year, while one of our sister States spends $28 for the same purpose. We have an enactment that requires the deliveries of liquor into Kansas to record the shipment and amount with our county clerk, and the statement I make as to the per capita consumption is authentic and based upon the compilations of these reports. This difference or $26.75 went into new homes, schools, and churches. We spent $13,500,000 last year on 415,000 scholars; that kept 15,000 teachers busy for about nine months. The salaries of the men teachers in our public schools have increased from $44 to $80.50 a month in the past 10 years, while the salary of the women teachers has doubled. All of the weak school districts have State aid, and we have no schools which have less than a seven-months term. That little sum of $26.75 referred to a while ago that we save on liquor consumption we spent on education, so that our illiterates are less than any State in the Union. We have an endowment fund for the common schools of $9,250,000. With a population of 1,690,000 we had an enrollment of 9,600 students in our State universities and 7,500 in our denominational schools. Six thousand students attended our State University and Agricultural College last year. This is a remarkable showing when compared with Missouri, which has 3,500,000 population and only 3,317 students in her university and agricultural college. Indiana, with about the same population, has 1,961 students in her combined schools. We have only 724 inmates in our State penitentiary, while Colorado, with half our population, has 800. We have only 214 boys in our State reformatory, and a vast majority of the inmates of both penal institutions were transient in our State when they committed their crime. In fact, in our State reformatory we have only 84 Kansas boys. The others were residents of other States; and in our Kansas penitentiary we have 152 native Kansans, and the remainder were citizens of other places or those who had acquired a residence in Kansas. We have only 12 women in our Kansas Penitentiary.

Eighteen counties have no poor farms, and one of our best counties, Barton, has no use for its poor farm, but turns it into an asset by renting it. Twenty-nine counties have no inmates in their poor farms. We had only 625 paupers in the State last year, and they are taken care of in the poorhouses of 76 counties. Our State has a total bonded indebtedness of $370,000, held by the permanent school fund. We have $169,000 of that indebtedness in cold cash already accumulated and will have the balance ready to meet the obligation long before the obligation is due. Kansas has only 1 insane person to every 560 inhabitants, while New York has a proportion of 1 to every 276. There must be a reason for this, and there is; it is in the limited use of alcohol by our citizens. Our scientific gentlemen report six kinds of alcoholic insanity. The commitments in New York for 1909 showed 31 per cent, Massachusetts 30 per cent, due to excessive use of alcohol, while in prohibition Kansas for six years ending July 25, 1912, our admissions showed only 5 per cent due to alcoholic troubles.

In the States mentioned one-third of the insanity is due to alcohol, while in Kansas only one-twentieth is due to the same cause. These statistics are important and show the value of strict prohibition. I merely cite these facts to show you what the prohibitory law has done for humanity. It has accomplished wonders in the way of decreasing the numbers of the insane in our State. We are reasonably sure that succeeding generations will be benefited to a much greater extent, as insanity in a limited sense is hereditary. In States where liquor is accessible, one-third of the insanity is chargeable to alcohol. Sexual crimes, arson, thefts, and dangerous assaults are but frequently symptoms of mental derangement, temporarily or permanent, caused by a too frequent indulgence in alcoholic stimulants. To the family it spells financial ruin through the squandering of means by the afflicted one or because the breadwinner of the family must undergo a lifelong illness.

To the individual, insanity in the mildest form involves the greatest suffering that human beings may endure, a lifelong deprivation of liberty, the loss of ideals, and the blasting of all earthly hopes.

Too much can not be said of our commercial, educational, and moral advancement. Something has contributed to our wonderful prosperity. Something out of the common run of affairs has given us a 15 per cent increase in our population in the past few years, while older Middle Western States have practically stood still. We have analyzed ourselves and we are satisfied that prohibition is largely responsible for only the mere handful of the insane we have in Kansas. We balance 2,900 prosperous, self-supporting citizens against every 1 pauper in our State. The proportion of only 1 feeble-minded person to every 3,000 self-possessed Kansans gives our State a reputation for rare intelligence. Ours is an admixture of peace, prosperity, and contentment, a citizenship loyal, true, free from guile, prejudice, or discontent—a citizenship that invites you to a State that is as fertile as the valley of the Nile, as full of possibilities as the Garden of Eden, and as beautiful as an all-wise Creator could fashion it.

It is over three years ago since ex-Gov. Hodges gave utterance to the above. Since that time Kansas has made wonderful advance morally, materially, and intellectually, and to-day its prosperity is so marvelous that it is an object of wonder to the Nation.

PROF. BLACKMAR'S TESTIMONY.

The Representative from Missouri commends Prof. Blackmar, of Kansas, very highly and quoted him quite freely. Prof. Blackmar deserves all of the words of praise spoken in reference to him, and while the quotations used from him to defame Kansas were spoken with the intent to spur Kansas on to even greater effort to make of the State the ideal of the world in sociology we all realize that he would be among the first to step forward and defend Kansas against the men who would use him as an instrument to assail her. But for the benefit of the gentleman from Missouri I will insert right here the views of Prof. Blackmar, published in the Topeka Capital on March 25. They are the result of patient investigation and, surely, if the professor is a welcome witness when brought forward to uphold the deductions of the Missouri Representative, he ought to be equally as reliable when he takes the stand for the other side. The article is as follows:

In just one year under prohibition, and without the bone-dry law, Kansas saved nearly $29,000,000 on her liquor bill, compared to the average expenditure for the rest of the United States. This is the conclusion of Prof F. W. Blackmar, of the State university, who has just completed an exhaustive search into the effects of prohibition in Kansas. He has been working nearly a year on figures and statistics from Kansas gathered early last year, and his report is just about ready to be published.

KANSAS SPENDS $4,250,000.

The Blackmar report, filed yesterday with Gov. Capper, shows that during the year covered in his report Kansas spent approximately $4,250,000 for liquors, consuming an average of $2.61 per capita. Had the average for the entire United States been maintained, Kansas would have spent $33,000,000. So prohibition presented the people of Kansas with $28,750,000 in cold cash in one year, or between five and six times what the State government costs in one year.

Ohio, Blackmar reports, with a population only three times as large as Kansas, spends twenty-five times as much for liquor as does Kansas, or eight times as much per capita. The people of the United States spend one and sixty-six one-hundredths times as much for liquor as for meat. Kansas spends five times as much for meat as for liquor. The average United States citizen spends five times as much for liquor as for bread.

Topeka had the heaviest consumption per capita of any city in the State, the Blackmar report shows, or 7.59 gallons. Kansas City, Kans., consumes less per capita, leaving out what is bought in Kansas City, Mo., than either Topeka, Wichita, Hutchinson, Salina, or Arkansas City. The average for these cities follows:

	Gallons.
Topeka	7.59
Wichita	6.28
Leavenworth	6.20

Arkansas City	3.55
Hutchinson	3.54
Kansas City	3.36

In the eastern third of the State, Prof. Blackmar reports, the average consumption of liquor is 3.7 gallons per capita. In the central third it is 2.39 gallons, and in the western third, 1.16 gallons, the amount decreasing directly as the distance from Kansas City, Mo.

"The survey shows the old fallacy," says Prof. Blackmar in his report, "that alcohol in one form is taken to keep you warm and in another to keep you cool. The consumption of beer was highest in July and lowest in January, while the consumption of whisky was highest in December and lowest in May. The survey also shows that the consumption of liquor is heavier among the foreign than among the native born."

CRIME IN KANSAS.

While the gentleman has paid considerable attention to crime in Kansas, and has been muckraking through the files of the press for a considerable period of time so as to gather data, which is in reality of no value, he makes no attempt to show how much of that crime is traceable to the saloons on the border, and yet it is the counties in Kansas which are contiguous to saloon counties in other States that furnish the bulk of our prison population.

And while he was about it the gentleman could have paid attention to a statement made in the report of the Kansas State Board of Corrections in 1916, which he quoted. That report says:

One (cause for the increase of delinquency) is the large influx of itinerant laborers in harvest time, which furnishes a large number of inmates coming into the State reformatory and penitentiary.

Any person who has ever lived in the farming sections of the West or Middle West will readily understand how true that is. When the harvest season is on the amount of labor available is entirely inadequate and dependence must be put upon transient help. So well is this understood, and the danger of failure to secure sufficient labor is so appreciated, that arrangements are made in advance to have employment agents at central points to arrange to secure and ship harvest hands. Each county makes reports as to the number needed and each one is bidding against its neighbor so as to prevent a shortage. Of course this results in wages becoming abnormally high and it attracts to the harvest fields the habitués of the dives of the saloon cities and the patrons of their "barrel houses." Last year we had to come in contact with the so-called Industrial Workers of the World, and the localities which had to deal with the conditions resulting well know the fear which was caused and the depredations which were committed in very many instances. The harvest season in the grain-raising States means not only a harvest of food crops but a harvest of criminals, for while many of those who go to the harvest fields to earn the high wages provided are of the salt of the earth, such as our college boys and our young men who look upon the occasion as a vacation and a chance to build up the health in outdoor life, still there is that leavening of the criminal element which comes to us from the saloon States and helps materially in filling up our prisons.

JUGGLING WITH STATISTICS.

One of the striking things in the article inserted in the RECORD is the tendency shown to juggle statistics and make them fit the purpose sought. Kansas is proud of its record as showing that prohibition reduces the tendency toward alcoholic mental disorders and claims a rate of 3.2 per cent for 1914. The gentleman from Missouri, however, insists that the percentage should have been 8.57 in 1914 and 10.7 in 1916. Such a tremendous difference in the claims is astounding, but when you analyze his own statistics you can see that he has absolutely no basis for his deductions. He claims that the percentage at the Topeka Hospital in 1916 was 3.3; at Osawatomie, 2.6; at the State Hospital for Epileptics at Parsons, 4.8. He then proceeds to add the three percentages and gives the total of the three as 10.7 for the State.

Under the same basis the gentleman would compute the percentage of increase in total population by adding together the percentages of the various counties of a State. If the average in each county was 4 per cent, he would have a 400 per cent increase in a State with 100 counties, and if it originally had 1,000,000 population his method of reckoning would show 5,000,000 when he was through, instead of 1,040,000. Great, indeed, is the gentleman's method of computation, but it is right in line with the brewer's and the distiller's claim of a few years ago, which was to the effect that prohibition increased their sales. A boast, by the way, which is no longer made.

FACTS NOT ON STRAIGHT.

The gentleman was either unwise in securing a man to gather his data or else he is unable to get his facts on straight. On page 5678 of the RECORD of March 8 we find this:

To bolster up the claims that prohibition has reduced poverty in Kansas valuable use is made of the purported high per capita wealth of the State. But a very important matter is purposely overlooked when advancing that argument which can not be fully understood, and that is that the "per capita" wealth is figured on the assessed valuation of property as compared with other States. For instance, many States, if not the great majority of them, assess taxes on a valuation of all the way from 33⅓ to 40 per cent of actual value, while in Kansas the assessed valuation is 100 per cent. Prior to the enactment of chapter 316 of the Laws of 1911, page 565, Kansas real estate was assessed at one-third valuation, but this law changed the system so that now "all real property in this State liable to assessment and taxation shall be assessed biennially at its fair market value in money."

Note that. Now, let us turn to the United States census report of 1910, made up at a time when the gentleman from Missouri states that land values in Kansas were assessed at only one-third their real value, and we find that—

Farm property had increased in 10 years, from 1900 to 1910, to the extent of $1,005,789,000 in the value of the land alone, $88,114,000 in value of buildings, and $81,386,000 in the value of farm equipment.

According to the same authority the total value of the land alone for that year was $1,537,976,573, as compared with $532,187,610 in 1900. And yet the gentleman from Missouri would have you believe that this was but one-third of the value, which would make the farm lands of Kansas worth $4,613,929,719

in 1910. In truth we would like to believe that, but we do not so pretend, and use it merely to show the unreliability of the gentleman's statistics and deductions.

SHOULD CRUSADE AT HOME.

But if the gentleman is so much in earnest in crusading for the good of humanity, I would advise him to look closer to his own home and clean up his own back yard. If he would but read the testimony in the contested-election cases which were brought here from St. Louis in the Sixty-second Congress and in the Sixty-third he would find conditions so deplorable that they afford him every opportunity to aid in the work of cleaning up the muck and ruck which is a stench in the nostrils of those who believe in clean politics. And when you have read that testimony you will see how much value can be put in the hope of securing a fair election in St. Louis on the prohibition question.

And if the thought of the gentleman will but hark back to April, 1915, he will remember an incident in connection with the city election there which surely should have brought forth denunciation from his lips. The candidate on the Republican ticket at that election was a crook who had looted sacred trust funds.

The evidence of that was in the possession of the party managers prior to the election, but despite all that they permitted the innocent voters to go to the polls and vote for this crook and without knowledge of the truth. He was elected, but is now in the penitentiary, and the men who permitted such an outrage to be perpetrated upon the electorate should have received the condemnation of every honest man. Verily, before the gentleman talks of crime and of delinquency in Kansas he should first aid a little in cleaning up his home city.

UNITED THEY STOOD; DIVIDED THEY ARE FALLING.

But I can understand how the gentleman is so much put out with Kansas and its ideas. The great strength of the prohibition movement which started from Kansas is threatening to sweep out of existence the brewers and the distillers. Heretofore the strength of these two elements was due to their unity of purpose. Together they fought every attempt made to regulate, restrict, or abolish the liquor traffic, and as they had unlimited funds and used them lavishly to debauch elections theirs was a power to be dreaded. But there is evidence on all sides to show that the partnership is on the verge of dissolution.

During the past two weeks three pamphlets and letters have come to my desk and all seeking to accomplish a common purpose. One was from Texas, one from New York, and one was from a Wisconsin brewer. Each and all had the same plea to make, and in substance it was this:

Whisky is bad. It ruins the body and debauches the soul. Destroy it, if you will; but the same thing can not be said about beer. The brew of the malt and hops is life-giving and body-building. It is essentially a temperance drink, and when you look at the nations which use it you will agree with us as to this. If you want to promote real temperance, you will destroy the distillery and endow the brewery as an instrument of public good.

Evidently the firm of Brewery & Distillery is on the verge of dissolution, and one of the partners desires to save himself at the other's expense.

It is one of the most significant signs of the times, for it serves to show how the prohibition movement has so grown in power that the brewers, as a last resort, are willing to save themselves, and are anxious to do so, even if they have to cut the throats of the distillers in order to succeed.

THE HERO OF MANY DEFEATS.

For many years I have been watching the fight between the "wets" and the "drys" in Missouri, and I have noticed that when the battle waxes hot the gentleman from the tenth congressional district is always brought upon the scene to lead the battle in favor of the saloon. No public or private duty is so pressing that he can not find the time to go out and plead in behalf of the man who wants his "booze," the man who makes it, and the man who sells it.

And I also have noticed that almost invariably the doughty champion of the divine prerogative of the brewer is beaten. In contrast to the Roman conqueror, who inscribed upon his banner, "Veni, vidi, vici," our brewery champion might well emblazon his with the inscription, "I came, I saw, I got licked."

One by one the strongholds of the saloon in Missouri have been conquered. Last year that wonderful center of industry, Kansas City, joined the ranks of those who have seen the evil of liquor making and selling. City after city and county after county are in line, and St. Louis alone, and by methods which have excited suspicion in the minds of those who have taken note of St. Louis elections in the past, prevented the State from going into the dry column. But the result is most hopeful for those who have worked for the abolition of the brewery and of the saloon and who have marked the splendid results following the work of the gentleman from the tenth district. He will now have to battle at home to prevent even Carondelet from joining those who have seen the light, and if he can only keep his voice and his health, and we can have an honest count of the vote, the chances are that he will win the same kind of a victory he has elsewhere in the State, and St. Louis will be dry. After which the valiant defender of King Bacchus will have to mourn and mourn in vain, for where can he find fresh fields upon which to battle—and lose?

THE VOICE OF KANSAS.

But one thing more and I am done with the article published in the RECORD by the gentleman from Missouri. On page 5671 he says:

There are scores of men to-day sitting in the legislative halls at Topeka who dare not vote against proposed dry legislation, but who have no more sympathy with the movement than they had years ago. Ribald and ruthless exploitation of the doctrine have created the most luxuriant crop of hypocrites imaginable.

And that affords a splendid example of the tendency of the gentleman to put forward assumption as fact. The men in the legislative halls favor the strictest form of prohibition for the reason that the universal sentiment of Kansas demands it, and the voters of Kansas see to it that the men they elect to office are in sympathy with their views. "Rubber-stamp" voting is not a fault of the people of Kansas. The Nation has been amazed time and time again by the independence of thought and of action of the people of Kansas. They take a stand for what they deem to be the right, no matter whether it be popular or not, and history shows that more often has the Nation come to take the Kansas viewpoint than has Kansas had cause to change and get in line.

Kansas is stronger for prohibition to-day than it ever has been. It is so for the reason that it has made a thorough test and is well satisfied with the result. Essentially a State of farm homes and of rural life, it has learned that prohibition makes for happier homes, for a higher standard of morality, and for the physical and mental improvement of its people. Kansas puts up the result of years of practice against the assumption of its critics. It points to the steady drift of its neighbors to get in line, and it says to you in all fairness, "If my methods had worked evil, if decay had come as the result of what I have been practicing, it would have been impossible to induce my neighbors to abandon their ideas of years and fall in step with me to live as my people have been and are living." [Applause.]

Mr. LEE of Georgia. Mr. Chairman, I yield five minutes to the gentleman from Alabama [Mr. BLACKMON].

Mr. BLACKMON. Mr. Chairman, this bill I regard as a very important one, but I am forced to say, however, that there has been more irrelevant and immaterial subjects discussed during this debate than I have ever heard before on a measure of similar importance. As I see it, this bill in every conceivable way protects the producers of this country. The producers are exempt from the provisions of this bill. I quote in part the exemptions:

Provided, That this section shall not apply to any farmer, gardener, or other person with respect to the products of any farm, garden, or other land owned, leased, or cultivated by him, nor to any retailer with respect to the retail business actually conducted by him.

It also exempts producers from penalty for hoarding or keeping their products, as will be seen by the following quotation from the bill:

Provided, however, That any accumulating or withholding by any farmer, gardener, or any other person, of the products of any farm, garden, or other land owned, leased, or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

Now, then, the question to my mind resolves itself into this: The provisions of this bill can not injuriously affect the great consuming masses of our people, and if that be true, if the producer is exempt, and there can be nothing in it injurious to the consumer, there is only one other class left to be considered, and that is the food speculator, the food gambler, and the food hoarder. Now, I want to ask the Members of this Congress if there is anyone that is insisting on delaying the consideration of this bill because of being afraid that the poor, innocent food hoarder and gambler is going to get hurt?

If we have such a Member here I want to refer him to the provision of this bill which provides that when proceedings are instituted against a person for unlawfully withholding from commerce the food supplies of the country, such person has the right of trial by jury. In my 20 years' experience at the bar there have been very few instances where a man having the right to submit a question to a jury of his peers has wrongfully received serious or great injustice.

I would not be a fair juror to sit on the case of a food gambler. I would convict him right off the bat. [Applause.]

But if there be men here who are afraid the food hoarder or the food gambler is going to get hurt, then I refer him to that provision of the bill.

Now, there is another observation I want to make. There is only one amendment to this bill that I would suggest and vote for, and that would be to make the penalty just as severe as it could be on the man convicted of conspiring to put up the price of food unjustly at this time. I would support such an amendment. [Applause.]

I want to ask this question, and ask it in all seriousness: Are not the American people much interested in this all-important subject? Will they not call to account those of us who have consumed so much time during the consideration of this bill, discussing various, divers, and sundry subjects, which have no possible relevancy to the subject matter of this bill? And will this not be true, when it is found that no practical or feasible substitute is offered in lieu of the present bill? Ought we not to be called to account for taking up the time of this House, thereby delaying the passage of this bill, when we do not offer something better, but consume time in criticizing that which we do not offer to improve? If we are not, we should be. [Applause.] What is a Member going to say who stands here and fights this bill, when every citizen of the United States realizes its importance and the necessity for its immediate passage, who has not something better to offer? This is legislation that the country has been looking for. They are not going to be satisfied with long drawn-out arguments as to how to conquer submarines, neither will they be entertained by reading the criticisms of the administration or the gratuitous advice given by so many as to how the war should have been conducted. The country needs and is entitled to this legislation, and I, for one, have been ready to do my part toward aiding in the accomplishment of this much-needed and desired result.

I believe that the bill is admirably drawn, and those who have labored so earnestly to bring it forward and pass it are entitled to the thanks of a long-suffering people. None of us would support this bill, except as a war measure, and, in fact, everyone knows that we would not be called upon to do so, except that the life of this Nation depends on controlling those who have conspired together to put up the price of food beyond the reach not only of those who are fighting in the trenches for the country, but beyond the reach of the great struggling masses of our people, who are looking to us for relief.

I am a strong believer in private ownership, and a strong believer in encouraging individual effort, but when we are confronted with a great crisis such as this it is no time to theorize, but it is time for action. [Applause.]

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. LEE of Georgia. Mr. Chairman, I yield three minutes to the gentleman from Tennessee [Mr. SIMS].

The CHAIRMAN. The gentleman from Tennessee is recognized for three minutes.

Mr. SIMS. Mr. Chairman, a few minutes ago the gentleman from Ohio [Mr. FESS] made a very interesting speech and suggested some very alarming conditions, and practically suggested that if the submarine menace could not be controlled it would be practically impossible to feed England, France, and Italy.

That may be true. Usually a man who knows least about a thing feels most assured of knowing just what to do when anything is sought to be done regarding that thing. I fall, perhaps, in that category. But ever since the Germans sent a merchant submarine to these shores with a cargo of merchandise and delivered it and returned safely with a cargo it occurred to me that that was the solution of the submarine menace as to transporting food and munitions. If we can build a submarine that can carry cargoes to England, France, and Italy, we will have solved the difficulty, so far as feeding their people are concerned and so far as the transportation of materials for explosives is concerned. It seems that scientific men have always looked for a remedy that is difficult and scientific rather than simple and effective.

Now, why not spend the money necessary to build these merchant submarines, and by such means carry anything and everything that the different belligerent nations are compelled to have? It is evident from the experience had during this war that submarines can not fight each other. It is evident that a submarine can cross the Atlantic with wheat in it as well as it can with torpedoes, guns, and men in it. Why it has not been done in crossing the English Channel I do not know. My lack of information on that point may account for my surprise that it has not been done; but the merchant submarine to me seems a possible remedy. We are going to spend $500,000,000 to build ships, and no suggestion has been made whereby any of them can be guaranteed against becoming victims of war submarines.

I was told a few days ago that the Germans were building 2,400-ton submarines. We see continually in the reports of submarine destruction of merchant ships that a certain number were above 1,600 tons, and a certain number were below 1,600 tons. Now, if we can build cargo-carrying submarines and carry in them wheat and provisions and materials for the manufacture of high explosives, such as cotton, and no war submarine can attack them successfully, why is that not a solution of the trouble of feeding our allies? [Applause.]

So, Mr. Chairman, has not Germany herself suggested the effective and practical means of evading and avoiding the menace of her own war submarines as a means of a successful food blockade of England, France, and Italy?

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. LEE of Georgia. Mr. Chairman, I ask the gentleman from Iowa [Mr. HAUGEN] to use some of his time.

Mr. HAUGEN. Mr. Chairman, in the 25 minutes reserved for myself I shall not undertake to discuss the bill in detail. The distinguished gentleman from Oklahoma [Mr. THOMPSON] in his able address took exception to my statement, and called on me for evidence to prove that the purpose of this bill is to reduce the price of farm products.

I called his attention to statements made by Mr. Hoover, who has already been selected as food administrator.

I also called his attention to editorials and reports purporting to quote Mr. Hoover and the President and the proponents of this bill, and promise to have read into the RECORD some of those reports. I regret to say that I have not in my files all of the numerous editorial comments and purported interviews with Mr. Hoover, and even if I did I should not feel justified in having all of them spread in the RECORD. I believe it is sufficient at this time to call his attention to the Washington Post of June 16, 1917:

President Wilson yesterday took drastic steps to force early passage of the administration food-control bill.

Believing that the high cost of living must be reduced at once, the President is understood on highest authority to have reached a determination that the following must take precedence over all other legislation now before Congress.

Creation of a central purchasing agency for all the allies in order to stop the competitive bidding for American foodstuffs and resultant price boosting.

* * * * * * *

It is the determination of the President to get action on the measure before July 1, so that Herbert Hoover, food administrator, will have law behind him in controlling food distribution, beginning with the southern wheat harvest late in July.

I also quote from the Washington Star of June 19:

Herbert C. Hoover to-day told Senators in explaining the purposes of the proposed food-control bill now before the Congress:

"With righteous manufacturers' and distributors' prices," he said, "the price of flour should not have been over $9 a barrel. Yet it averages $14."

Gentlemen, our allies are buying wheat, which is practically the only foodstuff they do buy.

This, I take it, will be satisfactory proof to the gentleman that the object of the food administrator, Mr. Hoover, is to bring the price of flour down to $9 a barrel, which would net the farmer about $1.50 per bushel for his wheat. The gentleman from New Jersey says that $9 flour will net the North Dakota farmer about $1.40 per bushel.

The price of wheat has been around $3 a bushel. I believe at one time it went up to more than $3.50. Now, if the gentleman can show the House how a barrel of flour can be made for $9 a barrel out of $3 a bushel wheat, it may then be possible for him to make his assertion good; but, unfortunately for him, it can not be done.

The best that he or anyone else can do is to make a barrel of flour out of 4½ bushels of wheat. The cost of the wheat alone would be $13.50, in addition to the cost of milling and distribution. Therefore, gentlemen, if any of you entertain the belief that this bill is, as alleged by the gentleman from Oklahoma and others, in the interests of the farmer or the consumer to any considerable extent, get that idea out of your system.

That is not the proposition. To the contrary, the producer, the farmer—principally the wheat grower and the sugar-beet grower—are the ones to be sacrificed or, as others have aptly phrased it, they are to be "made the goat."

True, the proposed bill contains many wise provisions. It contains provisions for which many of us have been contending for years, especially in the passage of House bill 4188, which passed the House about a month ago, and which has passed the Senate with provisions contended for here in the House. I refer to the legislation affecting food conspirators, evil gamblers, and manipulators of prices.

I need not say that we are delighted with the numerous recruits in our ranks and extend most hearty congratulations to the recent converts. Indeed, the country is to be congratulated

upon their change of heart and the loyalty displayed in this effort to curb the vicious practices of the evil gamblers and speculators. I only hope that there will be no backsliders before the bill is passed.

I trust the proper penalties against food conspirators—which, by the way, are not provided for in the bill—may be provided for by adding a new section after section 8. With that addition, as far as I am concerned, I believe that the bill as presented to the committee if enacted into law would be a long step forward in the accomplishment of the desired results.

In another place the distinguished gentleman from Oklahoma [Mr. THOMPSON] stated, in his able speech, that the farmers are exempted from the provisions of the bill, that the only section that affects the farmer is section 8, which refers to the willful destruction of any necessary.

Evidently the distinguished gentleman from Oklahoma has not read the bill. The gentleman is a lawyer, and without reflecting upon the ability of other lawyers I give him credit for being one of the best, if not the best, lawyer on the Committee of Agriculture. He has labored earnestly and persistently in the committee in the preparation of this bill, and many of the best features of the bill are largely due to his intellect, acumen, and wise suggestions. Had he read the bill he, of course, would not have made the statement he did. He is not to be blamed for his failure to read it, as scarcely anyone has had time to do so. As stated by the gentleman from Texas, he has not been able to keep up with the bill. True, some five or six bills have been considered by the committee, but as stated by the gentleman from Iowa [Mr. SCOTT] this bill has never been considered by the committee as a bill.

As the members of the committee know, we had a bill presented by the Department of Agriculture, practically a copy of the Canadian law, and that is what this bill is, except for a few amendments, and I regret to say, amendments which in my opinion do not strengthen the bill.

But be that as it may, if the gentleman will turn to page 8, section 9, he will find that the President is authorized to purchase, provide for production or manufacture of necessaries, to store, and so forth. The only exception is found on page 9, section 9, which reads:

Provided, That nothing in this section shall be construed to require any natural person to furnish to the Government any necessary held by him and reasonably required for consumption by himself and dependents for a reasonable time.

So any surplus of wheat of any natural person—the farmer—held by him in excess of what is reasonably required for consumption by himself and dependents for a reasonable time, may be taken over by the food administrator, at a price fixed by said administrator, and if the farmer or owner is not satisfied with the price fixed, he may hire an attorney, go into court, and possibly, sometime, he may get just compensation for his wheat.

I believe that is sufficient to convince the gentleman, and for his further enlightenment I commend the reading of the bill.

The contention is that the purpose of this bill is to reduce the prices on farm products, more particularly on wheat and sugar—at least that is the object indicated in the press reports and the statements by the chairman and the framers of the bill.

What is the situation? The world's normal production is about 15,000,000,000 bushels of cereals. The United States produces about one-third of that amount, or about 5,000,000,000 bushels. Last year the world produced only about 10,000,000,000 bushels, hence the world's supply was 5,000,000,000 bushels short, due to a partial failure of crops and thousands of farmers and farm hands in the trenches. They are fighting instead of farming.

Another cause of the high prices is the evil gambling and manipulation of prices. As a result of the high prices every bin has been swept clean, and an amount not to exceed 70,000,000 bushels of wheat will be carried over, as compared with 150,000,000 bushels the preceding year, and the larger reserve held in the country in that year. Short crops are reported in many sections of the world, and with the Canadian and United States supply of wheat about the only available supply, with other supplies cut off on account of the long distance which they have to be hauled, limited transportation facilities, and hazardous shipments, with the wheat crop in the United States and Canada reported short, the outlook is somewhat discouraging.

Cuba and the United States supply a great part of the sugar. The sugar crop of Cuba is estimated as 3,000,000 tons. The sugar-beet crop of the United States for this year is reported short, due to labor conditions.

Our Army, our Navy, our own people, and our allies must be supplied with food, to which all agree. Food must be exchanged for necessaries furnished us by neutral countries. Eight hundred million bushels of grain must be furnished our allies by Canada and the United States.

The contention is that under existing conditions prices may go sky high. Wheat may again go to $3.50 per bushel; sugar beets to $10 and $11 a ton. Some way must be found to keep prices down, especially on wheat and sugar. As before stated, it goes without saying that when the price of wheat goes down the price of practically every other cereal goes down with it. In order to accomplish the desired result it is proposed that our Government shall coordinate and cooperate with our allies in buying, or, in other words, form a pool or combination to buy, and to give the food dictator control over exports and imports and the power to requisition supplies, to fix prices, to take by force, and if the price fixed is unsatisfactory to the owner he may go into court and sue the United States. In that way it is believed that the prices of wheat and sugar may be lowered and kept down, and our fighting men and our allies can be supplied with the necessary wheat. Certainly no one will stand in the way of any honorable endeavor to supply those men who are fighting our battles and our allies with food or anything they may need so long as our own children, the future hope of our Nation, are not thereby robbed of their necessary requirements.

Still the question of discrimination may properly be raised. Is it fair to place the whole burden on the shoulders of the producer—primarily the farmer? Is it fair to combine in buying for the purpose of bringing down the price paid to the farmer—to the wheat grower, the corn grower, the sugar-beet grower—and thus deprive them of the just price regulated by the law of supply and demand? Such action is certainly a direct violation of our antitrust laws, and is contrary to the spirit of the American people and of progress.

United States Steel, according to reports, increased its net profits of $23,496,768 in 1915 to $271,531,750 in 1916.

According to Dr. Spillman, Chief of Office of Farm Management of the Department of Agriculture, the farmer receives on an average only $402 in food, fuel, rent, and cash for his year's labor, which includes the services of 4.6 persons.

Is there any doubt in the mind of anybody as to the results that will come from this bill? If so, let me say that "the sudden depression in the prices of wheat are due to the uncertainty which prevails regarding the probable terms of the food-control bill, which has a tendency to discourage operations," and I am now quoting from the New York Times of June 19:

The prices yesterday broke 10½ cents to 10⅝ cents at Chicago contract market, while cash prices in the winter wheat belt were 14 cents to 18 cents lower. In the Minneapolis spring wheat market they were down 16 cents and 20 cents.

And that notwithstanding the fact that the visible supply showed a decrease for the week of 3,682,000 bushels, and the total visible supply was 20,142,000 bushels, as compared with 51,223,000 bushels, at the same time last year.

Gentlemen, that is what happened the moment that Mr. Hoover, in his testimony before the Senate committee, suggested $9 a barrel flour If the mere suggestion of this price has that effect on the market, what will this bill do when enacted into law and put into operation?

I will tell you what it will do: If the price of flour is fixed at $9 a barrel, as is clearly indicated by Mr. Hoover and others it will bring the price of wheat down to not exceeding $1.50 a bushel.

Is it fair to say to the farmer who pays higher wages than ever, higher prices for seed, for farm implements, and everything that enters into the production of farm products, who takes chances, not only on the market, but with the elements as well, who, in fact, takes more chances and greater ones than men in any other line of business, and who has only averaged $402 a year as his net earnings, is it fair to say to him: "You must sell at prices fixed by the proposed combination, or by the food dictator, who believes that no one should make a gain in excess of a reasonable living profit out of this war," and allow the munition manufacturer, the steel manufacturer, the Oil Trust, the Lumber Trust, and numerous other trusts to fix their own prices and fatten on excess profits?

Why shall this Government lay its iron hand on the farmer, struggling along with an average net income of $402, out of which he has to house, feed, and clothe his family, while it says to the Steel Trust, the Standard Oil Trust, and numerous other trusts, pocketing their hundreds of millions of dollars profit annually: "You may go on marking up prices and fatten on war profits."

Evidently that was not the purpose of the administration, as the bill first prepared by the administration and introduced by Mr. LEVER included not only foods, feeds, and fuel, but shoes, clothing, and other necessaries of life, which if left in the bill would have given some protection to the consumer, but we observe that shoes, clothing, and other necessaries of life have now been stricken from the bill, and the meaning of the word "neces-

saries" as defined in the bill is limited to "foods, feeds, fuel, and articles required for their production, hereafter in this bill called necessaries."

Why this change of heart? Why at this late hour suggest or consent to the change? Why is the food producer thus singled out? I know not.

In raising this question I do not, of course, reflect on the motive of anyone concerned, certainly not of the President or of Mr. Hoover or of the committee. Therefore, whatever explanation is offered for the sudden change I accept it, not as ill designed, but made in the best of faith; hence the purpose of my discussion is not to criticize anybody, but to point out what seems to me unfair and unjust to the food producer.

True the bill provides for a guaranteed minimum price, which, of course, means nothing. In the first place, it does not apply to this year's crop, as prices must be fixed in advance of planting. If the bill is not passed in a few days wheat sowing will begin and prices can not, under the bill, be fixed for next year. Even if they are fixed, in all probability they will be fixed low and may result in depressing the prices to the minimum price fixed at the time of marketing the grain by the farmer. After the farmer disposes of it as he did of his 1916 crop at an average price of $1.30 per bushel, and when the speculator gets it in control and brings the price up through his methods of evil gambling and manipulation, it will become necessary for the food administrator, who exercises the power, to requisition the grain; and if he does that it will also be necessary for him to pay the then market price.

Mr. HARDY. Will the gentleman yield for three questions on section 9?

Mr. HAUGEN. I expected to talk an hour or two on this subject, but owing to the great demand for time my time has been cut down to 25 minutes.

Mr. HARDY. They are brief questions.

Mr. HAUGEN. I will yield.

Mr. HARDY. The first question is, Is the gentleman opposed to the purpose of the bill as set forth on the first page of it, paragraph 1?

Mr. HAUGEN. When the bill first came in it was a draft of the Canadian bill, but it has been amended and weakened. If I had my way about it—and my purpose will be to amend it, we have been criticized for not offering a substitute—I shall offer to amend it by including shoes, clothing, and other necessaries of life. I would go one step further, but if we can not do more than that, if we can not do more than was suggested by the department, I shall feel satisfied that we have accomplished something. The original bill included shoes, clothing, and other necessaries of life, but that has been stricken out. This bill now limits control to foods, feeds, and fuel and articles necessary for their production, but if the gentleman will read the statement of Mr. Hoover before the committee in the Senate he will find that it is not contemplated to take over the factories and mills that supply other articles necessary for their production.

Mr. HARDY. If the gentleman will yield for one more question I will not bother him again. Does the gentleman realize that paragraph 9 authorizing the Government to requisition foodstuffs is dependent solely and only on accomplishing the purpose in section 1; that paragraph 9 hangs on section 1 entirely?

Mr. HAUGEN. The purpose of section 9 is to authorize them to go into the farmer's bin and take the grain and fix a price when they are required?

Mr. HARDY. Only when it is necessary to prevent hoarding and speculation.

Mr. HAUGEN. But who is to determine whether or not there is hoarding or speculation? As the gentleman knows, the contention is that the bill is in the interest of the consumer, and that the consumer is to be benefited by the provision that authorizes the voluntary agreement and licensing of producers and manufacturers of foods, feeds, and fuel. The question, then, is, Where does the consumer, who has been led to believe that he is going to be benefited by this bill, come in? The contention is that foods are high, due largely to the evil manipulation of all prices and to the high prices on farm products, besides, of course, wages, transportation rates, rents, lights, fuel, quick delivery, and numerous other factors which enter into production, transportation, and distribution. Therefore the proposed food control has been suggested.

Who is to primarily determine whether the rates, charges, and practices of dealers are unjust, unreasonable, discriminatory, and unfair, and to order the discontinuance of such evil practices?

Mr. Hoover is the man chosen for this work—an engineer, a man of splendid ability in his chosen profession, but not an expert in food or the production of food. Even if he was such an expert, it would, of course, be a physical impossibility for him to give personal attention to the thousands of details in the operation of mines, factories, plants, and other establishments, which attention is necessary in order to determine whether or not the rates charged are unjust, unreasonable, discriminatory, or unfair. Hence, he must delegate that duty to others, supposedly competent to pass on all of the questions involved.

And who are they? If the plan already carried out by the Council of National Defense is to be adopted, as it probably will be (and I express no opinion as to what has been done), selections will be made from those men engaged in the particular line of business to be investigated—the very ones to be controlled and licensed. See the list of the advisory commission and subordinate committees to the Council of National Defense, published in the CONGRESSIONAL RECORD of June 8, pages 3592, 3593, 3594, 3595. You will find, for instance, Daniel Willard, President of the Baltimore & Ohio Railroad, is chairman of transportation and communication, and a large number of other railroad presidents associated with him. Elbert H. Gary, of the American Iron & Steel Institute, of New York City, is chairman of the committee on steel and steel products, with such men as Mr. Clarke, president of the Lackawanna Steel Co., and Mr. Schwab, of Bethlehem Steel fame, members of the same committee. Mr. J. A. Farrel, president of the United States Steel Co., is chairman of the subcommittee on steel distribution.

Mr. A. C. Bedford, president of the Standard Oil Co., is chairman of the cooperative committee on oil, and Mr. E. K. Doheny, president of the Mexican Petroleum Co., and other presidents of oil companies are associated with him.

F. S. Peabody, president of the Peabody Coal Co., Chicago, is chairman of the subcommittee on coal production; D. T. Warden, of the Standard Oil Co., and Crawford H. Ellis, vice president of the United Fruit Co.—sometimes known as the Banana Trust—are members of the committee on shipping; A. N. Thielaus, of the Studebaker Corporation, is on the subcommittee on Army vehicles; Frank A. Scott, of the Warner & Swasey Co., manufacturers of range finders, is chairman of the munitions standards board.

It is reported that one Mr. Julius H. Barnes, of Duluth, who, I understand, is one of the largest operators on the boards of trade and stock exchanges in this country, and other heavy operators on boards of trade and exchanges have been tentatively agreed upon as advisors of Mr. Hoover in determining the shipment and price of grain. Granting that they are all most excellent men, yet they are only human, and naturally these presidents and others interested in the large industries and trusts which it is sought to control are not likely to hold that the prices charged by or the practices of their own industries are wrong or unjust, or that they shall be taken over and operated by the Government; and if such industries are taken over by the Government, and these men are to advise relative to their control and operation, they certainly will not advise any action that is injurious to their own business or that will cut down the profits to the stockholders, even though such action were of benefit to the consumer. On the contrary, it is fair to assume that they will be inclined to advise such action as will favor the interests of their own institutions and associates.

The gentleman who whispers combines and controls the price fixing, and who does an illegal business and extorts exorbitant prices, is not likely to be reached, certainly not unless the bill is amended, and there are those who are guilty of these practices, as, for instance, I have a letter addressed to me from one Mr. Hoover, formerly a resident of my district, in which he states that a short time ago, when potatoes were being sold by the grocers of a certain Iowa town at $3.85 a bushel, the farmers of Arlington, in Fayette County, and of Edgewood, in Clayton County, were hauling potatoes to market and selling them at $2 per bushel. Mr. Hoover adds:

> Two weeks ago I bought early seed potatoes at Edgewood at $2.70 a bushel, when the same potatoes were selling in ——— at $4 a bushel.

I have omitted the town where these high prices were charged; it is sufficient to say that it is only about 50 miles from the other towns mentioned in my district, and transportation charges would not be more than from 5 to 10 cents per bushel. According to Mr. Hoover's letter, the farmer at that time received $2 for his potatoes, the transportation company and the distributor $1.85, and the consumer paid $3.85 and $4 per bushel for the same potatoes, which clearly indicates something wrong somewhere—a wrong which in all probability can not be corrected under this bill unless it is amended.

If so, the consumer will be just where he is now—in the hands of the very men from whom he seeks to escape. Hence the encouragement held out to the consumer in this bill may prove of no more value than the broken party pledges and promises

made in the past, and prices may continue, as they have done, to go up and not down.

Even taking for granted that combination buying and requisition of goods will lower the price of wheat, the price of wheat is only a small part of the high cost of living. Besides, the consumer, especially the city consumer, buys neither wheat nor flour. He buys the finished product in the shape of bread from the baker.

Under this bill the food dictator will fix the price of wheat to the farmer and the baker will fix the price of bread to the consumer, and in all probability will continue to fix the price in the same proportion as at present, which is 6 cents for an 8-ounce loaf of bread. A barrel of flour weighing 196 pounds makes 587 8-ounce loaves of bread, which allows for evaporation in baking. Therefore, as a result of this bill, the farmer will probably be paid, say, $1.50 a bushel, or $6.75 for the wheat that enters into the manufacture of a barrel of flour, and Mr. Consumer will continue to pay the baker $35.22 for the same quantity of flour made into bread, and which he now pays for bread made out of adulterated or mixed flour.

Of course, the consumer would welcome any reduction in the present high cost of flour; but bear in mind, as I have said before, that flour, the principal object aimed at, is but a small part of what the consumer has to buy. In addition to buying flour, he pays rent, transportation, street car fare, lights; he buys clothing and shoes; if he builds a home he buys lumber, hardware, sash and doors, paint, cement, brick, and numerous other things. Will he be satisfied simply with $9 flour if flour should be reduced to that price? If he is entitled to a reduction in the high cost of flour is he not entitled to a reduction in the price of shoes, clothing, and the numerous other articles which enter into the cost of living? I bought a pair of shoes about a year ago of a leading shoe dealer in this city, for which I paid $6. This year the same dealer tells me that I can buy the same shoes at $12.

In all probability the proposed 15 per cent increase in transportation will be granted the railroads. If so, it will add another $450,000,000 to the burden of the producer and the consumer.

On an average, about one barrel of flour per capita is consumed each year. Suppose this bill does reduce the price of flour to $9 per barrel. Will the consumer then be satisfied to pay the proposed 15 per cent increase in transportation, the proposed increase in rent, in building material, the 100 per cent increase in the price of shoes, and so on all along the line? The increase in the price of shoes alone will more than absorb the reduction in the price of flour.

The 15 per cent increase in the transportation rate would be equal to about $4 a barrel on the flour consumed in the United States.

But some one will say it is proposed to pass other bills giving the President control over other industries, especially the transportation companies. Yes; more than 4,900 bills of various kinds have been introduced. The number of this bill is 4961. More than 4,900 bills will not be reached in this session, and no one has suggested controlling or regulating the Steel Trust, the Standard Oil Trust, the Lumber Trust, and numerous other trusts and industries affecting the high cost of living.

How about transportation?

An order to increase transportation rates 15 per cent is under consideration by the Interstate Commerce Commission, and judging by what the commission did not long ago, after an exhaustive investigation, and after declaring that eastern railroads were not entitled to the 5 per cent increase asked for, the commission reopened the case and ordered the 5 per cent increase, it is fair to assume that the 15 per cent increase asked for will also be granted, notwithstanding their own reports show that the net earnings of the railroads are higher than ever; and there will be no reduction in the high cost of living so far as transportation goes, but in all probability $450,000,000 will be added to the burdens of the producer and the consumer.

How about the bill affecting transportation rates, which recently passed in the Senate?

We find that to be quite a different bill. In the bill as originally drawn it is proposed to regulate and control common carriers. Is it with a view to reducing transportation rates? No. Simply to forbid the obstruction or retardation of the orderly movement of trains in interstate transportation and to give the President power to direct that certain shipments shall have preference or priority in transportation.

Nothing harmful to the railroads in that. On the contrary, beneficial, as it simply prevents strikes or interference with their business, except so far as it gives preference or priority to certain shipments. It simply gives notice to the railroad employees that if they strike they must keep off the track; hands off; that is all.

In addition it provides for the fixing of reasonable rates by the Interstate Commerce Commission, for the rates for the transportation of troops, which in all probability means an increase in rate. The railroads are also protected by giving the Interstate Commerce Commission power to determine the extent of any injury or damage caused by any preferential order which may be given by the President.

With all the safeguards thrown around the railroads, with the generous treatment the railroads have received at the hands of the commission in the past, there can be no possibility that the railroads will suffer from the proposed legislation. Certainly not with Daniel Willard, president of the Baltimore & Ohio Railroad, acting as the chairman of the committee on transportation of the advisory committee of the Council of National Defense and the long list of railroad presidents and railroad magnates acting with him on the advisory committee. With these men sitting around the table directing and keeping down strikes, the interests of the railroads will undoubtedly be well looked after.

Mr. LEVER. Mr. Chairman, will the gentleman yield?

Mr. HAUGEN. Yes.

Mr. LEVER. The gentleman's argument is that in attempting to regulate the price of flour we are going to hurt the farmer.

Mr. HAUGEN. Yes; there is no question about that.

Mr. LEVER. The gentleman's argument, further, is that in attempting to regulate the price of shoes we are going to help the farmer.

Mr. HAUGEN. I am talking about consumers. We all profess to have just as much love for the consumer as for the farmer. I believe I am justified in saying that I have as much sympathy with the consumer—the wage earner—as I have with the producer—the farmer. At the age of 9 years I received my first month's wages of $9 a month, and many a day have I worked for less than a dollar a day—not an eight-hour day, either, but from sunup to sundown, and then some; and to that I never objected, as work has always been a pleasure to me; so I believe I am safe in assuming that I know both the cost and the value of a dollar. The consumer is entitled to courtesy and consideration, not only before election but in legislation as well.

Mr. LEVER. The shoes are made out of leather, and the leather is made out of hides, and the farmer raises the cattle that produce the hides; and I am wondering if the gentleman can reconcile his own inconsistency.

Mr. HAUGEN. Certainly I can reconcile it. There is nothing smart about that. [Laughter.]

Mr. LEVER. If you reconcile it, the gentleman will be smart.

Mr. HAUGEN. The answer is that the packer sells the hide—not the farmer. The packer not only sells the hide but controls the price. According to investigations made at the time of the Garfield investigation, some 15 years ago, the packer sells the hide to a suborganization made up of stockholders in control of the organization at a very low price, then about 4 cents a pound, and the suborganization sells and dictates the price to the tanner—at the time of that investigation, about 14 cents—or, in other words, 10 cents a pound was added to the price on which the price of the steer was based, hence the price of the steer to the farmer is fixed according to the price at which the hide is sold to the suborganization.

Possibly there is good reason for the increase in the price of shoes. I am not questioning that; but what I am complaining about is singling out the farmer. Why should he be made the goat? If food control is a good thing for the consumer, why not a shoe control? I know not what the reduction in the price of shoes would be or what the injustice is, but I do know that this bill is unjust to the farmer. I know that the proposition here is to regulate him. I know that the proposition is to reduce the price of his products. I know that the proposition is to reduce the price of wheat and sugar, which means $1.40 for wheat and that it is now nearly $3. I believe the gentleman from New Jersey [Mr. HUTCHINSON] stated a moment ago it was three dollars and thirteen and a half cents. I know that the proposition is to reduce it so that a barrel of flour can be made for $9, and the distinguished gentleman from New Jersey [Mr. HUTCHINSON] says that that means $1.40 net to the farmer of North Dakota. The farmer had to purchase his seed, and he paid from $2.50 to $3 per bushel for it, or if he had the seed on hand it was worth that price. He has to pay nearly twice the wages he paid before. It is reported in some instances that he is paying $60 a month. I am told that they are

paying $220 for a harvester. I have sold many of them for half of that amount. It is reported that he is paying $120 for a wagon, and I have sold many of them for $50 and less. He is paying double the price that he has paid in the past for his labor and for his implements. If you will read the testimony of Mr. Hoover before the committee of the Senate you will find that it is not the purpose of this bill to take over the manufacture of implements.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAUGEN. Mr. Chairman, I will ask the gentleman to yield me a few minutes so that I can say something about Mr. Hoover.

Mr. LEVER. I yield the gentleman five minutes more.

Mr. HAUGEN. Mr. Chairman, much has been said in the press and by Members of the other body about Mr. Hoover, the "food dictator" to be, who, it is claimed, left the United States years ago to seek his fortune in other countries, and who has recently returned to America, at the request of the President, to take over the task of dictating to the American people how and where to conduct their business, when and how to buy and sell, what wages and prices the farmer shall receive for his labor and products, and the return from his investment and life earnings; to tell the farmer's wife how much bread she may set before her children, the quantity of flour she may use—in short, to be given more power than was ever before granted to any mortal human being in the world. It is asserted that he is to be given power not only over our domestic affairs, but over our exports as well. He is to be given the power to use $150,000,000 as capital as he sees fit, to use the Government credit and the assets of our Federal reserve banks belonging to its member banks, to buy, produce, and sell grain, food, feeds, and fuel; thus giving him the power to buy and ship abroad every bushel of grain produced, at his own price. If the price fixed by him is not satisfactory to the producer, said producer may employ an attorney, go into court, and have his claim adjudicated, thus not only necessitating large expense and delay but also depriving our own people of our own grain. In other words, power is to be given Mr. Hoover to feed the people in foreign lands with American products, while our own may starve in a land of plenty. In short, these are a few of the powers alleged to be granted by this bill. These are far-fetched assertions, but undoubtedly, by implication, all of the aforementioned things may be done.

If I believed that all of the powers granted by implication in this bill would be exercised, I, of course, would not vote for the bill.

I know nothing about Mr. Hoover or his whereabouts in the past except what I have read in the press about him, and what I have learned from having met him and listened to his exposition of his plans a number of times. With my limited knowledge of him I have confidence in him. I believe that he is a man of ability, judgment, and experience; and that—if we are to have a food dictator—he is the man for the place.

Now, what is the situation? We are at war. War can not be fought *without* imposing additional burdens, and sacrifices must necessarily be made. To that no one objects. Certainly not the farmer. Not one of the farmers' representatives who have testified before the committee has objected to the bill, except, as I have stated, those who have objected to singling out the farmer and making him "the goat." In that respect I trust the bill can be amended. If so, it will afford protection not only to the farmer but additional benefits will be conferred on the consumer.

But whether or not this is done, as has been stated, this war is no pink-tea affair. This is no time for hesitation. This is a time for action and not for disputes; and if the President and those associated with him who have been charged with the responsibility of prosecuting the war deem this legislation necessary, and in view of the most urgent and persistent appeals made to Congress by the President for its passage, the apparent discriminations will necessarily have to be endured unless the bill can be amended and improved upon.

I trust that the bill may be amended, as before stated, by inserting a new section after section 8 to penalize the food conspirator, so as to be more just to the consumer and producer. I trust at least that it will be amended so that it can not be said that this House singled out a certain class, and the last class that ought to be selected. Read your campaign speeches, read the speeches printed in the RECORD, and compare them with your vote here to-day, or whenever that vote shall be cast. Some explanations will be necessary unless this bill is amended. I thank the committee. [Applause.]

The CHAIRMAN. All time has expired. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted, etc., That, by reason of the existence of a state of war, it is essential to the national security and defense, for the successful prosecution of the war, and for the support and maintenance of the Army and Navy, to assure an adequate supply and equitable distribution, and to facilitate the movement of foods, feeds, fuel, and articles required for their production, hereafter in this act called necessaries; to prevent, locally or generally, scarcity, monopolization, hoarding, injurious speculation, manipulations, and private controls, affecting such supply, distribution, and movement; and to establish and maintain governmental control of such necessaries during the war. For such purposes the instrumentalities, means, methods, powers, authorities, duties, obligations, and prohibitions hereinafter set forth are created, established, conferred, and prescribed.

Mr. HAUGEN. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Iowa offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. HAUGEN: Page 1, line 8, after the word "production," add the words "including shoes, clothing, and implements used in their production."

Mr. LEVER. Mr. Chairman, I make the point of order that the amendment is not germane to this section of the bill.

The CHAIRMAN. The gentleman from South Carolina makes the point of order that the amendment is not germane to this section of the bill. Does the gentleman from Iowa desire to be heard?

Mr. HAUGEN. I do not think it is necessary to discuss the point of order. It seems to me the amendment is germane to the subject matter of the bill. It is a limitation. It simply defines factors that are to be regulated later on in the bill. It adds shoes and clothing and brings them into the definition of necessaries. It limits the implements used in the manufacture of said necessaries. The bill reads, "other articles necessary for their production." I think there can be no doubt about its being germane. The bill also provides for the support and maintenance of the Army and Navy. Certainly shoes and clothing are essential to the support and maintenance of the Army and Navy. Hence it can not be held that the amendment is not germane to the subject matter of the bill.

Mr. STAFFORD. Mr. Chairman, I do not see wherein the point of order can be raised against this amendment on the ground that it is not germane. We certainly have the authority to include all kinds of articles over which the Government shall have supervision. This bill is not limited to any one article over which the Government will have supervision. It specifies three distinctly—foods, feeds, and fuel.

When a bill is of that generic type, where it mentions more than one class, it is in order to add other classes. If this related exclusively to food then the gentleman might bring into play the rule that bills relating to one subject matter can not be amended by the addition of another because it relates solely to one single subject matter. But here is a bill on its face relating to three different characters of subjects—foods, feeds, and fuel. It is within the province of the committee to include as many as it sees fit. It is not for the Chair to pass upon the expediency of them. That is for the committee to determine.

So I can not see wherein the point of order, that it is not germane, will hold.

Mr. LEVER. Mr. Chairman——

The CHAIRMAN. The gentleman from South Carolina is recognized. But the Chair would prefer to hear first from the other side, he will say to the gentleman.

Mr. CANNON. Mr. Chairman, I would be glad if the gentleman from South Carolina had stated something to sustain his point of order—some rule.

Mr. LEVER. I think the rule is so clear that it hardly needs to be stated.

Mr. CANNON. What is the rule? I am not familiar with it.

Mr. LEVER. The rule is that you can not amend a proposition included in this bill by adding to it other propositions, and I was about to argue to the Chair——

Mr. CANNON. Where is that rule? I would like to have it read. When was it adopted?

Mr. LEVER. I read:

And no motion or proposition on a subject different from that under consideration shall be admitted under color of amendment.

I read further:

One individual proposition may not be amended by another individual proposition, even though the two belong to the same class.

Mr. CANNON. That is one.

Mr. LEVER. And there is precedent after precedent along that line.

Mr. CANNON. I think I am familiar with the rules governing germane amendments. The gentleman says "one." But there are two. Aye, there are three; there are four; and the moment that you get two, then the rulings are uniformly that a third can be added.

Mr. LEVER. The gentleman's argument would lead to this conclusion, I take it, inevitably, that in order to provide for the national security and defense we might repeal the conscription act, we might designate where our ships shall go, we might pass a bill to provide for a public building in the city of Springfield, or we might provide practically anything that we desire.

Now this bill is built upon the theory of providing for the national security and defense by doing a certain kind of thing. My contention is that when you have done that it is not germane to introduce into that kind of machinery additional kinds of machinery under the rules of the House.

Mr. CANNON. Now, Mr. Chairman, it is hardly plausible. I recollect very well this example that is given in the Digest. The rulings were uniform through all the decades. For instance, if a bill provided for the admission of one Territory it was not amendable, but if it provided for the admission of two Territories to Statehood, it is amendable. So they run through the precedents.

Now let us analyze this provision for a minute. Let me read it. The language is:

To assure an adequate supply and equitable distribution, and to facilitate the movement—

Of what?—

of foods, feeds, fuel, and articles required for their production.

This is to facilitate the production and the distribution of foods, feeds, fuel, and articles required for their production. Well, great Heavens! Would not another class of food be germane?

So far as the rules are concerned, is it not germane to include anything that would enter into production? It seems to me too plain for argument. I do not understand that there is any rule which prevents it. Ah, but the gentleman may say, "We do not want to have this bill cover anything except what is specified." Well, when you come to food, I will ask my friend, if he wants to argue about it, how about cotton? Why, it is the boast of the gentleman's constituency that while cotton is used for munitions, its greater use is for clothing, and the next greater use of it after clothing is for food. Will the Chair take it upon himself to overturn the uniform rulings, so far as I recollect, of the previous Chairman? Will the Chair say, "I will hold this out of order"? Whenever it has been doubtful as to whether an amendment was germane the Chair has uniformly held, so far as I recollect, that it is up to the House to determine, and he has been careful about ruling out amendments on the ground that they were not germane, thereby taking from the House the power to determine the question upon the merits. Suppose that the amendment be sustained and that the gentleman from Iowa inserts the word "cotton"? Everybody knows that fertilizer comes from cotton seed. Everybody knows that cottonseed oil is almost universally used in the production of lard and butter substitutes, and that in and of itself, with or without being mixed with other articles, it is a food. Well, now, as the gentleman has moved to insert the words "shoes and clothing," could we insert the word "cattle"? Why, cattle furnish the hides from which the shoes are made, and they furnish the meat that sustains human animal life. I do not know that I can make it any plainer from my standpoint.

Mr. STEAGALL. Mr. Chairman, may I be heard just a moment?

The CHAIRMAN. On which side?

Mr. STEAGALL. Against the point of order.

The CHAIRMAN. The Chair will hear the gentleman.

Mr. STEAGALL. I am not experienced in the construction of the rule upon which the point of order is predicated, but it seems to me on the question of the germaneness of the amendment the only controversy that could arise would be whether or not shoes and clothing are already included in the language of this section of the statute. It enumerates not merely three things, "foods, feeds, and fuel," as suggested by the learned and beloved gentleman from Illinois [Mr. CANNON]. This is the language:

And for the support and maintenance of the Army and Navy, to assure an adequate supply and equitable distribution, and to facilitate the movement of foods, feeds, fuel, and articles required for their production.

It seems to me the only question remaining is whether or not clothing and shoes are such articles as are required for the use of those engaged in the production of foods, feeds, and fuel. Unless the people who are to grow the food and feed and produce the fuel are to work naked, it seems to me a provision dealing with the question of clothing and shoes is certainly germane, because the statute reads—

foods, feeds, fuel, and articles required for their production—

That is for the production of foods, feeds, and fuel. So that it seems to me upon a strict construction of the language of this section, clothing and shoes would be embraced under the present provisions of the statute. But whether they are so intended under this clause—

and articles required for their production—

Or not, certain it is that such a provision must be germane to this latter clause. The section embraces not only "foods, feeds, and fuel, but articles required for their production." So it seems to me the only question open to controversy is not whether the amendment is germane or not, but whether it is embraced within the provisions of this section as now written.

Mr. LEVER. Would the gentleman add barlow knives to this. No farm boy ever worked efficiently unless he had a barlow knife.

Mr. STEAGALL. I should think that agricultural implements of every essential sort would be germane to a provision—

To assure an adequate supply and equitable distribution, and to facilitate the movement of foods, feeds, fuel, and articles required for their production.

I will ask the gentleman from South Carolina what articles are embraced in this clause, articles required for the production of food, feed, and fuel, if clothing and shoes are not embraced by that provision, or at least germane to it?

Mr. LEVER. Does the gentleman think that shoes are absolutely necessary for the production of food and feed?

Mr. STEAGALL. I will say to my friend that there is a section where God has so favored the people in climate that they can engage in labor of this sort without shoes or clothing, though I am sure the gentleman would not have them work that way. But taking the country as a whole, I should think we would agree that clothing and shoes are such articles as are required by those engaged in the production of foods, feeds, and fuel.

In States where there are statutes making provision for liens in favor of the landlord upon the crops of the tenant for money advances or for supplies necessary to make a crop the courts hold that food and clothing for the tenant or his family are within the provisions of the statute. That is just the point I am attempting to set forth here, that shoes and clothing are such articles as are required by those who produce foods, feeds, and fuel.

The CHAIRMAN. To whom does the gentleman from Alabama yield?

Mr. STEAGALL. I will yield first to my friend the gentleman from Tennessee [Mr. HOUSTON].

Mr. HOUSTON. I was going to ask my friend from Alabama if he does not think that the words which follow the words—

and articles required for their production—

That is, the words—

hereafter in this act called necessaries—

So limit and qualify the articles referred to that unless they fall in that category they would not be included.

Mr. STEAGALL. I think the words—

hereafter in this act called necessaries—

Refer to foods, feeds, and fuel, but not simply those three alone, but to—

foods, feeds, fuel, and articles required for their production.

Mr. HOUSTON. Do not the words—

hereafter in this act called necessaries—

Modify and define what they are?

Mr. STEAGALL. "Necessaries" is the word employed throughout the bill to cover "foods, feeds, fuel, and articles required for their production." The word "necessaries" means anything and everything embraced in the four clauses.

Mr. GREEN of Iowa. I agree in general with the argument of the gentleman that clothing and shoes are included in the words—

and articles required for their production—

But does the gentleman think that, conceding that, it does not follow that the point of order should be sustained, for that would simply say that the words may possibly be superfluous, but not make the amendment subject to the point of order.

Mr. STEAGALL. It could not be said that a provision intended to make a section more specific would not be germane because it was already embraced. That would be merely a matter of English. To mention the articles particularly would only make the section more definite.

Mr. GREEN of Iowa. I do not think the gentleman heard me. That was exactly the point I was making. I say I think they would not be subject to the point of order.

Mr. STEAGALL. I misunderstood the gentleman. I am glad he agrees with me.

Mr. ANDERSON. Mr. Chairman, it is true that this section does deal with more than one subject matter. It deals with the regulation and control of foods, feeds, and fuel.

The question that is before the Chair, however, is the question whether the amendment proposed by the gentleman from Iowa introduces a new subject matter, a subject matter so unrelated to the subject matter of the bill as not to be germane. The bill relates to foods, fuel, and feeds. The amendment offered by the gentleman from Iowa relates to shoes and clothing. What are articles of clothing? Can it be said, for instance, that a proposition to regulate and to control the price and distribution of neckties and socks is so related to a proposition to regulate the control and distribution of foods, feeds, and fuel as to be germane to that proposition? It seems to me clearly that the amendment of the gentleman from Iowa obviously injects into this bill and makes subject to the regulation of this bill the subject matter totally different from that which is dealt with in the bill itself.

Mr. CANNON. Will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. CANNON. The gentleman has stated that this might include neckties and socks, and further, that would include, perhaps, a hundred articles; I do not know. But if this is not in order, would it be in order to include shovels and picks and powder, that is used in mining coal? Would that be germane?

Mr. ANDERSON. Each proposed subject matter would have to be dealt with standing on its own feet. The gentleman does not want me to argue a question not before the Chair?

Mr. CANNON. But it would be on all fours with this amendment when it got before the Chair. The gentleman might argue that in mining the coal a man might mine it with his long fingernails and without clothes. He might argue that if you insert the word "cotton," which is a food product, although cotton is mostly used for clothing—acquainted as I am with the gentleman, with his fair mind, I do not believe he could hardly be in earnest in contending that this amendment is not germane.

Mr. ANDERSON. I do not think there is any question about this proposition. The precedents lay down this rule: That while the committee may report a bill embracing different subjects, it is not in order in the consideration in the House to introduce a new subject by the way of amendment. The point I am trying to make is that the amendment offered by the gentleman from Iowa introduces into this bill an entirely new subject matter, a subject matter not dealt with in the bill at all, and because it is a new subject matter, not related to the subject matter of the bill, it is not therefore germane to the bill.

Mr. HAUGEN. Let me suggest that the bill provides for articles necessary. Does the gentleman know that shoes and clothing are necessary to the farmer?

Mr. ANDERSON. If they are, then the gentleman's amendment is entirely superfluous, because they are included in the bill now. If not, the amendment introduces an entirely new subject matter.

Mr. CANNON. If the gentleman will allow me, the gentleman says if they are included, and he does not deny that they are, then the amendment is unnecessary. Does the gentleman seek to deny the Chair the right to determine the question of fact by sustaining the point of order when he says they are already provided for?

Mr. ANDERSON. No; I do not say they are provided for. I am very confident that they are not included by the terms of the bill as it now stands.

Mr. HAUGEN. Does the gentleman contend that implements are not included?

Mr. ANDERSON. Farm implements, no; I think they are included.

Mr. LENROOT. Will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. LENROOT. Does the gentleman contend that the construction of the phrase "articles necessary to their production" would be limited to such articles as are specially designed and fitted for that purpose?

Mr. ANDERSON. Unquestionably so.

Mr. TOWNER. Mr. Chairman, I would like to call the attention of the Chair to what I presume he already knows, but always it is the application of old rules to new ideas. In the very good summary of decisions stated in the Rules and Digest, pages 344 and 345, we have the distinction clearly made with regard to this class of subjects. First, on page 344 the proposition is laid down and is sustained by the precedents, that one individual proposition may not be amended by another individual proposition even though the two belong to the same class.

Now, illustrating that, the first illustration given is a very easy one to understand:

To a bill proposing the admission of one Territory into the Union an amendment for the admission of another Territory is not germane.

Other illustrations are given. The second proposition is found on page 343 and is as follows:

A specific subject may not be amended by a provision general in nature, even when of the class of the specific subject.

And then an illustration is given that to a bill for the admission of one Territory into the Union an amendment providing for the admission of several other Territories into the Union is not germane, and then follows a third, to which I call the Chair's attention:

A general subject may be amended by specific propositions of the same class.

And then the illustration is given of the same character as the two preceding classes, that to a bill admitting several Territories into the Union an amendment providing for the admission of another Territory is germane.

The CHAIRMAN. The Chair is familiar with the rule that where a bill admitting several Territories into the Union is being considered, an amendment adding another Territory is germane. That is true. But is not the condition intended to be added to the original proposition that the amendment is identical in substance not only in class but in subject?

Mr. TOWNER. It was in that case; but there are a great many cases where it is not. The proposition is that it must be only of the same general character. Let me call the Chair's attention to this fact.

The gentleman from Minnesota [Mr. ANDERSON] said to the Chair that this was not of the same general character, and enumerated fuel, feeds, and food as the three things that were of the same general character. I desire to call the attention of the Chair to the fact that those were only enumerated as of the same general character for the purpose of securing the national defense, for the purpose of the successful prosecution of the war, for the support and maintenance of the Army and the Navy, and to secure an adequate supply and equitable distribution and to facilitate the movement of foods, feeds, and fuel, and articles required for their production. These things are specifically enumerated as of a class. It can not be said that food and fuel belong to the same class except that they belong to the same class for the purpose of sustaining our armies in the field or prosecuting the war. If it can be held that the production of clothing and shoes is of the same general character then certainly they are within the rule.

Mr. LEVER. Mr. Chairman, will the gentleman yield?

Mr. TOWNER. Yes.

Mr. LEVER. In line with the gentleman's argument, would he think it in order to raise a regiment of volunteer soldiers and send them to the front?

Mr. TOWNER. I think not; no.

Mr. LEVER. I do not get the gentleman's distinction then.

Mr. TOWNER. It is not only in that same general class that has been specified as the object and purpose for which these things are enumerated, but it occurs to me that clothing and shoes are in the same general class as fuel, food, and feeds, for the reason that they are all for the purpose of sustaining the Army in the field, for the reason that they are of the same general class and purpose in carrying on the war, for the reason that they are of the same class and purpose to directly sustain and support our armies in the field.

Mr. BARKLEY. Would the gentleman think that an amendment providing for the addition of automobile trucks, which may be necessary in transporting food to the Army and Navy, would be germane on this provision?

Mr. TOWNER. I do not know whether it would or not. That is a question for the Chair to determine.

Mr. BARKLEY. In accordance with the gentleman's argument that would be just as germane as clothing or shoes, because they may be needed by the Army.

Mr. TOWNER. I think the gentleman may perhaps suggest a great many things so remote that no chairman would hold that they were within the rule, but what I am contending for is that this is so intimately related, so much of the same general class, that it ought to be included.

Mr. SABATH. Mr. Chairman, in answer to the gentleman, take the provision of the bill providing for facilitating the movement of food, fuel, and feeds. Would it not be in order to provide for more trucks to aid and assist the Army?

Mr. TOWNER. It might very well be, but however that may be, you may always apparently suggest things that are so remote in a class of this kind that they would not be considered; but what I am arguing to the Chair is that these things are so intimately related that you could not hold they are not of the

same general class. The words "general class" and "general character" do not mean that it is specifically limited to the things themselves. It means that they are of the same general purpose, for the same general use, adapted to the same general object; and if that be true, then they are within the rule. I think it has never been held that anything so intimately related as these matters are is not germane.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. TOWNER. Yes.

Mr. MADDEN. Do not the rules provide that where an article is suggested in general terms it is in order to introduce a specific amendment?

Mr. TOWNER. Oh, yes. That has been definitely held many times.

Mr. MADDEN. Would not the gentleman consider "and articles required for their production" as a general statement?

Mr. TOWNER. I think it would comé under that; yes.

Mr. MADDEN. If that be true, then to add the words "shoes and clothing" would be in order under the rules of the House, would it not?

Mr. TOWNER. I think so.

Mr. COOPER of Wisconsin. Mr. Chairman, in my judgment the Chair must sustain this point of order for reasons apparent on a careful reading of the bill. Lines 7 and 8, page 1, of the bill show that its purpose—its only purpose—is to "assure an adequate supply and equitable distribution and to facilitate the movement of" foods, feeds, and "fuel and articles required for their production." This is the only object of the bill—to provide for the production, conservation, and distribution of those specifically mentioned necessaries, foods, feeds, and fuel, and of the articles required for their production. What are foods? Foods are substances eaten by human beings to sustain life. What are feeds? Feeds are substances eaten by animals to sustain life. Fuel is a substance burned either for the purpose of cooking or for the protection of human beings, and sometimes animals, from cold. In other words, and if we wish to be technical about this, the three substances, foods, feeds, fuel, are substances to be consumed, two by mastication and the other by combustion. The bill relates in express terms, specifically and only, to those three substances and to the articles and machinery required for their respective production.

But the amendment proposed by the gentleman from Iowa includes clothing and shoes, substances to be neither eaten nor to be consumed by fire, and the articles and the machinery for the production of which are of a character entirely different from those required to produce foods, feeds, or fuel. For example, woolen clothing, for its production, requires woolen machinery; and, of course, it was not at all contemplated by this bill that the price of that sort of machinery should be regulated by the man who is to have charge of the Nation's foods, feeds, and fuel. They are entirely different things, have entirely different uses, and require entirely different articles for their production.

It seems to me, therefore, that there can be no question that the amendment is not germane.

Mr. REAVIS. Will the gentleman yield to me, then?

Mr. COOPER of Wisconsin. I will.

Mr. REAVIS. Are clothing and shoes essential for the production of food or necessary for the comfort of anyone who raises the food?

Mr. COOPER of Wisconsin. The amendment of the gentleman from Iowa includes shoes and clothing and the machinery to make them, but it can not be——

Mr. REAVIS. The gentleman does not understand my question.

Mr. COOPER of Wisconsin. Can not be construed as germane to the bill.

Mr. REAVIS. Shoes and clothing are no more required for the production of food than for the production of firecrackers, are they?

Mr. COOPER of Wisconsin. I do not understand that shoes are absolutely required for the production of cotton, because from the time it is planted until it is harvested 90 per cent of the people who cultivate it do not have shoes on their feet.

Mr. HAUGEN. The gentleman will admit we do not grow wheat in the North without shoes or clothing. That may be so in the South where they grow cotton.

Mr. STAFFORD. Mr. Chairman, I merely wish to amplify what I said in the beginning largely by way of reply to the citation made by the gentleman from Minnesota [Mr. ANDERSON]. Referring to the paragraph of Hinds' Precedents, section 5825, which is the basis for the summary in the rules, the Chair will find that that amendment related to the manner of the appointment of the Public Printer as an amendment to the general deficiency bill. There was nothing in that general deficiency bill that related to the office of the Public Printer, and of course the Chair rightly ruled in that decision that it was not in order.

I wish to call the attention of the Chair to this fact: We have here a bill that seeks to grant authority over the supply, the distribution, and the movement of foods, feeds, and fuel. No one would hold that it would not be in order to insert the word "cotton" as an amendment, or the word "wool" as an amendment, or the word "leather" as an amendment after those three designated generic articles, because this bill relates to more than one subject of control. It is not limited only to food, it is not limited to fuel.

This committee, if it sees fit, might offer an amendment extending jurisdiction of this bill to ores; it can extend jurisdiction over anything which related to the maintenance of the Army and the Navy or which are essential for the national security and defense. Now, by way of confirmation, I desire to call the attention of the Chair to the parliamentary decisions because they have been referred to in discussion here by the gentleman from Illinois [Mr. CANNON], who is well versed with the decisions on germaneness. Under general parliamentary law, any amendment would be in order, and under the rules the only limitation that will exclude an amendment is that found in the clause of subsection 7 of Rule XVI:

And no motion or proposition on a subject different from that under consideration shall be admitted under color of amendment—

The Chair should not confuse in making his decision the fact that when a bill only relates to one subject matter you can not introduce another subject of the same general kind, nor should the Chair confuse in making his decision the fact that when a bill is introduced relating to a specific subject it is not germane to introduce an amendment providing for a general subject to which that specific subject is related. I call the attention of the Chair to paragraph "c" in the Manual, in which these references are made—

to a bill providing for the construction of buildings in each of two cities an amendment providing for similar buildings in several other cities—

Citing volume 5, 5840—

to a resolution embodying two distinct phases of international relationship, an amendment embodying a third.

Citing volume 5 of the Precedents, 5839. I have here citations just referred to, and I want to call the attention of the Chair to the language of the then occupant of the chair in overruling the point of order. That was a case where there was a bill admitting the Territories of Oklahoma, Arizona, and New Mexico, and an amendment was offered to provide for the admission of the Indian Territory, and this is what the Chairman, Mr. James A. Hemenway, said:

The Chair is ready to rule. If this were a bill for the admission of Oklahoma Territory alone, as it states, there would be no doubt as to the position taken by the gentleman from Missouri being correct. An amendment to admit some other Territory as a State would not be in order. But this is a general bill—

And that is what we have here—

covering three different Territories, and an amendment as suggested by the gentleman from Alabama [Mr. UNDERWOOD], to admit Alaska as a State, would be in order on this bill.

For instance, a private claim bill for the allowance of a single claim would not be subject to an amendment allowing some other claim, but a general claims bill, such as often comes before this House, can be amended by adding another claim. So with public-building bills. A bill to erect a public building at Birmingham, Ala., could not be amended by a proposition to erect a public building in Indianapolis, Ind., but a bill providing for a number of public buildings—

"A number of public buildings"—that is what this bill does, provides for the control of a number of subjects—food, feeds, and fuel—

but a bill providing for a number of public buildings could be amended by adding another public building. One is a general bill and the other is a bill for a single object; and as the Chair said, if this were a bill to admit Oklahoma alone as a State, this amendment would not be in order.

As the committee has brought in here a bill general in its character, relating to three subjects matter, food, feed, and fuel, it has extended the authority of the committee. I am not in favor of this amendment, I may say, but I am anxious to have the precedent continued in regular order and not have a decision made that would restrict the action of the House when a general bill comes before it. It would be in order for any person here, if he sees fit, to offer an amendment as to ore. We are paying enormous prices for our steel, largely because the price of ore and the price of pig is six times what it was two years ago. It is within the province of this committee, if it sees fit, to insert the word "ore" because the Government is a purchaser of steel plate for its shipbuilding program. It is within the province of this committee, if it sees fit, to insert the word "clothing" because the Government is in the field to purchase clothing. It is in the province of this committee to insert the word "cotton,"

the word "wool," and the word "leather," and can specify by more specific designation the word "shoes" and the word "clothing," and the implements that enter into the construction of them.

I can not see how the Chair can escape holding that this is in order in view of the fact that this is a general bill. We are not limited under the rules of the House to an amendment so far as feed is concerned or food is concerned, but can extend it to other specific subjects, such as ores, cotton, wool, leather; or we can still further specify them, as the gentleman's amendment has done in this case, in the way of clothing or shoes, and the like.

THE RUSSIAN COMMISSIONERS.

Mr. CLARK of Missouri. Mr. Chairman, I ask for a minute. It has nothing to do with this debate.

The House this morning authorized the Speaker to make arrangements with the commissioners from Russia as to what hour they would be here on Saturday. They came up to my room a while ago and called on me, and they agreed to be here at 12 o'clock. I make this announcement so that everybody can know the time.

CONTROL OF FOOD AND FUEL.

Mr. LENROOT. Mr. Chairman, I would like to submit some observations in favor of sustaining the point of order, but I do not care to take the time.

The CHAIRMAN. It will not be necessary. The Chair is ready to rule.

Fortunately for the peace of mind, at least, of the present occupant of the chair, he had intimation the other day that an amendment of this nature would likely be offered to this section of the bill. Acting upon that suggestion or intimation the Chair has looked the question up as carefully as he could and is entirely ready to rule, of course, not for one moment entertaining the thought of being at all discourteous or even impatient with anyone who may have reached a different conclusion upon this very important proposition and who want to present their views.

The Chair regards this as a very important question, because if this amendment is in order then, of course, the floodgates are opened, and we would be here all summer offering all sorts and kinds of amendments. It would encourage the activities of the imagination very much, because it opens a very broad and fruitful field for offering all sorts and kinds of amendments as related to the main subject.

The Chair wants to say this, to be perfectly frank and plain about it, that when the matter was first suggested to him he was very decidedly of the opinion, without looking it up but having some general knowledge of parliamentary law, that an amendment similar to this would be in order. When the Chair started to look this matter up he was in that frame of mind, but after pursuing that investigation carefully and giving due regard to the precedents, which are numerous, was forced to reach a different conclusion.

The Chair looks at this question in this way, that in passing upon this point of order the question as to whether the amendment is germane depends wholly upon the construction or interpretation to be put upon the bill presented by the committee. In other words, a proposition to be germane must relate to and be in harmony with the subject matter of the bill or the section to which it is offered.

In this case if the real purpose and the subject matter of this bill is to give the President control over necessaries generally during the existence of a war, in aid of the successful prosecution of the war, and in support and maintenance of the Army and Navy, if that is the purpose of the bill, if that is the fundamental idea, then the Chair feels that this amendment would be in order, because it does not transgress the rule referred to by the gentleman from Wisconsin [Mr. STAFFORD], to wit, "A general subject may be amended by specific propositions of the same class." This being a bill which mentions three different classes, to wit, food, feed, and fuel, which they designate as necessaries, under that long line of decisions cited by the gentleman from Wisconsin, others of like class may be added.

But does this bill give to the President or attempt to give to the President control over necessaries, generally, for the maintenance and support of the Army and Navy? Let us see.

The title of the bill is:

To provide further for the national security and defense by encouraging—

How?—

the production, conserving the supply, and by controlling the distribution of—

What?—

food products and fuel.

This seems to be clear and specific.

A very eminent Speaker of this House has said heretofore that a committee may bring in any proposition that it pleases. That that is the province of the committee. Now, this committee has chosen to bring in a proposition here giving the President during the war and in aid of the prosecution of the war, and support of the Army and Navy, control of what? Three things, namely, fuel, feed, and food. Now, then, of course, if clothing and shoes are of the same kind of subjects as mentioned in the bill then this amendment would not fall under the ban of section 7, of Rule XVI, which reads as follows:

No motion or proposition on a subject different from that under consideration shall be admitted under color of amendment.

The question of germaneness has been one that has bothered many occupants of this chair. It is not always easy to tell just what is germane. There has been an evolution of the rules of the House, beginning away back in the year 1789. I am going to ask the Clerk in a moment to read, because I think it would be instructive to the committee and very apropos to this discussion. The Clerk will read from Hinds' Precedents, section 5825. When the House was considering, on March 17, 1880, a bill making appropriations to supply certain deficiencies in the appropriations for the service of the Government for the fiscal year ending June 30, 1880, and for other purposes, Mr. Otho R. Singleton, of Mississippi, offered an amendment for the purpose of repealing the law making the Public Printer an officer appointed by the President, making the Public Printer an elective officer of the House of Representatives, and so forth, whereupon Mr. John A. McMahon, of Ohio, made a point of order against the amendment, and after debate the Chair, who was, by the way, the Hon. John G. Carlisle, than whom no greater Speaker perhaps ever presided over this House, rendered an opinion, which I am going to ask the Clerk to read. I shall be glad if the members of the committee will listen carefully.

The Clerk read as follows:

The amendment submitted by the gentleman from Mississippi [Mr. Singleton], under instructions from the Committee on Printing, is objected to upon two grounds: First, that it is not germane to the subject matter of the bill under consideration; and, secondly, that it is in substance the same as a bill heretofore reported by the Committee on Printing and now pending before the House.

Notice of this amendment was given several days since, and during the general debate in the Committee of the Whole the Chair was advised that a point of order would be raised against it; so that a reasonable opportunity has been afforded to examine the subject, and the Chair will now state the conclusions at which he has arrived.

In the absence of an express rule, the amendment would not be liable to a point of order upon the ground that it was inconsistent with or not germane to the subject under consideration, for, according to the common parliamentary law of this country and of England, a legislative assembly might by an amendment, in the ordinary form or in the form of a substitute, change the entire character of any bill or other proposition pending. It might entirely displace the original subject under consideration and in its stead adopt one wholly foreign to it, both in form and substance.

But ever since the 4th of March, 1789, this House has had a rule which changed the common parliamentary law in this respect, at least as to substitutes, and ever since 1822 as to amendments in any form. The Congress of the Confederation, in 1781, adopted a rule in the following words:

"No new motion or proposition shall be admitted under color of amendment as a substitute for a question or proposition under debate until it is postponed or disagreed to."

The House of Representatives of the First Congress, on the 4th of March, 1789, adopted the following rule upon this subject:

"No new motion or proposition shall be admitted under color of amendment as a substitute for the motion or proposition under debate."

It will be observed that each of these rules admitted amendments introducing new motions or propositions, if they were not offered as substitutes for the motion or proposition under debate. But in March, 1822, the House changed the rule of 1789 so as to make it read as follows:

"No motion or proposition on a subject different from that under consideration shall be admitted under color of amendment."

And in this form the rule has stood ever since, and now constitutes a part of the seventh clause of Rule XVI in the recent revision. The rule does not prohibit a committee reporting a bill from embracing in it as many different subjects as it may choose; but after the bill has been reported to the House no different subject can be introduced into it by amendment, whether as a substitute or otherwise.

When therefore it is objected that a proposed amendment is not in order because it is not germane the meaning of the objection is simply that it (the proposed amendment) is a motion or proposition on a subject different from that under consideration. This is the test of admissibility prescribed by the express language of the rule, and if the Chair, upon an examination of the bill under consideration and the proposed amendment, shall be of the opinion that they do not relate to the same subject, he is bound to sustain the objection and exclude the amendment, subject, of course, to the revisory power of the Committee of the Whole on appeal.

The CHAIRMAN. It seems to me that that lays down the law very plainly and succinctly that must govern the committee in this case, unless the committee desires to overrule the precedents.

Mr. CANNON. The Chair has not concluded his ruling?

The CHAIRMAN. No; he is not quite through. The Chair was going to say that the gentleman from Wisconsin [Mr. STAFFORD] called attention to the fact that it is in order when a bill is pending to admit two or three Territories to statehood to add by amendment an additional Territory. Of course, they are all on the same subject; they are all Territories. The same is true in regard to public buildings. If there are a number of public buildings provided for in a bill, then you may by amendment add another public building, or other public buildings, because they are all public buildings. They are all identical subjects. But here in this case we have this situation: Speaker Carlisle says the committee can provide for any subject or subjects that it wants to. The Committee on Agriculture in this case has chosen to provide for foods, feeds, and fuel only. Now, then, in the mind of the Chair, the subject of shoes is quite a different subject from that of foods, feeds, or fuel. The same is true with respect to clothing. That being true, under the precedents laid down here——

Mr. HAUGEN. Mr. Chairman, it also includes the articles necessary for their production.

The CHAIRMAN. Yes; but the Chair must look with reason to the statements made in the bill and not go out into the realm of imagination. We must not get too far removed from base. We might not find any stopping place at all when we came to hunting up the things that would contribute to production. It must be something immediate, and not too remote, and the Chair would not think it would go far enough to include clothing or shoes.

Therefore the Chair feels compelled to sustain the point of order. The point of order is sustained.

Mr. CANNON. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

Mr. CANNON. After the word "feeds," on page 1, line 8, I want to move to insert the words "cotton seed."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. CANNON: Page 1, line 8, after the word "feeds," insert the words "cotton seed."

The CHAIRMAN. Does the gentleman want to be heard?

Mr. CANNON. Mr. Chairman, I hope this amendment will be agreed to, because it is of very great importance. Cotton seed is claimed to be equivalent to two-thirds of the total wheat crop for food. Now, you can not regulate cotton seed without regulating cotton. Cotton is an agricultural product which goes into explosives. That is all I desire to say, I think, upon the merits of the question. But gentlemen may say that it is already included. Gentlemen may argue that it is not included. If we adopt the amendment there is no doubt about it. If you regulate the farmer's wheat, if you can fix a minimum price for the farmer's wheat or the farmer's corn, or the farmer's potatoes, you can fix a minimum price for the farmer's cotton seed, which means his cotton, and I do not see that the gentlemen who are interested in this branch of agriculture ought to object.

Mr. SLAYDEN. Will the gentleman permit a question?

Mr. CANNON. Yes.

Mr. SLAYDEN. Does not the gentleman believe that by the terms of the bill cotton seed is now covered, because cotton seed is a food and a feed—feed for four-footed animals and also a food for men, just as much as wheat. It is converted into such products that it is consumed as food for men and into various products consumed by cattle.

Mr. CANNON. Then what is the objection to including it?

Mr. SLAYDEN. I have not interposed any objection, except I think it is unnecessary.

Mr. CANNON. I do not think it is unnecessary.

Mr. SLAYDEN. It is a raw material from which food is made.

Mr. CANNON. If you can regulate it it does no harm to make it certain.

Mr. BARKLEY. Would the gentleman say it was necessary to put in the word "wheat"? People do not eat wheat, but they eat something made from it. They do not eat cotton seed, but they eat something made from it. The same might be said of corn.

Mr. CANNON. Oh, yes; but I guess you can feed it, can you not?

Mr. BARKLEY. Yes.

Mr. CANNON. But let that be as it may. Now, I would like at some time during the consideration of this bill under the five-minute rule to discuss the effect of enacting the bill at all, paragraph by paragraph; but you can not do it in five minutes. I should be very glad if on the morrow, which I believe will be Friday, I might have unanimous consent to speak—not to delay the bill. I expect to vote for the bill. I want to see it amended. I will do all I can to amend it along proper lines and not for embarrassment. The time approaches for adjournment this afternoon, and this amendment and such other amendments as may be offered can be voted on. But I want at least to call the attention of this great Committee of the Whole House on the state of the Union to what the effect will be when you clothe one man—I do not care if he were the wisest man that ever lived—with power to fix the minimum price for foods, feeds, and fuel, or other articles.

Mr. TOWNER. Will the gentleman yield?

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. LEVER. Would the gentleman from Illinois like to proceed now?

Mr. CANNON. I would rather proceed in the morning.

Mr. LEVER. If the gentleman desires to proceed further now, I will be glad to have him do it.

Mr. CANNON. Oh, well, I prefer not to.

Mr. LEVER. Would the gentleman rather speak to-morrow?

Mr. CANNON. I would rather.

Mr. LEVER. I think there is always a disposition in the House to accommodate the gentleman.

Mr. CANNON. Would it be asking too much that I may have three-quarters of an hour to-morrow?

Mr. LEVER. That is a little bit long. If we may be permitted to meet at 10.30, then the gentleman can have his three-quarters of an hour.

Mr. CANNON. I do not want to make the point that there is no quorum present to-morrow.

Mr. RUCKER. I will make it for the gentleman.

Mr. CANNON. In other words, I do not like to talk to empty benches, even though I may talk foolishness.

Mr. RUCKER. We will get the Members here.

Mr. LENROOT. The chairman of the committee stated that the gentleman from Illinois could have his three-quarters of an hour at any time he desired.

Mr. LEVER. At any time he desires.

Mr. CANNON. Will the gentleman ask unanimous consent?

Mr. LEVER. I do not know whether it is in order to do it now in Committee of the Whole, but we will get the time for the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois.

Mr. LEVER. Mr. Chairman, the language of the bill reads—

Foods, feeds, fuel.

I do not think there is a member of the committee who does not believe that cotton seed and the products of cotton seed are included in the words "foods," and "feeds." The committee do not desire that cotton seed and its products should be exempted. Coming from the South myself, from a great cotton-producing State, I am willing, and the farmers whom I represent are willing, that they shall do their bit in this great world struggle. [Applause.] We want no exemption that does not apply to every other section of the country. But I trust the amendment will be voted down, for the reason that if you are going to include cotton seed, and specify it, then you ought to include wheat, and corn, and butter, and eggs, and bran, and middlings, and shorts, and all those things world without end, every single, solitary food product in all of its various phases, and we have undertaken here to make this language so broad that it will take in the whole situation; and I can say to the Committee of the Whole unhesitatingly that it was in the mind at least of the chairman of the committee, and I believe of every member of the committee, that as far as cotton seed was either a food or a feed it is included within the terms of the words "food" and "feed." I hope, therefore, that the amendment will be voted down.

Mr. BARKLEY. Will the gentleman yield?

Mr. LEVER. Yes.

Mr. BARKLEY. This is a question for information. Did the committee consider that in defining the word "fuel" it would include gasoline and oil fuel, as well as coal?

Mr. LEVER. The committee did not, I will say to the gentleman; as far as the chairman was concerned, we did not have in mind the product, gasoline. We had in mind coal and oil, but, in my judgment, the court could easily construe it to include other articles.

Mr. SABATH. Would it not be easier for us to embody it in this bill, and thus relieve the court of the unnecessary amount of worry and trouble it might give the court in construing it?

Mr. LEVER. That is on one proposition. We will discuss that when we come to it.

Mr. SABATH. Will the gentleman permit me to ask him a question?

Mr. LEVER. Yes.

Mr. SABATH. Does the gentleman consider that cottonseed oil would be included in this paragraph?

Mr. LEVER. Undoubtedly, there is no question about that.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. LEVER. I shall be glad to yield to the gentleman.

Mr. MOORE of Pennsylvania. The first bill included clothing and certain articles not included in the present bill. Has the committee, especially in view of the ruling of the Chair on the point of order, considered the high cost of living resulting from the cost of hides, wool, cotton, petroleum, ores, and metals, or is it contemplated by the committee at any time in the future to bring in a bill covering these other materials that have added to the high cost of living?

Mr. LEVER. I will say that clothing and shoes were stricken from this bill at the suggestion largely of Mr. Hoover, whose idea was that he, or the person who should be charged with the administration of the law, should handle only the food and fuel situation. I say frankly to the gentleman that, in my judgment, there ought to be set up a fuel control pure and simple and separate from food control. But we felt that of the two things in this life that are absolutely necessary, one was food and the other was fuel. You must eat, and therefore we took these two.

Mr. MOORE of Pennsylvania. This being largely an export proposition, and the high cost of living in the large cities not being so well cared for in this bill as it might be, I would like to know whether Mr. Hoover made any suggestions to the committee as to whether an attempt would be made to reduce the high cost of living in the United States in the matter of clothing, for which we use wool, hides, cotton, and other necessaries.

Mr. LEVER. Mr. Hoover discussed with the committee only the proposition of food and fuel.

Mr. HAUGEN. Will the gentleman yield?

Mr. LEVER. Yes.

Mr. HAUGEN. Was it not the purpose of the committee in inserting the words "articles necessary for their production" to include implements used in the production of farm products?

Mr. LEVER. My interpretation of those words "articles required for their production" is that the court would hold that such articles as are indispensable and absolutely necessary in the production of farm products are such articles as are included in this bill.

Mr. HAUGEN. Would the gentleman include farm implements?

Mr. LEVER. Undoubtedly.

Mr. HAUGEN. Has the gentleman read the testimony of Mr. Hoover before the Senate committee that he does not so construe the law?

Mr. LEVER. Mr. Hoover is not going to construe the law; he is to be the administrative officer.

Mr. HAUGEN. It is not what is in the law, but what is in the mind of the man who administers it.

Mr. LEVER. The gentleman will remember that when Mr. Hoover was before the committee and the question of the minimum guaranty was under consideration, Mr. Hoover repeatedly emphasized the fact that in fixing upon what would be a reasonable and fair price to put upon the product you would take into consideration the increased cost of labor, the increased cost of fertilizers, the increased cost of farm implements and binding twine, and all things that entered into the cost of making of the product.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. LEVER. I ask for two minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BLANTON. Will the gentleman yield?

Mr. LEVER. Yes.

Mr. BLANTON. Referring to the question of cotton seed, I want to ask the gentleman if it is not a fact that there is not one thing about cotton seed or one single by-product which is not embraced under one of these three heads, foods, feeds, and fuel?

Mr. LEVER. That is undoubtedly true. The reason I ask the committee to vote down the proposition is not because I do not desire that cotton seed shall be included, because it is included, but I do not think we ought to clutter up the bill any more by adding cotton seed and adding wheat or bran. I think the judgment of the committee will show that it is not the wise thing to do in a bill of this particular character.

Mr. YOUNG of Texas. Mr. Chairman and gentlemen of the committee, I shall vote against the amendment offered by the gentleman from Illinois. When this bill was under consideration in the committee in that section of the bill which relates to fixing a minimum price, I offered a proviso that the price-fixing feature of the bill should not apply to cotton, cotton seed, and cottonseed products. So when you mention specifically by this amendment cotton seed, I shall have to vote against the amendment.

We people who grow cotton down South are just as patriotic as any other class in the country. I want you gentlemen of the House to listen to my suggestion on this proposition. What does the whole proposition involve in the very beginning of the language of this bill? It is a guarantee to somebody that you are going to make a profit if you engage in a certain line of business. They are guaranteeing by the language of the bill that the wheat men shall make a profit; they are guaranteeing to the farmer who grows cotton that he is going to make a profit, but if there is any truth in the bill itself it is going to be a profit-making business to the farmers of the country, and this Government has got to make good this guarantee.

And, so, when I come in and ask that cotton, cotton seed, and cottonseed products be exempted from the provisions of this bill, I am asking that the Government be relieved of a great obligation, if they carry out this bill in good faith, and it does what its advocates contend for it.

Mr. DIES. Mr. Chairman, will the gentleman yield?

Mr. YOUNG of Texas. I can not yield now. We will take the risk, we will grow the cotton, we will produce the seed, we will produce the meal, and we will produce the oil from these seeds, and so I do not want cotton and cotton seed mentioned in it. I made that fight in the committee and I make it here, and I shall vote against the amendment.

Mr. DIES. Mr. Chairman, I move to strike out the last word. I did not take up any of the time of the committee when the bill was under general debate, and I do not know that I ought to now, but this is a bad time to demagogue on any question. The great body of the people of the United States are listening to the speeches made here. Their burdens are going to be onerous enough, and they ought to be correctly informed about legislation. A Member of this body and a member of the Committee on Agriculture has just sent forth the message to the farmers of the South that lint cotton, which they produce to the value of a billion dollars, is to be affected by this bill. I do not believe there is a farmer in my district of sufficiently low intelligence to be deceived by that statement. Lint cotton is neither a food, a feed, nor a fuel, unless a fool eats it or burns it or tries to feed it to his stock. I have known men so dry in their wit and patriotism that they could spit cotton. [Laughter.]

Mr. PARKER of New Jersey. Mr. Chairman, will the gentleman yield?

Mr. DIES. Not now; I do not want to be interrupted at this time. Mr. Chairman, cotton is no more brought within the terms of this bill than mules or black-land farms or town clocks, and when gentlemen undertake to excite the fears of the farmers of the South by holding out to them that lint cotton is either a food, a feed, or a fuel, he offers an unparalleled insult to the intelligence of the cotton farmers. [Applause.] Whenever this great Government wants to concentrate its power and organize its machinery and exert its force to meet the organized power and force and machinery of the common enemy, the cotton farmer of the South is ready to give the President all of the power he wants to win victory for this great country. [Applause.] Some men talk as though the haystack and the lint cotton and the corn and the wheat upon their farms were more valuable than the honor and the glory and the blood and the tradition and the history of this great Republic. Some men are willing that their sons shall be conscripted and marched away to a foreign land to uphold the honor of our country; but, great God, if you touch the profits of their haystack or their cotton seed or their corn bins, it is something terrible to contemplate! This bill carries great power. We all know it carries great power—power that no Member of this Congress would yield except for the great crisis that confronts us.

It is no greater than the power the Confederacy gave Mr. Davis or the Union gave Mr. Lincoln, and when they did not give Mr. Lincoln the power he took the power, and he said in a message to Congress that he took the power in violation of law to preserve the country and save it from dismemberment. We are giving this power to the Commander in Chief of the Army and the Navy of this country in order that he may wield the power of a great Republic to preserve its liberties and overcome the common enemy. That is why we are giving it, and when the war is over and victory shall perch upon our banners, this Republic, as it did after the Civil War, will resume its ordinary functions. The people want you to give this power to the President, and when the war is over the people will cause you to take it back from the President, whoever he may be. If the President wants to put our lint cotton in this bill, put it in. You have put our boys in, and there is not anything that

belongs to a farmer in my district which, if God and my country shall want it, I am not willing to lay upon the altar of our country. [Applause.]

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last two words. I have not spoken on this bill, because in the presence of this aggregation of farmers I felt perhaps it would be useless for a man from a big city to say a word. This is one of those patriotic bills from the viewpoint of the gentleman from Texas that ought to be passed because it is going to be of advantage to the American farmer. I am always glad to help the farmer, but I have looked the bill over very carefully to find out wherein it is going to help the purchaser of the farmer's products who lives in the large cities of the country. It is said that Mr. Hoover, who is to be the food dictator after the bill is passed, is to reduce the cost of living, but to whom? The farmer is to be guaranteed a profit for his services to the country, although he is to be exempted from personal service in war, seeing that he is engaged in the business of production; but the young man in the city is to go to the front and the father of the young man in the city is to continue to pay the high cost of living; in addition, he is to contribute to this guaranty to the farmer for producing the food that is to go to feed the Army and the Navy and our allies. Here is a paragraph in the bill that has not been largely commented on. It is one of the most interesting paragraphs ever written into a bill by any Government of the world:

Thereupon the Government of the United States hereby guarantees every producer of any merchantable nonperishable agricultural products produced within the United States, for which a guaranteed price shall be fixed by notice in accordance with this section, that, upon compliance by him with the regulations prescribed by the President, he will receive for any such products produced in reliance upon this guaranty within the period, not exceeding three years, prescribed in the notice, a price not less than the guaranteed price therefor as fixed pursuant to this section.

The farmer is thus to be underwritten for everything that he produces. He is more fortunate than the wage earners in the great industries. He is to be guaranteed that he will be paid a certain price for his products, and the Treasury of the United States is to stand behind him until he is paid. When it comes to the matter of exemption from the regulations and the penalties prescribed by this act and to which others may be held we find, on page 6, this:

Provided, That this section shall not apply to any farmer, gardener, or other person with respect to the products of any farm—

There are some farms of a thousand acres or more in extent, but that farmer is to be exempt from the penal clause of this bill—

Provided, That this section shall not apply to any farmer, gardener, or other person with respect to the products of any farm, garden, or other land owned, leased, or cultivated by him—

Owned, leased, or cultivated by him—

nor to any retailer—

And so forth. So that the farmer is to be exempt from punishment under this bill, and he is to be guaranteed a fixed price, which the Government of the United States is to pay. Now, the purpose of this bill for one thing is to stimulate production. To stimulate production for whom? Mr. Hoover says, in part, to make up that 40 per cent deficit in the supplies of our allies. That probably is the main purpose of the bill—to see that the American production will be sufficient for ourselves and to make up the 40 per cent deficit in the supplies of our allies, and we are to guarantee the farmers who produce this 40 per cent that they will be paid a certain price for their products. That is interesting, but where does the American consumer come in? I hope he is to be considered. I have failed to find in this bill anywhere any specific provision that the consumer in the United States is to be safeguarded. I trust that the President of the United States has this in mind. I trust that Mr. Hoover has it in mind. I hope that while their hearts are beating in sympathy with our allies, for those who are fighting the battles on the other side of the water, that in the execution of this law they will also have compassion for the consumers of the United States who have been carrying a very heavy burden and who will continue to carry a heavy burden incident to the expenses of this war.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SNYDER. Mr. Chairman, I move to strike out the last three words.

The CHAIRMAN. The Chair thinks that would be an amendment in the third degree.

Mr. SNYDER. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Pennsylvania [Mr. MOORE].

The CHAIRMAN. The gentleman from New York.

Mr. SNYDER. Mr. Chairman, there is much in this bill, as I view it, to be commended. Certainly we must, if we are to be held to our promise to assist in providing food for our allies during this war, to not only make sacrifices in the matter of conservation of food, but we must also provide means for handling the production so that the cost will not become an obstacle to the progression and safeguarding of the Nation.

For instance, should the price of foodstuffs continue to increase, the result will be the forcing up of the price of our manufactures in all lines to an extent that the people will be unable to purchase them. This will mean the stifling or putting out of business industries in which many are employed, thus creating a situation which would cripple, if not defeat, our purposes for this war.

This is one of the reasons, and, to my mind, an important one, why we should in some way control prices.

It has been shown that in the past six months prices of all basic foodstuffs in this country have increased from 30 to 40 per cent. While it is true that wages have increased to a considerable extent, that increase has not been in proportion to the increase in the cost of the necessaries of life. These wage advances in all industries have, however, forced up the price of all materials used in manufactures to such a point that when the value of materials, overhead expenses, and wages are coordinated the ordinary item of manufacture becomes so high in price a great portion of our people, being pressed so hard to find ways and means to live, are forced to forego some of the necessities, the manufacture of which in this country produces a large volume of business and is one of the factors which has maintained our prosperity.

Some one must be intrusted with the power to regulate these matters, and, so far as I am able to judge, Mr. Hoover has demonstrated his ability in this direction to such an extent that the eyes of the world are upon him, and it is my belief that a very large majority in this country are behind the President in his desire to place Mr. Hoover in charge of this tremendous undertaking.

Inasmuch as it has been my pleasure to stand with the President in all these great war measures which have been enacted within the last few months, I do not feel that I could consistently do otherwise than support this bill, especially as I am advised that the President is behind it and believes in it.

Further, I believe there should be included in this bill a power, if it does not contain it, to regulate the movement of coal to such an extent that the railroads of the country can not be permitted, as they now are, to store coal in cars or at distributing junctions to the detriment of the other business of the country. They should submit to the same regulations as those placed upon their patrons and not enjoy an exception which affects much of our general industry.

Relative to the control of warehousing, I offer the suggestion that a proper method of keeping warehousemen from pyramiding prices would be to restrict them to the extent that upon each purchase from a producer for the purpose of warehousing the warehouseman should be limited to not over a 10 per cent profit on the purchase price on all his purchases, and that, without regard to when he disposed of his stock, this 10 per cent, with the original purchase price, shall be the price for which the purchases are sold. Further, the warehouseman should be so restricted that he could not dispose of his stock to any person other than a dealer or consumer.

I believe this bill should be amended by an appropriation of a million dollars for use in educational work among our allies, to instruct them in the preparation of food made from corn and its products. We know the value of these products, also the methods of preparing them; they do not, and because of that fact are asking us to supply them with all our wheat, thus suggesting that we retain all our corn. Therefore I believe instruction in this matter would not only be justified but valuable and go some distance toward solving the food problem not only abroad but in our own country. [Applause.]

Mr. KEATING. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman from Colorado asks unanimous consent to proceed for five minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. KEATING. Mr. Chairman, the gentleman from Texas [Mr. DIES] stated a moment ago that this was not a good time for the representative of an agricultural constituency to "demagogue." I might offer the same advice to the gentleman from Pennsylvania [Mr. MOORE], who represents an industrial constituency. [Applause.]

I represent a constituency that is about equally divided between men who work in mines and great manufacturing estab-

lishments and men who work upon the farm, and I want to say to the gentleman from Pennsylvania that, so far as the men who work in the manufacturing establishments and those who toil in the mines of my district are concerned, they are practically unanimous in the demand that this legislation be enacted. [Applause.] Not only that, but they recognize that they have no quarrel with the agriculturists of this country. They are quite willing that the farmers shall not only receive as much as they did last year for their wheat, but they are willing to pay them more. They realize that instead of getting an average of $1.35 or $1.40 a bushel for wheat, the farmer may receive $2 a bushel, and that flour, the thing the workman consumes, may still be very greatly reduced in price.

Mr. MOORE of Pennsylvania. Will the gentleman yield for a question?

Mr. KEATING. Certainly.

Mr. MOORE of Pennsylvania. The gentleman concedes that the farmer's profits are guaranteed by this bill, does he not?

Mr. KEATING. That is exactly what the people of this country want. They want the farmers' profits guaranteed, and they want the profits of the food pirates taken away from them. [Applause.]

Mr. MOORE of Pennsylvania. Just one other question. Would it not be fair to guarantee the wages of those who have to pay for the guaranteed products of the farm?

Mr. KEATING. The workmen of this country are not asking for any such thing as the gentleman from Pennsylvania suggets.

Mr. MOORE of Pennsylvania. But the farmer is getting his guaranty. Why should not the wage earner? I am not saying anything against the farmer——

Mr. KEATING. The gentleman from Pennsylvania is not saying anything against the farmer? No; but the gentleman from Pennsylvania is endeavoring to confuse the issue. That is what he is attempting to do.

Mr. MOORE of Pennsylvania. No; I am asking a fair question about another class of our citizens.

Mr. KEATING. The gentleman is attempting to make it appear that the workmen of this country, the men who toil in the mines and in the workshops, will not benefit as the result of the passage of this legislation; and yet the men who represent the great labor organizations of this country, practically without a dissenting voice, have issued an appeal to this Congress to hasten the enactment of this legislation. If the gentleman will go to his city of Philadelphia and consult the men who work there, the men who are paying $17 a barrel for flour—if they have the $17 with which to purchase the flour—they will ask him, as their Representative, to come here and, instead of raising false issues, get in back of this legislation and place it on the statute books by the 1st day of July. [Applause.]

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. KEATING. Yes; certainly.

Mr. MOORE of Pennsylvania. The $17.60 a barrel flour issue was referred to yesterday by myself. I then inquired whether it was fair to the American consumer in these times of high cost of living that flour should sell at $8.20 a barrel in London under this system when the people of Washington pay $17.60.

Mr. KEATING. And it will continue to sell for $17.60 until the gentleman and others like him withdraw their opposition to this bill and permit us to put it on the statute books. [Applause.]

The CHAIRMAN. The time of the gentleman from Colorado has expired.

Mr. KEATING. May I have two minutes more?

The CHAIRMAN. The gentleman from Colorado asks unanimous consent for two minutes more. Is there objection? [After a pause.] The Chair hears none.

Mr. SWITZER. Let me ask the gentleman a question. Your farmers desire this guaranteed minimum price?

Mr. KEATING. My farmers have not petitioned me to ask for a minimum price; no. My farmers do not object to the minimum price; but what my farmers want and what every thinking, patriotic citizen in this country wants is legislation which will reduce the cost of the necessaries of life. And the reason my farmers want it and the reason the workmen want it is primarily so this Nation may win this war. They realize that if you permit the prices of the necessaries of life to soar they will soon be beyond the reach of the ordinary citizen, and the workers, unable to purchase sufficient food, will be sullen and discontented. If you want to win the war, you must feed the people.

But one more thought before I finish. This bill is going to pass. Gentlemen rise on this floor and protest their friendship for the bill and at the same time talk about amending it. The House must beware of the efforts of these professed friends who would drive a knife to the heart of the bill by cutting out the essential provisions and so crippling it that it can not produce the desired results.

The people of this country have confidence in Mr. Hoover in so far as this food problem is concerned, and they want this bill passed. They want it passed with teeth in it, so that we may come back here in December and demand an accounting from Mr. Hoover and the other men to whom we are about to give these great powers.

Mr. MEEKER. Will the gentleman yield?

Mr. KEATING. Yes.

Mr. MEEKER. I come from a community that has a very large labor element in it. I want to ask the gentleman if the impression in the minds of the men who have asked for this legislation is not that they are going to get a maximum price on foodstuffs as well as the farmer a minimum price on his products?

Mr. KEATING. No. I think everyone who has studied the problem understands the objection to the fixing of a maximum price. What the toilers of the country expect, and what they will get, if you defeat some of the amendments that will be offered and pass the bill in its present form will be a very material reduction in the cost of the prime necessaries of life. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. GILLETT. Mr. Chairman, when I first read this bill I was staggered by its provisions. It gives the President despotic power over a large share of the business of the whole country. And I am asked to vote for it—a Republican who never professed any great confidence in this administration and who had particularly deplored and condemned the narrow partisanship which the President has exhibited in his appointments. Moreover, I have always belonged to that school which believed the best regulator of prices was the law of supply and demand, and that for the Government to try to improve upon that law would be apt to aggravate rather than alleviate distress and danger. And consequently it might be difficult to imagine that I should vote for a bill like this. But, at the same time, I recognize that we are now in a situation that abrogates all precedents. To-day a large part of the most productive workers of the world are engaged, not in production but in destruction, and every week there is buried at the bottom of the sea hundreds of thousands of tons of what the world most needs. As a result there is such a market for every kind of production as was never known before. For every one of the necessaries of life the demand far exceeds the supply. And under these circumstances it is impossible that the ordinary laws of trade can keep the balance even. Producers can demand any price they wish, and consumers will be compelled to pay it. There is no limit but the sky. Those who are able might pay any price; those who are unable might have to go without. And consequently, as I say, there is a new condition, and my old beliefs, although I still hold to them, do not apply.

The only agency which can remedy that condition is the Government, and regretting, as I do, the necessity which compels such a dangerous grant of power, I see no alternative. And I will admit that my regret is much diminished by the man whom I understand is to administer this vast power. I have heard sneers during this debate about the men who volunteer their services and who work for the Government for nothing. For one, I have much greater faith in the capacity of those advisers who are volunteering their services than I have for many of the paid representatives of the administration. [Applause.] And from what I know of Mr. Hoover, I am confident that he will bring to the administration of this office the best ability available. We do not any of us know much about this problem. It is a new one. But Mr. Hoover has been in France and England when they were trying out various experiments to meet this same condition. And he therefore knows more about it than anybody in this country. I believe he is a man of capacity, of integrity, of discretion, and of patriotism; and while I recognize the fearful responsibilities and difficulties of his position, and am doubtful of the results, yet I would rather trust him than anybody else. So I am willing to try the experiment and vote for this bill as the best remedy for our present critical condition. [Applause.]

Mr. STEVENSON. Mr. Chairman, I, like the gentleman from Pennsylvania [Mr. MOORE], have not taken up any of the time of this body in discussing this bill, or, in fact, any other bill. This amendment, from which we have strayed considerably, is entirely unnecessary, and for that reason I oppose it.

Now, I have no sympathy with the proposition advanced by the gentleman from Texas [Mr. YOUNG] a while ago, that he did not want anything said about cotton or cotton seed in any of this legislation. It does not make any difference in the

world. Our people understand that cotton seed is written in this paragraph three times. It is written in "food," it is written in "feed," and it is written in "the articles required for their production." Fertilizer is a thing that is most universally used, and therefore it is written all over the bill, and it is unnecessary to encumber the bill with it.

Mr. PARKER of New Jersey. Mr. Chairman, will the gentleman yield there fo a question?

Mr. STEVENSON. Yes.

Mr. PARKER of New Jersey. Do you regard cotton as an article required for the production of cotton seed?

Mr. STEVENSON. No, sir; and the proposition here is to insert cotton seed, and not cotton, as I understand the amendment.

Mr. PARKER of New Jersey. Do you understand that cotton is not required for the production of cotton seed?

Mr. STEVENSON. No; my friend evolutes the wrong way. Cotton seed is required for the production of cotton. [Laughter.]

Now, about this proposition, why begin to write details into this measure when they are all absolutely embraced in the whole measure?

I was down in South Carolina last week, in my district, and the farmers were asking me about this bill. They are in favor of it; but they asked about what it embraced in the way of cotton, and I said it embraced cotton seed, and they understand it. But the gentleman from Pennsylvania [Mr. MOORE] says it means a guaranty of price to the farmer. Well, now, if cotton seed is not embraced in it, it does not mean any guaranteeing of price to the farmer on cotton seed. But I will tell you what it does mean. He says it means we are going to tax our people to give cheap food to England and France. Well, as the gentleman from Massachusetts [Mr. GILLETT] just now said, the law of supply and demand will come in, and whenever you put it so that production is so stimulated by a minimum price—not a maximum price—that it will also reduce the price for the people of England and France, it will also reduce the price for the people in Philadelphia, and the gentleman will get his flour cheaper also.

Now, we are in a peculiar condition. It is almost heresy for a man from the State of Calhoun and from the district where Andrew Jackson was born and raised to vote for an autocratic measure like this; but we are in no ordinary condition. When a man is in his right mind, and without fever, and in his usual health, he has a right to go where he pleases; but when he is stricken down by typhoid and at times goes out of his head, he has to be restrained of his liberty and has to be subjected to a regimen——

Mr. HARDY. And must take some medicine. [Laughter.]

Mr. STEVENSON. Yes; and must take some medicine occasionally.

We have heard a heap here about Mr. Hoover. I have read this bill carefully from end to end, but I do not see Mr. Hoover's name mentioned in it. Down in South Carolina the people of my country are relying on justice being done, and they are relying not on Mr. Hoover, whom they do not know, but they are relying on Mr. Wilson, whom they helped to make the Chief Magistrate of this Nation, and he is the man whom we are trusting to lead us in this case.

Now, gentlemen, I want to reiterate, as I close, the proposition that I do not care how much you write in here the products of the farms of the people of the South. You can write cotton in it if it is necessary, and if it is wanted, because the southern people have registered to a man, and they have not only registered for the war but they have registered for a great campaign for the production of foodstuffs, and if you could see the corn that is smiling all over the southern hills down there, if you could see the potatoes as they are being shipped to your markets by the hundreds of carloads to points all over the country, you would say that our people are doing their duty and that they are ready to bear their burden. They have had no riots about registration, and there is no question of conscription there, and they are ready to back the President in all that he desires in carrying on this war. [Applause.]

The CHAIRMAN. The time of the gentleman from South Carolina has expired. The question is on agreeing to the amendment offered by the gentleman from Illinois.

The question was taken, and the amendment was rejected.

Mr. HAUGEN. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Iowa offers an amendment, which the Clerk will report.

The Clerk read as follows:

Mr. HAUGEN offers the following amendment: Page 1, line 8, after the word "fuel," insert "clothing, shoes, and other necessaries of life."

Mr. LEVER. Mr. Chairman, I make a point of order against that.

Mr. HAUGEN. Will the gentleman from South Carolina reserve the point of order for three minutes?

Mr. LEVER. Yes; I will reserve it for three minutes.

The CHAIRMAN. The gentleman from Iowa is recognized for three minutes.

Mr. HAUGEN. Mr. Chairman, having already discussed the question that is involved in this amendment for 30 minutes, it is not my purpose now to delay the House. My only object in offering the amendment is to give an opportunity to my friend from Colorado [Mr. KEATING] and others who claim to be friends of the consumers to vote to improve the bill by including shoes and clothing with foods, feeds, and fuel, to give that additional encouragement and protection to the consumer and the producer.

When the question is squarely put up to this House, will it vote to extend the benefits of this bill to shoes and clothing? Will it protect the farmer and give him protection to the extent of including farm implements? I believe that it is important to thus amend the bill, especially after reading the hearings had before the Senate committee, and particularly a statement therein by Mr. Hoover; and in order that there shall be no mistake about it, I desire to read into the RECORD an extract from the hearing had before the Committee on Agriculture and Forestry in the Senate, on page 22. There the chairman asked this question:

As to "foods, feeds, and articles required in their production," would you consider that that embraced farm machinery, which would certainly be required in the production of foods and feeds?

Mr. Hoover replied:

Construction would embrace that; but I see nothing in the operative side of the bill that would enable anything to be done in that direction.

So, according to Mr. Hoover's interpretation of the bill and what is contemplated by Mr. Hoover, it is not contemplated now to extend the protection to farmers so far as farm implements go.

Mr. LEVER. If the gentleman will permit——

Mr. HARDY. Mr. Chairman, will the gentleman permit me to make a suggestion that might reconcile everything here?

Mr. HAUGEN. Yes.

Mr. HARDY. The chairman of the committee a moment ago stated that his construction of those words, "articles required for their production," would include tools and implements used. Now the gentleman reads from Mr. Hoover's statement, showing that he does not so consider it.

Mr. ANDERSON. Yes; he does.

Mr. LEVER. That is what I was about to interrupt the gentleman to say, if the gentleman from Iowa will permit.

Mr. HAUGEN. Certainly.

Mr. LEVER. Mr. Hoover's statement is not at all inconsistent with the statement which he previously made before the Committee on Agriculture of the House. He simply says before the Senate committee that he has not the machinery in this bill to take care of farm machinery and the like; but in his testimony before the House Committee on Agriculture he specifically stated, not once, but repeatedly, that in fixing the minimum guaranty he must take into consideration the increased cost of these various things that go into the production of farm products.

Mr. HAUGEN. The difference between the chairman of the committee and myself is this: The gentleman proposes that this food controller shall take into consideration the increased cost of implements. My contention is that he shall have control to license these people, and thus regulate the price and bring it down where it belongs.

Mr. LEVER. He has that right under section 5 of the bill.

Mr. HAUGEN. That section does not contemplate licensing them, thereby bringing them under the provisions of the bill.

Mr. LEVER. I make the point of order.

The CHAIRMAN. The Chair sustains the point of order.

Mr. PARKER of New Jersey. Mr. Chairman, I offer the amendment which I send to the Clerk's desk.

The CHAIRMAN. The gentleman from New Jersey offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. PARKER of New Jersey: Page 1, line 8, after the word "production," insert: "and any articles which the President, during such war, may from time to time determine and declare to be necessaries."

Mr. LEVER. I make the point of order against the amendment.

Mr. PARKER of New Jersey. Will the gentleman reserve the point of order? I really think I may convince him that I am right.

Mr. LEVER. I reserve the point of order for five minutes.

Mr. PARKER of New Jersey. That is all the time I care for. Mr. Chairman, the object of this section is stated to be—

To assure an adequate supply and equitable distribution and to facilitate the movement of foods, feeds, fuel, and articles required for their production.

This war has proved that this necessity may extend from time to time to various other articles. I address my remarks to the chairman of the Committee on Agriculture.

Mr. LEVER. I trust I may be permitted to listen to the gentleman's argument.

Mr. PARKER of New Jersey. I say this war has proved that what are necessaries may change from time to time. Cotton was not so in the beginning. It became necessary for the making of explosives and was made contraband. Copper and zinc were not so necessary at first, but now they are melting down bells. Iron and steel were not so necessary, but they have become in some places absolutely essential. Coal was not such a necessity in France until France lost her coal-producing Provinces. Coal was not such a necessity in Italy until the submarine destroyed commerce, so that Italy is short of coal. It is a question of military necessity, and from time to time the President must determine whether there is an absolute necessity for a certain article for the conduct of this war and the support of our people. From time to time he must determine it. He may not exercise this power as to some foods. He may exercise it as to others; but he must have this discretion as to all articles, or he can not carry on the war, and it is his power and not ours that we appeal to. Congress under the Constitution has no power to regulate the growth of any food or the growth or production of any material. That is regulated by supply and demand. The President in time of war, as Commander in Chief, has a power that we recognize that does not belong to Congress, the power of a general in command of a city during a siege. He rules that city. It is not ruled by the board of aldermen, but they recognize his power to see that the people are supplied with what they need at such prices as will enable these necessaries to be distributed. That power should not be limited by your bill, but you ought to do what the President wishes, and that is to grant to the President, who is not of my party, the power and the responsibility of determining from time to time what are the necessaries of this Nation with the defense of which he as its Commander in Chief is charged. [Applause.]

Mr. LEVER. The argument of the gentleman is persuasive, yet at the same time Congress is going to be in session for some months to come and will be in session again pretty soon after the recess. I think it would be unwise to load the bill with many things, and I make the point of order.

The CHAIRMAN. The point of order is sustained.

Mr. MADDEN. Mr. Chairman, I move to amend the bill on page 1, line 8, after the word "fuel," by inserting the word "cotton."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 1, line 8, after the word "fuel," insert the word "cotton."

Mr. LEVER. To that, Mr. Chairman, I make a point of order.

Mr. MADDEN. I do not think it is subject to a point of order. If the gentleman will reserve his point of order I will talk about the merits of the amendment. It will take longer to discuss the point of order than it will the merits of the question.

Mr. LEVER. Very well, but I shall insist on the point of order when the time comes.

The CHAIRMAN. It seems to the Chair that this would fall in the same category as the amendment to insert shoes and clothing, upon which the Chair ruled a short time ago.

Mr. LEVER. I have no objection to reserving the point of order.

Mr. MADDEN. Then I will take the question up on its merits. Mr. Chairman, it seems to me that when the President is given power, as he is in this bill, to guarantee a price on nonperishable agricultural products cotton is protected by that provision. If cotton is protected by that provision, then there certainly ought to be a power in the President to regulate the conduct of those engaged in raising and distributing cotton. Does anyone deny that the power is granted in the bill to the President to guarantee a price on nonperishable agricultural products? Will anyone say that cotton is not an agricultural product? Will anyone deny that it is a nonperishable agricultural product? Will anyone deny that it is one of the prime needs for the successful conduct of the war? Will anyone deny that it is not one of the essential things to carry on the war? But aside from the question whether it is or not, the President ought not to be given the power to guarantee a price, to maintain a certain standard of price for this commodity on the market and be prohibited from controlling those who engage in its production and sale and distribution.

Mr. BORLAND. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. BORLAND. Does the gentleman contend that the words "nonperishable agricultural products" can be given any broader meaning by construction than the language of the bill referring to foods, feeds, and fuel?

Mr. MADDEN. I maintain that if there is any one article that can be included in the term "fuel" cotton is that article. If cotton is not a fuel for cannon and for the fighting of battles, what is it?

Mr. BORLAND. I wanted to ask the gentleman's view about it.

Mr. MADDEN. I am giving the gentleman my view.

Mr. BORLAND. Does the gentleman think that the words "nonperishable agricultural products" can be given any broader meaning by construction than the entire bill which refers to foods, feeds, and fuel? In other words, would it include tobacco, hemp, flax, and so forth?

Mr. MADDEN. I maintain that cotton can be classed as a fuel because it is to be used in the fighting of battles, used for the purpose of making powder.

Mr. LENROOT. Will the gentleman yield?

Mr. MADDEN. Certainly.

Mr. LENROOT. I call the gentleman's attention to the fact that section 12 is not dependent on any other section in the bill. It is complete in itself, and, unquestionably, as the bill reads it will cover cotton and tobacco.

Mr. BORLAND. Does the gentleman think it would cover tobacco and hemp?

Mr. LENROOT. No doubt about it.

Mr. MADDEN. Every nonperishable agricultural product is guaranteed a minimum price, and yet you confine the authority of the President to regulate the production, distribution, and sale of wheat, corn, oats, coal, and so forth, and I claim that is not fair nor just nor equitable. I am in favor of this bill. That is, I am in favor of the fundamentals involved in the bill, because I realize that somebody under the present circumstances must have the power to maintain the price on the food products which will enable the poor people to buy them.

Mr. LEVER. Will the gentleman yield for a suggestion?

Mr. MADDEN. Yes.

Mr. LEVER. It has been called to my attention since the reading of the bill began that the construction that the gentleman has placed on section 12 is probably the correct construction, that it would afford a guarantee to such nonperishable products as cotton, hemp, and the like of that. I think I can speak the mind of the entire committee when I say that no such construction was in the mind of the committee when it was put in the bill, and at the proper time I shall be in favor of accepting, or I shall offer an amendment of my own accord, which will provide that the guarantee shall apply only to food and feed products.

Mr. MADDEN. If the gentleman will agree to that, that satisfies the contention I am making, for I want the House to understand that I am for the bill and for giving the President the power to regulate conditions under which the war is being fought.

I want him to succeed, but I do not under any circumstances want to give the power to the President to guarantee a price on the market to any commodity over which he has no control with respect to its regulation. Hence, unless some such amendment as the gentleman from South Carolina [Mr. LEVER] suggests is proposed and adopted, cotton ought to be included as one of the items in the first section of the bill.

Mr. LEVER. That amendment will be offered.

Mr. YOUNG of Texas. I will state to the gentleman that I offered that amendment in the committee, and I shall offer it again upon the floor.

The CHAIRMAN. Does the gentleman withdraw his amendment?

Mr. MADDEN. No; I do not withdraw the amendment.

Mr. LEVER. Mr. Chairman, I make the point of order that this amendment is not germane to this section.

The CHAIRMAN. The Chair feels constrained to sustain the point of order, but he feels like saying that he entirely agrees with the gentleman from Illinois [Mr. MADDEN] that there are some things that it seems to the Chair are vitally necessary in the prosecution of this war. That, however, does not change the parliamentary situation, and the Chair is compelled, therefore, to sustain the point of order.

Mr. HAUGEN. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Amendment offered by Mr. HAUGEN: Page 1, line 8, after the word "production." insert "including farm implements and machinery."

Mr. LEVER. Mr. Chairman, I make the point of order against that.

Mr. HAUGEN. Mr. Chairman, the gentleman said that "articles required for their production" included machinery.

Mr. LEVER. That is correct. I am inclined to think the amendment is not subject to the point of order.

Mr. HAUGEN. I take it the gentleman will accept the amendment?

Mr. LEVER. I shall not accept it, because it is already included. I withdraw the point of order.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. This amendment, as I heard it, proposes to include farm implements and machinery.

Mr. HAUGEN. Necessary for the production of food, feed, and fuel.

Mr. MOORE of Pennsylvania. That raises an important point, one that might have been raised if any one of those commodities I inquired about a little while ago had been included—oil, for instance, or cotton, or metal, or wool. Is it to be understood that if this amendment be adopted that the guaranty clause is to apply to the manufacture of these articles?

Mr. HAUGEN. Oh, no. You can license the manufacturer of them and manufacture under a voluntary agreement, but not a guaranteed price.

Mr. MOORE of Pennsylvania. The producer of food, feeds, and fuel is to be assured a profit.

Mr. HAUGEN. Oh, no.

Mr. MOORE of Pennsylvania. Is the maker of these implements to be assured a particular price?

Mr. HAUGEN. He may bring the manufacturer under the provisions of the law. They may enter into a voluntary agreement. They may be licensed as is provided for. The purpose of the amendment after the words "articles required for their production" is to protect the farmer against the exorbitant prices charged for machinery. The object of the amendment is to protect the farmer in that respect.

Mr. MOORE of Pennsylvania. The purpose of the amendment, then, is to give jurisdiction to this food controller over the manufacturer of implements?

Mr. HAUGEN. Yes.

Mr. MOORE of Pennsylvania. In other words, in addition to going into the farm and store houses, he is now to go into the factories where agricultural implements are to be made and fix the price upon them if he finds it necessary?

Mr. HAUGEN. That authority is given in the bill, but this is simply to make it clear that these are articles necessary for the production of foods, feeds, and fuel.

Mr. MOORE of Pennsylvania. Then the real purpose is to give the farmer or the producer assurance that he may obtain his farm implements for a price that will be satisfactory to the President of the United States or the food controller, under his direction?

Mr. HAUGEN. It gives him authority to license them.

Mr. MOORE of Pennsylvania. What assurance does the maker of the implements have that he may be paid a fair wage?

Mr. HAUGEN. Why, it is all left to the power and discretion of the President and the controller. It is contended it is included in the bill, but according to the interpretation of Mr. Hoover there is a question whether it is given, and in order to make it clear, in order to give the farmer these assurances that he may have some protection against extortion——

Mr. MOORE of Pennsylvania. I submit the factory worker is also entitled to protection on his wage account.

Mr. LEVER. Mr. Chairman, I trust this amendment will be defeated for the very same reason that I hoped that the amendment offered by the gentleman from Illinois might be defeated. There is no question in the world in the mind of anyone that farm implements are included in the language "and articles required for their production." Now, the spirit of the gentleman's amendment is all right, but the effect of it will be to specify article after article in this bill, with the final result of excluding some that are now included in the broad language, and for that reason I trust the amendment may be defeated. I ask for a vote.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa.

The question was taken, and the amendment was rejected.

Mr. HAUGEN. Mr. Chairman, I offer another amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. HAUGEN: Page 1, line 9, strike out "hereafter in this act."

The question was taken, and the amendment was rejected.

Mr. STEAGALL. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment by Mr. STEAGALL: Page 1, line 8, after the word "fuel," strike out the words "and articles required for their production."

Mr. STEAGALL. Mr. Chairman, it is agreed on all hands that this bill carries powers unprecedented in the legislative history of this country. There are a number of penal provisions in the bill, and it does seem to me that we ought at least to make what we do here sufficiently specific that an American citizen may reasonably be informed after the passage of a statute what its contents are and what acts are necessary to constitute a violation of that law. There are four things embraced in this bill—"food, feed, fuel, and articles required for the production"—and later on in the same section is to be found this provision, "that the foregoing are hereinafter in this act called necessaries." Now, the penal sections of the bill make the doing of certain acts with reference to these "necessaries" a violation of law, and severe penalties are prescribed for those violations. I think it has been clearly disclosed in the arguments already made on this section that no two men in this House—aye, no two men among the able members of the committee that reported the bill—have agreed as to what is meant by the clause, "and articles required for their production," referring to food, feed, and fuel. If there are other things that ought to be included within the provisions of the bill as to which these sweeping and unparalleled powers ought to be given to the President or some appointee of the President, we ought here and now to enumerate them so that a citizen may know what his legal rights are, and if we do not know what articles ought to be included in the bill certain it is that we ought not to pass an act that would make it a crime for an average American citizen not to know. You will observe that it is provided, on page 6, section 6, that any person who willfully hoards any "necessaries" shall, upon conviction thereof, be fined not exceeding $5,000 or be imprisoned for not more than two years, or both, and that section applies to every citizen of the country.

I know that there is a provision in section 5 excepting farmers and the retail merchants, but that exemption applies only to that one specific section, and that section deals with the matter of licenses and things of that sort, so that these penal sections, all of them, just as the one I have read, applies to every citizen of the country. This is one of them. On page 8 there is another; on page 12, another; on page 16, another. In each instance the reference is to necessaries.

What are the necessaries? They are "food, feed, fuel, and articles required for their production," and no two men of this House who have discussed the matter this afternoon, so far as I have heard, have agreed as to what the language means.

Mr. MEEKER. Will the gentleman yield?

Mr. STEAGALL. Yes, sir.

Mr. MEEKER. On page 8, where the gentleman refers to the person who willfully destroys any necessaries, that destruction must be for the purpose of enhancing the price or restricting the supply.

Mr. STEAGALL. Yes; but that covers "food, feed, fuel, and articles required for their production," and if we know what it means or what is covered by the last clause what we ought to do as the Representatives of the American people in this great body is to write it plainly, so that every citizen who reads it may know what will constitute a violation, and if we do not know we ought not to make it a crime on the part of a citizen not to know. Every criminal statute ought to be made plain and specific. We ought not to pass a criminal statute as to whose meaning no Member is clear and content ourselves by saying we will leave the matter for the courts to determine.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. STEAGALL. If I have the time.

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask that the time of the gentleman be extended five minutes. He has struck a very interesting topic.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. MOORE of Pennsylvania. There is a good deal of mystification about that particular line to which he refers. Suppose we include in "articles required for their production" smoked ham. Would not that refer to the wood that is burned to smoke the ham? If we take shredded wheat, would it not pertain to the things in the factory in which the shredded wheat is made—the oil, the coal, the machinery, and other articles required for its production? And would not "articles required

for their production" apply to almost any commodity the gentleman can think of?

Mr. STEAGALL. That is probably true under the language of the statute, though if I were construing the matter as a judge I might not rule as the gentleman suggests. But I insist before we pass a statute as sweeping and unprecedented as this, and which carries such severe penalties as are provided in this act, we ought to make clear its provisions, so that an American citizen may know when he is violating the law. We ought not to require the average citizen to have a better understanding of this statute than we ourselves have. If we know the things that ought to go in here, we ought to put them in; and if we do not know, we ought to strike out the clause.

Mr. SWITZER. There are plenty of things used in production that tend to enhance the price, are there not?

Mr. STEAGALL. Yes; that is very true. But I insist that the act should be made clear in meaning and specific in purpose, at least in its criminal provisions; and it is manifest that the clause in this section, "and articles required for their production," is so general and indefinite that not even the committee reporting it agree as to its meaning.

Mr. CANDLER of Mississippi. Mr. Chairman——

The CHAIRMAN. The gentleman from Mississippi [Mr. CANDLER], a member of the committee, is recognized.

Mr. CANDLER of Mississippi. Mr. Chairman, the amendment offered by the gentleman from Alabama is to strike out the words "and articles required for their production." In support of his amendment he discusses the penalties prescribed in other sections of the bill. There is no penalty prescribed in this section of the bill where the gentleman offered his amendment, and the only penalties prescribed in the bill at all are in those sections where crimes or misdemeanors are specifically defined, and where it is then provided that the person violating the provisions of that specific section shall be subject to certain pains and penalties. Therefore the gentleman's whole argument that these words in this section ought to be stricken out because there are certain penalties prescribed for performing unlawful acts in reference to other provisions and other sections in the bill necessarily falls to the ground.

This bill includes specifically three different things, and that is all, namely, foods, feed, and fuel, and then follow the words which the gentleman proposes to strike out, to wit: "and such articles as may be required for their production." For the production of what? For the production of food, feed, and fuel, and that is all. Now, what harm is there when you propose to regulate these three classes of articles, then, to provide for the regulation of the things which enter into the production of the three classes? Certainly, if we are going to control the things themselves, we have got the right and should exercise the authority to control the ingredients or products which enter into the articles to be controlled. To strike out these words which the amendment proposes to strike out would weaken the section and weaken the bill.

Should we go into details, as was suggested by some amendments which have been offered heretofore, and particularize as to what shall be included in a section, when you put those specific things in a section you might exclude other things you do not mention. Should you strike out these words which give control over the things which enter into the production of the articles we propose to regulate and control, that would weaken that part of the section, and render less effectual the control of the very matters which are involved in the statute we propose now to enact into law.

Therefore, Mr. Chairman, it seems to me that the best policy for us to pursue in connection with this bill is to confine it to the purpose and intent and the regulation of the articles expressed in the bill, and stick to the text; and when we get through, as was suggested by the gentleman from Alabama, we will then have made specific what we intend and what we propose to control, and we will make it so specific there can not be any question or any doubt as to what we intend to control under the provisions of the bill. The penalties to which he referred will only apply to the violation of the specific acts which are defined as misdemeanors or crimes in specific sections, where the acts are made criminal and the penalties are imposed for the commission of the unlawful acts. We must presume the courts of this country in Alabama, in the good State that my genial and good friend comes from—and I know it is a good State—as well as elsewhere will exercise good judgment in the construction of any statute which is presented to them for consideration, and if they do, then there will be no trouble about this statute, and no trouble about the innocent suffering from a seeming violation of the law, where no intention is apparent to violate the law and the law really is not purposely violated. My splendid friend is, I am sure, unnecessarily alarmed about the penalties prescribed in this bill. I sincerely hope that the amendment will be defeated. [Applause and cries of "Vote!"]

Mr. LENROOT. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Wisconsin moves to strike out the last word.

Mr. LENROOT. Mr. Chairman, I desire to say just a word upon the construction of this phrase that is sought to be stricken out. It certainly will be construed later on by the courts if this bill shall pass, although I do not know that the courts, when they do come to construe it, will examine the debates of Congress upon the subject. But they may do so. I want to give my construction. What I believe to be the proper construction of this phrase is that there are four subjects here, all of them general, and this phrase "articles required in their production" is descriptive of a general class; and it can not, it seems to me, be applied to lumber used in the construction of a factory, or oil or fuel used in running that factory, as suggested by the gentleman from Pennsylvania. It must be confined to articles that are peculiarly designed and fitted for the special purpose of producing either foods, feeds, or fuel, and indispensable in their production, and when so confined and limited it does not seem to me that there can be any difficulty in the interpretation.

Mr. GREEN of Iowa. Mr. Chairman, will the gentleman yield?

Mr. LENROOT. Yes.

Mr. GREEN of Iowa. I am inclined to agree with the gentleman. But why not strike out the word "required" and insert "designed" instead? Then there would be no trouble about the interpretation of it.

Mr. LENROOT. I think that is a good suggestion.

Just one other comment in reference to the statement made by the gentleman from Alabama [Mr. STEAGALL], that it would be a hardship upon the American citizen who is not sure that his business came within the purview of this act; if he were subject to the penalty for the destruction of necessaries for the purpose of enhancing the price, I suggest that no citizen of the United States who destroys property of any character for the purpose of enhancing the price of like property is entitled to or should receive any sympathy or consideration from the Congress of the United States. [Applause and cries of "Vote!"]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Alabama [Mr. STEAGALL].

The question was taken, and the amendment was rejected.

Mr. SCOTT of Iowa. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Iowa offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. SCOTT of Iowa: Page 1, line 9, after the word "necessaries," insert "and for the purposes of this act the term 'fuel' shall include fuel oils and gasoline."

Mr. SCOTT of Iowa. Mr. Chairman, the purpose of the amendment is to make clear the language of the bill, and it partakes both of the nature of an explanation of the word "fuel" and an interpretation of the bill.

Mr. CANNON. If the gentleman will permit, would that include kerosene?

Mr. SCOTT of Iowa. Yes.

Mr. CANNON. If you mention just what it includes, does it not exclude other things?

Mr. SCOTT of Iowa. Fuel oils would include all oils such as kerosene and gasoline.

Mr. MONDELL. Mr. Chairman, will the gentleman yield?

Mr. SCOTT of Iowa. Yes.

Mr. MONDELL. Is the inclusion of the words the gentleman has suggested intended as an addition? Would it not possibly lead to the conclusion that fuel gas was excluded as fuel?

Mr. SCOTT of Iowa. I think not.

Mr. MONDELL. You are bringing within the language of the bill specifically certain articles that are used as fuel, but there are certain other articles nearly related to those, such as gas, which are also used as fuel.

Mr. SCOTT of Iowa. That may be; but the language as presented in the amendment merely brings in specifically these things.

Mr. BARKLEY. Mr. Chairman, will the gentleman yield?

Mr. SCOTT of Iowa. Yes.

Mr. BARKLEY. I just took occasion to examine the Standard Dictionary's definition of the word "fuel," and it specifically mentions oil, coal, wood, and combustibles.

Mr. SCOTT of Iowa. Does it mention gasoline?

Mr. BARKLEY. No; it does not name gasoline, but gasoline is a combustible used to start and to sustain fires. I think a

limitation such as is proposed would tend to exclude other things than those mentioned in the gentleman's amendment.

Mr. SCOTT of Iowa. Not things that cause power by explosion.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. SCOTT of Iowa. Yes.

Mr. FESS. The gentleman's amendment is an addition, not an exclusion?

Mr. SCOTT of Iowa. It is simply an addition.

Mr. FESS. It would not exclude what is already in it?

Mr. SCOTT of Iowa. No. It simply extends the term "fuel" to include gasoline, so that there may be no doubt about it.

Mr. FESS. The gentleman is a good lawyer, but I thought that if you specified in a specific way a number of things you excluded what you did not itemize.

Mr. SCOTT of Iowa. Not when the language is in the nature of an interpretation of the general language. To say that the general term shall include specific things does not limit the general term.

Mr. FESS. This would simply be an addition, then, instead of an inclusion?

Mr. SCOTT of Iowa. Yes.

Mr. DYER. Would not the gentleman's term exclude the use of alcohol as a fuel?

Mr. SCOTT of Iowa. It would exclude nothing.

Mr. DYER. I think the gentleman's limitation would have that effect—to exclude alcohol, which is used a good deal as fuel.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Iowa [Mr. SCOTT].

The question was taken, and the amendment was rejected.

Mr. MOON. Mr. Chairman, I ask unanimous consent that I may proceed for three or four minutes in order to put some things into the RECORD.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent to proceed for four minutes. Is there objection?

There was no objection.

Mr. MOON. Mr. Chairman, when we reach the fifteenth section of this bill, which is the one that grants the franking privilege to the persons and agencies connected with the administration of this law, I shall move to strike out that section and amend the eighteenth section, following by an appropriation of money that will cover postage.

This proposed amendment is as follows:

Amend H. R. 4961 by eliminating section 15 and by inserting the words "including postage" after the word "expense," in section 18, line 25, page 16, so that section 18 will read as follows:

"SEC. 18. That the sum of $2,500,000 is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, to be available immediately and until expended, for the payment of such rent, the expense, including postage, of such printing and publications, the purchase of such material and equipment, and the employment of such persons and means, in the city of Washington and elsewhere, as the President may deem essential."

I desire now to place in the RECORD, in order that they may be before the House, two letters, containing a statement of some of the reasons assigned by the Post Office Department why the fifteenth section should be stricken from this bill. It is disapproved by the administration, as I am advised. There are other reasons that I hope to state then.

The letters referred to are as follows:

WASHINGTON, *June 15, 1917.*

Hon. JOHN A. MOON,
Chairman Committee on the Post Office and Post Roads,
House of Representatives, Washington, D. C.

MY DEAR JUDGE MOON: It is noted that section 15 of House bill 4961, "To provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel," introduced by Representative ASBURY F. LEVER on June 11, 1917, which has been referred to the Committee on Agriculture, reads as follows with respect to the free use of the mails by any private agency or person:

"SEC. 15. That under regulations to be prescribed by the President the use of the mails of the United States free of charge for postage for exclusively official business in carrying out the purposes of this act shall be extended to any agency or person designated by the President."

With respect to the section above quoted, I am sending you with this letter a letter of May 7, 1917, addressed to you, which I had prepared and signed with respect to a similar provision incorporated as section 19 in House bill 4125, wherein I pointed out at considerable length why the section referred to, extending the free use of the mails to certain private agencies and persons, should not be enacted into law. I withheld this letter, believing the committee would eliminate the section from the bill. As section 15 of House bill 4961 is in effect the same as section 19 of House bill 4125, I desire to bring the matter to your attention.

Under existing law all officers of the Federal Government may send in the mails free of postage in penalty envelopes matter which they would have to mail in pursuance of their duties under the provisions of the other sections of the bill if it should become law, and therefore, in so far as the free use of the mails by such officials is concerned, no legislation is necessary. But, as stated in the inclosed letter of May 7, to extend the free-mail privilege to private agencies and persons not officers of the Government would constitute a new departure and a dangerous precedent.

The effect of extending such free use of the mails to private agencies and persons would be to increase greatly the amount of matter to be carried in the mails free of postage; and, in view of the enormous quantity of free matter with which the mails are already burdened, I feel sure that, considering the matter from the standpoint of the general public interest, you will agree that there should be no further extension of the free-mail privilege.

I have also to say with respect to section 15 of House bill 4961 what I said in my letter of May 7 regarding section 19 of House bill 4125, that I am greatly apprehensive that the enactment of this section into law would involve the Government in wasteful expenditure, because, after all, while the free-mailing privilege would be given to the parties named, as a matter of fact it could not be free under the law to the people of the United States, for the reason that the law provides for the payment of ample compensation to the railroads and other carriers for the transportation of this mail, and therefore it is believed that the postage expense incident to the sending of the matter by others than officers of the Government should be met out of an appropriation for such purpose. In the one case, if the postage is paid out of an appropriation, it would assure administrative economy in the execution of the law. On the other hand, the door would be wide open and inviting to unnecessary expenditure, which must be met by the people after all in the payment of increased compensation to railroads and other transportation agencies. It seems to me to be in the interest of economy and effectual administration to pay whatever mailing expense may be involved in this bill on account of matter sent by others than officers of the Government out of a sufficient appropriation for the purpose.

In view of the foregoing, this department is strongly opposed to the enactment into law of section 15 of House bill 4961. Since the provision is in the bill which has been referred to the Committee on Agriculture, it is thought that it may not have to come to your attention, and I am therefore advising you concerning it.

Yours, very truly,

A. M. DOCKERY,
Third Assistant Postmaster General.

—

WASHINGTON, *May 7, 1917.*

Hon. JOHN A. MOON,
Chairman Committee on the Post Office and Post Roads,
House of Representatives, Washington, D. C.

MY DEAR JUDGE MOON: Section 19 of House bill 4125, "To provide further for the national security and defense by encouraging agriculture and regulating the marketing and distribution of foods and other necessaries of life," which has been referred to the Committee on Agriculture, reads as follows:

"SEC. 19. That all correspondence, publications, and reports for the furtherance of the purposes of this act may be transmitted in the mails of the United States free of charge for postage, under such regulations as the Postmaster General from time to time may prescribe, by such State of local officials, public or private agencies, or persons, cooperating with or performing services for the Government under this act, as may be designated by the President or the Secretary of Agriculture."

While I yield to no man in a patriotic desire to enact all legislation necessary to maintain the rights of the people of this Government on the high seas and to win for the United States a conclusive victory upon all other issues involved in this mighty contest, and am in hearty favor of the purposes of the bill, yet I venture to suggest that this section is exceedingly broad, as it provides for the extension of the free-mail privilege to all State and municipal officials, public and private agencies, and persons who in any way whatever may cooperate with the Government under the provisions of the proposed legislation covered by the other sections of the bill. No such broad grant of the free-mail privilege has heretofore been made, and, if it should be done now, it would constitute a new departure and dangerous precedent.

Under existing law all officers of the Federal Government may send in the mails free of postage in penalty envelopes matter which they would have to mail in pursuance of their duties under the provisions of the other sections of the bill, if it should become law, and therefore, in so far as the free use of the mails by such officials is concerned, no legislation is necessary. But, as previously stated, to extend the free-mail privilege to State and local or municipal officials, to public and private agencies, and to persons not officers of the Government, would constitute a new departure and dangerous precedent.

The effect of extending such free use of the mails to State and municipal officials, public and private agencies, and private persons would be to increase greatly the amount of matter to be carried in the mails free of postage, and in view of the enormous quantity of free matter with which the mails are already burdened I feel sure that, considering the matter from the standpoint of the general public interest, you will agree that there should be no further extension of the free-mail privilege.

I am greatly apprehensive that the enactment of this section into law would involve the Government in wasteful expenditure, because, after all, while the free mailing privilege would be given to the parties named, as a matter of fact, it could not be free under the law to the people of the United States for the reason that the law provides for the payment of ample compensation to the railroads and other carriers for the transportation of this mail, and therefore it is believed that the postage expense incident to the sending of the matter by others than officers of the Government should be met out of an appropriation for such purpose. In the one case, if the postage is paid out of an appropriation, it would assure administrative economy in the execution of the law. On the other hand, the door would be wide open and inviting to unnecessary expenditure, which must be met by the people after all in the payment of increased compensation to railroads and other transportation agencies. It seems to me to be in the interest of economy and effectual administration to pay whatever mailing expense may be involved in this bill on account of matter sent by others than officers of the Government, out of a sufficient appropriation for the purpose.

In view of the foregoing I am strongly opposed to the enactment into law of section 19 of House bill 4125. Since the provision is in a bill which has been referred to the Committee on Agriculture, it is thought that it may not have come to your attention, and I am therefore advising you concerning it.

Yours, very truly,

A. M. DOCKERY,
Third Assistant Postmaster General.

Mr. MOON. Mr. Chairman, while I am on the floor and within my time I desire to make just one or two observations

about this bill. Surely there is no man in this House who has been raised in the faith of the Democratic Party who believes that this bill ought to pass in ordinary times. Whether the war necessities at this time justify the passage of this bill is to my mind exceedingly uncertain. Whether the conditions of our country are such that a measure of this character, crude, and without disrespect to the committee I may say thoughtless, in some of its provisions perhaps, and intensely arbitrary in others, should receive the sanction of this House without amendment is to my mind very doubtful. There is a provision in this bill, one of the most important perhaps, that denounce certain things as criminal, yet there is no penalty attached. Without attempting in any way to impose my own judgment upon the House or the committee, I believe that a measure of this sort ought to contain provisions that denounce certain acts and facts as crimes and fix penalties and provide for the punishment of offenders by the courts of the country as in ordinary times. I very greatly doubt the wisdom of conferering upon any man the powers here conferred, even in the midst of flagrant war, much less in a period like this. These are powers that ought to be held sacredly in the hands of the representatives of the people and not given to any man so long as you value a republic.

But I am not going to strike any discordant note at this time. I am going to vote for this measure as the best thing perhaps that has yet been proposed. I hope as this war shall progress, if it must progress, that this House and the Senate may act upon these questions, not with hysteria or fear, not unmindful of the great duties and obligations of the representatives of the people in times of peace, but with cool judgment. We are entering upon a war that may last for a long time. It may end suddenly. We know not, but we do know that all that this Republic has or will have is pledged to the successful prosecution of the war. We ought to know, too, that our domestic affairs and concerns ought to move along just as smoothly in this time as though no war had been thought of, because this country is great enough and powerful enough, at least joined with the allies, to conquer Germany and not interfere unwisely with our own concerns within the borders of the Republic. [Applause.]

Mr. SMITH of Michigan. Will the gentleman yield.

Mr. MOON. I yield to the gentleman from Michigan.

Mr. SMITH of Michigan. Is it not true that when a statute provides that a certain thing is a criminal act and the penalty is not provided in that statute it is a misdemeanor and punished as such?

Mr. MOON. How are misdemeanors punished under the Federal law? They are punished by a statute providing what shall constitute the offense and what the punishment shall be.

Mr. SMITH of Michigan. The penalty of a misdemeanor.

Mr. MOON. No. The gentleman confuses State and Federal statutes. We should say whether the act was a misdemeanor or a felony, if it is intended to punish as for a felony.

But, Mr. Speaker, passing from that question, I want to say that so far as this measure is concerned, I am going to give it my vote and my hearty support, trusting and hoping that something good may come out of it, though I fear that in its administration much money may be expended uselessly if not corruptly, that the people may be greatly annoyed and harassed without any compensating benefits from the act. Let us hope, at least, that that may not be true, and that as defects appear in the administration of it we can amend this act. We do not know what will come of it until we try it. But I am not expecting that very much good will arise from it in its present shape to protect our people against unlawful speculation in food products and to reduce the cost of living to the masses, which I know is our object.

Mr. KING. I ask unanimous consent to proceed for one minute.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to proceed for one minute. Is there objection?

There was no objection.

Mr. KING. Mr. Chairman, when we reach page 17, line 10 of this bill, I desire to offer a new paragraph to be known as section 19½, establishing in the Treasury Department a bureau to be known as the bureau of farm-risk insurance. I simply desire to have it printed in the RECORD for the information of the committee and the House generally.

The CHAIRMAN. Without objection, the request of the gentleman will be granted.

There was no objection, and the amendment is as follows:

Amendment offered by Mr. KING: Page 17, line 10, after the word "eighteen," insert a new paragraph and section, as follows, to wit:

"SEC. 19½. That for the purpose of further stimulating the production of nonperishable agricultural products within the United States and for more effectually carrying out the objects of this act, as expressed in the title and substance hereof, that there be established in the Treasury Department a bureau to be known as the bureau of farm-risk insurance, the director of which shall be entitled to a salary at the rate of $5,000 per annum; that said bureau of farm-risk insurance, subject to the general direction of the Secretary of the Treasury, shall, as soon as practicable, make provisions for the insurance by the United States of growing crops of nonperishable products against the action of the elements whenever it shall appear to the Secretary that the producers of such crops are unable to secure adequate farm-risk insurance on reasonable terms; that the bureau of farm-risk insurance, with the approval of the Secretary of the Treasury, is hereby authorized to adopt and publish a form of farm-risk policy, and to fix reasonable rates of premium for the insurance of growing crops of nonperishable products against the action of the elements, the proceeds of the aforesaid premiums when received to be covered into the Treasury of the United States; that the bureau of farm-risk insurance, with the approval of the Secretary of the Treasury, shall have power to make any and all rules and regulations necessary for carrying out the purposes of this section of this act; that the Secretary of the Treasury is authorized to establish an advisory board, to consist of three members skilled in the practices of farm-risk insurance, for the purpose of assisting the bureau of farm-risk insurance in fixing rates of premium and in adjustment of claims for losses, and generally in carrying out the purposes of this section of this act, the compensation of the members of said board to be determined by the Secretary of the Treasury, but not to exceed $25 a day each while actually employed. In the event of this agreement as to the claim for losses, or amount thereof, between said bureau and the parties to such contract of insurance an action on the claim may be brought against the United States in any district court of the United States; that the director of the bureau of farm-risk insurance, upon the adjustment of any claims or losses in respect of which no action shall have been begun, shall, on approval of the Secretary of the Treasury, promptly pay such claim for losses to the party in interest, and the Secretary of the Treasury is directed to make provision for the speedy adjustment of claims for losses and also for the prompt notification of parties in interest of the decisions of the bureau on their claims; that for the purpose of paying losses accruing under the provisions of this section of this act there is hereby appropriated, out of any money in the Treasury of the United States not otherwise appropriated, the sum of $10,000,000; that there is hereby appropriated for the purpose of defraying the expenses of the establishment and maintenance of the bureau of farm-risk insurance, including the payment of salaries herein authorized and other personal services in the District of Columbia, out of any money in the Treasury of the United States not otherwise appropriated, the sum of $100,000; that the President is authorized whenever, in his judgment, the necessity of further farm risk insurance by the United States shall have ceased to exist to suspend the operations of this section of this act in so far as it authorizes such insurance by the United States against such loss or damage by the reasons aforesaid, which suspension shall be made at any event within two years after the passage of this act, but shall not affect any insurance outstanding at the time or any claims pending adjustment. For the purpose of the final adjustment of any such outstanding insurance or claims the bureau of farm-risk insurance may, in the discretion of the President, be continued in existence a further period of not exceeding one year. A detailed statement of all expenditures under this section of this act and all receipts hereunder shall be submitted to Congress at the beginning of each regular session.

Mr. MONDELL. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 2, line 3, after the word "proposes," insert the following:

"There is hereby established a governmental control of necessaries which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries, which shall be exercised and administered by the President in accordance with the provisions of this act; and all such necessaries, processes, methods, and activities are hereby declared to be affected with a public interest and"

Mr. LEVER. Mr. Chairman, I reserve a point of order until I can look at the proposition.

Mr. MONDELL. I will say that I think the point of order can not be sustained, because the amendment is already a part of the bill in another place.

Mr. LEVER. I will reserve the point of order.

Mr. MONDELL. Mr. Chairman, the first section of this bill starts out with a declaration of a condition of war, continues with an expression of intention as to the purposes to be accomplished, and concludes by providing that the instrumentalities, means, methods, powers, authority, obligation, and prohibitions thereinafter set forth are created, established, conferred, and prescribed for the purpose of carrying into effect the purposes of the act.

What is intended is to create a governmental control over necessaries, but there is no clear and definite statement to that effect in section 1, the declaratory section.

Curiously enough, down in section 3, as though by some mischance it had been torn from its moorings and inserted at random at another point, there is a provision clearly establishing a Government control over necessaries, which section 1 is evidently intended to establish and possibly might be held to establish without clearly stating the fact as it is stated in section 3. So it has occurred to me that if we shall make very clear and definite the intent and purpose of the legislation, this declaration should go in and be a part of section 1. I therefore have inserted after the word "purpose," in line 3, page 2, section 1, the language in section 3 after the word "that" down to the first line of page 3, with slight modifications of the language,

so as to make it clear that the authority conferred is the authority thereafter designated in the various sections of the bill.

Now, quite a number of gentlemen have suggested that section 3 should not be in the bill. There seems to be a very wide difference of opinion as to what section 3 means. The gentleman from Minnesota places one interpretation on section 3, and other gentlemen place other interpretations on the section. One of the gentlemen discussing the matter—I think the gentleman from Wisconsin [Mr. LENROOT]—suggested that it was a mere declaration, and that it is a mere declaration seems to be borne out by the proviso at the end of it that none of the penalties of the act shall apply to that section.

Mr. LENROOT. That is a case of mistaken identity. "The gentleman from Wisconsin" thinks, with the penalties imposed, that it is much more than a mere declaration.

Mr. MONDELL. I am glad to be corrected, because I hardly thought that so good a lawyer and so intelligent a Member as the gentleman from Wisconsin would take that view of it, but that view has been expressed that it was a mere declaration and relatively unimportant, and that it did not make any difference whether it was in the bill or not. An indication that it is unimportant, if not unnecessary, lies in the fact that coupled with it and made a part of it is the provision that the President may invite voluntary assistance in carrying out the purposes declared in the act.

Clearly it is not necessary to make this broad and sweeping declaration merely for the purpose of authorizing the President as a part of that declaration to invite voluntary assistance in carrying out the provisions of the act, and the whole thing is made perfectly ridiculous from my point of view—and I mean no offense to gentlemen who think otherwise—by adding a proviso to the effect that, while we make a solemn declaration, the most clearly and definitely worded declaration in the bill, we do not mean anything by it, and though all the world may flout the declaration and everything attempted under it no penalty shall attach.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

Mr. MONDELL. I ask for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MONDELL. I am for this bill—heartily in favor of it. It has required some shifting of view, some jarring of preconceived notions, to reach the point where I can accept this sort of thing, but, having reached that point, there is no halfway station, in my opinion. If we are to establish a governmental administrative control over these things referred to as necessaries, that control must be so clearly defined, so explicit, so definite, so unquestioned, as far as the power of Congress exists to grant the authority we propose to confer, that there can be no question about it. Therefore, and with a view to strengthening the legislation as I see it, I suggest that this declaration now contained in section 3—and in section 3 apparently superfluous and unnecessary, if not mischievous—should be transferred to section 1, where it clearly belongs. It seems to me that whoever drew the bill originally must have intended to have that declaration of control placed in the part of the bill that, first, invokes the war power and, second, declares our intent and purpose, and then authorizes the utilization of all of the instrumentalities invoked for the purpose of accomplishing those purposes. In doing that the very clear and very explicit statement of the establishment of control contained in section 3 should be placed in the part of the bill where it logically belongs. That will still leave in section 3 those provisions under which the President is to invite voluntary assistance, to enter into voluntary agreements. There is certainly no objection to that, although it has been suggested by some that that is quite superfluous, in view of other provisions of the bill. There would be no harm done leaving it there; but the amendment I offer, it seems to me—and I hope gentlemen will consider it—ought to be adopted. I hope we may not have a vote upon it to-night, because I am anxious that the gentleman in charge of the bill between now and to-morrow morning may consider it. I offer this in the best of faith, and I believe that it is essential to the strengthening and rounding out of the legislation.

Mr. ANDERSON. The gentleman does not want to make another speech upon it to-morrow?

Mr. MONDELL. No; I am willing to leave it to the judgment of the House to-morrow; but I would like to have gentlemen sleep upon it and consider it in the meantime.

Mr. LEVER. Mr. Chairman, I wonder if we can not have an agreement to vote on the pending amendment this afternoon and then rise?

Mr. MONDELL. I suggest that we vote upon it in the morning.

Mr. LEVER. The gentleman from Iowa, Judge TOWNER, has a substitute which he desires to offer for section 1. I take it that most of the amendments to be proposed have been offered this afternoon. I am wondering if we can not get a unanimous-consent agreement to dispose of the amendment of the gentleman from Wyoming to-morrow morning, and also of the gentleman from Iowa, and that debate on the section and all amendments thereto shall close after the gentleman from Iowa shall have had, say, 10 minutes?

Mr. MEEKER. Mr. Chairman, reserving the right to object, do I understand that it is the purpose of the gentleman from Iowa to offer an entirely new section as a substitute?

Mr. LEVER. Yes.

Mr. MEEKER. Will that include what is involved in the amendment of the gentleman from Wyoming?

Mr. TOWNER. I will say to the gentleman that in reality my substitute for the first section is a substitute for the whole bill.

Mr. MEEKER. I would like to have a little time on the amendment of the gentleman from Wyoming.

Mr. LEVER. I ask unanimous consent that debate upon section 1 and all amendments thereto, including the amendment which will be offered by the gentleman from Iowa, Judge TOWNER, shall close in 25 minutes.

The CHAIRMAN. The gentleman from North Carolina asks unanimous consent that all debate on section 1 and all amendments thereto, including the substitute offered by the gentleman from Iowa, shall conclude in 25 minutes to-morrow morning. Is there objection?

Mr. MEEKER. Mr. Chairman, reserving the right to object, who will have control of that?

Mr. LEVER. The Chair.

The CHAIRMAN. The Chair will have control of it, and he will endeavor to divide it equally. Is there objection? [After a pause.] The Chair hears none. The Chair desires to know if the gentleman insists upon his point of order?

Mr. LEVER. Mr. Chairman, I will reserve the point of order.

Mr. GREEN of Iowa. Mr. Chairman, I ask unanimous consent to have inserted in the RECORD, without reading, an amendment which I shall offer to section 4.

Mr. LEVER. I have no objection.

The CHAIRMAN. The gentleman from Iowa [Mr. GREEN] asks unanimous consent to have printed in the RECORD for the information of the committee an amendment. Is there objection? [After a pause.] The Chair hears none.

The amendment is as follows:

Amendment by Mr. GREEN of Iowa: At the end of section 4 as part thereof, add the following as a new paragraph:

"If any person aggrieved by the violation of any of the provisions of this section shall file with a district attorney of the United States, a complaint under oath alleging and specifying such violation; or if any district attorney of the United States is credibly informed, or believes that the provisions of this section are being violated; or if he be directed by the President; then such district attorney shall forthwith, in the name of the United States, file a complaint or bill against the alleged violator in the district court of the United States having jurisdiction of the parties, setting forth such violations and praying that a temporary injunction issue enjoining the defendant against continuing the acts therein set forth as in violation of law. Upon the filing of such a bill as hereinabove required, the court in which the same is filed, or any judge thereof, is hereby granted jurisdiction to hear and try the said application for temporary writ of injunction upon three days' notice thereof being served upon the defendant. Such hearing may be upon affidavits or upon oral testimony; and at the conclusion thereof if the court or judge finds that there is reasonable cause to believe that the provisions of this section, or any of them, have been violated by a defendant therein, a temporary writ of injunction shall issue enjoining such defendant from further violations thereof, which injunction shall remain in force until final hearing and judgment in the action. If a continuance of the hearing on the application for temporary injunction be granted at the instance of defendant, the temporary injunction as prayed shall issue as a matter of course."

Mr. LENROOT. Mr. Chairman, I ask unanimous consent to insert in the RECORD, without reading, proposed amendments to section 5 which I expect to offer.

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin? [After a pause.] The Chair hears none.

The amendments are as follows:

Amendments intended to be proposed by Mr. LENROOT:

Amend section 5 by striking out all of the section on page 4 and the words "places of business of licensees" on line 1, page 5

Strike out the word "licensees" in line 2, page 5, and insert the word "persons."

Strike out the word "licensee" in line 4, page 5, and insert the word "person."

Strike out the word "licensee" in line 8, page 5, and insert the word "person."

Strike out, in lines 18, 19, and 20, page 5, the following: "without a license issued pursuant to this section, knowingly engages in or carries on any business for which a license is required under this section."

Strike out of lines 23, 24, and 25, page 5, the following: "or willfully violates any provision of this section or any regulation prescribed under this section."

So that said section 5, when amended, shall read as follows:

"SEC. 5. Whenever the President shall find that any rate, charge, or practice of any person is unjust or unreasonable or discriminatory and unfair or wasteful, and shall order such person within a reasonable time fixed in the order to discontinue any such unjust, unreasonable, discriminatory, and unfair, or wasteful rate, charge, or practice, thereafter, unless such order is revoked or suspended, such person shall within the time prescribed in the order, discontinue such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice. The President may in lieu of any such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice find what is a just, reasonable, nondiscriminatory and fair, or economical rate, charge, or practice, and in any suit in any Federal or State court of competent jurisdiction such finding of the President shall be prima facie evidence. Any person who willfully fails or refuses to discontinue any unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice in accordance with the requirement of an order issued under this section shall, upon conviction thereof, be punished by a fine not exceeding $5,000 or by imprisonment for not more than two years, or both: *Provided*, That this section shall not apply to any farmer, gardener, or other person with respect to the products of any farm, garden, or other land owned, leased, or cultivated by him nor to any retailer with respect to the retail business actually conducted by him nor to any common carrier, nor shall anything in this section be construed to authorize the fixing or imposition of a duty or tax upon any article imported into or exported from the United States or any State, Territory, or the District of Columbia."

Mr. LEVER. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HAMLIN, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee having had under consideration the bill H. R. 4961 had come to no resolution thereon.

EXTENSION OF REMARKS.

Mr. SLAYDEN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD, not appertaining to this subject, I will say.

The SPEAKER. The gentleman from Texas asks unanimous consent to extend his remarks in the RECORD. Is there objection?

Mr. WALSH. Mr. Speaker, reserving the right to object, may I ask the gentleman upon what subject?

Mr. SLAYDEN. Oh, on the state of the Union, or something of that nature.

Mr. WALSH. I object.

The SPEAKER. The gentleman objects.

HOUR OF MEETING.

Mr. LEVER. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 10.30 a. m. to-morrow.

The SPEAKER. Is there objection?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, I would like to inquire of the gentleman what is the gentleman's intention if we meet that early as to how late he expects to run in the afternoon?

Mr. LEVER. I would say to the gentleman from Wisconsin it is my very sincere hope, and I think the hope of the friends of this bill, and that means practically everybody in the House, that we shall complete this bill by Saturday night, and if it is necessary to run rather late to-morrow afternoon I think the House will be willing to stay with us and do so.

Mr. STAFFORD. What does the gentleman mean by running rather late?

Mr. LEVER. I would say half past 7, probably 8 o'clock.

Mr. STAFFORD. If we are going to meet at 10.30 and run until 7 or 8, we might as well meet at the regular hour. I have no objection to meeting at 11 o'clock, and while the gentleman may use his own judgment as to time we have office work to do and 11 o'clock is rather an early hour.

The SPEAKER. Is there objection?

Mr. STAFFORD. I object.

Mr. LEVER. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 a. m. to-morrow, with the understanding so that gentleman may know we are going to run rather late to-morrow afternoon.

Mr. GILLETT. Mr. Speaker, I do not wish it to be considered that that is agreed to without saying——

Mr. LEVER. I am not putting that in the request, but am announcing to the House.

The SPEAKER. The gentleman from South Carolina asks unanimous consent that when the House adjourns to-day it adjourn to meet at 11 a. m. to-morrow. Is there objection? [After a pause.] The Chair hears none.

Mr. LEVER. Now, then, Mr. Speaker, let me say to the Members of the House that it is my intention, if the committee will stay with us, to run as late as we can keep a quorum here to-morrow—up to 8 o'clock, at least, unless we get along mighty well, which I hope we will do.

Mr. Speaker, I move that the House do now adjourn.

ADJOURNMENT.

The motion was agreed to; accordingly (at 5 o'clock and 38 minutes p. m.) the House, under its previous order, adjourned until Friday, June 22, 1917, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of War, recommending that the sum of $2,000 be paid to the family of Tatsuji Saito, killed, presumably, by American soldiers at Camp Geronimo, Mexico (H. Doc. No. 194); to the Committee on Appropriations and ordered to be printed.

2. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Jordan River, Miss., and its navigable tributaries (H. Doc. No. 195); to the Committee on Rivers and Harbors and ordered to be printed.

3. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and survey of Willamette River from Corvallis to Eugene, Oreg. (H. Doc. No. 196); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

4. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and survey of Town Creek, Brunswick County, N. C. (H. Doc. No. 197); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

5. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Northwest River, Va. and N. C., with a view to its improvement from its mouth as far as it may be practicable (H. Doc. No. 198); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

6. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Travers and Big Stone Lakes, on the boundary between Minnesota and South Dakota, with a view to flood control and to connecting and extending navigation on and between said lakes (H. Doc. No. 199); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. DENT, from the Committee on Military Affairs, to which was referred the bill (H. R. 4897) to amend section 10 of the national-defense act approved June 3, 1916, and for other purposes, reported the same without amendment, accompanied by a report (No. 84), which said bill and report were referred to the House Calendar.

Mr. MONTAGUE, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 4960) to define, regulate, and punish trading with the enemy, and for other purposes, reported the same without amendment, accompanied by a report (No. 85), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. HAWLEY: A bill (H. R. 5131) amending the act providing for the sundry civil expenses of the Government approved June 12, 1917; to the Committee on Appropriations.

By Mr. WATKINS (by request): A bill (H. R. 5132) to amend paragraph 2 of section 12 of the act approved June 18, 1910, entitled "An act to create a commerce court and to amend the act entitled 'An act to regulate commerce,' approved February 4, 1887, as heretofore amended, and for other purposes"; to the Committee on Interstate and Foreign Commerce.

By Mr. KETTNER: A bill (H. R. 5133) for the protection of lands and property in the Palo Verde Valley, Cal., and for other purposes; to the Committee on Appropriations.

By Mr. HARRISON of Mississippi: A bill (H. R. 5134) establishing standard grades of naval stores, preventing deception in transactions in naval stores, regulating traffic therein, and for other purposes; to the Committee on Agriculture.

By Mr. GANDY: A bill (H. R. 5135) providing for the depositing of tribal or trust funds of Indians, and for other purposes; to the Committee on Indian Affairs.

By Mr. OSBORNE: A bill (H. R. 5136) providing that premedical and medical students in attendance at National Reserve Officers' training camps shall, upon expressing a preference, be placed in medical schools to complete their medical studies, and thereafter serve in the rank for which they shall have qualified; to the Committee on Military Affairs.

By Mr. McCLINTIC: A bill (H. R. 5137) to prohibit alien citizens who have evaded military service from entering the ports of the United States or becoming citizens thereof; to the Committee on Immigration and Naturalization.

By Mr. LOBECK: Resolution (H. Res. 107) directing the Committee on Expeditures in the Post Office Department to make certain examinations; to the Committee on Rules.

By Mr. LaGUARDIA: Joint resolution (H. J. Res. 107) proposing an amendment to the Constitution of the United States extending the power to regulate and control production, conservation, and distribution of food; to the Committee on the Judiciary.

By Mr. EMERSON: Joint resolution (H. J. Res. 108) thanking the patriotic workers who are making the Red Cross campaign for a $100,000,000 fund a success; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CRAMTON: A bill (H. R. 5138) granting a pension to Adelia Hamilton; to the Committee on Invalid Pensions.

By Mr. GANDY: A bill (H. R. 5139) granting an increase of pension to Robert Finley Conover; to the Committee on Pensions.

Also, a bill (H. R. 5140) granting a pension to Wellsley Crane; to the Committee on Invalid Pensions.

Also, a bill (H. R. 5141) for the relief of Edwin S. Metcalf; to the Committee on War Claims.

Also, a bill (H. R. 5142) to correct the military record of Lewis Ludwig; to the Committee on Military Affairs.

By Mr. HARRISON of Mississippi: A bill (H. R. 5143) granting a pension to Joseph Gager; to the Committee on Pensions.

By Mr. SMITH of Michigan: A bill (H. R. 5144) granting a pension to George M. Woodard; to the Committee on Pensions.

By Mr. WINGO: A bill (H. R. 5145) granting an increase of pension to George W. Sargent; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Memorial of National Conference of Charities and Correction and Homeopathic Medical Society of Philadelphia County, Pa., favoring prohibition as a war measure; to the Committee on the Judiciary.

Also (by request), memorial of the John Devoy Branch, Friends of Irish Freedom, and Salve Regina Council, No. 216, Knights of Columbus, relative to home rule for Ireland; to the Committee on Foreign Affairs.

Also (by request), petitions of sundry citizens of the State of Kentucky, asking law forbidding the slaughter of all calves under 2 years of age for veal; to the Committee on Agriculture.

Also (by request), memorial of National Association of Game and Fish Commissioners, favoring bill to give effect to the migratory-bird treaty; to the Committee on Foreign Affairs.

By Mr. CAREW: Petition of the New York State conference of mayors and other city officials, urging the immediate enactment of legislation for food control, including coal; to the Committee on Agriculture.

By Mr. CRAMTON: Memorial of William F. Sherman and five others of Port Huron, Mich., favoring passage of the daylight-saving bill; to the Committee on Interstate and Foreign Commerce.

By Mr. DALE of New York: Petition of Central Mercantile Association of New York, relative to increasing depth of Hell Gate Channel; to the Committee on Naval Affairs.

Also, memorial of New York State conference of mayors and other city officials, relative to food control, etc.; to the Committee on Agriculture.

By Mr. DALE of Vermont: Resolutions of Congregational Church of Lyndon, North Congregational Church of Norwich, United Presbyterian Church of Ryegate, Third Congregational Church of St. Johnsbury East, Union Congregational and Methodist Churches of Cabot, Congregational Church of Barnet, Congregational Church of Williamstown, First Baptist Church of Bellows Falls, Congregational Church of North Troy, Congregational Church of Barre, Congregational Church of East Barre, Congregational Church of Orleans, Congregational Church of Townshend, First Baptist Church of Saxtons River, Congregational Church of Randolph Center, and First Baptist Church of Brattleboro, all in the State of Vermont, favoring prohibition as a war measure; to the Committee on the Judiciary.

Also, resolution of the Methodist Episcopal Sunday School of Montpelier, Vt., favoring prohibition as a war measure; to the Committee on the Judiciary.

Also, resolution of Vermont Committee of Public Safety, favoring prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of W. S. Smithers and 36 others, of Orleans, Vt., favoring prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of Charles W. Kelley and 28 others, of Irasburg, Vt., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. DALLINGER: Petition of Board of Aldermen of Melrose, Mass., urging prompt pasasge of food legislation; to the Committee on Agriculture.

By Mr. DRUKKER: Petition of sundry citizens of Passaic, N. J., opposing the passage of prohibition measures; to the Committee on the Judiciary.

By Mr. DYER: Petition of Brewery Engineers' Local, No. 246; Germania Lodge, No. 394; St. Louis Photo Engravers' Union, No. 10, International Photo Engravers' Union of North America; Boot and Shoe Workers' Union, Local 25; Painters' Union 137, of St. Louis; Local Union 257, United Brotherhood of Carpenters and Joiners of North America; Local 67, United Garment Workers; Chauffeurs' and Carriage Drivers' Local 405; Butcher and Sausage Makers; William M. Davis and J. W. Williams; Metal Polishers, Buffers, and Platers, Local 13; the Central Trades and Labor Union; White Rats Actors' Union, Branch 11; Bartenders' Local 51; Stove Mounters' Local 34; Wood, Wire and Metal Lathers' International Union, Local 73; Musicians' Mutual Benefit Association, Local No. 2, American Federation of Musicians; the Ice Wagon Drivers and Helpers, No. 606; Cigar Makers' Local, No. 34; United Brotherhood of Leather Workers; Local Union No. 1, International Brotherhood of Electrical Workers; Brewery Oilers and Helpers' Union, No. 279; International Union of Elevator Conductors; International Association of Machinists; Brewery Firemen Local Union No. 95; Carpenters' Local Union No. 1329; the Meat Cutters and Butcher Workmen, Local 88; Core Makers, No. 426, International Molders Union of North America; Electrotypers' Union, No. 36; the Cap Makers' Union, Local 14; City Forestry Employees' Union 14861; Local No. 36, Amalgamated Sheet Metal Workers' International Alliance; United Garment Workers of America, Local 238; Local 37 of Cigarmakers' International Union; Public Drivers' Local, No. 43; Typographical Union, No. 3; Stove Mounters' International Union, No. 86; Awning Workers' Union, No. 14667; Erecting Lodge, No. 688; Coal Teamsters' Local, No. 608; Cigar Packers' Local, No. 281; Brewery Freight Handlers and Ice Plant Workers, No. 237; James J. Morgan and Louis Eckrick; Amalgamated Lithographers of America, Local No. 5; Coopers' International Union, No. 3; St. Louis Bookbinders' Union, No. 18; the Glassblowers of Branch No. 5; Local No. 646, United Brotherhood of Carpenters and Joiners of North America; Painters and Decorators, No. 562; Wood. Block, Brick Pavers and Helpers, Local No. 29; Waiters' Union, Local No. 20; Bar Bottlers' Local Union, No. 187; all of St. Louis, Mo., favoring a congressional investigation of the activity of the San Francisco Chamber of Commerce in its fight against organized labor; to the Committee on Labor.

By Mr. FOSS: Petitions of National Federation of Post Office Clerks and Illinois State Association of the National Association of Letter Carriers, favoring Lever food-administration bill; to the Committee on Agriculture.

Also, petition of citizens of Highwood and Highland Park, Ill., favoring national prohibition; to the Committee on the Judiciary.

By Mr. GALLIVAN: Petition of Brotherhood of Painters, Decorators, and Paperhangers of America, favoring immediate passage of food bills; to the Committee on Agriculture.

Also, memorial of Massachusetts Medical Society, relative to sanitary conditions of military camps, etc.; to the Committee on Military Affairs.

By Mr. HAMILTON of New York: Petition of sundry citizens of Hume, N. Y., favoring national prohibition as a war measure; to the Committee on the Judiciary.

By Mr. HELVERING: Petitions of various citizens of Minneapolis, Salina, Enterprise, Gypsum, Clay Center, Manhattan, Frankfort, and Junction City, all in the State of Kansas, favoring national prohibition; to the Committee on the Judiciary.

By Mr. HILL: Petition of members of the Methodist Episcopal churches of Norwalk and Rowayton, Conn., favoring prohibition; to the Committee on the Judiciary.

By Mr. HOUSTON: Petition of Woman's Missionary Society of the Methodist Episcopal Church South, Murfreesboro, Tenn., favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. HUTCHINSON: Resolution of Branch No. 380, National Association of Letter Carriers, of Trenton, N. J., urging the passage of the Madden bill, House bill 1654, providing for an increase in the salaries of the postal employees; to the Committee on the Post Office and Post Roads.

By Mr. KENNEDY of Rhode Island: Petition of Greystone (R. I.) Textile Workers, Local No. 838, favoring passage of Lever food bill; to the Committee on Agriculture.

By Mr. KETTNER: Memorial of Single-Tax Society, of San Diego County, Cal., protesting against methods of taxation by which the necessities of life are taxed, etc.; to the Committee on Ways and Means.

By Mr. O'SHAUNESSY: Petition of the Workingmen's Independent Political Club, of the city of Providence, R. I., urging the immediate enactment of the food-control bill; to the Committee on Agriculture.

By Mr. PAIGE: Petitions of Rev. Louis P. Causey and 88 others, of Clinton; Bible School of Rollstone Congregetional Church, of Fitchburg; Men's Leauge of First Congregational Church of Spencer; Sunday School of First Methodist Episcopal Church of Fitchburg; Swedish Evangelical Church, of Fitchburg; Eastern Hampden Young People's Society of Christian Endeavor Union; Massachusetts Branch National Congress of Mothers and Parent-Teachers' Association; townspeople of Paxton in public meeting assembled; Troop 12, Boy Scouts, of Fitchburg; Young People's Branch Woman's Christian Temperance Union, of Leominster; First Baptist Church, of Orange; Major Peter Harwood Chapter, Daughters of American Revolution, of North Brookfield; Athol Grange, of Athol; Sixth Massachusetts District of Universalist Churches, by Rev. Lucy Milton Giles, secretary, of Westminster; Central Congregational Church, of Orange, by Rev. Andrew Campbell, pastor, and Charles S. Parker, clerk; 200 members of Sunday School of Methodist Episcopal Church, of Oxford; and Greenwich Congregational Church, of Greenwich, all in the State of Massachusetts, in favor of national prohibition as a war measure; to the Committee on the Judiciary.

By Mr. PLATT: Petitions of Union Church of Newburgh and sundry citizens of the State of New York, favoring prohibition as a war measure; to the Committee on the Judiciary.

By Mr. RAKER: Petition of W. B. Bourn, acting chairman, American League of California, San Francisco, Cal., favoring the food-control bill and the appointment of Herbert C. Hoover as director; to the Committee on Agriculture.

Also, petition of the Pedic Society of the State of California, urging the necessity of having chiropodists connected with the Medical Corps of the Army and Navy; to the Committee on Military Affairs.

Also, petition of C. E. Clinch, president, Grass Valley, Cal., favoring food supply and control bill; to the Committee on Agriculture.

Also, petition of Mr. John Hedley, secretary, Redondo Beach, Cal., in re providing soldiers with an indestructible medal; to the Committee on Military Affairs.

Also, petition of H. F. Strother, secretary Golden Gate Harbor, No. 40, San Francisco, Cal., protesting against the establishment of the zone system and the increase of rates on second-class mail matter; to the Committee on Ways and Means.

By Mr. REED: Memorial of Presbyterian Church of Richwood, W. Va., urging national prohibition; to the Committee on the Judiciary.

By Mr. ROBBINS: Petitions of the United Presbyterian churches of Shearersburg, Latrobe, and New Alexandria; First Presbyterian Church of Monessen; the Rehoboth Presbyterian Church, of Belle Vernon; the Osborne Brotherhood Bible Class, of Wyano; the Calvary Baptist Church of Irwin; and Ligonier Valley Church, of Ligonier, all in the State of Pennsylvania, favoring prohibition; to the Committee on the Judiciary.

By Mr. ROSE: Petition of congregation of the Third Presbyterian Church of Altoona, Pa., favoring national prohibition as a war measure; to the Committee on the Judiciary.

Also, petitions of congregations of Hollidaysburg and Lakemont, suburbs of Altoona, Blair County, Pa., favoring national prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of congregation of Broad Avenue Presbyterian Church, of Altoona, Pa., favoring national prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of twenty-sixth annual convention of Altoona District Epworth League, State of Pennsylvania, favoring national prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of Woman's Home Missionary Society of the Franklin Street Methodist Episcopal Church, of Johnstown, Pa., urging passage of a bill prohibiting the manufacture and sale of all alcoholic liquors during the period of the war, thus conserving our grain for food; to the Committee on the Judiciary.

By Mr. ROWE: Petition of De Kalb Avenue Methodist Episcopal Church, Brooklyn, N. Y., favoring prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of the District Republican Club, Brooklyn, N. Y., favoring the immediate passage of proper, sufficient, and sweeping legislation to control our food prices and supply; to the Committee on Agriculture.

Also, petition of S. G. Rosenbaum, favoring enactment of daylight-saving bill; to the Committee on Interstate and Foreign Commerce.

Also, petition of Arthur J. Westermayr, of New York City, protesting against war-time national prohibition; to the Committee on the Judiciary.

By Mr. SANDERS of New York: Petition of Edwin Cosman and 13 other residents of the town of Parma, Monroe County, N. Y., favoring national prohibition as a war measure; to the Committee on the Judiciary.

Also, petition of the Stone Church Presbyterian Society, of Le Roy, N. Y., favoring total national prohibition during the war; to the Committee on the Judiciary.

Also, petition of Mrs. John Droman and 9 other residents of Churchville, N. Y., favoring national prohibition during the war; to the Committee on the Judiciary.

By Mr. SHOUSE: Petition of citizens of Iuka, Claflin, and Kendall, all in the State of Kansas, favoring the prohibition of foodstuffs in the manufacture of liquors; to the Committee on Agriculture.

Also, memorial of citizens of Stafford, Kans., urging amendment to prohibit polygamy; to the Committee on the Judiciary.

By Mr. SLOAN: Petition of Mrs. O. Fenstermacher and 27 others, of Cedar Bluffs, Nebr., favoring prohibition; to the Committee on the Judiciary.

By Mr. SMITH of Michigan: Petition of C. B. Whiple and 14 citizens of Battle Creek, Mich., against an increase on first-class or letter mail rates; to the Committee on Ways and Means.

By Mr. TAGUE: Petitions of Brotherhood of Painters, Decorators, and Paperhangers of America, Pattern Makers' Association, and citizens of the United States, relative to food control; to the Committee on Agriculture.

Also, petition of People's Council of America, relative to democracy and terms of peace; to the Committee on Foreign Affairs.

Also, memorial of the Massachusetts Medical Society, of Boston, Mass., relative to sanitary conditions arising in connection with the establishment of military camps; to the Committee on Military Affairs.

Also, petition of New England Newspaper Alliance against tax on newspaper advertising; to the Committee on Ways and Means.

Also, petition of Providence (R. I.) Wholesale Drug Co., against levying a tax on alcohol; to the Committee on Ways and Means.

Also, memorial of National Association of Game and Fish Commissioners, favoring passage of House bill 2612, migratory-bird treaty; to the Committee on Foreign Affairs.

Also, memorial of Industrial Traffic Conference of New England, against bill to increase membership of the Interstate Commerce Commission; to the Committee on Interstate and Foreign Commerce.

By Mr. TILLMAN: Petition of citizens of Trident, Ark., and vicinity, favoring prohibition as a war measure; to the Committee on the Judiciary.

Irwin and 37 others, of Doylestown; and C. W. Green and 72 others, of Quakertown, all in the State of Pennsylvania, favoring prohibition; to the Committee on the Judiciary.

SENATE.

FRIDAY, *June 22, 1917.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, we thank Thee for the spirit of the American people that has responded with such high resolve, with such deep devotion, to the call of divine providence to make stable and sure our homeland and to maintain the high ideals which have come to us through divine inspiration. We thank Thee that we are sure that the God of hosts is with us, that the God of Jacob is our refuge. We pray that we may address ourselves to the task of making ready for any issue that may present itself. Enable us to make a democracy which is fit for a free people and raise an ensign that will attract to it those who love liberty and justice the world around. Guide us in the discharge of the duties of this day. We ask for Christ's sake. Amen.

The Secretary proceeded to read the Journal of yesterday's proceedings, when, on request of Mr. HITCHCOCK and by unanimous consent, the further reading was dispensed with and the Journal was approved.

Mr. HITCHCOCK. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hitchcock	McNary	Simmons
Beckham	Husting	Martin	Smith, Md.
Brady	James	New	Smith, Mich.
Brandegee	Johnson, Cal.	Norris	Smith, S. C.
Calder	Johnson, S. Dak.	Overman	Smoot
Chamberlain	Jones, Wash.	Page	Sterling
Colt	Kellogg	Penrose	Sutherland
Culberson	Kendrick	Phelan	Thomas
Cummins	Kenyon	Pittman	Thompson
Curtis	King	Poindexter	Townsend
Dillingham	Kirby	Pomerene	Trammell
Frelinghuysen	Knox	Ransdell	Vardaman
Gallinger	La Follette	Saulsbury	Wadsworth
Gerry	Lewis	Shafroth	Warren
Gore	McKellar	Sheppard	Weeks
Hale	McLean	Sherman	Wolcott

Mr. SUTHERLAND. I wish to announce the absence of my colleague, the senior Senator from West Virginia [Mr. GOFF], on account of illness. I ask that this announcement may stand for the day.

Mr. McKELLAR. The senior Senator from Tennessee [Mr. SHIELDS] is detained at his home by reason of illness. I will let this announcement stand for the day.

Mr. NEW. I desire to announce the unavoidable absence of my colleague [Mr. WATSON]. I will let this announcement stand for the day.

Mr. KIRBY. I wish to announce the unavoidable absence of my colleague [Mr. ROBINSON].

The VICE PRESIDENT. Sixty-four Senators have answered to their names. There is a quorum present.

PETITIONS AND MEMORIALS.

The VICE PRESIDENT presented a resolution adopted by the National Conference of Charities and Correction at its forty-fourth annual meeting at Pittsburgh, Pa., favoring national prohibition as a war measure, which was ordered to lie on the table.

He also presented the memorial of R. G. Caldwell, of New York City, N. Y., remonstrating against the enactment of legislation to permit the brewers and distillers of the country to continue the consumption of food products in the manufacture of intoxicating liquors, which was ordered to lie on the table.

Mr. GALLINGER presented petitions of Edith P. Flanders, of Grasmere; of Mrs. H. A. Cutting, of Newport; and of the Quarterly Conference of the Methodist Episcopal Church, of Newfields, all in the State of New Hampshire, praying for national prohibition, which were ordered to lie on the table.

Mr. KENDRICK. I present petitions signed by a large number of citizens of Cheyenne, Douglas, Torrington, Cokeville, Basin, Kemmerer, Casper, Cowley, Cody, Riverton, Encampment, Wheatland, Greybull, and Luck, all in the State of Wyoming, favoring the enactment of legislation to conserve foodstuffs by prohibiting the manufacture of alcoholic liquors from food products. I ask that the petitions be referred to the Committee on Agriculture and Forestry.

The VICE PRESIDENT. Without objection, they will be so referred.

Mr. FRELINGHUYSEN presented a resolution adopted by the Central Labor Union of Perth Amboy, N. J., favoring Federal control of food products, which was ordered to lie on the table.

He also presented a petition of the Interchurch Federation of Trenton, N. J., and a telegram in the nature of a petition from the congregation of the Third Reformed Christian Church of Paterson, N. J., praying for national prohibition during the war, which were ordered to lie on the table.

He also presented a petition of the New Jersey State Federation of Labor, praying for the passage of the so-called Lever food bill, which was ordered to lie on the table.

He also presented a memorial of the Painters' Local Union of Long Branch, N. J., remonstrating against the enactment of legislation to prohibit the manufacture of beer and light wines, which was ordered to lie on the table.

Mr. JONES of Washington. I have a telegram calling attention to the oil situation on the Pacific coast and urging very strongly that some legislation be passed by Congress. It calls attention to the fact that they are threatened with a very serious oil shortage for transportation and manufacturing purposes. I move that the telegram be referred to the Committee on Public Lands, which is, I think, considering a bill dealing with that matter.

The motion was agreed to.

Mr. PHELAN presented a petition of sundry citizens of Campbell, Cal., and a petition of sundry citizens of Perris, Cal., praying for national prohibition, which were ordered to lie on the table.

Mr. McLEAN presented petitions of sundry citizens of New Britain, of the Trades Council of New Haven, and of Local Union No. 1341, Carpenters and Joiners of America, of Unionville, all in the State of Connecticut, praying for Federal control of food products, which were ordered to lie on the table.

He also presented petitions of sundry citizens of East Glastonbury, of the Congregation of the First Methodist Episcopal Church of Bridgeport, and of Cheney Bros., of South Manchester, all in the State of Connecticut, praying for national prohibition as a war measure, which were ordered to lie on the table.

He also presented a petition of Local Union No. 350, International Alliance of Theatrical State Employees and Moving Picture Operators, of Meriden, Conn., and a petition of Local Union No. 273, International Alliance of Theatrical Stage Employees and Moving Picture Operators, of New Haven, Conn., remonstrating against the proposed tax on theaters, which were referred to the Committee on Finance.

Mr. TOWNSEND presented petitions of the congregation of the Methodist Episcopal Church of Ann Arbor; of the congregation of the Presbyterian Church of Bay City; of sundry citizens of Hastings; of the congregation of the Methodist Episcopal Church of North Bay City; of sundry citizens of Detroit; of the congregation of the Methodist Episcopal Church of Ludington; of the Greater Hart Association, of Hart; and of sundry citizens of Middleville and Boyne City, all in the State of Michigan, praying for national prohibition during the period of the war, which were ordered to lie on the table.

Mr. COLT presented the memorial of Nathan W. Littlefield, of Providence, R. I., remonstrating against the waste of material resources in the manufacture of intoxicating liquor, which was ordered to lie on the table.

He also presented petitions of the Rhode Island Baptist Sunday School Convention; of the woman's class of the First Baptist Church of Providence; of the Hope Valley Grange, No. 7, Patrons of Husbandry; of the Roger Williams Association of the Baptist Churches of Rhode Island; and of the Swedish-American Good Templars, all in the State of Rhode Island, praying for national prohibition as a war measure, which were ordered to lie on the table.

He also presented resolutions from Harry J. Williams and 11 other citizens of Rhode Island, and from the Carpenters' Local Union No. 859, of Providence, R. I., pledging support to the Government in time of war, which were ordered to lie on the table.

Mr. KING. I desire to have printed in the RECORD a resolution adopted at the tenth annual convention of the convocation of the Episcopal Church in Utah, and I ask its reference to the Committee on Finance.

There being no objection, the resolution was referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

The following resolution was adopted by the tenth annual convocation of the Episcopal Church in Utah, held in Salt Lake City, June 7–8, 1917:

"*Resolved*, That the tenth annual convocation of the Episcopal Church in Utah urges upon the Utah Senators and Representatives in Congress and upon the chairman of the Finance Committee of the Senate exemption in the present Federal estate tax law for all educational, philanthropic, and religious bequests, legacies, and gifts, and that the secretary of convocation be instructed to convey this expression to the persons named."

HOYT E. HENRIQUE, *Secretary.*

POSTAGE ON SECOND-CLASS MAIL MATTER.

Mr. KING. I ask that the following editorial, appearing in the Deseret News, one of the leading newspapers published in Utah, be referred to the Committee on Finance without reading and that it be printed in the RECORD.

There being no objection, the editorial was referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

RUINOUS DISCRIMINATIONS.

Few concerns have been so severely struck by the war as newspaper publishers. Statistics say that within the last year over 700 country papers have suspended publication owing to the ever-mounting prices of print paper and other materials entering into the cost of publication.

The first great daily to announce that it is hard hit is the Baltimore News. It has not suspended, but the owner, Mr. Stewart Oliver, who bought the paper in 1915 from Frank A. Munsey, has just announced that the property has reverted to its former owner. The editorial says:

"Nothing would have given me greater pleasure than to continue as owner of the News, but the war has created entirely new conditions—terrifying costs of production—and it seemed to me the wiser course to lodge ownership of a rich and influential property, an institution like The News, in the strongest possible hands. No one business has had to bear a heavier increase in cost of production as the result of the world-wide war than the daily newspapers. Mr. Munsey's willingness under the circumstances to repurchase the property is in every way characteristic of his generosity and kindness."

It is estimated that had the increase in second-class mail rates recently adopted by the House but struck out by the Senate, become the law of the land it would have closed up hundreds of newspapers having large country circulations and turned thousands now fairly profitable into a losing venture. The four Salt Lake papers were among those who telegraphed protests against the House measure. Their postage bill to the Government is now approximately $40,000 a year, and the law proposed would have trebled it at least. The cost of paper has advanced from 100 to 150 per cent in the last two years, with everything else in proportion.

As The Deseret News stated recently, the newspapers of the country are willing to stand their just share of the burdens of the war. None of them objects to the imposition of regular taxes, as well as taxes on profits or excess profits such as other industries are subjected to. But to single out the newspaper industry by taxing its advertising revenue, or to prohibit circulation through the mails (which the increase in rates on second-class postage practically amounts to) becomes a discrimination which all publishers are justified in resisting.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. KENDRICK:

A bill (S. 2493) to amend section 3 of an act entitled "An act to provide for stock-raising homesteads, and for other purposes," approved December 29, 1916; to the Committee on Public Lands.

By Mr. McNARY:

A bill (S. 2494) to provide for the exchange with the State of Oregon of certain school lands and indemnity rights within the national forests of that State for an equal area of national forest lands; to the Committee on Public Lands.

By Mr. SWANSON:

A bill (S. 2495) to amend section 1585 of the Revised Statutes of the United States; to the Committee on Naval Affairs.

By Mr. WARREN:

A bill (S. 2496) for the refund of duties paid on materials destroyed by fire; to the Committee on Finance.

By Mr. KNOX:

A bill (S. 2497) for the relief of James W. Cross; to the Committee on Claims.

A bill (S. 2498) granting an increase of pension to John V. Reed (with accompanying papers); to the Committee on Pensions.

By Mr. CHAMBERLAIN:

A bill (S. 2499) granting an increase of pension to Sanford Smith (with accompanying papers); to the Committee on Pensions.

By Mr. OWEN:

A bill (S. 2500) to establish direct contact between the people and the National Government by the creation of the war information commission; to the Committee on Education and Labor.

WAR REVENUE.

Mr. McKELLAR. submitted an amendment intended to be proposed by him to the bill (H. R. 4280) to provide revenue to defray war expenses, and for other purposes, which was referred to the Committee on Finance and ordered to be printed.

RIVER AND HARBOR APPROPRIATIONS.

Mr. McNARY submitted two amendments intended to be proposed by him to the river and harbor appropriation bill (H. R. 4285), which were referred to the Committee on Commerce and ordered to be printed.

INVESTIGATION OF ATTEMPTS TO INFLUENCE LEGISLATION.

Mr. GORE submitted the following resolution (S. Res. 91), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That the committee appointed in pursuance of Senate resolution No. 92, Sixty-third Congress, first session, be, and is hereby, extended, with authority to make, from time to time, such investigations as were authorized therein and other investigations affecting the public interest or the rights of citizens, and the provisions of said Senate resolution in relation to expenses, the subpœnaing of witnesses, the production of books and papers, and other powers, are hereby extended and made a part of this resolution.

THE COMMITTEE ON INTERSTATE COMMERCE.

Mr. NEWLANDS submitted the following resolution (S. Res. 92), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That the Committee on Interstate Commerce, or any subcommittee thereof, be, and hereby is, authorized during the Sixty-fifth Congress to send for persons, books, and papers; to administer oaths, and to employ a stenographer, at a cost not exceeding $1 per printed page, to report such hearings as may be had in connection with any subject which may be pending before said committee, the expenses thereof to be paid out of the contingent fund of the Senate; and that the committee, or any subcommittee thereof, may sit during the sessions or recess of the Senate.

RECEPTION OF BELGIAN MISSION.

Mr. MARTIN. Mr. President, in order that Senators may have an opportunity to be presented to the distinguished representatives of Belgium who are now in the city as the guests of the Nation, I move that the Senate take a recess for 30 minutes.

The motion was agreed to.

The VICE PRESIDENT. The Chair appoints Mr. MARTIN, Mr. GALLINGER, Mr. HITCHCOCK, Mr. SAULSBURY, Mr. POMERENE, Mr. SMITH of Michigan, Mr. McCUMBER, and Mr. BORAH as a committee to introduce our distinguished guests to the Senate.

The Senate thereupon took a recess for 30 minutes.

At 12 o'clock and 15 minutes p. m. the members of the Belgian mission to the Government of the United States were escorted by the committee appointed by the Vice President into the Senate Chamber, the members of the mission being Baron Moncheur, chief of the political bureau of the Belgian foreign office at Havre; Gen. Leclercq, cavalry officer of the Second Regiment of Guides, and at one time commander of the First Division of Cavalry; M. Hector Cartier, counselor of the mission; Maj. Osterrieth, of the First Regiment of Guides; Count Louis d'Ursel; and Mr. Jean Mertens, secretary of the mission.

Monsieur E. de Cartier de Marchiennes, the Belgian minister; Hon. Breckinridge Long, Assistant Secretary of State; Mr. Hugh Gibson, of the State Department; and Capt. T. C. Cook, United States Army, accompanied the mission into the Senate Chamber.

Baron Moncheur was seated on the right of the Vice President and Minister Marchiennes upon his left.

ADDRESS BY THE VICE PRESIDENT.

The VICE PRESIDENT. Senators, since that far-off, unrecorded hour when our ancestors began their slow westward movement, unnumbered and unremembered thousands have died upon the field of battle for love, for hate, for liberty, for conquest, as freemen or as slaves. Every note in the gamut of human passion has been written in the anvil chorus of war. Many have struck the redeeming blow for their own country, but few have unsheathed their swords without the hope of self-aggrandizement. It remained for little Belgium to write a new page in the blood of her martyred sons and daughters in the annals of diplomacy [applause], to inscribe thereon that the dishonor of a people is the aggregate of the selfishness of its citizens; that the honor of a people is the aggregate of the self-sacrifice of its citizens; that treaties are made to be kept, not broken; that a people may dare to walk through "the valley of the shadow of death" touching elbows with their convictions, but that they dare not climb to the mountain tops of safety if thereby they walk over the dead bodies of their high ideals [applause]; that a people may safely die if thereby they can compel an unwilling world to toss upon their new-made graves the white lily of a blameless life.

Here, Senators, ends all I know, and here begins what I believe: Belgium shall arise. [Prolonged applause.] The long night of her weeping shall end; the morning of a day of joy shall break over her desolated homes, her devastated fields, and her profaned altars. When it breaks, humanity will learn that when mankind gambles with truth and honor and humanity the dice of the gods are always loaded. [Applause.]

To me, in all profane history, there is no sadder, sweeter, sublimer character than Sidney Carton. Dreamer of dreams, he walked his lonely, only way. In all the history of nations there is no sadder, sweeter, sublimer story than the story of Belgium. [Applause.] Doer of deeds, she, too, has walked her lonely, only way—the Via Dolorosa that leads to duty, death, and glory. [Great applause.] Out of the depths and across the

deeps the representatives of the remnant of her people and the guardians of her honor have come to us this day.

I present to you the chairman of that mission, Baron Moncheur. [Applause.]

ADDRESS BY BARON MONCHEUR.

Baron MONCHEUR. Mr. President and gentlemen of the Senate, when some years ago I had the honor of representing the Government of my King in the United States, I often came to the Senate where I listened with deep interest to the debates of your distinguished body. In those times I never thought that some day it would be my privilege to speak from this historic tribune.

When the Vice President was kind enough to ask me to address the Senate, I admit that at first I hesitated to accept his gracious invitation.

How should I dare to speak in this Chamber, which has resounded to the eloquence and wisdom of so many distinguished statesmen whose utterances from this tribune have changed the history of the world?

How should I venture to address this body to which the distinction, the talent, and the wisdom of its Members have given a unique place among the legislative assemblies of the world?

If, gentlemen, I have finally succeeded in overcoming this natural hesitation, it is only because of my great desire to express, as well as my words will permit, the gratitude and admiration which the whole Belgian nation feels toward the American people and toward their Government.

You all know the unspeakable evils which have befallen my unfortunate country—the unprovoked invasion accompanied by a deliberate system of terror, the burning of many of our thriving cities and of innumerable villages, the massacre of thousands of our peaceful citizens, the pillage and devastation of our country.

Then followed the iron hand of foreign domination, enormous war contributions exacted from all the nine Provinces of Belgium, ruinous requisitions of all sorts from our people, the seizure of the raw material of industry, and even the theft of our machinery which was sent into the country of our enemy for his own use, so that now the silence of death reigns in our industrial centers which before had been the most active in Europe.

You also know, gentlemen, the way in which this régime of oppression has been carried out—80,000 Belgians condemned, in the space of one year, to various penalties for having displeased the invader; as, for example, the noble burgomaster of Brussels, who has been in imprisonment for the past two years for trying to uphold the principle of civic liberty which for centuries has been so dear to all Belgians.

You have learned also of the deportation of our workmen into Germany—a crime the horrors of which, according to the opinion of one of your countrymen, should cause more indignation throughout the entire world than all the previous outrages against the sacred principles of justice and of humanity.

But Belgium, even in the midst of the terrible misfortunes which have been brought upon her by her fidelity to treaties and by respect for her plighted word, does not regret her decision, and there is not a single Belgian worthy of the name who does not now, as on the first day of war, approve the judgment of our Government that it is better to die, if need be, rather than to live without honor. [Prolonged applause.] Like Patrick Henry, all Belgians say, "Give me liberty or give me death." [Applause.]

This sentiment will be shared by all the citizens of the great American Nation, who responded with such enthusiasm and with such unanimity to the noble words of your President when, in terms which held the world spellbound, he proclaimed the imprescriptible right of justice over force.

The courage of my fellow countrymen has been strengthened, also, by the sympathy for our misfortunes which has been manifested throughout your great land. American initiative has bestowed most generous help upon our starving population, and, in offering from this tribune the expression of gratitude of every Belgian heart, I wish also to render special homage to that admirable organization, the commission for relief in Belgium, which has done so much to save our people from starvation. [Applause.]

Yes, gentlemen, the sympathy of America gives us new courage; and while King Albert [applause], who since the fateful day when our territory was violated, has remained steadfastly at the front, continues the struggle with indomitable energy at the head of our army intrenched upon the last strip of our soil that remains to us, while the Queen [applause], that worthy companion of a great sovereign, expends her unceasing efforts to comfort and relieve the victims of battle, exciting enthusiasm by her contempt for the danger to which she exposes herself day by day, on the other side of the enemy's line of steel stand the Belgian people, bowed beneath the yoke but never conquered, maintaining their unshaken patriotism in spite of the seductions of the enemy as well as in spite of his iron rule, the Belgian population, a martyr whose courage is upheld by our great Cardinal Mercier, awaits silently in the sacred union of all parties the final hour of deliverance. [Great applause.]

That hour, gentlemen, will, I am convinced, be materially hastened by the powerful aid of the United States, and the time approaches when Belgium, restored to full and complete independence, both politically and economically, will be able to thank in a fitting manner all those who have aided her to emerge from the darkness of the tomb into the glorious light of a new life. [Prolonged applause.]

The VICE PRESIDENT. Baron Moncheur and the members of the mission will take pleasure in meeting the Senators.

The members of the Belgian mission took their places at the left of the Vice President's desk, and the Members of the Senate were presented to them by the committee appointed by the Vice President.

The distinguished visitors were escorted from the Chamber; and at 12 o'clock and 45 minutes p. m., upon the expiration of the recess, the Senate reassembled.

PRICE OF STEEL.

Mr. VARDAMAN. Mr. President, I have about concluded that eternal vigilance on the part of Congress is the price of a square deal when the Congress is dealing with the financial or commercial bandit who would take advantage of the exigencies of war to rob and plunder the Government of the United States.

That the American people may understand the character of the men with whom the Shipping Board are treating in the matter of securing material with which to build the great steel merchant fleet, I am going to ask permission to insert in the RECORD an article taken from the Washington Herald of the 22d instant. I send it to the desk and ask the Secretary to read it.

The PRESIDENT pro tempore. Without objection, the Secretary will read as requested.

The Secretary read as follows:

DENMAN THREATENS STEEL INVESTIGATION—CONGRESS ANXIOUS TO SEE BUILDING OF MERCHANT FLEET STARTED.

Congressional investigation of the steel industry of the country is the whip that Chairman William Denman, of the Shipping Board, held over the head of President Farrell, of the United States Steel Corporation at the end of a long conference held here yesterday in an effort to fix the price of steel for America's new merchant fleet.

Chairman Denman told the head of the steel company that under no circumstances will this Government go above $56 a ton for steel plates, the price fixed for plates for our war vessels. The only alternative to acceptance of this price, Mr. Denman said, was a thorough airing of the whole question by a committee of Congress.

The conference broke up with neither side willing to recede from its position. There is little doubt that unless a compromise can be arranged in the next few days that Congress will act speedily. The Members of both Houses are pretty well stirred up over the entire shipping situation and are anxious to see some action that will start building of ships.

The alarming increase in submarine sinkings just announced has not improved the temper of the men who voted $750,000,000 for ships and who would now like to see the laying of a few ship ways. It is not at all likely that if a congressional committee is appointed it will content itself with merely inquiring into the cost of steel, but it will demand to know what the Shipping Board and Emergency Fleet Corporation are doing as well.

Mr. VARDAMAN. Mr. President, I should not protest against this seemingly unwarranted, inexcusable exaction, or probably, I should say, inexcusable extortion, on the part of the representatives of the Steel Trust, if it were necessary to maintain the financial stability of the enterprises they represent; but the following statement published in the New York Evening Post of the 18th instant shows that the steel corporations do not need such favoritism, but are prospering beyond the dreams of avarice. Such profits as they have enjoyed for the last three or four years ought not to be permitted even in normal times. If they do not actually reach the illegitimate, they border closely on to the criminal. I shall read the statement:

The Steel Corporation earned $104,000,000 in 1911, $108,000,000 in 1912, and $137,000,000 in 1913, making an average of $116,000,000. In the first quarter of this year the corporation earned $113,000,000, or at a rate of $452,000,000 a year. It is now estimated to be earning at a rate of $520,000,000. Take the conservative figure of $464,000,000, or an increase of 300 per cent over the three-year average, ignoring the phrase "and the excess of last year," these earnings would bear a tax of 75 per cent on the excess; the tax would be $261,000,000, leaving profits at $203,000,000.

There is no sign of that leanness which war usually brings to legitimate business in the record of these figures.

Mr. President, when we consider that $30 per ton for this steel would bring a fair return to the stockholders of the companies manufacturing it the demand of $95 which is made upon the Government of the United States is a holdup pure and simple. It does not differ in morals from the act of a man who, at the point of a pistol, would force the wayfarer to stand and deliver his hard-earned cash. Really I have more respect for the morality of the highwayman's conduct, because he stakes his

liberty against the success of his undertaking, while the Steel Trust magnate risks nothing.

The Congress is considering the question of taking the products of the farm, fixing a price which will give the farmer scant returns for his labor, and distributing those products among the people. The excuse for this extraordinary act is the fact that we are at war, and that every man who loves the flag should willingly make a sacrifice in the interest of his country and his fellow man; and in that I most heartily concur. But it is a lamentable fact that these men, with their hoarded millions, enjoying all the luxuries of life, are taking advantage of the Nation's necessities to enhance still further their unholy, criminal hoarding. Congress ought to investigate this matter and let the American people understand the character of these plutocratic "patriots" who some months ago were so sensitive of the Nation's honor that they wanted to force the country into war in order that they might preserve its good name untarnished. They were willing to sacrifice men and other people's money to the last man and dwindling farthing, rather than see the American Nation suffer unresented an insult. The fact is, I believed then and I believe now, that their desire for war was inspired by a greater desire on their part to furnish them an opportunity to rob and plunder the people and the Government, and profit by the Nation's misfortune. It is a spectacle that is not very alluring or elevating to the American youth. The President of the United States has the power to commandeer these steel plants, and he ought to do it. And he should do it at once.

If after using the plants the Government is able to pay the stockholders dividends on the output under Government control, the Government should pay it. I am willing that they shall have a fair return upon their investments. I am not asking for charity for the Government at the hands of these men. But, on the other hand, if the exigencies of the situation should demand it, then the Government should use these plants without profit. I do not think it would be an injustice under the circumstances to return the plants to their owners after the war is over, even without profit to them, in as good condition as when they were taken over by the Government. If it becomes necessary for the Government to conscript its citizens, force them to leave their homes, their families, and vocations, and if need be give their lives in defense of the flag, I think the owners of these steel enterprises can well afford to permit the Government to operate their plants without special profit to the owners. It is as little as patriotic men under the circumstances could give. In the name of God and humanity, has the dollar become more sacred than human life? Are profits to be held by this Government of more importance than human souls or broken hearts? The patriotic mothers do not complain when their sons are torn from their loving bosoms and fed to the god of war in defense of a righteous cause. The loyal loving wives have cheerfully surrendered their devoted husbands to be sacrificed upon the altar of the country's cause. Then, I repeat, would it be inhuman, unjust, or in the remotest degree unfair to conscript the wealth of these men who have grown richer and richer still out of this unfortunate world-wide disaster?

I simply desired to call attention to this affair, and to submit these observations, in order that the American people may know just what is being done and that Congress may be put on guard.

I am going to ask to insert in the RECORD also an editorial which apepared in the Washington Herald of this morning, defending the action of the agents or officers of the Steel Trust. I want it published in the RECORD, because I think it carries with it its own refutation, and but accentuates the indefensibility of the outrage which is attempted to be perpetrated upon the American people.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and the article will be published in the RECORD.

Mr. GALLINGER. Mr. President, I will ask the Senator from Mississippi if the article is of considerable length; or is it brief?

Mr. VARDAMAN. I shall be very glad to read it, if the Senator desires it read, and I hope Senators will listen with discriminating minds to the reading.

Mr. GALLINGER. I thought the Secretary might read it, or the Senator himself.

Mr. VARDAMAN. I shall read it.

Mr. GALLINGER. I should like to hear it.

Mr. VARDAMAN. The article is headed:

"STIMULATION BY STRANGULATION."

"This is not only not a time to allow any slowing up of business," said President Wilson, in his letter to the Merchants and Manufacturers' Exchange of New York, "but it is a time when every sensible process of stimulation should be used."

This splendid sentiment goes to the very root of the requirements of a war waged for victory. "Every sensible process of stimulation should be used." Stimulation of what? Stimulation of everything needed by this Nation and the other nations fighting for the liberty of the world. Stimulation of food production, stimulation of woolen goods, of cotton goods, of shoes, of clothing, of steel, of copper, of ships, of rails, of locomotives, of cars, of motors, of airplanes, of munitions. The reverse of the President's pronouncement is that every foolish process of strangulation should be prohibited.

Now, this brings us face to face with the latest situation, in which Mr. Denman, of the Shipping Board, and Maj. Gen. Goethals figure. The President can take care of this controversy, but there are a few general principles which should be stated in connection with the rage for price cutting of commodities, which appears to be symptomatic of peace delay rather than war hurry. Mr. Denman isn't going to pay $95 a ton for steel when Mr. Daniels, the Secretary of the Navy, is getting it at $30. Mr. Daniels obtained an agreement for steel by the use of the club. Since he obtained it the price of steel has steadily advanced with the demand and the cost of production. He is taking a good many dollars out of the pockets of the stockholders of the steel establishments with each ton of steel, because it is furnished at a loss. That loss is increasing every day with the growing costs of labor and material.

Steel at $95 a ton may not represent a profit, because the cost of production has increased much more rapidly than the price. The aim of the producers of all the basic metals has been to increase output. The men in charge of the great industries long ago saw the necessity of stimulating production. Their concern has been to supply the materials so that there should be no strangulation in finished product output because of scarcity. They have placed faith in the President and his assistants, believing that they would do nothing which would cause stagnation because of heavy losses. In other words, the manufacturers have had the courage to go ahead only to run against a policy of strangulation. Emma Goldman and her pacifist and anarchist followers can not do as much harm to the cause we are fighting for as will be done by this process of commandeering profits. With the vanishing of profits, wages will come down, and what will Mr. Gompers have to say about that?

Think seriously for a minute where this course is bound to lead. The Government expects the men whose fortunes are invested in the steel, copper, lead, woolen, oil, cotton, machine, milling, and packing industries to keep their establishments going at high speed. It expects them to pay very heavy income taxes. It expects to impose heavy taxation on profits, regardless of past losses and extra risks. It expects them to take liberty loan bonds amounting to no one knows how many billions, the next one being due in less than three months.

I will digress just at this point to observe that I do not think there is a great deal of charity in taking a liberty bond. The bonds of the United States are a very good investment, and this particular bond furnishes a safe retreat from taxing money that would better serve mankind if it were invested in developing the farms and building homes throughout the Republic.

It expects them to pour out their money liberally for war relief.

Yet they rob the Government of $30 a ton for the steel and then give 1 per cent to the Red Cross. That charity is a good investment.

They are doing it and doing it in a way to command praise.

Yes; I think they are doing it for that purpose. But the public will not be deceived by such peculiar manifestations of patriotism.

But the Government can make it impossible for them to do their part much longer.

If business is to be conducted at a loss it is not merely going to slow down, it is going to stall. Business can not help itself. It will have to yield to the Three Tailors of Tooley Street—it is not necessary to name them. What, then, is going to happen to the revenues, to say nothing of the loans? And what happens to the cause to which the President has dedicated the country in lofty phrases?

President Wilson's words on stimulation of business should be placed above the desk of every official of the Government and of every Member of the Congress of the United States:

"This is not only not a time to allow any slowing up of business, but it is a time when every sensible process of stimulation should be used."

Mr. CALDER. Mr. President, I agree with the Senator from Mississippi that $95 a ton is an extraordinary price for steel. I know that in New York those buying in small quantities for building operations from the middleman who buys from the steel company are paying as high as $120 a ton for steel.

Mr. President, 35 cents a pound for copper is an extraordinary price, even in war times, and $120 a ton is an excessive price for steel. So is $3 a bushel for wheat, and if these prices continue no one can foretell what the future may have in store. But I am sure the Senate would like to be informed of some of the real facts regarding the steel situation. I conferred recently with a shipbuilder, a man who is constructing 10 cargo-carrying vessels for the Shipping Board at his yard in the State of Washington. Like the excellent business man he is, he contracted a year ago for steel for 1918 at approximately $35 a ton. He has turned his contract over to the Shipping Board and will deliver these 10 cargo-carrying ships to the Shipping Board on the basis of his contract made last year. So at least 10 of these cargo-carrying ships have been purchased at a price a great deal less than the figures quoted by the Senator.

CALLING OF THE ROLL.

The PRESIDENT pro tempore. If there is no further morning business, the morning business is closed.

Mr. GALLINGER. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Senator from New Hampshire suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Kellogg	Norris	Sterling
Borah	Kendrick	Overman	Sutherland
Chamberlain	Kenyon	Page	Swanson
Culberson	King	Phelan	Thomas
Curtis	Kirby	Pittman	Thompson
Fletcher	Lewis	Poindexter	Townsend
Gallinger	McCumber	Ransdell	Trammell
Gore	McKellar	Reed	Underwood
Hale	McLean	Saulsbury	Vardaman
Husting	McNary	Sheppard	Wadsworth
James	Martin	Sherman	Walsh
Johnson, Cal.	Nelson	Smith, Ariz.	Warren
Johnson, S. Dak.	New	Smith, S. C.	Wolcott
Jones, Wash.	Newlands	Smoot	

Mr. McKELLAR. As has heretofore been announced, the senior Senator from Tennessee [Mr. SHIELDS] is absent on account of illness.

Mr. KIRBY. I desire to announce the unavoidable absence of the Senator from Arkansas [Mr. ROBINSON]. I ask that this announcement may stand for the day.

The PRESIDENT pro tempore. Fifty-five Senators have answered to their names. There is a quorum present.

CONSERVATION OF FOOD AND FUEL.

Mr. GORE. Mr. President, I have a letter and a telegram which I should like to have read into the RECORD.

Mr. CHAMBERLAIN. If the Senator will yield to me for a moment——

Mr. GORE. I yield.

Mr. CHAMBERLAIN. I ask that the unfinished business be laid before the Senate. There is really nothing before the Senate.

The PRESIDENT pro tempore. The Chair lays before the Senate the unfinished business, which is Senate bill 2463.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 2463) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

The PRESIDENT pro tempore. The Senator from Oklahoma asks that the Secretary may read a letter and a telegram. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

KINGFISHER, OKLA., *June 19, 1917.*

Hon. THOMAS P. GORE,
Washington, D. C.:

DEAR SENATOR: Wheat in this part of the State will average about half a crop. The expense of harvesting and thrashing this year is much greater than usual. The Harvester Trust has put up the prices of binders and headers about $50 apiece. Twine is 18 cents a pound, against 11 last year. Labor is higher. It is very dry here and the corn crop is in great danger just now. Everything the farmer buys is a great deal higher. If this part of the State averages half a crop of everything this year we will be lucky.

In the newspapers we see a great deal of talk about the Government regulating the price of foodstuffs. Of course, if any regulating is to be done, it will be the farmer that will be "regulated." He is not organized and can't make his influence felt as the trusts can that are thoroughly organized and keep their paid agents in Washington all the time. The farmer is not in shape to protect himself.

It looks like the law of supply and demand would give the farmer a good price this year for the little he will have to sell if the Government does not interfere to put a price on his stuff. Of course, everybody else will say that a price should be put on what the farmer raises because he produces the food of the country and it wont do to let the people starve. The manufacturer and others who employ labor want a price put on farm products so that the labor they employ can live cheaply on the wages they pay. At the prices the manufacturer pays for labor he is selling his goods too high. Let him pay his labor prices high enough to enable them to buy food at the price fixed by supply and demand.

With a famine threatening the whole world at present, the farmer should be encouraged to do his best, and the "regulating" should be done somewhere else along the line. Everybody else lives off of the farmer. He is considered an easy mark.

As your constituents are mainly farmers, I know that you will look after their interests. I have talked with a great many and I know that they want no "regulating" of prices while the stuff is in their hands. I noticed by the papers this morning that the speculators put wheat down 10½ cents yesterday. They know that there is every year a certain per cent of farmers who must sell as soon as they thrash; that they can not hold their wheat because of debts that must be paid at once. The speculators expect to get this wheat this year for about half what it is worth. Monopolists and speculators should be regulated to the bone.

Respectfully,

W. S. WHIRLOW.

DENTON, TEX., *June 21, 1917.*

Hon. T. P. GORE,
United States Senate, Washington, D. C.:

Representing leading wheat county in Texas we applaud your efforts in interest of the wheat farmer and against the food-control bill. High cost of living is not due to price of wheat, as 3 cents worth of flour will feed a man. Setting a maximum price for wheat would be a fatal error. The minimum price of $2 per bushel even would drive southern farmers to cotton on account of cost of wheat machinery and would result in material reduction of wheat acreage. We wish you success in your efforts.

EXCHANGE NATIONAL BANK.
FIRST NATIONAL BANK.
DENTON COUNTY NATIONAL BANK.
FIRST GUARANTY STATE BANK.

Mr. THOMPSON. I have here an editorial which appeared in the Washington Star on food control. It pertains to the pending bill, and I should like to have it printed in the RECORD. It is short.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FOOD-CONTROL NEED.

Herbert C. Hoover's statement yesterday before the Senate Committee on Agriculture should lead to wise and quick action on the food-control bill, which is now pending before that body. It was a convincing exposition of the need of a central administration of the food supply in this country, whatever the method or process. Speculation has already taken a tremendous toll from the people, estimated at a quarter of a billion dollars. If not checked the speculators will continue this taking of toll. There is no conscience apparently in that quarter Every factor in the food production and distribution system is on the make because somebody is disposed to take advantage of the present necessities of this country and its allies in war and push the prices up to the highest notch. What is started by those who control large quantities of food is continued all along the line, including middlemen and retailers, the latter pleading self-protection in justification.

This is not merely a matter of prices. It is a question of sufficient food supply for ourselves and our allies, and of victory or defeat in the war. It is a matter of distribution and effective use. Speculation in foods is always accompanied by a possible waste. In order to manipulate prices upward those who control foodstuffs in large quantities must be in a position to hold heavy consignments out of the markets from time to time, and whenever this happens there is an actual loss of products. Last season carloads of potatoes were deliberately sidetracked to prevent their arrival at a certain market where they would affect the price. The potatoes rotted in the cars. It is charged also that in the neighborhood of Chicago certain crops were bought in the fields by speculators and allowed to rot in the ground in order that they should not be put into the market and lower the prices.

Every ton of foodstuffs that is wasted is a blow at the national security. These wastes will continue so long as there is no central administration of the food supply, and no power on the part of the Government to punish those who hold products out of the market or who manipulate the prices for speculative profits. The pending bill grants that power and provides the necessary administration.

Mr. McNARY. Mr. President, I have here a telegram embodying a resolution of the Oregon State Grange, adopted in its forty-fourth annual session at Astoria, and I should like to have it read.

The PRESIDENT pro tempore. Without objection, the Secretary will read the telegram.

The Secretary read as follows:

ASTORIA, OREG., *June 15, 1917.*

Hon. CHARLES L. MCNARY,
United States Senate, Washington, D. C.:

Whereas there is now pending before the Congress of the United States a bill providing for food control: Therefore be it

Resolved, That the Oregon State Grange, in its forty-fourth annual session at Astoria, Oreg., this the 13th day of June, 1917, respectfully urge that immediate action be taken by Congress along the lines suggested by the President and Secretary of Agriculture.

C. E. SPENCE, *Master of Grange.*

RECESS.

Mr. CHAMBERLAIN. Mr. President, as no one is ready now to proceed with the discussion of the pending bill, but by half past 2 I think we can take it up again, I move that the Senate take a recess until half past 2 o'clock.

The motion was agreed to; and (at 1 o'clock and 15 minutes p. m.) the Senate took a recess until 2 o'clock and 30 minutes p. m., at which hour it reassembled.

CONSERVATION OF FOOD AND FUEL.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 2463) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

Mr. BORAH. Mr. President, before the Senator from Missouri [Mr. REED] proceeds I desire to offer an amendment to the pending bill, which I ask to have read, printed, and lie on the table.

The PRESIDENT pro tempore. The Secretary will read the proposed amendment.

The SECRETARY. It is proposed to insert as new sections the following:

SECTION 1. During the present war with Germany and when the President of the United States shall so direct, the Federal Trade Commission is hereby authorized and empowered to fix fair and reasonable prices, both wholesale and retail, of the following articles, to wit, steel, coal, oil, farm implements, fertilizers, meats, bread, flour, and such other foods as shall be designated from time to time by the President; and such articles of clothing as are usually worn by wage earners, farm laborers and laborers generally.

SEC. 2. When the price of any article shall have been fixed or established as aforesaid, the President shall issue a proclamation announcing such price or prices, and after the issuance of such proclamation no higher price shall be charged or received by anyone for said articles.

SEC. 3. That the President is hereby authorized and empowered to prescribe such rules and regulations as he may deem essential for the proper enforcement and observance of the prices fixed under this act. Any person who willfully charges or receives a higher price for any such articles than the price which shall have been fixed as aforesaid shall be guilty of a misdemeanor, and upon conviction thereof shall be fined not exceeding $5,000 or be imprisoned for not more than one year, or both.

Mr. CHAMBERLAIN. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The absence of a quorum being suggested, the Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Borah	Husting	New	Stone
Brady	James	Norris	Sutherland
Calder	Johnson, Cal.	Overman	Swanson
Chamberlain	Johnson, S. Dak.	Page	Thomas
Colt	Jones, Wash.	Ransdell	Trammell
Culberson	Kellogg	Reed	Underwood
Cummins	Kendrick	Saulsbury	Vardaman
Curtis	Kenyon	Shafroth	Wadsworth
Dillingham	King	Sheppard	Walsh
Fletcher	Knox	Simmons	Warren
France	La Follette	Smith, Ariz.	Weeks
Frelinghuysen	McCumber	Smith, Md.	Williams
Gallinger	McKellar	Smith, Mich.	Wolcott
Hale	McNary	Smoot	
Hitchcock	Martin	Sterling	

Mr. SMITH of Arizona. I wish to announce the absence of my colleague [Mr. ASHURST] on official business.

Mr. WEEKS. I wish to announce that my colleague [Mr. LODGE] is absent to meet an important engagement. I desire to have this announcement stand for the day.

The PRESIDENT pro tempore. Fifty-eight Senators have answered to their names. There is a quorum present.

Mr. REED. Mr. President, this morning, if never before, Senators who listened to the representative of Belgium and who had brought before their mental vision the picture of the ravishment of that fair country, who contrasted it with the smiling landscapes of America; Senators who thought of men and women in the thrall of military bondage and who remembered that we enjoy the blessings of liberty, and up to this time have not felt any of the horrors of war; Senators who listened and who thus thought must have had impressed upon their minds the gravity of the times, the responsibility of America in this world contest; and all who so listened surely felt that we should approach every public question in a spirit of the highest patriotism; that we should remember that every act of ours is filled with grave responsibility; and that any mistaken policy may bring incalculable ruin to the whole world. We ought to be prepared to lay aside personal interest, to put behind us personal ambition, to stand for that which we believe is right, even *though it shall* be to our own personal detriment.

We are ravishing the homes of America of their first born; we are about to ask them to imperil limb and life upon the bloody field of honor. If we, seated within these peaceful halls, ask this of others we ought to manifest that moral courage which is essential to all proper legislation. Moreover, we should not be pushed by any clamor into hasty action. Upon the other hand, there should be in all our actions that degree of speed which is consistent with accomplishment and at the same time with proper consideration and deliberation.

I refuse, so far as I am concerned, to yield anything which I deem to be a great essential. I am willing to compromise upon all matters that do not involve questions of great principle, but I am not willing to enact legislation in the teeth of the Consitution. I do not belong to that class of gentlemen who, in substance and effect, declare that when Germany created a condition of war by sinking American vessels she thereby abolished the Constitution of the United States. I decline to accept the doctrine that because Germany made war upon our commerce and upon our rights so that we have declared a state of war to exist, when we declared that state of war we also declared martial law in the United States.

I affirm, sir, that this war can be carried on better by a democracy, better by a free people, better by unchained limbs and unfettered brains, than it can be carried on by a people acting in obedience to the dictation of any man, however good or however great. I insist that military authority has its bounds and limits; I insist that, except within the war zone, the civil authority of the United States is superior to the military authority. But more of that in a moment. Just for the present, as I appeal to you for a hearing and to the country for a hearing, I desire to read to you some words recently uttered, which, I think, it would be well for all to consider:

The Federal Government through several of its departments is giving continuous consideration to the immediate problems presented and to the possibility of remedial measures. The solution will certainly not involve a Federal dictatorship, and it is highly unlikely that it will involve a dictatorship in any State or community. America does not take kindly to dictators. The difficulties, in any event, would be very nearly insuperable. We have a continent to deal with, and there are difficulties of double jurisdiction. Consider, for instance, the matter of fixing a minimum price. The Federal Government could deal only with commodities passing into interstate commerce. The States might be hampered in attempting to fix price.

That article appears under this headline, "Need of calmness in dealing with the foodstuffs situation." It is a prayer for deliberation; it is a warning that the task is bounded by the Constitution, and that the powers of Congress are limited to interstate commerce. It is the assertion that we should have no dictators in this country of any kind, and the author of that article, which was printed on the 3d day of March, 1917, was no less a person than a member of the President's Cabinet, the Secretary of Agriculture, Mr. Houston. I commend it as worthy of perusal.

In speaking at this moment of a question of deliberation, let me call your attention to the fact that no great issue is ever wisely solved by those who lose their heads. Excitement does not make for wisdom; prudence pauses and seeks to find the kernel of the wrong. It does not rush in and accept every new-fangled notion that may be presented.

We are confronted just now by extraordinarily high prices. Accordingly, we treat that question as though those prices had come to stay, and on every hand prophets rise and tell us that the winds bear only evil upon their wings, that grim starvation is to be our early fate, and ghastly scenes are painted on the canvas of the mind until terror seizes upon us. Yet, sir, as the pleasant seasons come they bring their remedy. The smiling sun and laughing rain have already helped solve this fearful problem. Why, wheat in 30 days, in 10 days' time, in 5 days' time, has fallen off 30 cents a bushel; potatoes in the last five days have dropped in the Washington market by 15 cents a peck, and in two weeks you will find them selling at less than 50 per cent of what they cost a week ago. Even the Sugar Trust, or whatever evil thing it was that advanced the price of sugar to 12½ cents a pound, is releasing its grasp, and now we are buying sugar at a discount from that price of 33⅓ per cent. Abide in patience now and let the summer bring its ripening grain, the frosts of autumn gild the hills, and the harvest's glories be gathered into the arms of our great land, and you will find that the good God has done more for man and for the solution of these difficulties than all the food dictators who have ever come upon earth.

Some men are just so constituted by nature that when a difficulty arises they grow excited. The biscuits that their wives have made one morning happen to be a little scorched, and thereupon they break up housekeeping and insist on moving to a hotel, whereat they starve until homemade biscuits have attractions which they never had before. Some men, discovering the plumbing out of order in their house, would burn the house or would declare all plumbing to be a failure; but other men, however great the risk, would get a plumber and would fix the leak. That there are evils in the present condition of affairs that may be remedied all candid men admit; but that because some evil men have speculated in foods it is therefore necessary to enact legislation that will destroy the right of honest men freely to deal in food I utterly deny.

Some rogues have violated the statutes of our land, forestalled our markets, and in total defiance of our laws created monopolies and placed dishonest hands upon the earnings of the people. But because such men exist it does not follow that we should take the property from those who honestly administer it. Some men there are who will pause and think of these grave questions, using the intelligence that nature gave to them, and some will even dare to think within this Hall. To such men I make an appeal for audience and sound judgment, and if when that is given my associates shall find occasion to differ from all that I have said, I then shall be content.

Mr. President, it has been asserted that no food dictatorship is proposed. I assert that this bill is a food-dictatorship bill, and that if its powers are employed the farmer's crops in field or bin, the merchant's stock in transit or on shelves, the manufacturer's products in raw or finished state, the very mines of the earth, are all brought within its comprehensive sweep, and even the tables in our homes are placed beneath the one control named in this bill, and that the man who, we all understand, is to exercise this control is Mr. Hoover. We say that advisedly, because it is solemnly given in testimony that he has been called home for that purpose.

Let me speak of Mr. Hoover with profound respect and with the utmost kindliness. I am told that, though he has not so-

journed in this land for many years, he yet came here to undertake this task. That he may be inspired by motives of the highest character I do not challenge. I simply state two things: He is but a man, a single human being, perhaps endowed with more than ordinary skill. The second statement is that I understand, but do not affirm as true—for I know but little of Mr. Hoover, as, indeed, you all know but little of him—I understand that his long absence from this country began almost immediately after his graduation from school, and during the intervening years he has sojourned in China, in Australia, in England, in Belgium. In this great school of the world he may have learned much, and yet I would much rather, if he is to control the domestic concerns of America, that he had dwelt among the people he is to rule.

Mr. VARDAMAN. Mr. President, will the Senator, before he leaves the subject, permit me to ask what is Mr. Hoover's vocation?

Mr. REED. I understand he is a mining engineer. I want to say, in addition to that—for I want to be perfectly frank about this matter—that I am told that when Belgium was in its dire distress he was selected to control the food distribution, or at least came into that position in some way, and I am told that in that work he exhibited splendid talent and fine patriotism and humanity. Nothing that I say, I trust, will be taken as having a harsh note against Mr. Hoover; yet I say I would rather take some man who, like these Senators, has lived in this country and remained in touch with its people than one who has been so long absent from our hearthstones.

And now, those of you who think we can not live without a food dictator, I call your attention to this, that as we approach this question the most startling thing, perhaps, is that while we are talking about a food dictator in the United States of America, Canada and Australia, that are parts of the British Empire, that have been engaged in this war for nearly three years; that have poured out their treasure and offered the blood of their kind with extravagant loyalty, have not a food dictator. They still think that the people of Canada and Australia can attend to their own business better than somebody can attend to it for them.

And now I put this hard upon the conscience of you all: Is there not some lesson in this fact that I bring, that in Canada there is no food dictator, that in Australia there is no food dictator? And I think if we ransack the whole wide world we will find there is no one who can be called a food dictator in the world save in those three or four countries that are at death grapple, where the lines of the soldiers form the frontiers of States; those countries every acre of which is rocking with the reverberations of cannon; those countries where the artillery of the air is bombarding the homes and cities of the land; those countries that are dependent for their food upon importations from abroad; not countries like ours, that can support not only itself but half the world besides.

Oh, I know that there are men as honest and as intelligent as myself who differ from me; and yet I can not help returning to the fact that Canada, Australia, New Zealand, the vast British Empire, on which the sun never sets, has no food dictator save within the British Isles themselves; and round them is drawn the cord of Germany, that is seeking to choke them to death, a cord that is made up of innumerable assassins of the sea that link themselves together to shut out the commerce of the world.

Mr. WALSH. Mr. President——

Mr. REED. I yield to the Senator from Montana.

Mr. WALSH. I wish the Senator would be a little more specific about his reference to Canada. I shall have on my desk in a moment—I have sent for it—a food-control statute of the Dominion of Canada, under which a food commissioner has been appointed.

Mr. REED. There was a statute of that kind passed. I am informed, however, that it is not enforced. I took pains to telephone to the British Embassy to ascertain whether they had any such thing in Canada, and was informed that there was nothing of that kind.

Mr. WALSH. I shall be glad to furnish the statute to the Senator in five minutes.

Mr. REED. I shall be glad, also, if the Senator will ascertain whether any attempt is being made to act under it.

Mr. WALSH. All I know with respect to that is that the newspapers of day before yesterday carried a notification that the Canadian food commissioner just appointed was here to confer with Mr. Hoover.

Mr. REED. That is a very different thing from a food dictatorship.

Mr. WALSH. Oh, I quite agree. That is why I asked the Senator what he means by Canada not having a food dictator. Canada has a statute of food control, and it has a food commissioner to administer that statute. I do not take issue with the Senator that Canada has not a food dictator.

Mr. REED. Very well.

Mr. WALSH. But I should like to know what the Senator means by the expression he uses; because Canada has a food-control statute, and it has one man to administer that statute.

Mr. REED. I mean by a food dictator some one who can control the habits of the people, who can take possession of the people's property and appropriate it, who can do the things that are stipulated in this bill. I have no doubt that every country has a food commissioner. I have no doubt that efforts are being made to alleviate hardships everywhere. I am perfectly willing—and lest I forget it later, I say this to the Senate now—I am perfectly willing to sit down with Senators and agree on everything that is necessary to be done; but I deny that the things proposed in this bill are wise or prudent. I assert, on the contrary, that they will destroy more than they will conserve, and that you will stop the vast productive machinery of this land to the grave injury of America's cause in this great conflict.

I want to be understood. I am willing to make any sacrifice and to do anything necessary to win this war. I have from the first appreciated its magnitude, its horrors, and its dangers; but I insist that the war can be won without doing violence to the Constitution. I maintain that it is not necessary to deprive the people of a single right reserved for themselves by that sacred instrument. I declare that it is unnecessary to establish any kind of dictatorship in this democracy. I insist that the people can attend to their own businesses better than any man born of woman can do it for them. I maintain that it is not necessary to disrupt business, interfere with the great organized machine of production, deprive farmers of a free and open market, or attempt the regulation of wages, in order to overcome our enemies. I earnestly urge that the American people are a thousand times stronger if permitted to regulate their own businesses and industries than they will be if the power to control their own affairs is wrested from them and placed in the hands of any one man, board, or commission. I am willing to pass any law necessary to punish food speculators, food hoarders, food cornerers, all who practice extortion in necessaries of whatsoever kind or character; all who seek to forestall the market; all who conspire to despoil the great consuming public.

But I maintain that it is not necessary, as I said a moment ago, to punish the vast multitude of honest people in order to reach the occasional criminal; that it is not necessary to lay the hand of power upon the business of the United States in order to prevent the commission of crimes by a limited number of wretches. I declare that the Constitution need not be invaded, because a few speculators are abroad in the land.

I gladly recognize the fact that the executive department of the Government is possessed of great powers, and that the President is Commander in Chief of the Army and Navy of the United States. I have not the slightest desire to interfere with a single one of these mighty powers. On the contrary, I am willing to do everything necessary to the full and complete employment of every executive function.

I am willing to vote the President every dollar of money required, and have so voted. I am willing to do the unprecedented thing of voting thousands of millions of the taxpayers' money for loans made to European nations, and have so voted. I am willing to vote and have voted for every soldier and ship asked. I am willing to vote and have voted to create an enormous commercial fleet to carry food to European nations. In short, I am willing to do anything and everything necessary to strengthen our Army and Navy; but I am not willing to assail the Constitution or to deprive the American citizens of their natural rights. Such a course of conduct, I warn you, will weaken America at the time when she ought to be made strong.

Mr. President, before any question can be answered it must be fairly stated and intelligently understood. Wise men do not deceive themselves. Honest men will not mislead others. Nothing is to be gained by raising false issues, especially when the truth is bound to be disclosed in the near future. Differences of opinion and conclusion are to be expected; but when a proposition is committed to paper, introduced in the form of a congressional bill, referred to a congressional committee, and by it solemnly reported to Congress, it is time to quit denying its plain provisions.

For weeks the scope and purposes of the food dictatorship bill have been misrepresented. The country has been flooded almost daily with news articles bearing every indication of inspiration. The food dictatorship bill is presented as a very moderate measure which, without friction or effort, will (a) raise the price to the producer, (b) reduce the price to the consumer, (c) advance wages, and (d) abolish the food speculators.

Everybody is to be made prosperous and happy, without labor or expense to any other body. A populistic Utopia is to be realized. The dream is exactly the dream of the old Populist who proposed to abolish the middleman, control the prices of the manufacturer, and get the food to him without a dollar's expense or a penny's outlay; but he proposed to do it by an organization, whereas it is proposed in this instance to do it by the power of the Federal Government. The Populist failed and this will fail, as substantially every similar attempt has failed in the history of the world.

But returning now, we are told this about the food bill. I read from a Washington paper, because it is one of those articles that bear the earmarks of inspiration. This is what we are told the food bill is:

Believing that the high cost of living must be reduced at once, the President is understood on highest authority to have reached a determination that the following must take precedence over all other legislation now before Congress:

"Creation of a central purchasing agency for all the allies in order to stop the competitive bidding for American foodstuffs and resultant price boosting—

As though that would require any legislation! I shall come to that in a moment—

legislation to prevent hoarding of foodstuffs during the war—

And that kind of a bill already has passed the Senate—

empower minimum price fixing to stimulate production."

That is the one thing that would require any legislation, and its propriety is extremely doubtful; its wisdom and effect are gravely in doubt. But the other thing—is that the food-control bill?

Again, in a letter which has been three or four times put into the RECORD, from the President to Congressman BORLAND, the President is quoted as declaring:

The object of the measure is not to control the food of the country, but to release it from the control of speculators and other persons who seek to make inordinate profits out of it, and to protect the people against the extortions that would result.

Against the objects thus expressed no man in America will lift a voice. It is our business, however, to inquire whether this bill will accomplish the desired result, and also to ascertain whether it is the best plan that can be evolved.

At this point it is interesting to state that the examination of Mr. Hoover on Tuesday last developed the fact that he himself concedes that the bill ought to be altered and amended; and yet it was handed to us a few days ago with the imprint of "Thus saith the Lord" upon it, and every man who dared pause even to read it was impaled upon the pens of that brood of writers who first engage in deification of a man without reason and then in crucifying him without cause.

What are the evils to be remedied?

It is claimed:

(a) That the prices of foodstuffs are excessive, that they are liable to go higher, and that we must protect the people against extortionate prices.

(b) That we must send as much food as possible to the allies in order to assist them in winning the war.

I propose to discuss these two propositions in their order.

It is asserted that the excessive price of foodstuffs is caused by three things, and this is conceded by Mr. Hoover in his testimony:

(a) Excessive buying of foodstuffs by our allies, with a resultant price boosting. Indeed, this is now conceded to have been the largest element in what is known as the speculative movement, and its removal constitutes, after all is said and done, the most potential proposition Mr. Hoover has to present.

(b) Hoarding of foodstuffs.

(c) Speculation.

The remedy for the first of these evils—now, can I get the attention of Senators to this, and see if it is not so plain, so easy, and so simple that men can not differ about it? The remedy for the first of these evils, proposed by Mr. Hoover and this bill, is the "creation of a central purchasing agency for the allies in order to stop competitive bidding for American foodstuffs, with resultant price boosting."

Does that require a single line of legislation? It can be arranged in five minutes' time by a conference between the agents of the allies and the representatives of our own Government.

Indeed, it has already been arranged. A short excerpt from Mr. Hoover's testimony will show the importance of this control, and that the control is already fixed. I challenge you to give attention. I was examining Mr. Hoover:

I understand you to say that there ought to be a plan by which the food for the allies should be purchased through some agency cooperating with our Government?

Mr. HOOVER. Yes.

Senator REED. What would be the object of that, please?

Mr. HOOVER. The object of this is primarily to stop rival bidding by the different allies and their agents in all markets.

Senator REED. Has that taken place in the past?

Mr. HOOVER. To an enormous extent.

Senator REED. Did that take place when wheat rose to the great price that it did in May?

Mr. HOOVER. There was rival buying of wheat and flour by different agencies of the allies at that very moment.

Senator REED. As a matter of fact, they are supposed to have purchased and held throughout the year something over 100,000,000. Is not that true?

Mr. HOOVER. I do not know the details of their operations.

Senator REED. But you do know their biddings or buyings were very large?

Mr. HOOVER. Yes, sir.

Senator REED. And you do say you desire the power now to have the purchases for the allies made through one common agency, in order to stop that great element of speculation?

Mr. HOOVER. Yes, sir.

Senator REED. And you think that is very necessary and very essential?

Mr. HOOVER. I do.

Senator REED. Would you include in that the sale of all wheat and other grains that you propose to control that go to neutral countries?

Mr. HOOVER. I think it will be necessary to control neutral buying.

Senator REED. Then your proposition is to put into the hands of this agency all export business?

Mr HOOVER. In wheat, at least.

Senator REED. There is no doubt, is there, Mr. Hoover, about the fact that the allies have it within their own power to purchase through one common agency at the present time?

Mr. HOOVER. They have now arranged one common agency.

Senator REED. It is arranged?

Mr. HOOVER. Yes.

Senator REED. That agency is already in voluntary cooperation with your committees is it not?

Mr. HOOVER. No; we have no arrangement with them whatever; until we have some legal position we can not enter into any arrangement. Just on that point I might mention that the most dangerous thing that might happen to this country is to allow even our own allies to have the unrestricted run of our market.

That is the most dangerous thing. That is the greatest evil. They have already arranged a common buying agency:

Senator REED. You do not doubt, Mr. Hoover, do you, that these allies to whom we are furnishing very large sums of money and with whom we are cooperating, having established this agency here, as you say they have, will keep faith with us and buy in accordance with whatever agreements are made?

Mr. HOOVER. I have no doubt they will keep faith.

Now, Mr. President, that great evil, that great danger, that thing that caused wheat to go to $3 a bushel, that pooling of the market, that cornering of wheat, which brought $3 wheat in May and $17 flour at the same time, is already under control.

I say to the distinguished Senator having this bill in charge if he wants a law passed giving specific authority to any man appointed by our Federal Government to enter into arrangements and agreements with the allies so that there shall be complete concert of action under absolute authority of law he can have my vote and my support for such a proposition.

Mr. President, I hope Senators will bear in mind this important matter, because as I proceed in this debate I shall undertake to show that the great cause of the rise of foodstuffs in May was occasioned by this buying of the allies in the market. Indeed, Mr. Hoover substantially admits it in the testimony I have read, and he otherwise and elsewhere reenforces that statement.

Mr. VARDAMAN. Mr. President——

Mr. REED. I yield to the Senator from Mississippi.

Mr. VARDAMAN. Has the Senator observed an editorial in the Saturday Evening Post upon this matter headed "The British Example"? It is very short and at some point during the Senator's discussion I will present it to the Senate in support of the Senator's view with reference to the effect on prices caused by the competition between our allies in buying wheat in the American market.

Mr. REED. I thank the Senator, and would be glad if he would put it in right now if he cares to.

Mr. VARDAMAN. Then if the Senator will permit me I shall read it; it is very brief:

THE BRITISH EXAMPLE.

Within six weeks of the outbreak of war the British Government started on food regulation, beginning with sugar. Government regulation gradually increased until last November the food controller was virtually authorized to do as he pleased with the nation's food supply, having power to restrict the use of any food article, to seize stocks of edibles, and to prescribe prices.

Of late the practical operations of this scheme have been considerably criticized. It is charged, for example, that wheat buyers for the allies so bungled the business as to upset American markets and send prices to unnecessary heights, thereby wasting a good deal of ally money.

The London Spectator is of the opinion that, both in England and France, Government control has placed the food situation too much in the hands of politicians, who, however good their intentions, lack expert knowledge of the subject, and too little in the hands of men with practical experience in handling food products.

It is a very intricate and difficult question. Whether any arbitrary plan of fixing prices finally does more good than harm, for example, is decidedly debatable.

Here is the part of the editorial which bears especially on the phase of the subject of which the Senator is now speaking:

Any successful plan of food regulation must lean heavily upon actual experience and be guided largely by men whose business training has made them familiar with all the details of the subject.

We need a scheme of governmental food regulation. For one thing, all buying for our Government and the allies should be directed by a single expert agency. That agency itself would be an important food regulator. The fact that power to regulate exists will do much to allay panicky action by individuals.

It is a hard subject. Only the best experts, free from all political interference, can hope to succeed with it.

Mr. REED. I am obliged to the Senator. It is not only in line with what I have said but with what I am about to say.

I have already called attention to the fact that there is one agent to buy for the allies. Of course it goes without the saying that our Government without any legislation can arrange to buy its supplies in a manner not to compete with the allies' agents.

There remains, therefore, one other source of demand of great importance to which I want to call attention, and that is the purchases of neutral countries, for if we can control through a voluntary agency already created the purchases of the allies and then can control or regulate the purchases of neutral countries we will have gathered within our powerful control the entire foreign business of the United States, and whoever controls the price of all our surplus foodstuffs that go abroad will control to a very large extent the domestic price.

Mr. President, how are we to meet that question with reference to shipments to neutral countries? On the 15th day of June it was met by what is known as the espionage bill, certain sections of which are as follows:

TITLE VII.

CERTAIN EXPORTS IN TIME OF WAR UNLAWFUL.

SECTION 1. Whenever during the present war the President shall find that the public safety shall so require, and shall make proclamation thereof, it shall be unlawful to export from or ship from or take out of the United States to any country named in such proclamation any article or articles mentioned in such proclamation, except at such time or times, and under such regulations and orders, and subject to such limitations and exceptions as the President shall prescribe, until otherwise ordered by the President or by Congress: *Provided, however,* That no preference shall be given to the ports of one State over those of another.

SEC. 2. Any person who shall export, ship, or take out, or deliver or attempt to deliver for export, shipment, or taking out, any article in violation of this title, or of any regulation or order made hereunder, shall be fined not more than $10,000, or, if a natural person, imprisoned for not more than two years, or both; and any article so delivered or exported, shipped, or taken out, or so attempted to be delivered or exported, shipped, or taken out, shall be seized and forfeited to the United States; and any officer, director, or agent of a corporation who participates in any such violation shall be liable to like fine or imprisonment, or both.

SEC. 3. Whenever there is reasonable cause to believe that any vessel, domestic or foreign, is about to carry out of the United States any article or articles in violation of the provisions of this title, the collector of customs for the district in which such vessel is located is hereby authorized and empowered, subject to review by the Secretary of Commerce, to refuse clearance to any such vessel, domestic or foreign, for which clearance is required by law, and by formal notice served upon the owners, master, or person or persons in command or charge of any domestic vessel for which clearance is not required by law, to forbid the departure of such vessel from the port, and it shall thereupon be unlawful for such vessel to depart. Whoever, in violation of any of the provisions of this section shall take, or attempt to take, or authorize the taking of any such vessel, out of port or from the jurisdiction of the United States, shall be fined not more than $10,000 or imprisoned not more than two years, or both; and, in addition, such vessel, her tackle, apparel, furniture, equipment, and her forbidden cargo shall be forfeited to the United States.

The clause is followed by heavy penalties. Thus there is in the President of the United States the complete power to stop the sending of any grains or foodstuffs whatsoever to any country, the allies or the neutrals. The power is already there, and the power to say to all European countries that they can not have food at all carries with it the power to say to them the terms under which they shall have the food. Therefore there is now in the power of the President by an act we all supported the absolute right to control the entire surplus of this country, and whoever controls that surplus, I repeat, will control largely the price of the domestic article. We are about to mobilize an army of 2,000,000 men, and it will speedily go beyond that. The purchase of the supplies of our Government will constitute a heavy draft on the production of the country, and this immense purchasing power is itself a controlling factor.

I say there can be no doubt about the proposition that the exercise of the power to which I have adverted gives an absolute power to prevent any extortion being wrought in our country on prices of wheat, on prices of flour. It is a sword of Damocles suspended over every man who speculates on the future. How can he speculate when this Government can either bull the market or bear the market, when this Government can by a simple arrangement with the representatives of the allies fix the prices of all the food that is going abroad and thus command the price in the domestic market?

The truth is such a power as I now refer to, if it were lodged anywhere else than in the Government, would be absolutely destructive and would constitute a force greater than that which was wielded by all the wheat corners that have existed in this country since we had a wheat market or that existed in the world since there were men who forestalled the market at the gates of Rome.

Is it not time to get the blood out of our heads and realize that there is already this tremendous power lodged in the Government?

Now, this is not my fight. I have no interest here save as you have interests; but some things about the way this bill has been put forward remind me of the banking and currency bill. For 50 long years we had gotten along with the old banking law. There was no financial emergency; there were no special conditions in this country demanding action; and yet a banking bill was brought in and the demand was made to pass that bill. The country was told that unless the bill was instantly passed some great evil would settle upon us.

Ah, there are Senators within the sound of my voice who when some members on the Banking and Currency Committee insisted there should be an investigation, that there should be hearings, that we should look before we leap, that we should actually be guilty of the great temerity of examining and reading the bill—there are Senators within the sound of my voice who denounced it as a kind of grievance. Yet, sir, when some of us stubbornly insisted upon hearings and when the hearings were had it was discovered that the bill was so defective that it had to be amended over five hundred and forty times. It was discovered that even the Secretary of the Treasury was sending here amendments to the bill after it had gone to conference, and asking that they be adopted, and that as late as 2 o'clock in the morning when the conferees sat together the amendments were still coming; and after it was completed in this way it was then pronounced to be the wisest piece of financial legislation that had graced the archives of legislative halls since time began.

Mr. WADSWORTH. Mr. President——

The VICE PRESIDENT. Does the Senator yield?

Mr. REED. I do.

Mr. WADSWORTH. Is it not a fact that we have been amending it ever since?

Mr. REED. And since that time it has been found necessary to further amend it. Heaven knows how many times it would have had to be amended if the committee had not insisted on working. In fact, as the bill came to us it would have as inevitably produced a panic as this bill, if you are not careful, may produce one. But it was a matter of mathematics in the other case. The other bill withdrew from circulation over $500,000,000.

Mr. President, we do not need to be alarmed or frightened. Let us take a little time and do this job like statesmen. Let us remember, sirs, it is not our dignity that is to be trenched upon or maintained. Let us remember that out yonder are 104,000,000 of the best people in the world, that there are only 96 men here to speak for them, and that it is our sworn duty to speak with the voice of wisdom, if the Infinite shall give us wisdom to so speak. Let us remember that this is a Government of three great coordinate branches; that when the people wrote the Constitution the people said, "We are the source of all power; we have no masters; we have servants; one of our men shall serve us in the executive department, and him we clothe with certain powers, and on his head we lay certain heavy duties to speak and act for us in these great matters of state. We create another power, other servants, who shall express our opinion in the form of statutes, not theirs but ours, and who shall forever guard the Constitution that we write and stand outside the portals of the temple of liberty with drawn swords to defend us in our rights. That is the Congress, and you are but servants; into your keeping we have put the choicest jewels of our liberty, and you shall defend them for us. You shall not surrender them; you shall not cast them aside. When you surrender them you do not surrender your own power but ours. And we create the great Supreme Court, the judiciary, to construe these laws, and he who will lay down a right the people have reserved and treacherously disregard the obligation that he took or break the trust reposed in him is worse a traitor than is the wretch who marches beneath the red banner of the anarchist."

Why, sirs, we fight for democracy, and let us fight for it beneath the unsullied and untarnished banner of democracy. Let us tell the world that here is one people who can rule themselves, that here is one people who do not need a dictator, a master, a people who can act together strongly, valiantly, and with deathless courage confront every condition.

Now, permit me to again say the question of the control of food prices is already in the hands of our Government, and that power wisely exercised will fix the price.

But I desire now to speak fairly again. If it be necessary to give our Government the right to buy in the market in order to prevent a slump or break in the market, I am willing to confer that right. That can be done without an invasion of the Constitution, and while it is a great power I do not believe it is a power that will be misused.

Mr. Hoover I desire to quote again:

Senator REED. It was, as I understood you to say, the buying of the allies, bidding against each other in the markets of this country, that was one of the great forces in running up prices to what we regarded as extortionate?

Mr. HOOVER. That was one of the forces.

Senator REED. And if we could eliminate that feature entirely from our markets it would go a long ways toward stabilizing prices, would it not?

Mr. HOOVER. It would; if the implement were carefully handled. It requires a great deal of care in its manipulation.

Surely there ought to be care, because such a power might be used to bring irrevocable ruin and injury, but I am assuming that an honest and a strong man will be placed in this control.

Now, with this proposition settled have we not settled two-thirds of the whole controversy? Take it home with you; think it over. Read Mr. Hoover's testimony; and there are some here who will read it having first taken off their shoes from their feet because the place that they approach is holy ground. But take it and read it, and out of the mouth of Mr. Hoover get your answer. The power of control is already granted, and happily the Constitution is not violated, although, of course, when we put our Government into the open market buying and selling we are doing an unusual thing. But this is a time for unusual things.

Mr. VARDAMAN. May I interrupt the Senator?

Mr. REED. Certainly.

Mr. VARDAMAN. I heard Mr. Hoover's testimony. If I remember it correctly, the substance of his entire statement was that if the trusts or speculators were taken out of the market by congressional enactment, and if the power shall be given him to carry on his volunteer organization scheme, he thought he could solve this problem. While he thought the bill gave him the right, and that right should remain in the bill, to prescribe the menu in the home and otherwise control the distribution and consumption of food in the private home, still he did not expect to invoke the strong arm of the law in the enforcement of such a provision.

Mr. REED. No; the Senator for once is in error. He said he was willing to cut out of the bill the proposition giving him power to control the tables. Indeed, he expressed surprise that it was there.

Mr. VARDAMAN. I am very glad the Senator has corrected me. I thought he said that probably having the power under the law would prevent the necessity of using it. But if he consented to the elimination of that provision from the bill, I am glad of it, for that is the main objection I have to this bill.

Mr. REED. No; Mr. Hoover graciously stated, and I almost quote his language, that he did not think he ought to have the power to compel me to eat a soup bone if I did not want to eat it.

Mr. VARDAMAN. I am very glad to get that information from the Senator, because it removes a very serious objection to the bill. I hope Mr. Hoover's suggestion may be adopted by the Senate.

Mr. REED. I thank the Senator. Now, the second claim is, and I quote:

We need legislation to prevent hoarding of foodstuffs during the war.

Mr. Hoover has not been here long. He has been pretty busy. There are a lot of other people in this country who have been very busy. Legislation of that character has already passed the Senate in the shape of an amendment offered by the distinguished Senator from Montana [Mr. WALSH]. That bill came to us from the House of Representatives. It is known as House bill 4188. It was introduced in the House May 4, 1917, passed by the House May 28, 1917, passed by the Senate June 1, 1917, and returned to the House with amendments on June 2, 1917. It will be observed that it was just four days from the time the bill reached the Senate until it was sent back to the House ready for action upon the amendments of the Senate. The bill contains many provisions and meets substantially all of the reasonable demands of the advocates of a food dictator. I call attention to the tenth section, known as the Walsh amendment. It provides:

SEC. 10. That any person carrying on or employed in commerce among the several States or with foreign nations or with or in the Territories or other possessions of the United States in any article suitable for human food, fuel, or other necessaries of life, who, either in his individual capacity or as an officer, agent, or employee of a corporation, or member of a partnership, carrying on or employed in such trade, shall store, acquire, or hold, or who shall destroy or make away with any such article for the purpose of limiting the supply thereof to the public or affecting the market price thereof in such commerce, whether temporarily or otherwise, shall be deemed guilty of a felony, and be punished by imprisonment in the penitentiary for not less than six months nor more than three years: *Provided*—

And so forth. That ought to be drastic enough.

Mr. KENYON. Mr. President——

Mr. REED. Let me finish the sentence. The bill went to the House of Representatives and has been held up in the House of Representatives. It has been held up by the very gentlemen who are advocating this food dictatorship bill, and it has been held up for the reason that it was believed, if it passed, it would remove any necessity for the food dictatorship bill. Now I yield to the Senator from Iowa.

Mr. KENYON. I rose to ask the Senator what had become of that bill, but he has perhaps answered my question.

Mr. REED. Yes.

Mr. KENYON. That bill will have been passed three weeks to-morrow. A conference was asked with the other House and conferees were appointed by the Senate at that time. It is a most remarkable thing that for three weeks no conferees have been appointed by the House of Representatives, while the papers have been full of suggestions that speculators are robbing the people to the extent of about a hundred million dollars a month. If that is so, the responsibility for the delay or the robbery is not on the Senate.

Mr. REED. Mr. President, the responsibility is not on the Senate. I think I could tell the Senator exactly why this was brought about——

Mr. KENYON. Well, why?

Mr. REED. But the Senator who gave me the information told me that he did not feel at liberty to disclose what he had overheard.

Mr. KENYON. Mr. President, has the Senator from Missouri, in the legislative history of the country, ever known of a bill being held up in this way, with no conferees appointed? I do not know, I am not prepared to answer my own question, but I have inquired of a good many Senators, and they have told me that they never heard of such a thing in the whole history of Congress.

Mr. REED. I do not recall having heard of anything of that kind. It is a most remarkable situation. We are told that the country is suffering; we are told that there are hoarders in our land; we are asked to grant relief. We are asked to pass a bill giving the power to send the man to the penitentiary who hoards the foodstuffs of the American people; we put an amendment on a bill that came here from the House of Representatives, and which contained much important legislation which that House seemingly wanted, for that House had passed the bill. We send it back. It lies there for some days without action. It is finally brought on; a request for unanimous consent is made, and ex-Speaker CANNON objects to the unanimous consent that day to having conferees appointed. There the matter rests. The bill is apparently slaughtered by its own authors.

Mr. KENYON. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Iowa?

Mr. REED. I do.

Mr. KENYON. Was it not true also, as the Senator from Missouri will remember, that there was apparently a great need, and an effort to bring it about, to have a food survey in the country, which is covered by that bill? The Senator will also remember that some of us who were interested in that bill urged, and were under a certain stress, to get that bill through, so that we could have that food survey. I do not desire to interrupt the Senator——

Mr. REED. The Senator is not interrupting me.

Mr. KENYON. But I say, I think it is one of the most remarkable things in the history of legislation that when the Senate has asked for a conference and has appointed its own conferees, for three weeks we hear nothing about a bill of that importance.

Mr. REED. The Senator's statement is absolutely accurate. I recall that the Senator from Iowa was one of the earnest advocates of that bill. He was one of those who earnestly sought to have a food survey made, to the end that we might know what the wants and demands of our country were, in order that we might act intelligently.

Mr. VARDAMAN. Mr. President——

Mr. REED. Let me conclude the sentence. The Senator from Iowa insisted upon appropriations being made so that the Secretary of Agriculture could begin this work. We were informed that the Secretary of Agriculture had his force already

in hand so that he could speedily complete it, yet the bill is held without action.

Mr. VARDAMAN. May I ask the Senator a question?

Mr. REED. I yield to the Senator.

Mr. VARDAMAN. I ask if it is not a fact that the legislative program which has been made for Congress, provided that this bill should first pass, and that the disobedience of Congress has resulted in the food-survey bill being held up? As I understand, that bill is being held up until this bill passes, which was intended should first pass. I am afraid the Senate was not as obedient as it was thought it should be in carrying out the program prepared for it. For that reason the House is probably holding up the food-survey bill.

Mr. REED. Well, I really do not know what it is intended to do with that bill.

Mr. VARDAMAN. I understand that was the program prescribed for the Congress to carry out.

Mr. REED. But I do know that before we act on this or on any other bill, one of the important facts we ought to have is some kind of knowledge of the amount of food there is in the country, the condition of our crops, the demands that are to be made upon us by domestic consumption, and also the needs of European countries. All that would have been embraced in the powers conferred by the bill which we passed. Without knowledge of that kind, we are acting in the dark. I say it is time the Senate of the United States made itself felt; it is time that notice was served that this is a coordinate branch of the legislative authority in this country, and that this body of men propose to do their duty as the light is given them.

Mr. VARDAMAN. If that course had been pursued in the past and Congress had showed a little more independence, we should not now be suffering from the confusion in which we now find ourselves entangled. I think the people of America would have more respect for the Congress if it committed an occasional mistake on its account in an effort to do right than they would to take orders from a coordinate branch of the Government and do right. The fact is, it is my judgment that it is impossible for the Congress to do right in every circumstance if it acts by the order of some outside power. Subserviency never leads to the proper goal in the conduct of an officer of the law where independence of action is contemplated in the law creating the office.

Mr. KENYON. I should like to ask the Senator from Missouri a question, for I am interested in this subject, though I may not agree with his argument. Where the Senate passes a bill and in some mysterious way it becomes lost, or if the other House passes a bill and the matter is held up in the Senate in some mysterious way, what is the remedy? Many of our bills are lying in conference now. Have we reached a point where legislation can be defeated by conferees or the lack of conferees?

Mr. REED. Well, Mr. President, I thought I hinted at the remedy. I do not think I need to make it plainer. So long as men will take bills that are handed to them, and say, "I am somebody's man; he has the responsibility, and I have none," such men can expect to feel each day across their backs a little harder and keener the lash's cutting.

Mr. President, there remains a third proposition or evil, for now we have covered hoarding, we have covered the cornering of the market by the purchases of great governments—there remains the evil of speculation.

I have already shown that the principal element in our recent market disturbances was the extraordinary European purchases, and that this matter is now completely in hand.

I have also shown that any hoarding can be prevented and punished under the Walsh amendment.

In addition we have already adopted in the bill just referred to as being held up what is known as the Nelson amendment, which gives the President the right to stop all dealings in futures upon grain exchanges, and to restrict the buying absolutely to cash spot transactions. That power can be exercised so that every evil there is in buying or selling of futures, every evil there is in that thing commonly called speculation, can be crushed by the President as easily as a man can crush an insect. The power is conveyed in the Senate amendment, but it is held up and throttled. Mr. President, Senators are familiar with the Nelson amendment, and therefore I shall not read it, but ask to have it printed as a part of my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

The amendment referred to is as follows:

SEC. 12. Any building or room occupied or used by a board of trade, chamber of commerce, grain exchange, or otherwise, in which wheat or other food cereals are bought or sold for present or future delivery shall for the purpose of this act be known as grain exchange.

All persons engaged in buying or selling in interstate or foreign commerce, for present or future delivery, any wheat or other food cereal in or about any such grain exchange shall be known and designated as traders in grain.

All sales of wheat or other food cereals by such traders in such exchanges for future delivery, and not for present or immediate delivery, shall be known and designated as dealings in futures.

If at any time during the pendency of the existing war between the United States and the German Empire the President of the United States shall find that such dealings in futures in or about any grain exchange unduly or unreasonably raise or enhance the price of wheat or other food cereals, to the injury of the people of the United States, he may at once request the traders in such exchange to discontinue for a time specified by him all dealings in futures. In case such request of the President is not promptly complied with, then he is hereby empowered to order such dealings in futures, as last aforesaid, to be entirely suspended and discontinued for such limited time as he may direct, and if such order is not promptly complied with he may by proclamation declare such exchange closed, and thereafter it shall be unlawful to utilize or permit to be utilized such building or room as a grain exchange, or for any person being a trader in grain on such exchange to engage in the business theretofore conducted on or at such closed exchange.

Any person violating any of the provisions of this act shall be punished by a fine of not less than $500 or by imprisonment for not more than one year, or by both such fine and imprisonment.

Mr. REED. It would appear, therefore, that nearly all of the evils which are constantly being paraded before the public have already been so treated that the simple passage by the House of the bill which has passed the Senate containing the Nelson and Walsh amendments, with the common purchasing agencies for the allies, the neutrals, and ourselves will establish such a control as will prevent the great dangers alleged to be in the food situation.

When, however, we come to consider the bill we must be astonished at the almost limitless power proposed to be conferred. Many of these demands are, in my opinion, unconstitutional, although I do not at present propose to discuss that phase of the question.

In passing, I remark that I do not agree with the position taken by the Senator from Texas or the view expressed by the Senator from Nevada, which were to the effect that we were justified in fighting Prussianism with Prussianism. So far as I am concerned, I propose to fight Prussianism with Americanism. I hold that it is not necessary to sacrifice democracy in order to overthrow despotism, as represented by Kaiser Wilhelm. I maintain that just in proportion to our adoption of the methods of autocracy we weaken the fight for democracy.

The bill before us is not the innocent, mild, gentle, and persuasive measure which has been presented to the public. It does, in fact, create not only a food dictatorship, but also a business and wage dictatorship. In some respects it is without precedent or parallel in the legislative enactments of any modern nation, republic, or monarchy.

I pause to inquire now who will in fact exercise the great powers granted by this bill? While the powers are nominally to be exercised by the President, it is well understood, and is not to be denied, that these powers are to be transferred to Herbert C. Hoover. What will be his powers? I will proceed to enumerate them; and I hope Senators to-morrow morning will take the RECORD and read this enumeration of powers, and then read the bill, and they will find that I have not stated all the powers proposed to be conferred:

(a) The bill undertakes to place within the power of this agent the control of all necessaries—foods, feeds, fuel.

(b) The right to control consumption, which embraces the right to dictate what the people may eat. This is almost the power of life and death.

(c) The articles required for the production of either food, feed, or fuel. This will embrace nearly every kind of machinery, including the raw materials, steel and iron, copper, lead, zinc, and many other commodities.

(d) The processes, methods, and activities employed in the production and manufacture of all necessaries.

Now, pause and think where that carries you:

(e) Their procurement, distribution, sale, and marketing.

(f) Their storage.

(g) Their financing and pledging.

(h) Power is given to take control of factories and plants, including cold-storage plants, engaged in the production of necessaries, and to operate them. This would include all packing houses, cold-storage plants, and many other establishments.

(i) To take possession of all mines and to operate them.

(j) To take possession of all necessaries. This would give the right to take the grain from any farmer's bin.

Now, notice that: The bill gives the power to take possession of all "necessaries," which includes the right to take the grain from every farmer's bin, to take the cattle from every farmer's field, and to take the sheep from every farmer's ranch.

(k) Under the clause which includes as necessaries all articles required for the production of food or fuel, the iron or steel mills engaged in creating the machinery of production could undoubtedly be taken.

I see now I have omitted lumber yards. In fact, within the scope of this bill, Mr. President, comes substantially everything; but I proceed:

(l) Authority is conveyed to make these seizures, paying such compensation as Mr. Hoover, in the name of the President, may fix, with the right of appeal from the award.

(m) Mr. Hoover may, in the name of the President, prescribe such rules and regulations as he may deem essential for the carrying out of the purposes of section 9, including the operation of any factory, mine, plant, or part thereof, and the purchase, sale, or other disposition of articles manufactured, produced, prepared, or mined.

If there is anything left out, it was forgotten, but I proceed:

(n) He may control the employment and fix the compensation of employees in industries so seized.

That might embrace all the great industries of this land. Let labor pause and consider that phase of the question.

(o) By simple announcement—get this if you have not already done so—the President, or Mr. Hoover in his name, can prohibit any citizen from importing, exporting, manufacturing, storing, or distributing any of said necessaries; compel them to take out licenses and to conduct their business under regulations prescribed by him. Among these regulations he may require them to keep whatever system of accounts and auditing he may dictate, and to swear to their correctness.

(p) He may, if he deems the charges or profits unfair, fix such charges as he may deem reasonable. Any person daring to engage in business without such license may be fined $5,000 and sent to the penitentiary for two years.

A few hours ago there stood in the Senate the representative of the Belgian people. You heard his plaintive statement that the Belgian people had been despoiled of their property without compensation and that they had been imprisoned for asserting their rights as citizens; but now it is proposed in the United States of America, beneath the silken folds of our flag, to give power to one man to declare simply that it is, in his opinion, for the country's welfare, and thereupon no man within the borders of this land engaged in the manufacture of necessities or of things that enter into them can run the factory that he built with his own hands, the business that he created by his own toil, the enterprise that sprang from his brain, unless he takes out a license and agrees that the price shall be fixed; and if he dares to do business without this license he can be sent to the penitentiary for two years and fined $5,000.

Mr. KENYON. Mr. President, may I ask the Senator a question?

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Iowa?

Mr. REED. Certainly.

Mr. KENYON. I should like to ask the Senator, as I myself am not entirely clear on it, if he believes that under section 5 the President would have the right to fix the price at which these articles could be sold? Is that power granted by these words, on page 5?—

> The President may, in lieu of any such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice, find what is a just, reasonable, nondiscriminatory and fair, or economical rate, charge, or practice.

Is "charge" synonymous with "price," or does it refer merely to the practice of the business? I do not know.

Mr. REED. It would be a meaningless thing, a useless thing, if it had the confined and circumscribed meaning that the Senator gives it. Mr. Hoover's testimony makes it perfectly clear.

Mr. KENYON. I do not want the Senator to say that I give it that meaning.

Mr. REED. I mean that if it had the restricted meaning that one part of the Senator's question implies.

Mr. KENYON. I took the position in my argument that that provision gave the President the power to fix the price. The chairman of the committee disagreed with me about that, and held that the word "charge" was not synonymous with the word "price." I am interested in knowing the Senator's view as to that.

Mr. BORAH. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Idaho?

Mr. REED. Gladly.

Mr. BORAH. In view of the fact that the meaning is questioned, I do not see why we need to leave it in doubt. Why not insert the word "price," so that we may know precisely what we are dealing with in the bill? The Senator from Iowa, who has given a great deal of attention to this bill, and the Senator from Oregon, who is in charge of the bill, differ as to the meaning. Why not use the word "price," which will settle it?

Mr. KENYON. Mr. President, will the Senator permit me to interrupt him further?

Mr. REED. Certainly.

Mr. KENYON. I want to say that Webster's Dictionary, among other definitions of the word "charge," gives this:

> The price demanded for a thing or service.

Then it gives as synonymous the words:

> Care, custody, trust; management, office; expense, cost, price.

I still believe that my construction of that section is correct, although the Senator from Oregon thinks otherwise. I am simply offering this suggestion to get at what this section really means. That is the value of this discussion.

Mr. PAGE. Mr. President, may I interrupt the Senator for a moment?

Mr. REED. Certainly.

Mr. PAGE. I should like to ask the Senator from Iowa if Mr. Hoover, when this word was brought to his attention, did not expressly deny that it had that meaning, or, at least, said that, so far as he was concerned, he did not understand it to have that meaning, and that he would not act upon it as though it had that meaning?

Mr. KENYON. Is not the Senator from Vermont confusing that with what Mr. Hoover said as to consumption? He did say that as to consumption he had no intention of fixing what a man should eat or a price in that respect. I do not remember that Mr. Hoover was asked as to this particular part of section 5. I may be in error, however, as to that.

Mr. PAGE. I was present and listened, and I presume the Senator from Missouri can tell me if I am wrong; but I was under the impression that Mr. Hoover expressly said that the word "charge" there was not designed to cover the matter of price.

Mr. REED. I do not remember that testimony, I will say to the Senator. I, of course, would be glad to have Mr. Hoover's gracious construction and his kind permission for us to pass the bill with the understanding that it does not include price. But let me ask the Senator, suppose Mr. Hoover said that the word "price" ought to be in; what then? Does the Senator think it ought to be in?

Mr. PAGE. My recollection, Mr. President, is that the Senator from Missouri, at the time he was cross-questioning Mr. Hoover about this matter, brought up the thought that was in his mind that it did mean price. I am quite sure that at the same time, during the hearing before the committee, Mr. Hoover expressly denied that that was the intent, so far as he understood it; that it did not mean price, but rather meant a charge for some commission or, perhaps, freight. I am not certain in regard to the exact limit to which he carried it. I may be wrong about the whole matter. I only say that I obtained that impression from something that was said at the time the Senator from Missouri was cross-questioning Mr. Hoover.

Mr. REED. The Senator, I think, is in error. However, I am so much of an iconoclast that I would decline even to let Mr. Hoover construe this bill for me or ask his permission to put a thing in or take it out. It seems to me that absurdity could go no further than that in the Senate of the United States we should be debating whether Mr. Hoover had construed a bill in a certain way. Why, there are 104,000,000 other people in this land who have lived here always, who have wrought and toiled, who have prayed and waited, who have created in this country, and whose investment and whose wealth is here and not elsewhere. I would as lief have the construction of any old farmer in my country, or any business man, as that of Mr. Hoover.

Mr. BORAH. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Idaho?

Mr. REED. I do.

Mr. BORAH. I take it, from the discussion which has gone on between the advocates of the bill, that the difficulty of the situation does not arise out of the fact that we are unable to find language by which to express ourselves, but probably out of the fact that some desire that the price-fixing power be put in the bill, and some do not. Certainly if they desire to have the bill plain and explicit, all that they need to do is to substitute the word "price" for "charge," or to insert it just ahead of the word "charge."

Mr. REED. Or to strike out the word "charge" and all the rest of that section, and provide that after the President has licensed these people they shall be allowed to charge whatever they please; and then, of course, there would be no reason for licensing them. Indeed, this section is meaningless and a silly thing unless the power to fix prices is contained in it; for what

purpose would be served by taking possession of the plants and factories of the citizens, compelling them to take out licenses, and then permitting them to do exactly as they would have done if the license had not been issued?

Mr. WALSH. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Montana?

Mr. REED. I do.

Mr. WALSH. I desire to inquire of the Senator from Missouri whether it is not a fact that whatever view Mr. Hoover did express concerning whether the word "charge" was meant to signify "price," or to include "price," he expressed upon a very insistent question asked of him by the Senator from Missouri?

Mr. REED. I will answer the Senator from Montana in this way: So far as my recollection goes, I do not recall having taken up the question of price-fixing in section 5 with Mr. Hoover at all. I think the Senator is entirely mistaken in his assumption. Therefore I am unable to answer the Senator.

Mr. WALSH. The Senator will perhaps recollect what transpired before the committee well enough to tell us whether Mr. Hoover ventured any opinion on his own motion, or whether he ventured any opinion in response to the request of anyone except the Senator from Missouri?

Mr. REED. Oh, Mr. President, that is easily answered, though I do not know if I had asked Mr. Hoover his opinion what pertinence it would have here. I asked Mr. Hoover a considerable number of questions; but before I asked Mr. Hoover any question at all Mr. Hoover delivered himself of a dissertation, which it took him, I think, 45 minutes to read, and he read rather rapidly.

Mr. WALSH. No part of which related to the word "charge."

Mr. REED. In which he went entirely through the bill; and I say to the Senator that I do not think I mentioned the question of "charge" in my questions. I would not trust my recollection absolutely, but that is my recollection.

Mr. WALSH. Neither would I. I do not mean to say that the Senator from Missouri did; but I do undertake to say that if Mr. Hoover spoke on the subject at all, it was in response to a question addressed to him by the Senator from Missouri.

Mr. REED. Possibly; and yet he may have spoken about it in his original statement.

Mr. WALSH. I think not. I want to remark, however, that I quite agree with the Senator from Missouri that it is utterly immaterial what view Mr. Hoover takes as to what is the proper construction of the word "charge" in this bill. Mr. Hoover does not even profess to be a lawyer.

Mr. PAGE. Mr. President, before the Senator from Montana sits down, may I ask him one question? I do not know but that I am mistaken about my recollection of this matter; but as I remember now, at this distance from the hearing, Mr. Hoover especially denied that he was the author of this language. He especially said that he was not a lawyer. He did not attempt to construe it; but, as I remember, the Senator from Missouri said to him, "Well, inasmuch as you are to be the executor, I should like to know what view you take of this language"; and he thereupon gave his view as to this and some other features of the bill, some especial words like this word "charge."

Now, probably I am mistaken. I simply say that I have a recollection, and I should be glad to have the Senator either confirm or disaffirm that recollection, because, as I remember, he was present.

Mr. REED. Oh, Mr. President, there is no use in confirming or disaffirming recollection. This testimony is written out. It is printed. It is before the Senate. I do not want any loose recollections thrown into this matter. If the Senator can find any such question as he speaks of, I shall be obliged to him if he will do it; and as I shall not be able to conclude my remarks to-night I will yield to him to-morrow, and he can put it in the RECORD. But I say to the Senator now, in passing, that I think the whole question utterly immaterial. I do not think that any such thing transpired as the Senator has spoken of; but events have moved so rapidly in the last few days, and we have all been working so hard, that I would not trust my recollection. But here is the record. Let us go to the book.

Mr. KENYON. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Iowa?

Mr. REED. I yield to the Senator.

Mr. KENYON. I do not want to take up time with what the Senator may regard as an immaterial matter; but I believe the Senator from Vermont refers to an incident which the Senator from Missouri will remember, I think, when I recall it.

Mr. Hoover took a thousand bushels of wheat and took it through from the farmer to the elevator man and the miller. He construed this part of the bill to mean this, as I now remember: The 1,000 bushels of wheat comes to the elevator man. We say to him, "You can have 10 per cent profit." Then it comes from the elevator man to the miller, and we say to him, "You can charge 10 per cent profit." Mr. Hoover had some such notion as that in his mind as to the word "charge"—that "charge" is not "price." I think that is discussed on page 50 of his testimony. It is not very clear. I want to ask the Senator from Missouri, before he gets through, to say what he thinks about the word "charge" covering "price."

Mr. REED. Well, now, notice the context, and can there be any doubt? First, the bill provides that—

> Whenever the President shall find it essential to license the importation, exportation, manufacture, storage, or distribution of any necessaries, in order to carry into effect any of the purposes of this act, he shall publicly so announce.

Now, up to that point all that the President has to do is to make an announcement. I assume, of course, that in this case it will be Mr. Hoover acting. Thereupon—

> No person shall, after a date fixed in the announcement, engage in or carry on any such business specified in the announcement of importation, exportation, manufacture, storage, or distribution of any necessaries as set forth in such announcement, unless he shall secure and hold a license issued pursuant to this section.

Now, the President makes an announcement, and thereafter everybody who is engaged in this particular business must take out a license. Then—

> The President is authorized to prescribe such regulations governing the conduct of the business of licensees as may be essential to prevent uneconomical manufacture and inequitable distribution of necessaries and otherwise to carry out the purposes of this act.

Why, under that section Mr. Hoover, or the administrator of this bill, whoever he may be, can actually go into a factory and can compel the proprietor of that factory to cease manufacturing goods in the manner he has been doing it for 50 years, and compel him to proceed to manufacture them in some other way which this gentleman says is more economical. I call your attention to the language on line 18, page 4.

Mr. VARDAMAN. What section?

Mr. REED. Section 5. Now, proceeding with the bill, it further provides:

> Such regulations may also include requirements for the issuance of licenses and requirements for systems of accounts and auditing of accounts to be kept by licensees, submission of reports by them, with or without oath or affirmation, and the entry and inspection by the President's duly authorized agents of the places of business of licensees.

You must now keep the accounts of this place of business in the manner required, and you must swear to them. It is your own place of business, of course. You made it. You may have begun when you were a boy and toiled and worked and saved and planned, and at last you have created the business. Now, these gentlemen, under this power, can first compel you to take out a license or you can not run it; second, they can compel you to change your method of manufacture if they do not think it is economical; third, they can require you to keep a set of books and account to them under oath, and then they can enter and examine your place of business!

I call attention to the old clause of the Constitution relative to the right of the citizen to be secured against unreasonable searches and seizures, and ask if it does not have some application here?

Mr. KENYON. Mr. President, would the mere fact that the bill authorizes the entering of his place of business be an unreasonable search?

Mr. REED. I do not know whether it comes within the meaning of that section or not, but it comes within its spirit, and I simply throw out that remark in passing.

Mr. KENYON. I think it would have to be for the purpose of securing incriminating evidence to be an unreasonable search.

Mr. REED. Possibly. I say it is within the spirit of it more than its language.

Mr. OVERMAN. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from North Carolina?

Mr. REED. I yield to the Senator.

Mr. OVERMAN. I want to ask the Senator whether or not Congress has the power to say to me, not doing an interstate business, doing purely an intrastate business, that I shall take out a license to do business?

Mr. REED. The Senator from North Carolina is one of those old-fashioned Senators who still thinks the Constitution has vitality. Evidently he did not hear the declaration recently made here—in substance, anyhow—that when we were at war with Prussia it was all right to Prussianize America; or that when we were at war all the people of the United States and all their property were at once mobilized into the Army, and there was, therefore, no civil government left; or that other exclamation of a distinguished Senator, that the only power left in Congress when we were at war was the power to vote money. It

is refreshing to find once in awhile a man who believes that that old instrument which William H. Taft declared was the Ark of the Covenant still lives, and that within that ark and altar there still blaze the fires of liberty.

But I read on with this section:

Whenever the President shall find that any rate, charge, or practice of any licensee is unjust, or unreasonable, or discriminatory and unfair, or wasteful, and shall order such licensee, within a reasonable time fixed in the order to discontinue any such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice, thereafter, unless such order is revoked or suspended, such licensee shall, within the time prescribed in the order, discontinue such unjust, unreasonable, discriminatory and unfair, or wasteful rate, charge, or practice.

Now, what are we dealing with? Here is a man who has a business. The President issues this order to the effect that the business ought to be licensed. Thereupon, this man takes out a license to run his own business. Thereupon, what follows? They examine his books and they discover whether he is making any unjust, unreasonable, discriminatory, or unfair charge or practice—whether he has that in his establishment, in his business. How could he discriminate? How could he make a charge? How could he have a practice? Plainly, by the conduct of his business. What is this charge that he is going to make? It is his business. It must be the thing that he charges the people to whom he sells the goods; and that is the price.

Why, the section is absolutely without meaning unless you construe the word "charge" to include the word "price"; for of what avail would it be to find out whether he had a charge if that charge did not mean "price"? What charge do you mean? A man is grinding his own flour in his own mill and selling it to the public, and that is his sole business. Is his rate or charge reasonable? What is his rate or charge? The only rate or charge he has is for the flour that he sells, and that is the price of the flour.

I decline to argue further a thing that is as plain as that, and I proceed to collate what is in this bill; and now I have divided up this that I hope to be an epitome:

(q) The power to control financing and pledging is broadly granted. This would seem to go far toward interfering with many important banking operations. It might readily be exercised so as to prohibit the mortgaging of grain in the farmer's bin or the public elevator.

Under the provisions of section 6, hoarding is defined; and behold the mildness of this provision:

(1) Any citizen may be fined $5,000 and sent to the penitentiary who has contracted for or arranged for any quantity of necessaries in excess of his reasonable requirements for use or consumption by himself and dependents for a reasonable time. What does that language mean? What rule shall a man apply?

(2) Any manufacturer, wholesaler, retailer, or other dealer may be similarly punished if he has contracted for any quantity of necessaries in excess of the reasonable requirements of his business for use and sale by him for a reasonable time, or reasonably required to furnish necessaries produced in surplus quantities seasonally throughout the period of scant or no production.

Mr. President, I know a man who owns an elevator that is capable of holding practically a million and a half bushels of wheat. It will be necessary to employ that elevator, as it is necessary to employ others, if our crop is to be properly handled. This man usually buys wheat on the market, pays the farmers money for it, and puts the grain in his elevator. That man is afraid to-day to buy wheat lest this bill be passed and he be charged with buying an unreasonable amount and sent to the penitentiary.

Mr. KENYON. Mr. President, does the Senator think the very instance he gives would be a violation of this act?

Mr. REED. I think that if I owned that elevator I would be afraid to fill it half full lest I be indicted and taken before some jury; and, if times were hard, and if people were excited, and if there were some want in the land, and if the cry had gone abroad that people were hoarding and storing, I would be afraid to have the question of fact submitted to those men.

Mr. KENYON. But if the elevator man had not bought or kept differently from his usual course of business, or in larger quantities, the Senator would not have much to fear on that question in a supreme court.

Mr. REED. Oh, yes, I would. His usual course of business was to buy on the market a million and a half bushels of wheat and handle it through his elevator. He kept his elevator substantially filled throughout the year; but if he found that it was to his advantage to hold it for a month, or two months, he held it. He was performing to some extent the same office perhaps that the cold-storage man is performing, although that is not a good illustration. He was at least carrying on his usual business. He was buying large quantities of grain; and now we pass this statute. What are the rights of this man?

Understand I am not in favor of hoarding grain. I am absolutely in favor of any rule or regulation which will prevent the hoarding of our foodstuffs so as to imperil the free market of the people; but what I am talking about is a law so loosely drawn, without any definition, without any means of defense, that under it a man might be sent to the penitentiary who bought a little more grain than some jury might think he ought to have. Now, you pass statutes of that kind, and you frighten everybody to death. That is the point I am making. I am not arguing in favor of hoarding. I am not arguing in favor of speculation. I am arguing in favor of legislation that will let the business men of the country, great and small, big and little, know when they are committing a crime, and not turn them over to such loose language as this bill contains.

Mr. KENYON and Mr. VARDAMAN addressed the Chair.

The VICE PRESIDENT. Does the Senator from Missouri yield; and if so, to whom?

Mr. REED. I yield first to the Senator from Iowa. I will yield to the Senator from Mississippi in a moment.

Mr. KENYON. I remember that when we were discussing the speculative section of the other bill, introduced by the Senator from Montana [Mr. WALSH], the Senator from Missouri argued, and it seemed to me very clearly, that if there were a holding merely in the ordinary course of business for better prices, that would not come under the inhibition of that section; it would not be subject to the same objection as where the grain or the eggs were held for the purpose of affecting the market. It seems to me that is exactly the situation as to subdivision (b) of this bill. While I realize that there is force in what the Senator says as to frightening elevator men, yet, under the circumstances cited by the Senator, where grain is stored in the ordinary way of business of the man, though bought in large quantities, it seems to me it would not be a violation of this section.

Mr. REED. I say to the Senator in answer to that that I think the section is very different from what we have called the Walsh amendment. I think that amendment is very much plainer in its terms. However that may be, I am simply calling attention to this now in order to show what its effect may be and how necessary it is that we should scan this bill; that we should take it back to the committee; that we should write it so that men will not be frightened to death who simply intend to go on with their legitimate business.

Mr. VARDAMAN. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Mississippi?

Mr. REED. I yield to the Senator from Mississippi.

Mr. VARDAMAN. I hope the able Senator from Missouri may bring his penetrating intellect to bear upon that particular section of the bill. Now, I take it that no Senator who desires to serve the American people will object to a provision of the bill the purpose of which is to prevent hoarding or cornering the market and in that way causing a scarcity of food and increasing the price. I hope the Senator will propose in the course of the discussion an amendment which will carry out that idea without interfering with any legitimate business, because we all want and the country needs relief from that class of criminal people.

Mr. REED. Mr. President, I think I am largely in agreement with the Senator from Mississippi. The Senator from Mississippi, like all of us, may have his faults, but there is one thing about which he is never at fault. He never forgets the great common people of the country.

I am perfectly in accord with the idea of stopping all hoarding. I have already called attention to the fact that we have passed an amendment that I think is very sound and means something very different from the measure under consideration. I call attention to it again. It is the Walsh amendment to House bill 4188 that I referred to. Notice the language:

That any person carrying on or employed in commerce among the several States or with foreign nations or with or in the Territories—

There I say to the Senator from North Carolina we begin to invoke the just powers of the Government as they concern interstate commerce—

in any article suitable for human food, fuel, or other necessaries of life, who, either in his individual capacity or as an officer, agent, or employee of a corporation, etc., shall store, acquire, or hold, or who shall destroy or make away with any such article for—

Now, notice the language—

for the purpose of limiting the supply thereof to the public or affecting the market price thereof in such commerce, whether temporarily or otherwise, shall be deemed guilty of a felony.

The lawyers of the Senate will catch the distinction at once; I think lawyers and laymen alike. This permits the purchase

of goods and the holding of goods, but if it be done for the purpose or so as to increase the price then punishment follows. However, I pass from this phase of the discussion with the remark that I am ready to go with other Senators to do whatsoever is necessary to stop hoarding. I think it ought to be done. It seems to me that some of the powers which are contained in this proposed bill are very wise. I agree to the proposition that if necessities are being hoarded it is all right to confer the power to proceed to take those things and pay a legitimate price for them. Always, however, that law must be so drawn as to come within the constitutional powers of our Government, and that would bring forward quite a discussion, but that the power can be exercised I have not the slightest doubt, and exercised without doing violence to the Constitution.

Mr. President, I have reached a point in my remarks where I want to take up another topic. I am sorry to have taken so much of the time of the Senate, and I shall discontinue my remarks for to-day.

Mr. KING obtained the floor.

Mr. WALSH. Before we pass from the subject which the Senator from Missouri has been discussing, will the Senator from Utah pardon me?

The PRESIDING OFFICER (Mr. SHEPPARD in the chair). Does the Senator from Utah yield to the Senator from Montana?

Mr. KING. Gladly I yield.

Mr. WALSH. I desire to say that I took occasion to interrupt the Senator from Missouri early in his discussion in connection with the statement made by him to the effect that Canada has no food dictator. That is quite true; but, of course, the statement carried the implication that we were creating a food dictatorship in this country. I asked the Senator for some specific information concerning Canada, and called his attention at that time to the fact that Canada has a food-control law and a food controller. I have before me the order of the privy council of the Dominion Government issued on the 11th day of June, 1917, pursuant to the war-measures act of 1914, which is now the food-control law of the Dominion of Canada. I am going to ask leave to insert it in the RECORD, but I call the attention of the Senator at this time to these provisions of the Canadian law. It creates a board called the board of grain supervisors of Canada, which consists of 12 members, with a chairman:

4. The board shall have power from time to time to fix the price at which grain stored in any elevator may be purchased, and the conditions as to price, destination, or otherwise, under which grain may be removed from such elevator, and may also prescribe what grain shall be sold to millers or milling firms in Canada or elsewhere (hereafter called "millers") and what grain shall be sent to the United Kingdom and the allied powers; and it shall be the duty of the board to issue such orders and take such action as it deems necessary to facilitate at all times the transportation and delivery of grain in excess of domestic requirements to the United Kingdom and the allied powers.

(a) Any price so fixed shall be subject to the approval of the chairman of the board.

(b) The board may from time to time appoint an executive committee of not less than three of its members, of whom the chairman shall be one, and may assign to such executive committee any duties or powers within the competence of the board.

5. The board shall have power to receive offers for the purchase of grain from millers and from the Wheat Export Co. (Ltd.), or from any other person or body corporate, hereinafter referred to as "overseas purchasers," representing or acting for the Government of the United Kingdom or for any of the allied nations, or for any combination of the same, and from time to time to fix the prices at which such grain shall be sold.

6. The board shall have power to take possession of and sell and deliver to millers or to overseas purchasers at the prices so fixed grain stored in any elevator, and to account and pay over to the owners thereof the proceeds of such sales, after deducting all expenses connected with the taking possession, sale, and delivery.

7. The board shall, as far as possible, and having regard to position and the cost of transportation, fix a uniform price throughout Canada for grain of the same kind, quality, and grade.

8. Notwithstanding anything in the grain act or in the railway act, the board of railway commissioners for Canada shall have power to order any railway company to provide cars and other transportation facilities for handling grain and to transport as directed grain taken possession of or owned by the board.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

P. C. 1604.

[Privy council, Canada, at the Government house at Ottawa, Monday the 11th day of June, 1917.]

Present: His excellency the Governor General in council.

Whereas, by reason of war conditions, it is considered necessary to provide means whereby the grain of Canada in excess of domestic requirements may be made available for purchase by or on behalf of His Majesty's Government of the United Kingdom and of the allied powers, and that the distribution of domestic requirements be controlled in such manner and under such conditions as will prevent to the utmost possible extent any undue inflation or depreciation of values by speculation, by the hoarding of grain supplies, or by any other means:

Therefore his excellency the Governor General in council, under and by virtue of the provision of the war measures act, 1914, is pleased to make the following regulations, and same are hereby made and enacted accordingly:

1. The Governor General in council may appoint a board, to be designated "the board of grain supervisors of Canada," hereinafter called the board. Such board shall be honorary and shall consist of not more than 12 members.

2. The members of the board shall be paid traveling and living expenses while actually engaged in the duties of the board, but otherwise shall receive no remuneration.

3. The board shall make such inquiries and investigations as from time to time it deems necessary to ascertain what supplies of grain are now available or will be available. The board shall ascertain the location and ownership of such grain and what transportation and elevator facilities are available in connection therewith, as well as all conditions connected with the marketing and the market price of the same. For the purpose of any inquiry or investigation held by the board, the board and the several members thereof shall have all the powers of a commissioner acting under part 1 of the inquiries act.

4. The board shall have power from time to time to fix the price at which grain stored in any elevator may be purchased, and the conditions as to price, destination, or otherwise under which grain may be removed from such elevator, and may also prescribe what grain shall be sold to millers or milling firms in Canada or elsewhere (hereinafter called "millers") and what grain shall be sent to the United Kingdom and the allied powers, and it shall be the duty of the board to issue such orders and take such action as it deems necessary to facilitate at all times the transportation and delivery of grain in excess of domestic requirements to the United Kingdom and the allied powers.

(a) Any price so fixed shall be subject to the approval of the chairman of the board.

(b) The board may from time to time appoint an executive committee of not less than three of its members, of whom the chairman shall be one, and may assign to such executive committee any duties or powers within the competence of the board.

5. The board shall have power to receive offers for the purchase of grain from millers and from the Wheat Export Co. (Ltd.) or from any other persons or body corporate, hereinafter referred to as "overseas purchasers," representing or acting for the Government of the United Kingdom or for any of the allied nations or for any combination of the same, and from time to time to fix the prices at which such grain shall be sold.

6. The board shall have power to take possession of and sell and deliver to millers or to over-seas purchasers at the prices so fixed grain stored in any elevator, and to account and pay over to the owners thereof the proceeds of such sales after deducting all expenses connected with the taking possession, sale, and delivery.

7. The board shall, as far as possible, and having regard to position and the cost of transportation, fix a uniform price throughout Canada for grain of the same kind, quality, and grade.

8. Notwithstanding anything in the grain act or in the railway act, the board of railway commissioners for Canada shall have power to order any railway company to provide cars and other transportation facilities for handling grain, and to transport as directed grain taken possession of or owned by the board.

9. Every person shall truthfully and promptly answer any inquiry made by the board or by any person duly authorized on its behalf about any matter within its powers or duties, whether such inquiry is made verbally, in writing, by telegraph, or in any other way.

10. In this order "elevator" means and includes any terminal, country, private, public, and hospital elevator, and any elevator licensed by the board of grain commissioners for Canada.

11. The board, with the approval of the governor in council, may make any regulations it deems necessary for the purpose of fully and effectively carrying out the objects and provisions of these regulations, and in particular, but without limiting the generality of the foregoing, may make regulations:

(a) For appointing representatives in different places in Canada for the purpose, from time to time, of making known in such localities the prices for grain fixed and other regulations or directions made by the board, and for reporting to the board any violations of any order issued by the board or any regulations made hereunder, and generally for assisting the board in the effective discharge of its duties.

(b) To authorize the engaging of clerks, employees, and assistants and the paying of their salaries.

(c) Creating offenses and providing penalties in respect of violations of any order made by the board or of any regulation made hereunder.

(Signed) _____ _____,
Clerk of the Privy Council.

P. C. 1605.

Certified copy of a report of the committee of the privy council, approved by his excellency the Governor General on the 11th June, 1917.

[Privy council, Canada.]

The committee of the privy council on the recommendation of the minister of trade and commerce advise that the following persons be appointed members of the board of grain supervisors for Canada, the appointment of which board was authorized by order in council of 5th January, 1917, the first named to be chairman:

Robert Magill, of Winnipeg, Manitoba.
H. W. Wood, of Carstairs, Alberta.
Samuel J. Rathwell, of Moosejaw, Saskatchewan.
Thomas A. Crerar, of Winnipeg, Manitoba.
William L. Best, of Ottawa, Ontario.
John Charlie Cage, of Winnipeg, Manitoba.
William A. Bawlf, of Winnipeg, Manitoba.
William A. Matheson, of Winnipeg, Manitoba.
Lionel Clarke, of Toronto, Ontario.
Joseph Ainey, of Montreal, Quebec.
James Stewart, of Winnipeg, Manitoba.

The committee further advise on the same recommendation that until the board shall otherwise determine, seven members of the said board shall constitute a quorum.

(Signed) _____ _____,
Clerk of the Privy Council.

Mr. WALSH. I also call the attention of the Senate to a dispatch appearing in yesterday morning's Washington Post under date of June 20, as follows:

CONTROLS CANADA'S FOOD—W. J. HANNA'S APPOINTMENT IS ANNOUNCED BY PREMIER BORDEN.

OTTAWA, ONTARIO, *June 19.*

W. J. Hanna has been appointed food controller of Canada, it was announced in the house to-day by Premier Borden.

Mr. Hanna left here to-day for Washington to confer with Herbert C. Hoover.

Canada's food controller recently retired from the provincial secretaryship of Ontario. He is a lawyer by profession.

Mr. REED. Mr. President, I have this to say, that I this morning communicated with the English ambassador, not in person but with his representative or his secretary, and the statement was made to me that Canada has no food control or no food dictatorship, that a bill had been passed a good while ago, but substantially it never had been put into execution. I express it as an opinion that an investigation will show this to be the case. There was a law passed giving the right to take over grain when it was in a public elevator. The law may have gone further, but the Senator knows, as I do, that grain in public elevators is in a different position, particularly if you refer to the grain as owned by those engaged in the public business of running warehouses or elevators. At that point the Government may have recently concluded to take action. Whatever the facts are they ought to be made known, but that is, of course, a very different thing from what is proposed in the pending bill.

Mr. GORE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Oklahoma?

Mr. KING. Certainly.

Mr. GORE. I will say that Canada has passed a statute or has authorized the privy council, which has proclaimed a rather rigorous statute a good deal like the Walsh amendment, punishing conspiracies and efforts to manipulate the prices of foodstuffs. I had a telegram the other day from the American consul general at Ottawa stating that Canada had not undertaken to fix the prices of foodstuffs and probably would not do so.

Mr. WALSH. If the Senator will pardon me, the order which I just had inserted in the RECORD is of date June 11, and it does authorize the grain board to fix prices. Probably the information the Senator had antedated that.

Mr. GORE. The telegram I speak of was received two or three weeks ago, stating that they had not fixed prices and probably would not undertake to fix prices. It is entirely probable that they may have vested the power to fix them, but may not have exercised it. Of course, I have no information on that point.

Mr. KING. Mr. President, Senators feel the importance of this measure, and each Senator has doubtless given some thought to it. I have formulated a measure here which I may or may not offer as a substitute for the pending bill. I merely ask that it be printed for the information of such Senators as will care to examine into the subject.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KING. I ask that the proposed substitute may lie on the table.

The PRESIDING OFFICER. It is so ordered.

RECESS.

Mr. CHAMBERLAIN. I move that the Senate take a recess until to-morrow at 12 o'clock.

The motion was agreed to; and (at 5 o'clock and 15 minutes p. m.) the Senate took a recess until to-morrow, Saturday, June 23, 1917, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

FRIDAY, *June 22, 1917.*

The House met at 11 o'clock a. m.

Rev. M. A. Matthews, D. D., pastor of the First Presbyterian Church of Seattle, Wash., offered the following prayer:

Kind Heavenly Father, we thank Thee for the preservation of our lives until the present moment. Do Thou pardon every sin that we have committed. Direct us in the duties and responsibilities imposed upon us. Wilt Thou bless these United States, the President, the Vice President, the Members of the House and of the Senate, and all in Federal authority. Guide and direct them, that all that they may do may redound to Thy glory and the advancement of Thy kingdom and the permanent establishment of all the great principles for which we are now striving. We ask for Christ's sake. Amen.

The Journal of the proceedings of yesterday was read and approved.

CONSERVATION OF FOOD AND FUEL.

Mr. LEE of Georgia. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961, for the conservation of food and fuel.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961, with Mr. HAMLIN in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 4961, of which the Clerk will report the title.

The Clerk read as follows:

A bill (H. R. 4961) to provide further for the national security and defense by encouraging the production, conserving the supply, and controlling the distribution of food products and fuel.

The CHAIRMAN. When the committee rose on yesterday an amendment offered by the gentleman from Wyoming [Mr. MONDELL] was pending, against which a point of order was reserved. It was also agreed by unanimous consent that all debate on section 1 and all amendments thereto, including a substitute which the Chair understands is to be offered by the gentleman from Iowa [Mr. TOWNER], should close. The gentleman from Minnesota [Mr. ANDERSON], a member of the committee, is recognized.

Mr. ANDERSON. Mr. Chairman, I think we ought to dispose of the point of order in some way or other.

Mr. LEVER. Mr. Chairman, I have very great doubt as to a point of order lying against the amendment of the gentleman from Wyoming, and I therefore withdraw the point of order and am willing to let the matter be submitted to the House.

The CHAIRMAN. The gentleman from South Carolina withdraws the point of order. The gentleman from Minnesota [Mr. ANDERSON] is recognized for five minutes.

Mr. ANDERSON. Mr. Chairman, when the committee rose last evening the gentleman from Wyoming had submitted an amendment which is now pending. That amendment transferred that part of section 3 which relates to the establishment of a Govenment control from section 3 to section 1.

The gentleman from Wyoming is exceedingly ingenious in the use of language and always presents his propositions with logic; but I must confess that I was unable, in listening to his speech and reading it, to determine exactly what he had in mind in the proposed transfer, nor am I able in my own mind to come to a satisfactory conclusion as to just what the effect of the transfer proposed by the gentleman from Wyoming is. I think I do know what the effect of the section is at the point at which it now appears. I do not know, and I do not think any man can know, what the effect of it will be if it is transferred to section 1.

Mr. MONDELL. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. MONDELL. The gentleman knows that there is quite a difference of opinion as to the effect of this particular language as it occurs in section 3. My thought was that as a part of a general declaration, if it were coupled with the declaration in section 1, there would not be any question as to what was intended by it.

Mr. ANDERSON. I have no doubt that the gentleman's intentions were entirely proper, and I do not undertake to say it is not possible that he accomplishes the purpose he had in mind in transferring part of the section from section 3 to section 1. The basis of the gentleman's proposition, as I understood, to transfer the section was that it belongs more properly to section 1 than where it is.

Now, section 1 is purely a declaratory section. It lays the foundation of the constitutionality of the bill. Section 3 is not a declaratory section. It is a legislative section, and it is no more closely related to section 1 than are many other sections of the bill. There is no more reason for putting section 3 in section 1 than there is for putting any other section or joining any other section with section 1. It is no more closely related to that section than any other section.

Mr. MONDELL. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. MONDELL. I know that the gentleman's time is brief, and I do not want unnecessarily to interrupt him. But the gentleman characterizes the language I seek to transfer as being legislative, located as it is in the bill; but at the end of the section there is a proviso under which none of the penalties of the bill shall attach to the violation of any of the injunctions, if it is an injunction, laid down in this, what the gentleman terms, a "legislative proposition." It strikes me as making the whole matter rather confusing.

Mr. ANDERSON. I think it is likely that section 3 may be amended by striking out that proviso, and if the gentleman desires to make the section clear it strikes me it would be better to make it clear in section 3 than to attempt to do it by transferring it from the section where it now occurs to section 1.

The committee in drawing this bill has attempted to carry through it a definite policy and to so connect up the different sections of the bill as to make the entire bill symmetrical and to make each section bear the exact relation to every other section in the bill that it should bear to carry out the legal effect that the committee has in mind. I am fearful that by the adoption of the amendment of the gentleman from Wyoming we will have done something which we did not intend to do, and that his amendment will destroy something of the symmetrical purpose and effect which the committee had in mind.

Mr. SCOTT of Iowa. Will the gentleman yield?

The CHAIRMAN. The time of the gentleman has expired.

Mr. ANDERSON. My time has expired, and therefore I can not yield.

Mr. TOWNER. Mr. Chairman——

The CHAIRMAN. Under the agreement the gentleman from Iowa [Mr. TOWNER] is to have 10 minutes of the 25.

Mr. TOWNER. I offer the following amendment.

Mr. LEVER. Will the gentleman from Iowa first permit the taking of a vote on the amendment of the gentleman from Wyoming [Mr. MONDELL]?

Mr. TOWNER. I have no objection whatever.

Mr. LEVER. I ask, then, that we first dispose of the amendment of the gentleman from Wyoming.

The CHAIRMAN. If the gentleman from Iowa does not care for recognition at this time, the Chair will recognize the gentleman from Missouri [Mr. MEEKER], the leader in support of the amendment of the gentleman from Wyoming. The gentleman from Missouri will be recognized for five minutes.

Mr. MEEKER. Mr. Chairman, I referred to section 3 in my remarks in the general debate the other day, at which time I announced that I intended to support this bill, and I do, although the gentleman from Kansas [Mr. HELVERING] saw fit yesterday, after I had made such announcement, to declare that I was opposing it. There was just as much truth in what he said about that as in the other things he said, and that is enough to say about the matter. I am not going to take time to reply to such silly stuff as that to which he gave utterance.

I am interested in this bill. The third section is more misleading to the public generally, I think, than any other section of the bill. I think the amendment offered by the gentleman from Wyoming [Mr. MONDELL] will really put the only valuable part of the section that there is in its proper place.

Now, here is the contention that I am making all the time in regard to this bill: Whatever is enacted into law on this subject will put Mr. Hoover against the most difficult proposition that any human being ever undertook. The only reason that the men of the cities are asking for this control bill is because they believe it is going to control and regulate the maximum price. We have been told that that is not to be done by direct orders. Now, what remains? The greatest assistance that Mr. Hoover will get out of this legislation will be the support of popular sentiment generally, and it is well for this Congress to let the people understand that they are not going to get a maximum price-fixing law out of this legislation, and that all the reduction in food prices will come only through Mr. Hoover or the President being able to hasten the transference of food from the producer to the consumer, to cut down storage charges and things of that sort, and that the people should not expect to see an immediate reduction of food prices simply by the order of the food dictator. Now, the men who are insisting that the public shall be informed as to how this thing is going to work are the best friends that Mr. Hoover will have after the bill shall have been passed.

Now, what is section 3? We have had it read a number of times, and the gentleman from Texas, Judge HARDY, has pointed out the facts with reference to it. Judge HARDY certainly is a friend of the bill. I do not think the gentleman from Kansas would deny that, though he could slander Judge HARDY as easily as he could me. Judge HARDY, who followed me the other day in the debate, pointed out that the last half of this section is useless, and he further went on to say that the proviso of the section was nonsensical. I think I am correct when I say he used the term "nonsensical." Now, these men who are urging this bill certainly can not be considered enemies of it when they point out its weaknesses. The gentleman from Colorado [Mr. KEATING] yesterday spoke about his miners and employed people out there wanting this bill to pass. The only reason they want the bill to pass is because they have felt that by some sort of a scheme they are going to get a reduction in the prices that they have to pay for their foodstuffs. I believe that the transference of this part which is purely declaratory and putting out that part of the section which is useless will at least give the bill an honest status in the mind of the public.

The CHAIRMAN. The question is on the amendment of the gentleman from Wyoming [Mr. MONDELL].

The amendment was rejected.

The CHAIRMAN. The gentleman from Iowa [Mr. TOWNER] is recognized for an amendment by way of a substitute to section 1. The Clerk will report it.

The Clerk read as follows:

Amendment offered by Mr. TOWNER: Mr. TOWNER moves to strike out the first section of the bill after the enacting clause and moves the adoption of the substitute offered as a substitute for the entire bill, with notice that if adopted he will then move to strike out the remaining sections of the bill as they are reached.

The substitute offered is as follows:

"That hereafter and during the continuance of the war between the United States and Germany it shall be unlawful for any person, partnership, corporation, or association, either as an individual or as an officer, agent, or employee of a partnership, corporation, or association, producing, dealing in, buying, or selling or otherwise handling and controlling any article or articles suitable for human food, fuel, or other necessaries of life willfully to acquire control, store, hold, or hoard such articles for the purpose of limiting the supply thereof, or unreasonably enhancing the price thereof, or to monopolize or control the market thereof, or to limit the production or sale thereof, or to injure or destroy, or to limit, interfere, or prevent the transportation, storage, handling, or free disposition and sale thereof. Any person violating the provisions of this section shall be deemed guilty of a felony and shall be punished by fine not exceeding $10,000 or by imprisonment for not more than five years, or by both such fine and imprisonment: *Provided*, That the provisions of this section shall not apply to any farmer, gardener, or other person with respect to the products of any farm, garden, or other land owned, leased, or cultivated by him, nor to any retailer with respect to the retail business actually conducted by him, nor to any common carrier with respect to transportation.

"SEC. 2. That to carry into effect the purposes of this act the President is authorized to purchase, provide for the production or manufacture of necessaries; to store them and to provide storage facilities for them by construction, purchase, lease, or otherwise; to sell them; and to require any person having the control of any necessaries, or any storage space suitable for the storing of necessaries, to furnish the whole or any part of such necessaries or storage space to the Government in such quantities, at such times, and at such prices as shall be determined by the President to be reasonable. Upon failure of the person to comply with such requirement, the President is authorized to requisition and take possession of any such necessaries or storage space, and to pay for them at the price so determined. If the price so determined be not satisfactory to the person entitled to receive the same such person shall be paid the amount prescribed by the President, and shall be entitled to sue the United States to recover such further sum as, added to the amount so paid, will be just compensation for such necessaries or storage space, and jurisdiction is hereby conferred on the United States district courts to hear and determine all such controversies: *Provided*, That nothing in this section shall be construed to require any natural person to furnish to the Government any necessaries held by him and reasonably required for consumption by himself and dependents for a reasonable time. Any moneys received by the United States from or in connection with the disposal by the United States of necessaries under this section may, in the discretion of the President, be used as a revolving fund for further carrying out the purposes of this section. Any balance of such moneys not used as part of such revolving fund shall be covered into the Treasury as miscellaneous receipts.

"SEC. 3. That whenever the President shall find that it is impossible by voluntary arrangement or agreement to assure an adequate and continuous supply of necessaries, he is authorized to requisition and take over, for use or operation by the Government, any factory, mine, or other plant, or any part thereof, in which any necessaries are or may be manufactured, produced, prepared, or mined. Whenever the President shall determine that the further use or operation by the Government of any such factory, mine, or plant, or part thereof, is not essential for the national security or defense, the same shall be restored to the person entitled to the possession thereof. The United States shall make just compensation, to be determined by the President, for the taking over, use, occupation, and operation by the Government of any such factory, mine, or plant, or part thereof. If the amount so determined be unsatisfactory to the person entitled to receive the same, such person shall be paid the amount prescribed by the President, and shall be entitled to sue the United States to recover such further sum as, added to the amount paid, will be just compensation, in the manner provided by section 24, paragraph 20, and section 145 of the Judicial Code. The President is authorized to prescribe such regulations as he may deem essential for carrying out the purposes of this section, including the operation of any such factory, mine, or plant, or part thereof, the purchase, sale, or other disposition of articles used, manufactured, produced, prepared, or mined therein, and the employment, control, and compensation of employees. Any moneys received by the United States from or in connection with the use or operation of any such factory, mine, or plant, or part thereof, may, in the discretion of the President, be used as a revolving fund for the purpose of the continued use or operation of any such factory, mine, or plant, or part thereof, and the accounts of each such factory, mine, plant, or part thereof, shall be kept separate and distinct. Any balance of such moneys not used as part of such revolving fund shall be paid into the Treasury as miscellaneous receipts.

"SEC. 4. That undue enhancement of prices of food, feed, fuel, and other necessaries of life is hereby prohibited. Whenever the President finds it essential in order to prevent undue enhancement or fluctuation of prices of, or in order to prevent injurious speculation in, or in order to prevent unjust market manipulation or unfair and misleading market quotations of the prices of food, feed, fuel, and other necessaries of life he is authorized to prescribe such regulations governing, or may either wholly or partly prohibit, operations, practices, and transactions at, on, in, or under the rules of any exchange, board of trade, or similar institution or place of business as he may find essential in order to prevent, correct, or remove such evil practices.

Further, for the purposes of this section, the President may require all persons coming within its provisions to keep such records and statements of account, and may require such persons to make such returns, verified under oath or otherwise, as will fully and correctly disclose all transactions at, in, or on, or under the rules of any such exchange, board of trade, or similar institution or place of business, including the making, execution, settlement, and fulfillment thereof. He may also require all persons acting in the capacity of a clearing house, clearing association, or similar institution, for the purpose of clearing, settling, or adjusting transactions at, in, or on, or under the rules of any such exchange, board of trade, or similar institution or place of business, to keep such records and to make such returns as will fully and correctly disclose all facts in their possession relating to such transactions, and he may appoint agents to conduct the investigations necessary to enforce the provisions of this section and all rules and regulations made by him in pursuance thereof, and may fix and pay the compensation of such agents. Any person who willfully violates any regulation made pursuant to this section, or who knowingly engages in any operation, practice, or transaction prohibited pursuant to this section, or who willfully aids or abets any such violation or any such prohibited operation, practice, or transaction, shall, upon conviction thereof, be punished by a fine not exceeding $10,000 or by imprisonment for not more than four years, or both.

"SEC. 5. That whenever the President shall find that limitation, regulation, or prohibition of the use of foods, food materials, or feeds in the production of alcohol or of alcoholic or nonalcoholic beverages, or such nonalcoholic beverages as he shall determine, or that reduction of the alcoholic content of any beverage, is essential in order to assure an adequate and continuous supply of food, he is authorized, from time to time, to prescribe, and give public notice of, the extent of the limitation, regulation, prohibition, or reduction so necessitated. Whenever such notice shall have been given and shall remain unrevoked, no person shall, after a reasonable time, which shall be prescribed in the notice, use any foods, food materials, or feeds in the production of alcohol or of alcoholic or nonalcoholic beverages, except in accordance with the limitations, regulations, and prohibitions prescribed in such notice, or produce any beverage having an alcoholic content in excess of the amount prescribed therefor in such notice. Any person who willfully violates this section shall, upon conviction thereof, be punished by a fine not exceeding $5,000, or by imprisonment for not more than two years, or both.

"SEC. 6. That the sum of $2,500,000 is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, to be available immediately and until expended, for the payment of such rent, the expense of such printing and publications, the purchase of such material and equipment, and the employment of such persons and means, in the city of Washington and elsewhere, as the President may deem essential.

"SEC. 7. That for the purposes of this act the sum of $150,000,000 is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, to be available immediately and until expended: *Provided*, That no part of this appropriation shall be expended for the purposes described in section 6."

Mr. LEVER. Mr. Chairman, I think this substitute is subject to a point of order, but I am not going to make it. I believe under the arrangement the gentleman from Iowa [Mr. TOWNER] is to have 10 minutes. I should like to reserve 5 minutes to myself.

Mr. TOWNER. Mr. Chairman, I feel some hesitancy and reluctance in presenting this substitute, for the reason that I am in favor of this legislation and shall support this bill, I presume, whether my substitute is adopted or not. I have made an endeavor to cure some of what I consider to be the defects in this bill, and I have done so for two reasons: First, for the purpose of perfecting it as an operative piece of legislation; and, second, because I think it is much more likely to become a law speedily in the form which I suggest than otherwise.

The bill as prepared, as we all know, is not the work of the Committee on Agriculture. It comes from the Department of Agriculture, but we do not know who prepared it. Of course, we might denounce it. I do not desire to do that. I only desire to say this: That evidently any man, and certainly any Member of Congress who has read this bill, must know that it is one of the most complicated pieces of legislation ever proposed. No one knows what it will do or what will become of it. We all desire the speedy passage of legislation. If now the objects and purposes of this bill can be secured by simplifying it, by striking out the unnecessary and extraneous parts of it, by getting rid of the complicated, questionable, and debatable portions of it, then certainly we will have accomplished a great deal.

There are only two objects and purposes in this legislation. The first is the prevention of evil practices such as hoarding, monopolizing, manipulation, speculation, and unduly enhancing the prices of the necessaries of life. That is the first object and purpose of this legislation. The second is to give the President power over the industries of this country to carry on the war.

Now, gentlemen, the first eight sections of this bill are an endeavor to accomplish the first object, and that can all be accomplished, as I believe, in the first section which I have proposed in this bill. In this bill the operative features are separated. We separate the means of control, we separate the methods of punishment, we separate the method of dealing with evil practices, and in my judgment we should do only one thing, prohibit them and punish them if they are evil practices, and we intend to do so. That is our object and purpose. We propose to prevent the undue hoarding, monopolizing, and manipulation of products for the purpose of unreasonably enhancing prices, and I think all that is necessary for us to do is to do as I have done in the substitute in the first section. This substitute is in reality in its first section a substitute for the first eight sections of the bill. It simply makes a statement of these evil practices and puts a punishment upon them. That simplifies the bill, removes the objectionable features, and makes it really operative.

Now, the other provisions of the bill, intended to give the President power and control of the industries of the country for the purpose of carrying on the war, I have put in the substitute practically as they were drawn in the bill. For instance, section 2 of my substitute is section 9 of the bill, and gives the President power to purchase and sell or requisition foodstuffs in the country, and so forth. Section 3 of my substitute is section 10 of the bill. It gives the President power to requisition, operate factories, mines, and so forth, wherever necessary. Section 4 of the substitute is section 11 of the bill, which gives the President the power to regulate and prevent injurious speculation or market manipulation. Section 5 of the substitute is section 13 of the bill, which gives the President the power to regulate the use of grain or food provisions for alcoholic liquors. Sections 6 and 7 of the substitute are sections 18 and 19 of the bill, which contain the appropriations.

Now, gentlemen, if we can accomplish these objects by a piece of legislation that anybody can understand, that can be easily enforced, that gives the President all the power it was intended to give him by this legislation, then I submit that it ought to be done. I presume gentlemen here will not feel justified in voting for the substitute now. Perhaps they may be wise in doing so. I present it, however, in good faith, and I would like to have it receive the consideration of the Members of the House during the succeeding days of this debate so that finally we may be able, before it is finally passed in the House, to so simplify it and to make it operative and make it in such a form as will be speedily enacted into law.

Mr. SIMS. Will the gentleman yield?

Mr. TOWNER. Yes.

Mr. SIMS. In section 5 of the bill reported by the committee, in the latter part of it, is a provision exempting the farmers and gardeners, and then it excludes common carriers. I notice that the gentleman's substitute excludes common carriers. What is the object of exempting common carriers and putting them in a class with farmers and gardeners?

Mr. TOWNER. I will say to the gentleman frankly that I have not considered that.

Mr. LEVER. If the gentleman will yield, I will answer the gentleman.

Mr. TOWNER. I yield.

Mr. LEVER. The purpose of preferential shipments was originally carried in the bill as it was introduced, but it was the understanding of the committee that a separate bill pending before the gentleman's committee, I believe, was to take care of that situation, and therefore the committee cut it out.

Mr. SIMS. But it classes the common carrier with the farmer and the gardener.

Mr. LEVER. We did not want the provisions of the bill to apply to common carriers.

Mr. SIMS. How could it unless they were gardeners and farmers?

Mr. TOWNER. I think the chairman's idea is that other legislation proposed will more fully give the same control.

Mr. SIMS. I think it ought to be stricken out of the bill and out of the gentleman's substitute.

Mr. TOWNER. I think so, too, but I would not say so dogmatically. I used the language of the bill and did not try to modify it except as it was absolutely necessary to make it clear and a straightforward piece of legislation.

Now, gentlemen, we all know what opposition there is to this bill. I think much of the opposition that has been suggested is not well founded. I think much of the opposition that has been suggested has been caused by the debatable and unnecessary parts of the bill. Take, for instance, the licensing system, which, in my judgment, is entirely unnecessary; and it would be one of the most complicated and difficult pieces of machinery that could possibly be thought of and would entail an enormous expenditure of money to put it into operation. The licensing of all the institutions for storage, even the small dealers in food products, the purchasers of eggs, poultry, and dairy products, the coal yards that handle fuel, all these things to be subjected to a licensing system, and then to say that there must be a violation of the terms of the license in any case before there can be a punishment of what we desire to make a crime, is to make it difficult to enforce the penal portion of the statute. If we intend to punish a man for evil practices which we define, and we do so in this bill, then we should not make the punishment so far removed from the offense that conviction is almost im-

possible. And especially we should not penalize a whole class because of the evil practices of an individual. If a single violation is shown, the individual only should be punished, not the whole class engaged in the same line of business.

We should prohibit simply and attach a penalty to it clearly, and then we will have accomplished the object. Let that be known and men will certainly more quickly obey the law than they will if they say, "Oh, well, the President has got to notify us; we can then obtain license to do business, and he has got to issue an order to us to stop these evil practices, and we are going to have a probationary period in which we will endeavor to stop these evil practices," and all that has to be done, and then a new violation has to occur before you can punish men for the pirating and exploitation of food products all over this country of ours outside of the legitimate trade. In the sections of the substitute there is no provision that would unjustly punish any man for an honest performance of his duty. I have nothing further to suggest unless there are some questions that gentlemen desire to ask regarding the matter. I will only add that, while I do not believe this substitute will commend itself to the approval of the membership of the House at this time, I submit it in good faith as an honest endeavor at least upon my part to simplify this legislation and make it effective, and I hope and trust it will receive the consideration of the House.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. LEVER. Mr. Chairman, the proposal submitted by the gentleman from Iowa [Mr. TOWNER] affords the committee a test proposition. This bill is drawn upon the theory of providing for certain processes of food control, and then it also provides for certain offenses in connection with food, which are penalized, and then the appropriation section. The proposition of the gentleman from Iowa as I heard it only proposes penal offenses and attaches proper penalties to those offenses. It is my thought, and it is the thought of Mr. Hoover, and the thought of the President himself, and of the Committee on Agriculture, I think almost unanimously, that the greater results from this legislation are not coming through the penal sections of the bill, but through the control which is to be set up by the food administrator, Mr. Hoover. The gentleman's proposition cuts out all efforts at control. It simply says that speculation, for instance, is a crime and punishes it, but it does not provide anywhere for that balance wheel in our machinery of distribution, the lack of which in my judgment has brought about the conditions from which we are now suffering. It is all very well, as expressed to me by the very distinguished gentleman this morning, to set up in your watermelon patch a scarecrow, but a scarecrow only scares; it neither hoes, nor plows, nor harvests. It gets you nowhere except to keep the crows out. What we are trying to do in the control provisions of the bill is to set up something that is constructive; to set up something that will do the business; to set up something that will coordinate the distributing machinery of this country and bring to it the most efficient administration and use, and if the gentleman's proposition should prevail, in my humble judgment, it would take from this bill at least 75 per cent of the effectiveness which the committee feels is in the bill. I trust, therefore, that it may be voted down.

Mr. TOWNER. Mr. Chairman, will the gentleman yield?

Mr. LEVER. Just one other thought before I yield. The suggestion has been made here repeatedly that this bill has been crudely drawn. Those who make that suggestion have not offered anything to make it any less crude. One gentleman said yesterday there were many foolish provisions in the bill, but he has submitted no amendments to make these provisions wise, or even to strike them out. It is a very easy matter to criticize, but the Committee on Agriculture was undertaking to sail an absolutely uncharted sea, and we believe that we have brought to this committee and to this House a sane, logical, and reasonable proposition.

More than that, the suggestion has been made that this bill is the product of the Agricultural Department, and that the Committee on Agriculture has had practically nothing to do with it. No statement could be further from the fact than that. It is true the Agricultural Department early in the session did prepare, at the suggestion of many members of the committee and at the suggestion of thinkers throughout the country, a bill which they submitted for the consideration of the committee only. The committee did consider it. We met in full session every morning. We discussed the sections; we got the judgment of the full committee, and we submitted that judgment to a subcommittee composed of the best lawyers of the committee, we thought, and we, with the solicitor of the department, went over this bill line by line, word by word, and there is not a line in the bill, there is not a word in the bill, that has not had the fullest and most earnest consideration of the Agricultural Committee. Not only that, but we struck from the original bill, I think, two-thirds of the language submitted and probably two-thirds of the sections. This is a bill that has been considered by your committee.

The CHAIRMAN. The time of the gentleman from South Carolina has expired. All time has expired.

Mr. MEEKER. Mr. Chairman, I ask unanimous consent for one minute in which to ask the chairman of the committee a question.

Mr. LEVER. I suggest that the gentleman ask it on the next section.

Mr. MEEKER. I withdraw the request.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa in the nature of a substitute.

The substitute was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 3. That there is hereby established a governmental control of necessaries which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries, which shall be exercised and administered by the President for the purposes of this act; and all such necessaries, processes, methods, and activities are hereby declared to be affected with a public interest. And in carrying out the purposes of this section the President is authorized to enter into any voluntary arrangements or agreements, to use any agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person, to utilize any department or agency of the Government, and to coordinate their activities so as to avoid any preventable loss or duplication of effort or funds: *Provided*, That none of the penalties of this act shall apply to this section.

Mr. SCOTT of Iowa. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Amendment offered by Mr. SCOTT of Iowa: Page 2, line 24, strike out the words "for the purposes of" and insert the words "as specified in."

Mr. SCOTT of Iowa. Mr. Chairman, a good deal has been said heretofore with respect to the scope of section 3 and the apparent almost unlimited power that is given the President in that section if the section is to be construed as legislative in its character and unlimited by the subsequent provisions of the bill. The effect of the amendment striking out the words "for the purposes of" and inserting the words "as specified in" is to make it clear that the purpose is to give to the President all of the powers specified in the act, but to give no blanket powers that would have no remedy attached, and no specific mode of execution stated. It limits the general or comprehensive language of section 3, and confines the operation to the remedies and provisions as contained in the subsequent sections.

Mr. LENROOT. Mr. Chairman, I offer the following amendment as a substitute for the amendment offered by the gentleman from Iowa.

The Clerk read as follows:

Substitute amendment offered by Mr. LENROOT: Page 2, line 24, strike out the words "for the purposes of" and insert "as hereinafter expressly provided."

Mr. LENROOT. Mr. Chairman, I am heartily in favor of the things sought to be secured by the amendment of the gentleman from Iowa, but it seems to me that it is possible at least that his amendment does not accomplish the purpose intended. When you say "specified in this act," if section 3, as it stands, confers a general power upon the President, that is one of the powers specified in the act and therefore the gentleman's amendment does not limit it in any way. The substitute that I have proposed, instead of the language "as specified in the act," would make it read "as hereinafter expressly provided," thereby absolutely eliminating any of the general powers and authority that are previously found in section 3. Now, that is merely a question of which accomplishes best the purpose intended.

Mr. STAFFORD. Will the gentleman yield?

Mr. LENROOT. I will.

Mr. STAFFORD. I assume the gentleman would further amend by striking out the words "this act," following the word "of," in line 24?

Mr. LENROOT. I intended my amendment as a complete substitute for the amendment of the gentleman from Iowa.

Mr. STAFFORD. But the amendment of the gentleman from Iowa merely struck out the words "for the purposes of"——

Mr. LENROOT. "Of this act," I thought.

Mr. STAFFORD. And inserted the words "as specified in." The gentleman's amendment to have full force should also include striking out the words "this act."

Mr. LENROOT. Mr. Chairman, I ask unanimous consent to modify my amendment as a substitute by striking out the words "for the purposes of this act," in line 24, and inserting the

words "as hereinafter expressly provided." Now, upon the merits of the proposition I will say just a word.

Mr. LEVER. Mr. Chairman, I suggest the modified amendment be reported.

The CHAIRMAN. The Clerk will report the amendment as modified.

The Clerk read as follows:

Modified amendment: Page 2, line 24, strike out the words "for the purposes of this act" and insert the words "as hereinafter expressly provided," so that it will read, "which shall be exercised and administered by the President as hereinafter expressly provided."

Mr. LENROOT. Now, Mr. Chairman, may I ask whether the chairman intends to oppose this amendment? If not, I do not desire to take any further time.

Mr. LEVER. I would like very much to hear the gentleman's statement before I express an opinion.

Mr. LENROOT. Now, upon the merits of the proposition——

Mr. RUCKER. Before the gentleman proceeds, may I ask him a question?

Mr. LENROOT. I will yield.

Mr. RUCKER. Would not the amendment be stronger and come nearer accomplishing the gentleman's purpose if the word "hereinafter" was omitted?

Mr. LENROOT. No; because the general power by the provisions of the language of section 3 would still remain.

Mr. RUCKER. That is the reason I suggest the word "hereinafter" ought to be stricken out.

Mr. LENROOT. If you strike out the word "hereinafter," there is no occasion for any amendment at all.

Mr. RUCKER. I do not catch the idea, then.

Mr. LENROOT. Because the power then is complete; unless it is desired to limit the authority of the President to the specific enumerated things afterwards found in the act, then there is no occasion for any amendment at all.

Mr. RUCKER. Would not the language "herein expressly provided" be just as complete as "hereinafter"?

Mr. LENROOT. No; it would not. Section 3 in the language from lines 18 to 23 confers a general power upon the President independent of the other sections of the act. If we merely said "as herein expressly provided" it will include that general power, while if we say "hereinafter expressly provided," it makes it purely a declaratory section, and for the specific authority of the President in the enumerated cases we must look to the other sections of the act.

Mr. BARKLEY. Will the gentleman yield?

Mr. LENROOT. I will.

Mr. BARKLEY. In this bill as in many others there are certain expressed powers given the Executive and certain implied powers to carry out the expressed powers. Would the gentleman's amendment in any way hamper the President in exercising the implied powers necessary to carry out the expressed powers?

Mr. LENROOT. Not in the least; any implied power that grows out of any expressed authority granted would still exist, of course.

Mr. BARKLEY. I was fearful that the gentleman's amendment being so specific as to the expressed powers might somewhat handicap the Executive in the exercise of powers necessarily implied.

Mr. LENROOT. In every provision of the Constitution is a grant of expressed power, and in each of those expressed powers there are all the powers implied necessary to carry out the expressed powers.

Mr. BARKLEY. Where the legislation limits the Executive to the exercise of expressed powers, is not that an attempt to limit him or handicap him in the use of the implied powers?

Mr. LENROOT. Not unless you say we can not legislate upon any matter except in the manner specifically expressed in the various articles of the Constitution itself, because exactly the same principle applies.

Mr. BARKLEY. If the gentleman will yield to another question. The gentleman's amendment provides that certain things shall be done "as hereinafter expressly provided." Now, if "hereinafter expressly provided" does not completely authorize the President, then he would be limited to the exercise of powers "hereinafter expressly provided."

Mr. LENROOT. I am frank to say I am perfectly willing to eliminate from the amendment the word "expressly," and we will still limit the powers, as I desire to have done. I have no objection to that, and if the gentleman desires to make that amendment at the proper time I shall offer no objection to it.

Mr. GARD. I think my question is much in the same line. I desire to know what would be covered by the gentleman's amendment. What would be "hereinafter expressly provided"?

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that the gentleman may have five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. GARD. What would be the meaning of the section as amended by the gentleman, with these words in?

Mr. LENROOT. It would be merely a declaratory section. There is only one power given in the section as construed by the gentleman from Minnesota [Mr. ANDERSON], a member of the committee, and that is the power of the President to make voluntary arrangements. That power would still exist with my amendment. Every power that is conferred on the President in subsequent sections would still exist, and all implied powers growing out of it. Those express powers would still exist.

Mr. MONDELL. Will the gentleman yield?

Mr. LENROOT. I will.

Mr. MONDELL. The gentleman thinks there is no doubt but that it would be held that the language of his amendment refers not to this section but to the act? "Hereinafter" would refer to the act and certainly not to the section only.

Mr. SIMS. What is the real difference between the language of the bill and your amendment in its effect upon the purposes of the bill?

Mr. LENROOT. We have had a good deal of discussion and general debate, I will say, and I do not know whether the gentleman listened to it or not, but the chairman of the committee urged the construction that section 3 conferred general independent power upon the President with relation to this whole question, and that he was not limited in the exercise of power by the subsequent sections of the bill, and, to a question which I asked, agreed that if that construction was correct then everything else in the bill except the appropriation section and the penalties and those sections not regulatory might go out of the bill, because they were merely suggestive or advisory to the President.

Mr. SIMS. Does the gentleman accept that as the proper construction?

Mr. LENROOT. I do not; but I do say that the proper construction should be made plain, and it will be made plain by this amendment, making it clear that this is merely a declaratory section of the intention and purpose of Congress.

Mr. SIMS. You do not mean to say "hereinafter" but just "hereafter," meaning after this bill becomes a law?

Mr. LENROOT. I mean hereinafter in this bill. I do not think for a moment that there should be any authority granted to the President in this section over and beyond the express powers granted later in the bill. If you do say that there should be general authority granted to the President to do anything that he sees fit with reference to this food and fuel situation, then you have gone beyond any nation that is now at war. You have gone beyond the Kaiser, you have gone beyond England, you have gone beyond France. You have simply turned over to the President to do as he sees fit, anything that he deems proper, with reference to these matters. I want to say, further, that the gentleman of course knows, as he has been a member of the Committee on Interstate and Foreign Commerce for years, that if we would confer any such power we have no right to do so.

Mr. SIMS. My contention is that the language here, "for the purposes of this act," does not confer such powers as the gentleman has described.

Mr. LENROOT. "For the purposes of this act" means what? For the purposes of encouraging the food supply and conserving it, and all that sort of thing. If the gentleman's construction is correct, it simply says he wants Congress without legislating to say to the President, "You can do anything you please."

Mr. SIMS. Oh, no.

Mr. LENROOT. That you can restrict the rights of citizens as you choose without any limitation or specification from Congress. Does the gentleman desire that?

Mr. SIMS. My contention is that this section 3 does not confer any such power as that, either with the amendment or the substitute offered.

Mr. LENROOT. Without the amendment it is open to that construction.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LENROOT. Mr. Chairman, I ask unanimous consent for five minutes more.

Mr. HEINTZ. I object.

Mr. LEVER. I trust that the gentleman may have five minutes more. I hope the gentleman will withdraw his objection.

Mr. HEINTZ. I withdraw the objection.

Mr. LEVER. Mr. Chairman, I ask unanimous consent that the gentleman from Wisconsin [Mr. LENROOT] may proceed for five minutes more.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that the gentleman from Wisconsin may proceed for five minutes. Is there objection?

There was no objection.

Mr. MONTAGUE. Will the gentleman yield?

Mr. LENROOT. I will.

Mr. MONTAGUE. I would ask the gentleman from Wisconsin [Mr. LENROOT] if his amendment, rearranged in this form, would not meet his purpose: After the word "act," in line 24, insert his amendment, so that it will read: "For the purposes of this act as hereinafter provided?"

Mr. LENROOT. That accomplishes the same thing. I would have no objection to that. My only point is that it should be made clear that this section 3 is declaratory only, but, so far as specific powers are concerned, we must look to subsequent sections of the act. I want to say that the gentleman from Minnesota [Mr. ANDERSON] and the gentleman from Michigan [Mr. MCLAUGHLIN] both say that in their opinion that was the intention of the committee.

Mr. ANDERSON. Well, I do not stand for that statement.

Mr. LENROOT. Except as to voluntary arrangements.

Mr. ANDERSON. Yes. That modifies the gentleman's whole statement, absolutely.

Mr. LENROOT. My amendment saves that, because that is found later on in the section, and I have no objection to that.

Mr. FESS and Mr. GARD rose.

Mr. LENROOT. I yield first to the gentleman from Ohio [Mr. GARD].

Mr. GARD. If this section under the construction is declaratory, would it not be necessary to establish in terms what the governmental control was? The mere saying that governmental control shall be used would hardly be sufficient.

Mr. LENROOT. In all the subsequent sections we do expressly determine what the control is. This section does two things: In the first part of the section it designates the President as the party through whom the control is to be exercised. Later on it authorizes expressly the President to enter into voluntary arrangements. I have no objection to that. My amendment will permit that.

Mr. GARD. But it does not say, at least, what the governmental control consists of.

Mr. LENROOT. That is the whole purpose of the bill later on. Let me ask the gentleman what is the purpose of the subsequent sections of this act relating to control if full control is intended to be given by section 3?

Mr. BORLAND. Mr. Chairman, will the gentleman yield?

Mr. LENROOT. Yes.

Mr. BORLAND. As intimated by the gentleman from Ohio [Mr. GARD], is not the amendment of the gentleman from Wisconsin turning what is really a legislative direction into an express limitation of power? Is not that the purpose of the gentleman's amendment?

Mr. LENROOT. If it were a declaration, my amendment would not be a limitation of power, because if there is a power conferred by the act, then it is something more than a mere declaration.

Mr. BORLAND. The gentleman has conceded that this is a declaratory regulation. Is not his amendment and the force of it to turn that into an express grant or limitation of power?

Mr. LENROOT. It is a limitation of power, and that makes it expressly a legislative declaration.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. LENROOT. Yes.

Mr. MOORE of Pennsylvania. If this is merely a declaratory paragraph, why do we in the proviso say that none of the penalties of the act shall attach to the section?

Mr. LENROOT. It is clear that if that language remains in the bill, this section is something more than a mere legislative declaration.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. EMERSON. Mr. Chairman, I rise in opposition to this amendment. I am opposed to pulling the teeth out of this bill.

This bill does indeed grant extraordinary powers, and it is a very drastic bill, but that is what we want in this crisis. We want just the kind of a bill that is here, and just the kind of a bill that the committee has reported, and that is the kind of a bill that the people of this country demand, and that is the kind of a bill that the Congress should pass. I congratulate the committee on the fine work they have done in presenting this bill for the consideration of the House. The thing to do is to pass this bill in its entirety, and I shall oppose every amendment to it that is not recommended by the committee itself. [Applause.]

If this House moves as slowly as it did yesterday we will not be able to get this bill passed at this session. I am going to vote for this bill as it is, and I shall oppose all amendments to it.

Members get up here and argue, and propose amendments, and find fault. I suppose there are Members here who would find fault with the Bible, and would find fault with the Ten Commandments, and even with the ways of the Lord himself. There is no bill but some Member would find fault with.

The people of this country demand this bill be passed, and passed at once, and without unnecessary delay. If we are going to uphold the hands of the Commander in Chief in conserving all the resources of this country in this great struggle we must pass this bill. It is no time to talk about the great powers granted, or the rights of Congress. Wars are carried on by the Commander in Chief, and unless he does some wrong he should be followed. We should follow the President in this crisis, and not lead him.

I am going to stand by the President, as I have in the past [applause] and vote for this bill as it is, except such amendments as the committee proposes, because this is the bill the President wants, and if he is wrong I can hold him responsible later. This is no time for argument, faultfinding, holding out on technicalities, or wasting time in debate. Ambitious Members must curb their ambitions for the present and subordinate their personal ambitions for the welfare of the whole country. The people "back home" demand the passage of this bill and demand that it be passed now. The people of this country are watching this bill very closely and they will know what we are doing here, and we will have to account to them later.

I have received hundreds of letters from the people back home wanting to know why we do not pass this bill? Why is it being delayed? What is the matter with Congress? It is really our conduct here that is subjecting us to the criticism that we are receiving all over this country. Mr. DIES from Texas said more on this bill in five minutes yesterday than all of the Members have said in three days. It is a drastic bill. It is a far-reaching bill. It does grant extraordinary power. It does make the President a dictator. But that is what the people of this country want, and what they want now. The people of this country are unanimously in favor of the immediate passage of this bill.

I desire to read the following letter, which expresses the sentiments of a great majority of the people of this country.

LAKEWOOD, OHIO, *June 21, 1917.*

Hon. HENRY I. EMERSON,
Washington, D. C.

DEAR SIR: As I am one of your constituents I not only urge but demand that you support the food-control bill and any legislation which will cause adequate coal to be mined, and regulate the price to be paid by the consumer. There not only should be a limit to the amount to be received by the producer (of all necessaries of life especially), but there should be a limit to the amount to be paid by the consumer.

I expect you not only to support the above-mentioned legislation but to see that it is passed quickly.

It is my opinion, and the opinion of all with whom I have conversed, that the situation is desperate and that unless something is done very soon by the peoples' Representatives, the people will take the matter in their own hands, and, of course, you are cognizant of the results of such an action.

Don't bother about constitutionality. We want you to assist in passing these laws before it is too late. The constitutional features may be thrashed out later.

Very respectfully, yours, L. S. LOMMASSON.

We have conscripted men, we have conscripted wealth, and we should conscript the food of this country in the interests of the people of this country. We have loaned money to foreign countries, and we may or may not get it back. We have received commissions from almost every country on the face of the earth, and we are going to receive one to-morrow. It is time for this Congress to do something for the people back home. I shall oppose this amendment. I shall oppose the substitute, and I shall oppose every amendment to this bill that is not recommended by the committee itself. [Applause.]

Mr. CANNON. If the gentleman in charge of the bill will permit, does not the gentleman think it well to ask unanimous consent, after the views of the gentleman from Ohio [Mr. EMERSON] have been expressed, at once to pass the bill? [Laughter.]

Mr. MOORE of Pennsylvania rose.

Mr. BORLAND. Mr. Chairman——

The CHAIRMAN. The gentleman from Pennsylvania rose first.

Mr. MOORE of Pennsylvania. I desire to offer an amendment.

Mr. BORLAND. I desire to oppose the pending amendment.

The CHAIRMAN. The gentleman from Missouri is recognized.

Mr. BORLAND. Mr. Chairman, I trust that this amendment will not be adopted, because, in my judgment, it changes the character of this section and is dangerous in its tendency. It is the character of amendment that I think we ought to guard against in this kind of a bill.

Section 3 is intended, so we learn from the opinion of the Solicitor of the department, as a legislative declaration. He says, if I may quote for a moment:

The bill carries on its face a declaration by Congress in the first section that by reason of the existence of a state of war the things required or forbidden are essential to the national security or defense, to the successful prosecution of the war, and for the support and maintenance of the Army and Navy, and in the third section that the processes, methods, and activities concerning necessaries are affected by the public interest. Is this legislative declaration well founded?

Then he goes on and discusses how well founded that legislative declaration is, that these particular activities are affected by the public interest.

Mr. STEVENSON. Mr. Chairman, will the gentleman yield?

Mr. BORLAND. Yes.

Mr. STEVENSON. Do not the words "There is hereby established," and so forth, amount to more than a mere declaration? Is not that an absolute exercise of power, a conferring of power on the President, and is not the proposed amendment here a regulation and definition of the methods by which that power can be exercised, and is it not a good limitation to say that this power, that is extraordinary, should only be exercised in accordance with the terms that this Congress lays down?

Mr. BORLAND. I think not.

Mr. STEVENSON. I think it is.

Mr. BORLAND. I want to call attention to the language of section 3—

That there is hereby established a governmental control of necessaries which shall extend to and include all the processes, methods, activities of, and for the production, manufacture, procurement, storage, distribution, sale, marketing, pledging, financing, and consumption of necessaries.

Now, there is a legislative declaration.

Mr. STEVENSON. But, if the gentleman will permit, is not that word "established" more than a declaration?

Mr. BORLAND. "Which shall be exercised and administered by the President for the purposes of this act." In other words, that subordinate clause, "which shall be administered by the President for the purpose of this act," is not a grant of power, nor is it so intended. It is a part, and a subordinate part, a descriptive part, of the legislative declaration.

Mr. LENROOT. Mr. Chairman, will the gentleman yield?

Mr. BORLAND. Yes.

Mr. LENROOT. If it is not a grant of power, what is it?

Mr. BORLAND. As I understand the gentleman's proposition, it is to turn this clause into a grant of power by saying that the President shall act as hereinafter specified. Now, I agree with the view of the gentleman from Ohio [Mr. GARD], that if the gentleman from Wisconsin seeks to turn this into a specific grant of power, then he must go on and enumerate in this section what this governmental control is. But the theory of the bill is that there is first a legislative declaration of the need for this governmental control, to wit, the war emergency, and the specific reference to the agency through which that control shall be exercised, and no specific grant of power is intended by the theory of the bill to be embraced in this section.

Mr. LENROOT. Will the gentleman yield for a question?

Mr. BORLAND. Yes.

Mr. LENROOT. If there is no specific grant of power in section 3, how could my amendment be a limitation upon that power?

Mr. BORLAND. The gentleman is seeking to change the language of section 3, and to provide that it shall be done as hereinafter expressly provided. That is his amendment, and that is what I object to. I object to turning the language of this section into a specific limitation of power, because I regard the gentleman's amendment not so much a grant of power as a limitation of power.

Mr. LENROOT. Has not the gentleman said his construction is that there is no grant of power?

Mr. BORLAND. That is my contention.

Mr. LENROOT. How could there be any limitation on something which did not exist?

Mr. BORLAND. I think it is not wise to try to grant or to limit the power of the President.

Mr. DEWALT. Mr. Chairman, I desire to speak to the amendment.

Mr. LEVER. I ask unanimous consent that the debate on this amendment be closed in 15 minutes.

Mr. BATHRICK. I want five minutes on that.

Mr. MONDELL. Can not the gentleman make it a little longer?

Mr. LEVER. I wonder how many more amendments there are to this section? Has the gentleman from Wyoming [Mr. MONDELL] one?

Mr. MONDELL. I have no amendment.

Mr. LENROOT. I wish to strike out the proviso.

Mr. LEVER. I think there will be no objection to that.

Mr. MOORE of Pennsylvania. I desire to move to strike out the proviso.

Mr. LEVER. I do not think there need be any discussion on that, because I think there will be no objection to it.

Mr. MOORE of Pennsylvania. I should like five minutes on this paragraph.

Mr. LEVER. Will gentlemen who desire to speak on this hold up their hands and let us see how many there are?

Mr. LENROOT. If this amendment is defeated, I have another on which I should like to have five minutes.

Mr. BARKLEY. Will the gentleman accept an amendment that the word "expressly" shall be stricken out?

Mr. LENROOT. If the gentleman will offer it, I will accept it.

Mr. LEVER. Then the gentleman from Kentucky will not want any time?

Mr. BARKLEY. No.

Mr. LEVER. I ask unanimous consent that all debate on this section and all amendments thereto close in 30 minutes.

Mr. MONDELL. There are five gentlemen on this side who desire to have five minutes each.

Mr. LEVER. Then make it 40 minutes.

Mr. MONDELL. Will the gentleman give us 25 minutes?

Mr. LEVER. Reserving 10 minutes of that for the committee.

Mr. BATHRICK. Reserving the right to object, do I get five minutes out of this?

Mr. LEVER. I think the gentleman can.

Mr. GILLETT. If the gentleman will give us 25 minutes on this side, he can have whatever time he pleases.

Mr. BATHRICK. I want only five minutes.

Mr. LEVER. I ask unanimous consent that debate on this section and all amendments thereto close in 50 minutes, 25 minutes to be used on that side.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this section and all amendments thereto be closed in 50 minutes, half of that time to be used on the Republican side. Is there objection?

Mr. MOORE of Pennsylvania. Reserving the right to object, I should like to know if the gentleman objects to my offering an amendment to strike out the proviso.

Mr. LEVER. No.

Mr. MOORE of Pennsylvania. I offer it, then, and ask that it be pending.

The CHAIRMAN. Is there objection?

Mr. MONTAGUE. Mr. Chairman, reserving the right to object, may I ask if the gentleman from Wisconsin [Mr. LENROOT] will accept in lieu of his amendment to insert, after the word "act," on page 24, line 2, the words "as hereinafter provided"?

Mr. LENROOT. I will.

Mr. MONTAGUE. That that shall be an amendment pending before the committee.

Mr. LENROOT. I will ask unanimous consent to withdraw my substitute and offer in its stead the amendment suggested by the gentleman from Virginia [Mr. MONTAGUE].

Mr. LEVER. Let that be reported, please.

Mr. SCOTT of Iowa. I am quite willing to withdraw my original amendment and permit the gentleman from Wisconsin [Mr. LENROOT] to offer this as an original amendment to the section.

The CHAIRMAN. The gentleman from Iowa [Mr. SCOTT] asks unanimous consent to withdraw his amendment. Is there objection?

There was no objection.

Mr. LENROOT. I ask unanimous consent to withdraw my substitute and permit the gentleman from Virginia [Mr. MONTAGUE] to offer as an original amendment the suggestion that he made.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent to be permitted to withdraw the susbtitute offered by himself. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from Virginia is recognized.

Mr. MONTAGUE. Mr. Chairman, I now offer the amendment which I suggested.

The CHAIRMAN. Will the gentleman send up his amendment?

Mr. MONTAGUE. My amendment is in the following words:

After the word "act," in line 24, page 2, insert the words "as hereinafter provided."

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Virginia.

The Clerk read as follows:

Amendment offered by Mr. MONTAGUE: Page 2, line 24, after the word "act," insert the words "as hereinafter provided."

The CHAIRMAN. Does the gentleman from South Carolina [Mr. LEVER] now desire to submit a request for time?

SEVERAL MEMBERS. Vote! Vote!

Mr. LEVER. Mr. Chairman, there seems to be a general desire to vote at once.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Virginia [Mr. MONTAGUE].

The question being taken, the amendment was agreed to.

The announcement of the Chairman that the amendment was agreed to was received with applause.

Mr. MOORE of Pennsylvania. Mr. Chairman, I have an amendment to offer to section 3.

The CHAIRMAN. The gentleman from Pennsylvania offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. MOORE of Pennsylvania: Page 3, lines 9 and 10, strike out the proviso.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania.

Mr. MOORE of Pennsylvania. I understand that the chairman of the committee is willing to accept the amendment.

Mr. LEVER. As far as I am concerned, I am willing to accept it, but the gentleman from Michigan [Mr. MCLAUGHLIN] offered this in the committee and he ought to be heard. I ask unanimous consent that all debate on this amendment be closed in 10 minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate on this amendment close in 10 minutes. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. Mr. Chairman, I do not know where this bill was drawn nor by whom; however, it has the approval of the Committee on Agriculture and probably will pass the House in an amended form. This proviso which my amendment would strike out illustrates the importance of Congress exercising a scrutiny of bills of this kind. The paragraph gives the President unlimited power. The amendment suggested by the gentleman from Wisconsin would indicate that it is only a declaratory paragraph, and yet the proviso is that none of the penalties of this act shall apply to the section. If it is a declaratory paragraph, why is it necessary to have a proviso that there shall be no punishment under the paragraph? What are the powers conferred on the President in this paragraph? To make voluntary arrangements and agreements, to use any agency or agencies, to accept services of any person without compensation, to cooperate with any agency or person, and to utilize any department or agent of the Government. The proviso is that no punishment shall be applied to this section. The President may call in the great manipulators and agencies of one kind and another who are actually interested, and may put them in the council for national defense or under Mr. Hoover's direction, and the punitive clause is not to apply to them. I am glad that the chairman of the committee has indicated that he will have no objection to striking out this proviso. If wrong is done under this paragraph, it should be punished as under any other paragraph.

There are some things apart from the proviso which I hope to have time to comment on in the two and a half minutes remaining. One is that there is a dispute on now as between the producers of corn and the producers of wheat as to what shall constitute bread fit for people to eat. There are rumors, and they seem to be fairly well founded, that our allies do not want corn bread, and there is testimony which I could produce, perhaps, in another five minutes, which the Secretary of Agriculture has inquired into, that the people of Europe do not relish the notion of having corn mixed with their wheat. They want pure wheat flour. Mr. Hoover is here for the purpose of seeing that the allies are well supplied with wheat. We are to conserve our wheat supply under the direction of Mr. Hoover, but he is to see that our allies are well supplied with wheat and wheat flour, but it seems that we are to mix corn with the flour we have left for the consumption of the people of the United States.

Mr. Secretary of Agriculture Houston, on July 28, 1915, in a letter which I hope to quote in full later, indicated that the department had experimented with the use of corn in foreign countries. I can not now read the whole letter, but he said that it was quite evident that this attempt to introduce corn flour and other corn products into western Europe had not met with success, and the people of Europe are not, as a rule, lovers of corn as human food.

Now, there is a full-page advertisement in the Washington papers of this morning indicating that one of the first things to be done in this war emergency is to utilize corn for the people of the United States. This paragraph provides that the President can call in various agencies, and many of them are here on the ground, to cooperate with him in conserving the resources of the country and limiting the food supply for the people of the United States. Evidently the corn advocates are among them.

Mr. SIMS. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I can not yield in five minutes.

Mr. SIMS. I merely wanted to say that corn bread is much better than wheat bread.

Mr. MOORE of Pennsylvania. Corn pone may be good for grown people, but Dr. Wiley, who is a fairly good authority on dietetics, has stated that bread made of flour in which there is a large percentage of corn, as proposed by some of these large corn associations, is so deleterious to the children of this land that they grow up enfeebled and unfit for military service to which the people of Europe have been trained. I wish I had time to read into the RECORD something Dr. Wiley has said about the use of corn which is now proposed for a staple food of the people of the United States. At any rate, the people of Europe do not appreciate corn in their bread. [Applause.]

Mr. MCLAUGHLIN of Michigan. Mr. Chairman, as this bill was prepared by the Department of Agriculture, and as it came to the Committee on Agriculture it contained section 3 without the word "voluntary," in line 3, page 3, and without the proviso now appearing in lines 9 and 10. In the judgment of some members of the committee this section was very objectionable, but those who were urging the bill in the first instance and seemed to have more knowledge of it than other members of the committee, insisted that the section should stand just as presented. To satisfy objections it was stated that the section was merely declaratory, that it conferred no authority, but it provided that there should be established governmental "control." We asked what that meant. They said that the word would be used in the usual sense, but it came out during the discussion that it was clearly the intention of the officials of the department and those who were to administer the law that this section should be used as a club over the farmers and business men of the country. It was to be pointed out to them that here is a governmental control over every branch and phase of their business, and they must submit to every suggestion and every demand made upon them, because here was the governmental "control" without limit conferred in this bill. That statement was made after there had been considerable discussion of the bill and after it was said in the first instance that it conferred no power and was merely declaratory.

In an effort to make it clear that it was only declaratory and could not be used as a club to embarrass and drive the people of this country the word "voluntary" was inserted, authorizing the President to make simply voluntary arrangements under this particular section. In order to make it doubly sure that no man from the department, no man working under Mr. Hoover, no man exercising or assuming control of affairs of the country could go out or send others out and use this section to compel obedience to their orders it was thought wise to add the proviso so that there could be no misunderstanding as to the meaning of the section providing that none of the penalties of this act shall attach to this section. The chairman and some others say that they are willing to have that go out; they did not want it to go in in the first place. They wanted the section to stand so that it could be used improperly as a club over the business men of this country, misrepresented to the business interests of the country, and held out to them as conferring authority upon those who would use it to compel obedience to the demands of those who would administer this law and this section of the law. In my judgment the section ought to go out altogether, or every possible safeguard ought to be placed around it. The word "voluntary" helps some. The proviso makes it clear that the section can not be used as those who prepared the bill expressly said they intended covertly and improperly to use it.

Mr. LENROOT. Mr. Chairman, will the gentleman yield?

Mr. MCLAUGHLIN of Michigan. Yes.

Mr. LENROOT. There is no general penalty section in this bill, is there?

Mr. MCLAUGHLIN of Michigan. There are several penalties.

Mr. LENROOT. Applying only to each specific section.

Mr. McLAUGHLIN of Michigan. To each specific section. That is true.

Mr. LENROOT. Then I want to ask this question: Could there be any possible construction given to this proviso except that if certain individuals entered into voluntary arrangements they might violate the prohibitions of subsequent sections of the act, and no penalty should apply to them?

Mr. McLAUGHLIN of Michigan. In answer to that, if the gentleman will read further, following the provision in regard to voluntary arrangements, he will find that the President is authorized also to use any agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person, to utilize any department or agency of the Government, and so on. If all these were voluntary there would be force in what the gentleman from Wisconsin says.

The CHAIRMAN. The time of the gentleman from Michigan has expired. All time has expired. The question is on the amendment offered by the gentleman from Pennsylvania [Mr. MOORE].

The question was taken; and on a division (demanded by Mr. MOORE of Pennsylvania) there were—ayes 72, noes 26.

So the amendment was agreed to.

Mr. CRAMTON. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Amendment offered by Mr. CRAMTON: Page 2, line 20, after the word "methods," strike out the comma and insert in lieu thereof the word "and," and strike out the comma after the word "of" in the same line.

Mr. LEVER. Mr. Chairman, the committee accepts that amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan.

The amendment was agreed to.

Mr. MORGAN. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. MORGAN: Page 2, line 20, after the word "methods" insert the word "instrumentalities."

Mr. LEVER. Mr. Chairman, we have no objection to that amendment.

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. BATHRICK. Mr. Chairman, I move to strike out the last word.

Mr. LEVER. Mr. Chairman, before the gentleman begins, I ask unanimous consent that all debate upon this section and all amendments thereto shall conclude in 20 minutes, 5 minutes to be used by the gentleman from Ohio [Mr. BATHRICK], 5 minutes by the gentleman from New York [Mr. SIEGEL], 5 minutes by the gentleman from Mississippi [Mr. STEPHENS], 3 minutes by the gentleman from Wisconsin [Mr. COOPER], and 2 minutes by the gentleman from Texas [Mr. JONES].

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that all debate upon this section and all amendments thereto shall close in 20 minutes, the time to be apportioned as indicated. Is there objection?

There was no objection.

Mr. BATHRICK. Mr. Chairman, I have viewed with considerable concern what seems to me to be an overwhelming inclination on the part of certain gentlemen in this House to amend every bill that comes in here for the purpose of granting the President power to transact the necessary business in connection with this war. They seem to desire to clip his wings, to limit his power in every particular possible, and I think, under these circumstances, it is one of the most reprehensible things that a Member of this House can do. I shall not state that these gentlemen who are attempting to amend this bill intend to do the Government any harm. They are simply afraid that the President is going to have too much power. They have expressed the terrible fear on the floor of this House that we are building up an autocracy in this country. They know that in order to carry on this war successfully we must have in a large degree autocratic government, that no war was ever conducted successfully without autocratic leadership.

Mr. CANNON. Mr. Chairman, will the gentleman yield?

Mr. BATHRICK. Yes.

Mr. CANNON. Does not the gentleman think he ought not to blame, but rather commend, 435 men for desiring to consider the bill themselves instead of blindly accepting the judgment of 20 men?

Mr. BATHRICK. I have no objection to the House considering the bill, in the spirit of helpfulness for war emergencies, but gentlemen have carried into the consideration of these war measures the same dallying spirit which they have shown on occasions in time of peace. They do not seem to comprehend that extraordinary measures are necessary at this time, but on every point they have attempted to balk the endeavors of the administration to get itself into shape. For my own part, I believe we ought to have some autocracy now. For a good many years, under our laws as they have stood, we have slowly, inch by inch, made but little progress toward suppression of nefarious business practices in this country by interests which constitute in themselves a dangerous autocracy, and if we have a little individual autocracy in this country at this time, if we have a little kingly power, we might more surely learn something we have never learned before, namely, who is responsible for these artificially increased prices and the oppression of the poor who are compelled to pay so much for food to-day that many of them are insufficiently fed.

We have had investigation after investigation by commissions and committees and yet the hosts of greed are still merrily able to go on coining unfair shekles from our necessities. If it was proposed to prosecute them they nested securely in a snarl of red tape and drew protection from the law's delay and complications of the courts.

Now the war is upon us, and for its duration I wish that power may be given to the President to cut this red tape and clear out these brush piles, exposing to the world these avaricous animals and to give them just punishment. Perhaps some of the gentlemen who are afraid to give the President so much power do not want this done, but the people do want it done.

We may learn much if we give him some power, and, gentlemen, I for one want to stand for those measures as best I can. I am sorry the amendment of the gentleman from Wisconsin [Mr. LENROOT] passed. Unquestionably it was a limitation upon the power of the President in this emergency, and I am glad the amendment of the gentleman from Pennsylvania [Mr. MOORE] has passed, because I believe that that will afford some little additional power to the earnest men who direct and control this great situation.

Mr. MOORE of Pennsylvania. If the gentleman will yield——

Mr. BATHRICK. I do.

Mr. MOORE of Pennsylvania. If the gentleman had reason to believe that certain interests were endeavoring through war agitation to adulterate food, does not the gentleman think it is the duty of Congress to stay here and try to reach the crooks who are endeavoring to get in and make money under the guise of patriotism?

Mr. BATHRICK. Absolutely; I agree that the gentleman's amendment should pass, and I am glad it did, and I just said so. I am afraid the gentleman misunderstood me.

Mr. HAMILTON of Michigan. The gentleman agreed with the gentleman from Pennsylvania.

Mr. MOORE of Pennsylvania. He did, and he was right. [Laughter.]

Mr. BATHRICK. But I hope the gentlemen of this House will not keep on amending these bills and emasculate them the way they have done heretofore and fail to give the President the power to do what is necessary. I would rather trust the leadership to him. The people of this country trust the President of the United States, and I would rather trust him to lead than bickering factions of a Congress, some of whom have been putting these amendments in when back in the pigeonholes of their minds lurks some political animosity. I should not say they have it now. I will say gentlemen on the Republican side have played fair on this proposition with but few exceptions, but dating back year after year and in political campaign after political campaign some of them did not love the President of the United States, and I hope that no feeling of that kind and no spirit of that kind will enter into the controversies over these bills.

Mr. DYER. Will the gentleman yield?

Mr. BATHRICK. Yes; I yield.

Mr. DYER. The gentleman recognizes that the Republicans at least have been more loyal in their support of the administration than Democrats.

Mr. BATHRICK. No; I do not recognize that the Republicans have been more loyal in support of the President than Democrats. No; I am stating that they have mostly played very fair, but some of you have not. That is the truth, and gives every man his due.

Mr. Chairman, these great happenings are everybody's business in this country, but everybody can not best attend to it. If we are to have it well conducted we must be content to follow. The restless American spirit illy brooks control and the restraint of these fearful times seems to be petulently accepted by some of our people. To be a Member of this great body is a rare honor.

It is no tarnish upon this honor if the administration knows what it wants and asks for it. We say that the President must lead, but some of our Members here want to tell him always which way to go. If that system should prevail there would be no leadership. There is not a business organization on earth whose directorate refuses some plenary power to its managers.

And what is this autocracy that some cringe before and fear so much? It is a thing to laugh at. No autocracy of a public official which had substance could last beyond the first election or keep out of range of one angry citizens' rifle. Liberty is so inbred and firmly grounded in this Nation of free people that no usurper could command a force large enough to defeat the police force of one of our cities. The only autocracy we need to fear is the hidden machinations of our unofficial cormorants. And they will be uncovered one by one, and the President of this United States now will uncover some of them if you will but give him the power.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SIEGEL. Mr. Chairman, the fact that prices for food in this country are higher than in England and France is undisputable. With this admission of fact we are confronted with the question whether we shall have as dictators the human vultures and wolves who have been accumulating their wealth by hoarding food supplies and then selling them at extortionate prices or whether we are prepared to have a chief food dictator who will look after the interests of the people, appointed by the President of the United States.

The people have more confidence in the fairness of the man who has been twice placed in the White House by their votes than they have in scoundrels who see in this war the means of gathering for themselves more wealth without the rendition of anything to the Nation.

In the midst of the greatest war we have ever faced men have been discussing here the constitutionality of the proposed law, but I feel we may safely leave that question to the courts. This is a war measure, and the Supreme Court, I am confident, will rise to the occasion.

We are confronted with a condition and not a theory. We must find a remedy for this condition, and the only remedy that is at present in sight is this bill. It matters very little to me who originated it, because if it is going to change the intolerable condition which has arisen, then it deserves the hearty support of all men who are prepared to assist the President as Commander in Chief of the Army and Navy in winning this war.

It is the simple and plain duty which every Representative in Congress owes to the people of this country to help reduce the price of the cost of food, so that the citizen, whether rich or poor, can purchase same at a fair and reasonable price. One thing is certain, and that is that the price of food in this country must not be permitted to be enhanced by giving to speculators the opportunity to add to its cost extraordinary and uncalled-for profits. It may be a coincidence, but it is a fact that the very men who have been reaping the harvest of profits from the war orders are the loudest in their shrieks when taxation is about to be imposed in order to meet the expenses of this war. There has been entirely too little said about the greed and selfishness of these public plunderers, who have made the average citizen their prey, and it is about time that Congress and the press commenced to properly characterize the gentlemen who seem to think that this war has come for the sole purpose of allowing them to accumulate additional wealth.

It is a duty of every man who loves this country with real devotion and it is the paramount duty of the press to join in a nation-wide movement to expose the men who are hoarding food supplies with the sole idea of adding to their bank accounts.

The press by turning its rays of publicity upon the dark holes which secrete these so-called gentlemen can render a patriotic service to our Republic in this critical hour which no one can equal or measure in dollars and cents.

It is wise at this time to recall the words of Grover Cleveland when at Columbus, Ohio, on November 13, 1890, he said:

> I have spoken of frugality and economy as important factors in American life. I find no fault with the accumulation of wealth and am glad to see energy and enterprise receive their fair reward, but I believe that our Government in its natural integrity is exactly suited to a frugal and economical people, and I believe that it is safest in the hands of those who have been made strong and self-reliant in their citizenship by self-denial and by the surroundings of an enforced economy. Thrift and careful watchfulness of expenditure among the people tend to secure a thrifty Government and cheap and careful living on the part of individuals ought to enforce economy in the public expenditures.

Mr. Chairman, I recognize that the farmer deserves fair and honest treatment, and I know that all citizens, regardless of occupation, rejoice that this bill gives him a fair deal.

That the tiller of the land faces many serious problems annually and does not know what his returns are going to be eventually we all know.

Not long ago I read the World Mender, by Maxwell Grey, and this extract, at pages 43 and 44, struck me as being one of the best descriptions of the farmer's lot. I read it in full:

> For no property carries with it so many duties and responsibilities, mutual courtesies, and human relationship as land. It is half human, this mother earth of ours; we are as much a production of the soil as corn and wine—and cabbages. We spring from it; we draw all our nourishment from it; we all inherit our common 6 feet of it, and are reabsorbed in it at last. You can not make a clear, clean-cut commercial business of tilling the soil as you can of merchandise, manufactures, and handicrafts. Perhaps because Heaven has such a direct and immediate concern in it. Husbandmen share in the Creator's work; they hang directly upon the laws of nature and observe them from hour to hour. Winds, rains, and suns have part in the productive power of the soil; mechanical inventions can not greatly change agricultural processes—a plow is still a plow and a scythe a scythe, whether machine or man driven. And although by applied science men can fly quicker than birds through heights unreached by birds' wings and compel lightning to carry them and cook their food, heal their sickness, warm and light their houses, and flash their thoughts to the ends of the earth, nothing apparently can make seed germinate or sap rise, blossoms fruit, or cattle live and increase one moment quicker or under any other conditions than those that existed from the beginning of time. Nor can rain, nor sun, nor wind, nor frost be produced or the seasons be altered by any device of man. Perhaps because of these things land is different from all other possessions, and agriculture, the most august and ancient and essential of industries, is the least commercial and the least amenable to change. Shepherds and field laborers wait upon times and seasons; there can be no eight-hour day, no exact regulations for them. They must work or wait when and where they can. Cows must be milked and sheep folded, corn cut, and hay carried when nature arranges, not when man pleases. Yet machinery and science can and do increase production, and there is no industry that has greater need of capital for success—that is, in an old and thickly populated country like this—where the utmost must be made of the different soils.

Mr. Chairman, that there is a necessity for the immediate enactment of this bill is shown by the following table of increases in retail prices in May as compared with January of this year.

	January, 1917.	May, 1917.	Increase.
			Per cent.
Granulated sugar, pound	$0.07	$0.10	43
Evaporated milk	.10	.13	30
Standard tomatoes, No. 3 can	.12	.18	50
Sugar corn	.09	.15	66
Sifted early June peas	.12	.19	58
Baked beans	.10	.15	50
White corn meal	.04	.06	50
Hominy	.04	.05	25
Head rice	.08	.10	25
Broken rice	.04	.06	50
Oatmeal	.04	.06	50
Macaroni, bulk	.08	.13	62
Spaghetti, bulk	.08	.13	62
Salmon	.09	.16	77
Navy beans	.12	.19	58
Lima beans	.10	.20	100
Split peas	.08	.12	50
Domestic sardines	.04	.06	50
Molasses, No. 3 can	.10	.18	80
California peaches, extra standard, No. 3	.15	.20	33
Peanut butter, bulk	.10	.15	50
Lump starch	.04	.06	50
Cornstarch	.05	.07	40
Rib roast	.24	.25	4
Chuck roast	.20	.22	10
Plate beef	.15	.16	7
Porterhouse steak	.32	.37	16
Sirloin steak	.28	.34	22
Round steak	.25	.32	28
Chuck steak	.20	.25	25
Hamburg steak	.16	.20	25
Butter	.43	.55	28
Fresh hams	.22	.27	23
Fresh shoulders	.18	.22	22
Fresh pork chops, loin	.26	.32	23
Fresh pork roast, loin	.25	.30	20
Smoked hams	.20	.25	25
Smoked bacon	.27	.34	26
Smoked sausage	.22	.25	14
Pure lard	.19	.25	31

Average net increase, 51 per cent.

This bill is demanded by the hundreds of thousands of citizens of the United States who are working at the same old wages that they have received a year ago, and it is upon them that the high cost of living has mainly fallen and become the most serious problem in their lives, and not only has labor as a whole but most of the employers of the country have joined in the demand for the enactment of this bill into law. I quote from several of the leading papers of the country, showing that practically the entire press favors this legislation.

Further evidence of this condition of affairs is readily found in the retail prices of food printed in the World Almanac for 1917, and which is as follows:

Relative retail prices of some of the principal articles of food each year from 1907 to 1915, and each month from January to September, 1916.

[Average price for 1915=100.]

Year or month.	All articles combined.	Sirloin steak.	Round steak.	Rib roast.	Chuck roast.[1]	Plate boiling beef.[1]	Pork chops.	Bacon, smoked.	Ham, smoked.	Lard, pure.	Hens.	Eggs, strictly fresh.	Butter, creamery.	Milk, fresh.	Flour, wheat.	Corn meal.	Potatoes, Irish.	Sugar, granulated.	Bread.

[1] Relative prices not computed prior to 1914.

The New York Times on June 11 printed the following editorial:

PASS THE LEVER BILL.

National safety demands the immediate acceptance by Congress of the Lever bill, with all its essential features. This is a war emergency measure, and its enactment is imperative. Theorists who oppose the increase of the powers of the Federal Government must lay their theories aside for the time being. The safety of this country will not be imperiled by granting extraordinary power in this matter to President Wilson. On the other hand, its safety will be imperiled by any further delay in the passage of the food-administration bill.

The case was set forth concisely by Mr. Hoover in his talk with the representatives of the American Federation of Labor, who are united in support of the bill:

"Throughout the last three years two words have been written over the pages of English history—'Too late.' Unless the Lever bill is passed immediately, before the grain is harvested, 'too late' will be written in our history."

Secretary Houston, in a statement published this morning, declares that the task of maintaining the subsistence of our allies in the war is "a political and moral obligation and a military necessity." The passage of the food-administration bill will enable us to perform that task and also to care for ourselves. Mr. Hoover, who has been chosen by the President to head the office of food administration, is without question the very man for the place. He has proved his capacity, and there was no guesswork in his appointment. With the passage of the Lever bill he can take up the work with assurance of success. Distribution will be facilitated, hoarding and speculation will be prevented, and prices will be fairly adjusted. Congress should not permit another week to pass before the enactment of the food-administration law. It should be in operation before July.

The Washington Post, on June 12, editorially said:

THE CONTROL OF FOOD.

In substance it empowers the President to establish a license system regulating the importation, exportation, manufacture, storage, or distribution of any food, feeds, or fuel; to limit or prohibit the use of food or feeds in the manufacture of liquors; to guarantee minimum prices for foodstuffs; to operate factories, mines, and other plants; to regulate all exchanges dealing in foodstuffs; and to create an agency for the control of food production and distribution. The bill also makes it unlawful to hoard, destroy, or limit the production of food, or to combine to exact excessive prices, or to limit the facilities for transporting food.

This is a war measure, as distinctly aimed at the defeat of Germany as is the creation of the new army. It is made necessary by the situation in which the allies find themselves and by the method in which modern war is fought. The United States is not merely fighting the German Army and Navy; it is fighting an organized nation, incredibly systematized and self-denying to the point of death. The war revolves around the food supply of the world. If the United States will manage its food strategy with foresight and skill, it can deliver a staggering, if not fatal, blow to the enemy that is waiting its opportunity to strike a death blow at this Nation.

Food control comes as a complete novelty to Americans. It is a sample of government supervision that was not dreamed of a year ago. Much tact and discretion must be exercised by the Government in inaugurating and enforcing a law that touches the people so closely, and even with the best of administration there will probably be opposition from ignorant and interested persons. Speculators and extortionists will not readily abandon a field in which they have fattened at the expense of the people. Criminals, however, need not be treated with patience. As for the ignorant objectors, they are likely to fall in line when two facts are clearly understood: First, that the food-control system is a temporary measure, to end when the war ends; and, second, that this control will eliminate price boosters and monopolists.

The country is confronted with the alternative of submitting to private control of food by conspirators, with the risk of crippling the allies and thus losing the war, or asserting control of all food by the Government. Talk of "paternalism" and "centralization" and "Government usurpation" becomes idle when the dire alternative is thoroughly understood. The Government must act for all the people in the food question, just as it acts for the people in military and naval operations. Bread and bullets are weapons of war which must be controlled exclusively by the Government.

The Philadelphia Inquirer, in an editorial on June 13, said:

High prices that are made high arbitrarily must be torn down. Greed, that is back of much of the gouging of the public, must be put out of business. The lessons of thrift must be pressed home. Food must be conserved. The requirements of our allies must be met through methods of scientific distribution. Red tape must be severed.

On May 25 the New York American printed a long editorial favoring absolute food control by the Government and urged it as the country's most urgent war need. In part the editorial said:

The world is facing famine. The countries at war are perilously near starvation; the countries not at war are not far removed from the same condition.

In this country prices are soaring to new high levels. Unless drastic restrictive and protective measures are enforced, and enforced very soon, this rich country will not only not be able to feed the nations of Europe but will find its own people suffering a degree of want and privation never before recorded in our history.

Apparently Congress realizes that no time is to be lost in thus preparing for the work ahead of us. And surely all haste should be made in passing these two bills that is compatible with a complete understanding of them.

Mr. LEVER has done his work well. The first bill, requiring a survey of the national food resources, is vitally necessary to the successful execution of the provisions of the second bill, which gives the Government absolute control of the food of the country and of its dispensation.

Germany, largely cut off from outside assistance, has been able thus far to withstand her enemies because in the very beginning Germany instituted a food survey. When Germany began to fight, Germany knew to the pound almost what was in her larder, and knew in addition what portion of the larder's contents could be replaced by what Germany could grow and manufacture.

Having this information, Germany arbitrarily assumed control of the empire's food supply and doled it out in exact proportion to its needs instead of its wants. Speculation in food, such as is carried on daily and hourly in New York to profit a few at the cost of suffering to the many, became a prison offense and soon stopped.

The submarine is Germany's great offensive weapon, but food control has been Germany's great defensive weapon and is the answer to the ever-recurring question as to how Germany "is able to hold out."

On the other hand, England had no food survey, had no food control; that is, not while there was still plenty of food for the time being. England did not awaken to the necessity of such control until the visible end of her supply came in sight. The very lack of food control, such as it is now proposed we shall have, is the explanation of England's inability to longer withstand the ravages of the submarine.

These are plain, matter-of-fact illustrations of the necessity of absolute food control, of the vital necessity of vesting in the National Government unrestricted power of food distribution.

Only in this way can our resources be brought to the highest pinnacle of production and maintained at the highest possible level of constant supply. Only in this way can unfair discrimination be prevented. Only in this way can those less able to meet high prices be assured of protection against those wolves whose rapacity is not less keen nor less relentless in times of the direst peril.

Thus we have a demand expressed by the people individually and through the newspapers not only advocating, but insisting that this measure be made a law as quickly as possible.

Some men seem to believe that the people do not know what they want, but I feel as Prof. N. S. Shaler said in the Citizen, at page 239:

It is characteristic of a democracy where each man's speech is perfectly free that the people express themselves loudly. They often appear fanatical, but all the while there is with them an under current of sound reason which prepares them in the end to act in a very judicious way. It is this quality that has made the formation and preservation of our Nation possible, and it is that on which every patriot may safely rely in his efforts to turn his neighbors to the right way.

[Applause.]

Mr. JONES of Texas. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. JONES of Texas: Page 2, line 18, beginning with the word "that" strike out all of section 2 down to and including the word "section," on page 3, line 2.

Mr. JONES of Texas. Mr. Chairman, my purpose in offering this amendment is to eliminate all except the voluntary provision of this section. There seems to be a good deal of doubt as to the meaning of the section. If it is simply declaratory, as some seem to think, there can be no objection to striking it out because it serves no useful purpose. If it is not simply declaratory, it is entirely too sweeping, for it grants every power on earth, entirely too much power, giving, as it does, absolute control of all necessities. This would enable the administrator to invade the private affairs of every individual citizen. Therefore I offer an amendment which would preserve the voluntary features of the section and eliminate all the other features.

Mr. COOPER of Wisconsin. Mr. Chairman, during the progress of this debate I have heard the word "declaratory" applied many times to the language of section 3. Gentlemen have contended that as the bill is drawn the language of that section is merely declaratory. Now, the word "declaratory" in law has a well-understood meaning. If this section were enacted into law and their suggestion is correct, it would be a declaratory statute. And yet the fact is that it is not declaratory language, and the word "declaratory" is not at all properly applicable to it. Here is the definition of "declaratory" as laid down in Bouvier:

A declaratory statute is one which is passed in order to put an end to a doubt as to what is the common law or the meaning of another statute, and which declares what it is and ever has been.

Also, the same authority gives the following definition of the word "declaratory":

Something which explains or ascertains what before was uncertain or doubtful, as a declaratory statute, which is one passed to put an end to a doubt as to what the law is, and which declares what it is and what it has been.

Yet we have had an hour's argument here as to whether the language of that section was declaratory or not. But how can it be successfully argued that section 3 is declaratory of existing law, when in truth it provides for the establishment of something absolutely new in our history? No; it is not declaratory, and if enacted into law it would be a new general public statute, with perhaps an ambiguity on its face, but a statute in no legal sense declaratory of or interpreting any already existing law.

The CHAIRMAN. Without objection, all the pro forma amendments are withdrawn, and the question is on the amendment of the gentleman from Texas [Mr. JONES].

The question was taken, and the amendment was rejected.

The Clerk read as follows:

SEC. 4. That it is hereby made unlawful for any person willfully to destroy any necessaries for the purpose of enhancing the price or restricting the supply thereof; knowingly to commit waste or willfully to permit preventable deterioration of any necessaries in or in connection with their production, manufacture, or distribution; to hoard, as defined in section 6 of this act, any necessaries; to monopolize or attempt to monopolize, either locally or generally, any necessaries; to engage in any discriminatory and unfair, or any deceptive or wasteful practice or device, or to make any unjust or unreasonable rate or charge, in handling or dealing in or with any necessaries; to conspire, combine, agree, or arrange with any other person, (a) to limit the facilities for transporting, producing, manufacturing, supplying, storing, or dealing in any necessaries; (b) to restrict the supply of any necessaries; (c) to restrict distribution of any necessaries; (d) to prevent, limit, or lessen the manufacture or production of any necessaries, or to enhance the price thereof, or (e) to exact excessive prices for any necessaries; or to aid or abet the doing of any act made unlawful by this section.

Mr. KEATING. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Colorado offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. KEATING: On page 4, at the end of line 5, add the following:

"*Provided*, That nothing in this section shall be construed to repeal, modify, or affect either section 6 or section 20 of an act entitled 'An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes,' approved October 15, 1914."

Mr. LEVER. Mr. Chairman, I ask unanimous consent that debate on this amendment shall close in 10 minutes.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that debate on this amendment shall close in 10 minutes. Is there objection?

There was no objection.

Mr. KEATING. Mr. Chairman, I have no desire to take up the time of the committee. As I understand it, the chairman of the Committee on Agriculture is disposed to accept this amendment.

Section 6 and section 20 of the Clayton antitrust law are the so-called labor sections, and by adopting this amendment we will reserve the right to workingmen to strike if they see fit.

It was not the purpose of the men who drafted this bill to interfere in any way with the rights of workingmen. That has been clearly stated by Mr. Hoover. It was at his suggestion that this amendment was drafted in its present form and presented here to-day.

Mr. Chairman, the workers of this land are rendering splendid service to the country at this time, and there is no desire and no attempt on their part to embarrass the Government in the work of preparing for this war. But in refraining from striking, in refraining from pressing their reasonable demands, the workmen have acted voluntarily. What they object to is the attempt to curtail their rights by the use of force or compulsion. I trust that it will be possible to adopt the amendment.

Mr. BLACK. Will the gentleman yield?

Mr. KEATING. Yes.

Mr. BLACK. I am in sympathy with the gentleman's amendment. As he referred to only the labor part of the Clayton antitrust law, I ask him if section 6 does not also exempt agricultural and horticultural societies in the legitimate exercise of their powers?

Mr. KEATING. Yes; it does. Section 6 declares—

That the labor of a human being is not a commodity or article of commerce. Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations, instituted for the purposes of mutual help, and not having capital stock or conducted for profit, or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof; nor shall such organizations, or the members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade, under the antitrust laws.

Mr. CANNON. Is that section 6 or section 20?

Mr. KEATING. Section 6. Section 20 provides:

That no restraining order or injunction shall be granted by any court of the United States, or a judge or the judges thereof, in any case between an employer and employees, or between employers and employees, or between employees, or between persons employed and persons seeking employment, involving, or growing out of, a dispute concerning terms or conditions of employment, unless necessary to prevent irreparable injury to property, or to a property right, of the party making the application, for which injury there is no adequate remedy at law, and such property or property right must be described with particularity in the application, which must be in writing and sworn to by the applicant or by his agent or attorney.

And no such restraining order or injunction shall prohibit any person or persons, whether singly or in concert, from terminating any relation of employment, or from ceasing to perform any work or labor, or from recommending, advising, or persuading others by peaceful means so to do; or from attending at any place where any such person or persons may lawfully be, for the purpose of peacefully obtaining or communicating information, or from peacefully persuading any person to work or to abstain from working; or from ceasing to patronize or to employ any party to such dispute, or from recommending, advising, or persuading others by peaceful and lawful means so to do; or from paying or giving to, or withholding from, any person engaged in such dispute, any strike benefits or other moneys or things of value; or from peaceably assembling in a lawful manner, and for lawful purposes; or from doing any act or thing which might lawfully be done in the absence of such dispute by any party thereto; nor shall any of the acts specified in this paragraph be considered or held to be violations of any law of the United States.

My amendment will simply carry out the purpose that the men who drew this law had in mind.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. KEATING. Yes.

Mr. GREEN of Iowa. The bill as now drawn does not provide for the issuance of any injunction?

Mr. KEATING. No.

Mr. GREEN of Iowa. The amendment which the gentleman has prepared refers to the issue of injunctions, does it not?

Mr. KEATING. It is much broader than that. It covers section 6 and section 20; and section 20, among other things, provides that none of the acts specified in that section shall be considered violations of law.

Mr. GREEN of Iowa. I wish to say that I was about to offer an amendment to cover that. I am in sympathy with the gentleman's amendment.

The CHAIRMAN. The time of the gentleman from Colorado [Mr. KEATING] has expired.

Mr. ROBBINS. Mr. Chairman, I want to ask the gentleman from South Carolina a question before we go any further with this section.

The CHAIRMAN. The time of the debate is running.

Mr. CANNON. It ought not to run.

Mr. LEVER. Does the gentleman from Illinois [Mr. CANNON] desire to be heard?

Mr. CANNON. I would like to say a word.

Mr. LEVER. I ask unanimous consent, Mr. Chairman, that the gentleman from Illinois may have five minutes in addition to this.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent that the time for debate on this amendment may be extended five minutes. Is there objection?

Mr. FARR. Reserving the right to object, Mr. Chairman, I understand that my colleague from Pennsylvania [Mr. ROBBINS] wants time.

Mr. LEVER. I will be glad to yield time to the gentleman from Pennsylvania when I take the floor.

The CHAIRMAN. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from Illinois is recognized for five minutes.

Mr. CANNON. Mr. Chairman, without full understanding of what this amendment means, I doubt the propriety of agreeing to it.

This bill is a war bill. It gives the President power. People are in the habit of saying it gives Mr. Hoover power. I object to that. My God, suppose Mr. Hoover were to die. It gives the President the power to do what? What he could not do in time of peace.

Now, if it is not that, it is not worth the paper it is written upon.

Mr. KEATING. Mr. Chairman, will the gentleman yield to me for a question?

Mr. CANNON. I will, just for a brief question.

Mr. KEATING. Does the gentleman believe that in case a workingman or a combination of workingmen should desire to cease work, and that as a result of stopping work they limited the facilities for transportation, producing, manufacturing, supplying, or dealing in any necessity, then that this act should apply to that individual or combination of individuals? In other words, under the operation of this law should men be prevented from voluntarily quitting work?

Mr. CANNON. Well, under the operation of this law, if it is enacted, you take the farmer's products; in my judgment, upon a liberal construction, you take the products of labor and absolutely in effect apply them for the public good. It is a war power. Now, then, are you going to exempt any portion of the people from its operation? I do not know that it would be effective if we would enact it. I am inclined to think that the President, as Commander in Chief of the Army and Navy, under the exercise of his war powers under the Constitution, could do a great many things that he is not clothed with power to do even under this act if it is enacted.
